Mr. ROBISON. Mr. Speaker, I am proud that when Republicans convene in Chicago on July 25, the dean of the delegates will be a constitutent of mine, and a former Member of this body, the Honorable William H. Hill, who will be attending his 10th national convention. To mark this event, I include an article on Mr. Hill, written at my request by Robert N. Dixon, State editor of the Binghampton (N.Y.) Sun:

THE HONORABLE WILLIAM H. HILL
(By Robert N. Dixon)

When the Republican National Convention convenes in Chicago on July 25 the dean of delegates will be William H. Hill of Johnson City N.Y., publisher of the Binghamton, Sun, and for more than 60 years a leader of the Republican Party in upstate New York.

As a delegate from the 37th Congressional District of New York Mr. Hill will be attending his tenth Republican National Convention. At the 1912 convention he was an alternate delegate, and since 1924 he has been a delegate to every convention but one. The exception was the 1936 convention, when illness prevented his attendance.

Now in his 85th year, "Billy" Hill continues to be chairman of the Broome County Republican Committee, a post he has held for many years. He is also Republican State Committeeman for Broome County and is a member of the executive committee of the State committee.

His amazing politcial career began when he was elected mayor of Lestershire (now Johnson City) New York at the age of 21. He then became postmaster of that community, serving from 1902 until 1910 when he entered newspaper publishing. He was a member of the New York State Senate from 1914 to 1918 when he was elected to the U.S. House of Representatives as a Member of the 66th Congress. He was appointed a member of the New York State Parks Commission in 1925 by Gov. Alfred E. Smith, and has been reappointed to this commission regularly by both Republican and Democratic Governors of New York.

In 1928, Mr. Hill was chairman of the New York Hoover-for-President Committee, and was Mr. Hoover's floor-manager at the convention which nominated our 31st President.

Each year as he celebrates his birthday on March 23, a New York member of the United States Senate rises to pay him tribute on the floor, as Senator KENNETH B. KEATING has done the past 2 years. At the same time, friends and political figures from all over southern and central New York gather in Mr. Hill's office to wish him well. These office gatherings have become so renowned they are covered by news media in the area.

One of his long time personal friends, incidentally, is Jim Farley, who, on the opposite side of the political fence, will also be attending his 10th national convention.

There's no doubt about it, Billy Hill is one of the grand old men of the Grand Old Party.

Citizenship Day and Constitution Week, 1960

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the President's proclamation designating the week of September 17 through 23, 1960, as "Constitution Week" and also a reprint of an article from the September 13, 1959, issue of the New Orleans Times-Picayune by Comdr. Robert W. Collins, U.S. Navy Reserve. They follow:

CITIZENSHIP DAY AND CONSTITUTION WEEK, 1960
A PROCLAMATION BY THE PRESIDENT OF THE UNITED STATES OF AMERICA

Whereas our life as a nation is founded upon the Constitution of the United States, the oldest and most tested written Constitution in the world; and

Whereas it is fitting that our citizens, both native born and naturalized, observe the birthday of the Constitution and reaffirm their determination to support its principles, which have a universal appeal and application and are an inspiration to freedom-loving people everywhere; and

Whereas by a joint resolution approved February 29, 1952 (66 Stat. 9), the Congress designated the 17th day of September of each year as "Citizenship Day" in commemoration of the signing of the Constitution on September 17, 1787, and in recognition of those citizens who have come of age and those who have been naturalized during the year; and

Whereas by a joint resolution approved August 2, 1956 (70 Stat. 932), the Congress requested the President to designate the week beginning September 17 of each year as "Constitution Week," a time for study and observance of the acts which resulted in the formation of the Constitution; and

Whereas the aforesaid resolutions of the Congress authorize the President to issue annually a proclamation calling for the observance of Citizenship Day and Constitution Week:

Now, therefore, I, Dwight D. Eisenhower, President of the United States of America, call upon the appropriate officials of the Government to display the flag of the United States on all Government buildings on Citizenship Day, September 17, 1960; and I urge Federal, State, and local officials, as well as all religious, civic, educational, and other organizations, to hold appropriate ceremonies on that day designed to give our people a clearer understanding of their rights, responsibilities, and opportunities as citizens of the United States.

I also designate the period beginning September 17 and ending September 23, 1960, as "Constitution Week"; and I urge the people of the United States to observe that week with appropriate ceremonies and activities in their schools and churches and in other suitable places.

In witness whereof, I have hereunto set my hand and caused the seal of the United States of America to be affixed.

Done at the city of Washington this 15th day of March in the year of our Lord 1960, and of the independence of the United States of America the 184th.

DWIGHT D. EISENHOWER.

By the President:

CHRISTIAN A. HERTER,
Secretary of State.

[From the Times-Picayune, Sept. 13, 1959]

HISTORY OF U.S. CONSTITUTION PROVES IT HAD TO BE GOOD

(EDITOR'S NOTE.—President Eisenhower at the request of Congress has proclaimed September 17 as "Citizenship Day," and the week beginning Thursday as "Constitution Week," a time for study and observance of the acts which resulted in the formation of the Constitution. This article traces the early history of the document, commenting on the impact it has had on the lives of Americans from Washington to Eisenhower.)

(By Comdr. Robert W. Collins, U.S.N.R.)

When I accepted this invitation to give a message on appreciation of the U.S. Constitution from the viewpoint of a Naval Reserve legal-specialist officer, I did so in serious thoughts and reflections on that day so many years ago when I was first commissioned in the U.S. Naval Reserve and swore "that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same."

In celebrating the 172d anniversary of the adoption of the U.S. Constitution, we are paying just tribute to the very foundation of our Government, that is, the Constitution itself.

On the 17th of September 1787, a convention of delegates of the people of the United States, selected from the Original Thirteen States, adopted and made public that document, which consisted of a preamble and seven articles expressed in the language of the common law.

When accepted and ratified by those States on behalf of the people of these United States, our Charter of Government came into being.

It should be remembered that the Constitution at that stage in American history was much clearer in its definition of responsibility and its imposition of obligation on its citizens and member States than at a shortly later date in our history.

Four years later there came into force and effect the first 10 amendments, commonly called then and at all times since, including the present moment in history, the Bill of Rights. These early amendments did not alter in any manner the form of our constitutional government. However, they did write into the charter itself certain rights, largely of the individual, guaranteed to them by their Government in this basic compact of their own creation.

Perhaps the Constitution was better understood in its terms and in its meaning at the time of its adoption than it is presently understood, although thoughtful Americans have at all times recognized that the obligations of citizenship are implicit and inherent in the Constitution. To support and defend the Constitution is part of the oath required in all services, but it is a definite obligation on all citizens with or without a formal oath. The struggle to maintain the Constitution of the United States is an unending one, and we would do well to remember the old adage that "eternal vigilance is the price of liberty."

As we take time from our ordinary pursuits to honor such an event as the adoption of our Constitution, it is well for us to consider whether or not the American people had the same appreciation then as we now have of this basic instrument of our lives and Government.

The people did understand the document, but appreciation and support was far from unanimous. History teaches us that only 55 of the 65 delegates of the Constitution convention attended that convention. Only 12 of the Thirteen Original States were represented in the deliberations. Of the delegates in attendance participating in the drafting of the Constitution, 16 failed or refused to sign the document at the time of its adoption. When the secrecy was broken and the proposed plan was published, a tempest of debate over its merits began to blow. Critics fell upon it. Scarcely a single sentence or line of the Constitution escaped attack. While this public debate over the plan was in full course, conventions duly elected in the States assembled to pass upon it.

Within 3 months three States ratified it, Delaware and New Jersey and Pennsylvania, after a hot contest. Early in 1788, Georgia and Connecticut added their approval. By a close vote Massachusetts accepted it in February. Maryland and South Carolina soon followed. The New Hampshire convention, at first opposed or hesitant, decided favorably before the end of June. Nine States, the number necessary to make the Constitution effective and binding between the States so ratifying same, had now made their fateful decision. Two large States wavered. In New York and Virginia the result was long in doubt, and it was not until the late summer of 1788 that New York and Virginia ratified on the same day. Two States still remained aloof. North Carolina withheld its approval until November 1789, and Rhode Island, which had sent no delegates to the convention, would have nothing to do with the new Constitution until the spring of 1790, when it added its own ratification. Upon that event the full acceptance of the charter was accomplished. It had stood the test of scrutiny and searching criticism and survived. Its great ideal, its great body of principles, its great hope for the human race then became the basic charter of the United States binding and effective at the same time on all of the people in all of the States of our great Nation.

If proof be needed that the Constitution was clear and explicit, permit me to show briefly how that document provided the basic authority for the existence of that department of the Government in which we of the Navy League have particular interest. The Department of the Navy exists due to the following items:

Article I, section 8, provides:

"The Congress shall have power—

* * * * *

"(13) To provide and maintain a navy;

"(14) To make rules for the government and regulation of the land and naval forces;

"(18) To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof."

The only other reference to the Department of the Navy in the Constitution is contained in article II, section 2(1), which provides: "The President shall be Commander in Chief of the Army and Navy of the United States."

It may be interesting to note that during its first years the Navy operated without the benefit of being a separate department. It was a great soldier-statesman who urged the creation of a permanent Navy and the founding of the Department of the Navy, which was accomplished April 30, 1798. Washington's recommendation hereon contained the following language, which we cherish: "To secure respect of a neutral flag requires a naval force, organized and ready to vindicate it from insults and aggression. This may even prevent the necessity of going to war by discouraging belligerent powers from committing such violations of the rights of the neutral party as may, first or last, leave no other option." The prime mission of the Navy Department was then, as it is now, to assist the people of the United States to provide for their common defense, and this is one of the people's prime obligations under the Constitution.

When the Constitution was adopted our Nation was living in a period described at that time as "These are the times that try men's souls." There have been various times during our history when the expression would have been appropriate and it is particularly appropriate today. We are fortunate that the framers of the Constitution were moralists. They were to a man moralists to the degree that they held that every right has its corresponding responsibility. They knew that benefits and rights flow from the fulfillment of just and honorable obligations.

The Constitution as framed by the great Convention and reluctantly and somewhat grudgingly ratified by the American States was at the same time the wisest and the noblest assertion of constitutional morality in the annals of statecraft. If the Founding Fathers were dubious of the future of that Constitution, it was not they questioned its wisdom so much as they doubted the willingness of successive generations of American citizens to accept its wise restraints and fulfill its implied and inherent obligations. Washington himself was very reserved as to the merits of the Constitution, but as months passed he came to feel that the result had been wiser than he had anticipated. After stating that the powers of Government had been wisely distributed so as to prevent any undue concentration of power in any one man or body of men, he stated that the new Government would not be other than good, "so long as there shall remain any virtue in the body of the people."

It is recorded in our history that the great Delegate from Pennsylvania, Benjamin Franklin, with tears in his eyes implored his fellow Delegates to sign the compact. He said in an answer to those who saw fatal objections in the Constitution: "There is no form of government but what may be a blessing to the people if well administered for a course of years, and can only end in despotism, as other forms have done before it, when the people shall become so corrupted as to need despotic government, being incapable of any other."

In these statements, Washington and Franklin were giving similar advice and warning of an earlier statesman of our colonial era. It was William Penn who expressed the same principle in this simple analogy. He said: "Governments, like clocks, go from the motion men give them; and as governments are made and moved by men, so by them they are ruined, too. Therefore, governments depend upon men rather than men upon governments."

Our Constitution, as a scheme of government, is a government under law, and not under men. Nevertheless, our Government depends upon its citizens to fulfill their individual responsibilities in the manner set forth in the precepts handed to us by those great early Americans we have mentioned. The Constitution is the organic expression of our national unity and has brought unbounded blessings to the millions of Americans that have come and gone.

The great English historian, Macauley, nearly 70 years after the adoption of the Constitution, made this studied criticism: "Your Constitution is all sail and no anchor." The terms of that critique stimulate my interest. What that great writer probably had in mind was the suggestion that no written document could wholly restrain the excesses of democracy. His underlying suggestion is not incorrect, but possibly it would be more accurate to state that the Constitution has proved to be more of a rudder than an anchor. No state of human society is wholly static; there was no occasion for the Constitution to be an anchor. Its purpose was, and is, to guide rather than to hold.

Another great and disinterested witness of American institutions rendered his opinion on the occasion of the centennial anniversary of the American Constitution. Gladstone, the English statesman, wrote the committee in charge of that celebration: "I have always regarded that Constitution as the most remarkable work known to me in modern times to have been produced by the human intellect, at a single stroke, so to speak, in its application to political affairs." We have reason to consider that he believed most strongly that opinion, for earlier the same Gladstone had written the following: "The American Constitution is the most wonderful work ever struck off at a given time by the brain and purpose of man."

We Americans and generations which follow us will do well on occasions such as this if we will remember the advice of the ancient proverb in our actions in relation to the Constitution of the United States: "Remove not the ancient landmark, which thy fathers have set."

Narcotics as a Communist Weapon

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. ANFUSO. Mr. Speaker, on May 9, 1960, I introduced a bill, H.R. 12120, to provide for grants-in-aid to the States for the treatment of narcotic drug addicts in closed institutions. In the short time since then my bill has received support from many quarters, including leading organizations, newspapers, Government officials, and others.

It has been suspected for many years that the Communists, especially Red China, is smuggling narcotics into most of the Far East countries in an effort to subvert the youth of those countries. The recent riots in Japan are a case in point.

In this connection, I wish to insert into the RECORD a most interesting article on the subject by the noted columnist Ruth Montgomery "Reds Use Drugs as Weapons," which was published in the June 28, 1960, issue of the New York Journal American and other newspapers. This matter deserves immediate attention before it gets out of hand, and my bill is a step in the direction of dealing with the problem in an effective manner.

The article by Ruth Montgomery reads as follows:

CAPITAL LETTER—REDS USE DRUGS AS WEAPON
(By Ruth Montgomery)

WASHINGTON.—The bearded egomaniac who rantingly presides over Cuba is giving U.S. narcotics agents a king-size headache.

Only 18 months after Fidel Castro's seizure of power, smuggling of cocaine from Cuba into the United States has more than trebled.

Cuba itself, since falling under the spell of the Communist-tinged Castro regime, now uses more cocaine than any other nation in the world, despite its comparatively small population.

A top official in our Narcotics Commission discloses that Cuba has become the "chief staging area" for illicit traffic in cocaine, since Castro came to power.

The official said Castro has rebuffed all our appeals to deport "Italian-American, French Corsican, and Canadian gangsters and narcotics peddlers who are now holed up in Havana."

International communism has long employed narcotics as a favorite means of subverting underprivileged peoples, and obtaining cash to finance its undercover activities abroad.

We need look no further than Japan to discover the horrifying disruption that can occur when students and leftist agitators are hopped up on drugs. Narcotics Commissioner Harry J. Anslinger has been fighting for years to stem the smuggled flow of heroin into Japan from Red China and North Korea.

As long as 5 years ago, the Senate Judiciary Committee heard expert testimony on the subject from L. G. Deverall, former member of General MacArthur's labor education staff, who was then the representative in Asia for the AFL's free trade union committee.

Warning of the dire consequences that could result from the continued flood of narcotics into Japan, he said: "The Chinese Reds predominate as smugglers, and the North Koreans as pushers. As the Japanese press has very bitterly said, 'The Chinese and Koreans sell the stuff and we foolish Japanese plunge it into our blood veins'."

Deverall pointed out that, at the end of World War II, Japan had only a few thousand heroin addicts. Within 10 years they had increased to 50,000, and the number is now many times multiplied.

Flushed with its extraordinary success in subverting Japanese youths by use of drugs, international communism is now turning its attention to America—thanks to the hospitable political climate and convenient location of Castro's Cuba.

To help curb the appalling new menace, Representative VICTOR L. ANFUSO, Democrat, of New York, has introduced a bill to provide much needed facilities for curing our nearly 50,000 addicts. A companion bill has been offered in the upper Chamber by GOP Senator JACOB JAVITS, of New York. Both have the blessing of Commissioner Anslinger.

It is fitting that two New Yorkers should take the lead in this move. Nearly 46 percent of all our known addicts reside in the Empire State, and 80 percent of the Nation's dope fiends are centered in New York, California, Illinois, and Michigan.

Unless we hurry, we could have a taste of Japanese-style rioting in our home stamping ground.

Progress Report on Local Service Turboprop Aircraft

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include a condensation of a very interesting and informative report, submitted before the aviation division of the American Society of Mechanical Engineers at its aviation conference in Dallas, Tex., in June by Mr. G. Robert Henry, executive vice president of Bonanza Air Lines, Inc. I am sure this will be of interest to all Members of Congress who are concerned with the future of local service airlines.

PROGRESS REPORT ON LOCAL SERVICE TURBOPROP AIRCRAFT
(By G. Robert Henry)

THE NATURE OF THE LOCAL SERVICE AIRLINE INDUSTRY

In order to understand properly the effect of a turboprop aircraft on a local service carrier, it is necessary to give a brief description of the local airline industry. Local service carriers are certificated by the Civil Aeronautics Board for scheduled airline service in different regional areas of the continental United States. As such, they concentrate primarily on local or so-called "short-haul" markets. A local carrier provides air service between many of the smaller communities within its area, between small communities and major air terminals, and between some of the larger air terminals themselves. It serves both the local and connecting requirements of the traveling public in its area.

In 1959, the local carriers served a population of 111 million people in 511 cities. Three hundred of these cities received their only air service from the local carriers. In addition, the local carriers served 327 military bases. Of these, 59 bases are entirely dependent upon the local airlines for commercial air service. This industry consists of a number of highly skilled, highly trained operating organizations that are capable of turning their abilities and services to the national defense needs at a moment's notice.

The local service airlines employ more than 10,600 people, with a total payroll which exceeds $59 million per year. There are 13 of these airlines currently in operation. More than 6,000 route miles were added to the local service carrier systems in the last 3 years. Their route miles have increased 64 percent since 1950.

Today, not one of the 13 local service airlines operates a route system which is self-sustaining. Inherent in the route systems operated by the local service industry is the fact that the traffic density obtainable is insufficient to cover the costs of providing the required service. It is, therefore, necessary for the Federal Government to make public service payments to these carriers in order to enable them to provide the services found by the Civil Aeronautics Board to be required by the public convenience and necessity, and to enable these carriers to earn a reasonable return on capital investment.

Although their public service payment requirements have increased 2½ times in the past 10 years, the industry's traffic generation has grown more than sixfold during that period. In other words, in 1959 each subsidy dollar bought almost three times the public benefit that it bought 10 years ago. For some years past now the vast majority of these services have been provided with the pre-World War II DC–3 type aircraft. This aircraft, as you know, has been extremely reliable, but it has not been economical. Even were the local carriers to be admitted to high-density self-sustaining markets, the character of the DC–3 is such that even under the most favorable traffic circumstances the aircraft could not be operated on a self-sustaining basis.

The problem thus faced by the local airline industry and by the Government which has fostered this industry was obviously twofold in character. In addition to the authority already granted these carriers to provide much needed service to smaller communities and over relatively lean traffic segments, the Civil Aeronautics Board would have to authorize these carriers to provide service in profitable markets. Otherwise public service payments by the Government to these carriers would be required to the end of time. Not only would it continue ad infinitum, but the required dollar volume of such payments would continue to mount as service was extended to additional communities that could demonstrate a legitimate need for air service; for there can be no justifiable basis for concluding that only those people living in the densely populated metropolitan areas of the Nation are entitled to air service.

The second aspect of this problem was that even assuming admission of these carriers into more densely traveled markets, or markets that are inherently profitable, it was necessary to find an aircraft for this industry which could be operated economically in such markets. If the need for public service payments was to be reduced by the operation of some profitable segments together with loss segments then an aircraft must be found which could be operated profitably at a reasonably obtainable load factor.

ACQUISITION OF THE TURBOPROP

In consequence several local carriers have purchased and placed in operation a considerable number of F–27 jetprop aircraft. As of the end of 1959, there were four local service carriers operating the F–27 on a regularly scheduled basis within the continental

United States. These carriers were operating 23 such aircraft and more were on order. A fifth local carrier started F–27 operations in early 1960 with three of these new aircraft. In addition, one of the airlines in Hawaii has six of the aircraft, and two of the airlines in Alaska operate five of them. Moreover, several foreign airlines were also operating the F–27 in 1959.

Meanwhile, following the availability and selection of the F–27 jetprop by several of the local carriers, two other types of jetprop aircraft have been manufactured and sold or contracted for to certain of the local carriers. One of the larger local service airlines conducted an experimental operation in 1959 with a single Canadair 540 jetprop, powered by Napier Eland engines. The published 1959 cost and operating data for this experimental operation are too limited for inclusion in this report. Nevertheless, the results of this experiment have been sufficiently satisfactory to that carrier that an order has been placed for five aircraft of this type. Still another local service carrier has determined to order the converted Convair 340, powered by Allison jetprop engines. These are scheduled for delivery in late 1960.

Of the local service carriers operating Fairchild F–27 jetprop aircraft within the continental United States, only four operated the aircraft for a sufficient period during 1959 to provide a basis for evaluation. Although the aircraft of these carriers went into service at various times and with varying frequencies during the past year, there are nevertheless certain facts available which permit us to perform a highly indicative appraisal.

THE TURBOPROP OPERATIONS

Now we are able to ask, Has the turboprop met the rather sizable demands that a replacement aircraft was expected to meet? On the basis of the information which is now available, the F–27 jetprop is proving that it can do all that was expected of it and more.

Better service to the traveling public: In response to the requirement that the replacement aircraft must provide better service to the traveling public, the Fairchild F–27 jetprop has a normal cruising speed of about 100–115 miles per hour faster than the DC–3. Seating and cabin accommodations are more commodious and comfortable. The high wing configuration permits unobstructed visibility. The cabin is pressurized, permitting comfortable flights at high altitudes in contrast with the nonpressurized DC–3. The F–27's high altitude capability and its weather radar permit selection of the smoothest possible flight plan. The extremely reliable Rolls-Royce turbine engines have reduced cabin noise level substantially and have virtually eliminated vibration. And, last but not least, the aircraft is extremely attractive. The local carriers using the Fairchild F–27 are indeed providing substantially better service to the traveling public.

Operational costs: With respect to the operating cost of the replacement aircraft, a comparison with the DC–3 becomes extremely difficult. This is true because of the different times at which the jetprop aircraft entered into service with the individual carriers, because of the changing route characteristics of a number of those carriers, because of individual carrier differences with respect to the proportion of plane-miles operated with the jetprop equipment, and because of differences between the carriers in problems of integration of the new jet-powered equipment. Nevertheless, by using the third quarter of 1958, during which period all four of the carriers previously referred to operated piston-type aircraft almost exclusively, and the third quarter of 1959 in which those carriers operated with a mixed fleet including turboprop equipment, a reasonably pure comparison can be obtained. The average of the four local service F–27 operators produced an actual decrease in total operating cost per available seat-mile between these periods. Admittedly, the decrease was not substantial. It was, however, greatly encouraging, for in each case the carrier was still in the integration stage of its new jetprop equipment. Each had yet to learn the maintenance and other operating efficiencies that would come with increased experience with this new type aircraft. Moreover, this reduction in cost was made in the face of innumerable cost increases, many of which were entirely unrelated to type of equipment, such as increased costs in connection with supplies, rentals, wages, outside services, and the like. It should be noted, too, that the DC–3 operating costs, which are included in total operating expense for a carrier, have also increased substantially.

Traffic generation: With respect to the additional traffic required to be generated by the replacement aircraft, the results obtained by the four F–27 operators during the calendar year 1959 have been greatly encouraging. On the average, this group produced a nearly 30-percent increase in revenue passenger miles over the year 1958, while the increased miles flown by the group were slightly less than 12 percent. Using the third quarter of 1959 versus the third quarter of 1958, which is again a relatively pure comparison, the figures show a 40-percent increase in revenue passenger miles with an increase in plane-miles flown of only 14 percent. The average number of passengers on board on all flights increased by 22 percent.

Operating performance characteristics: The fourth major requirement for the replacement aircraft was that it must meet, and even exceed in many instances, the operating and performance characteristics of the DC–3. The short-field landing and take-off capabilities of the F–27 match those of the DC–3; its speed, stability, rate-of-climb and single-engine performance are far superior to that of the DC–3; its Rolls-Royce engine reliability has established a record unsurpassed in the history of commercial aviation. Thus we find an aircraft that far more than meets the operating and performance prerequisites for the replacement of the old DC–3.

The potential for self-sufficiency: And now we turn to the final condition which had to be met by any aircraft being considered as a replacement for the DC–3, and that is that it must have the capability for the substantial reduction or total elimination of the requirement for public service payment support. The goal of all local service carriers is, and must be, self-sufficiency. This new local service aircraft must be sufficiently attractive to the public and sufficiently economic to be operated effectively and profitably in such high density and potentially profitable short-haul markets as may be granted by the Civil Aeronautics Board. Our belief in the economics of the F–27 are rapidly becoming a reality. It is believed that, as experience is accumulated with the aircraft and engines, the break-even need load factor requiremets for an all F–27 operation will ultimately settle at a figure in the neighborhood of 55 or 56 percent. Thus, if opportunities are presented to operate this aircraft in high-density, short-haul markets, it is clear that the opportunities for self-sufficiency will be at hand, for it is already abundantly clear that the attractiveness and the capabilities of the F–27 are quite sufficient to enable it to take full advantage of these opportunities.

Again, as purely illustrative, the F–27 on Bonanza's system is already generating more than twice the revenue per plane-mile operated than is the DC–3. Yet its direct operating costs per plane-mile are only about one-third greater. It should again be emphasized that further experience with the aircraft and engines, and emergence from the difficult and costly period in which the manufacturer, the vendors, and the operators are individually and collectively seeking out improved and more efficient techniques in such areas as supply, maintenance, and overhaul, will lead to still more pronounced operating cost advantages for the F–27 over the DC–3.

Even in a measure of productivity that is cast in terms of available seat-miles the F–27 on Bonanza's system is already far outstripping the DC–3. During the past 12 months ending March 31, 1960, the DC–3 barely managed to make a contribution toward indirect costs, whereas by contrast the F–27 not only covered its direct operating costs but contributed very substantially toward overhead. This is shown by the following table:

12 months ending Mar. 31, 1960

[Cents per available seat-mile]

	Total direct expense	Total operating revenue (exclusive of subsidy)	Available for contribution to indirect expense
F–27	2.387	3.504	1.117
DC–3	2.680	2.739	.059

Again it must be stressed that we are in the early stages of this program and that this situation can be expected to improve radically in favor of the F–27.

Having now completed a year during which period bonanza has accomplished a partial transition into an all-turboprop operation, and having reviewed the results of that year with intense interest and great analytical care, we can now say that we are eminently pleased with those results. So pleased, in fact, that we now firmly believe a total transition into the jet age to be essential to the future welfare of the local service industry and to the public which it does and will continue to serve so beneficially.

THE FUTURE

In preparing and submitting a report of progress you must inevitably reach that juncture where you ask the question, "To where will this progress to date lead this industry in the future?" The objectives in their simplest form call for the provision by the local carriers of a very fine, high-grade public service in the interests of the commerce, the postal service, and the national defense. Moreover, they call for the provision of this service ultimately on a self-sustaining basis. We fully recognize that the attainment of these objectives is the joint responsibility of the carriers, the Civil Aeronautics Board, and the Congress of the United States. The Congress has taken a deep and abiding interest in this segment of the industry, as reflected by its passage of legislation providing for permanent certification of local air carriers and, subsequently, legislation providing for the Government guaranty of repayment of private loans for the financing of an equipment modernization program for this industry. In both of these matters the Congress has made it unmistakably clear that the public interest calls for the perpetuation, future development, and continued strengthening of this segment of the industry; and it is, of course, to Congress that we must turn for the public service support money necessary during the interim period when the Civil Aeronautics Board and the carriers are building a foundation on which a structure of self-sufficiency can finally be erected.

We must admit that in our pursuit of these objectives the way is fraught with many and serious problems. There are conflicts within the airline industry itself which, if not properly resolved, can readily destroy this program. For example, there are a few carriers within the trunkline industry that believe that the local airlines must be per-

manently relegated to a subsidy status. Stripped of any artifice or embellishment, this philosophy very bluntly calls for a policy from the Civil Aeronautics Board which would require that any air transportation authorization that is profitable be granted to and reserved exclusively for the trunk airlines; if it is a loss operation, it belongs to a local service carrier. It calls for permanent and mounting subsidization of the local service industry, regardless of the character and quality of the equipment and service that can be provided to the public by the local carriers. Such a thought must be regarded as abhorrent to the fundamental principles of this Nation, unless in the national interest there can be no other answer.

The enhancement and realization of this permanent subsidy concept is being pursued by a few trunk airlines in route case proceedings before the Civil Aeronautics Board. It boils down in essence to a position that local airline applications for self-sustaining or profitable operations in short-haul, high-density markets should not even be heard by the Civil Aeronautics Board. These trunk carriers make no attempt to defend such a position on any public interest grounds, for a position such as this cannot stand public exposure. So they launch their attack on procedural grounds in local service area route case proceedings, contending that the very consideration of short-haul, high-density route awards to local carriers in such route cases would make the proceedings far too big and too complex.

They would have the Board reserve consideration of service in short-haul, high-density markets for those cases in which only trunkline applications are to be acted upon. They would have the Board continue to envision the local service carriers as puddle-jumping DC-3 operators for whom any form of profitable operation or authority is unthinkable, thus wholly ignoring the local airline industry's technological advancement into the modern day jet age, and the public benefits that can accrue from such advancement. This DC-3 image which they persist in attempting to perpetuate is indeed obsolete in view of the fact that many of the local carriers have progressed very far into the jet age. Bonanza, in fact, is today carrying well over 90 percent of its total system traffic in the ultra-modern F-27.

From a public interest standpoint, these proceedings must be so cast as to present the Board with an opportunity to determine which carrier will do the better job—a trunk or a local service carrier—in the short-haul, high-density markets. Many of the local service carriers are today financed, jet equipped, and ready, willing, and able to serve these short-haul, high-density markets—and to do so even better than the trunks. To give them access to those markets will serve well the public needs in such markets and capitalize fully upon the very great interest, ability, and incentive of these carriers. This, in conjunction with the industry's fleet modernization program, provides the only hope for the elimination or any substantial reduction of the dependence of these carriers on Government support.

It ought also to be recognized that the Civil Aeronautics Board itself is quite properly beset with many conflicts in connection with this problem. Oversimplification cannot solve the problem; the answer is not necessarily either black or white, good or bad; it is not a problem susceptible of resolution by formula. Each case must be examined individually within the framework of a basic developmental and forward-looking policy. Certainly the Civil Aeronautics Board cannot mutilate the trunk airlines of the Nation by divesting them of segments and markets essential to their well-being and economic stability. Nor can the Board jeopardize the trunk airlines' enviable and self-sufficient route structure by saturating them with competitive influences on route segments and in markets vital to their survival on a self-sustaining basis. These are factors which the Board must carefully evaluate.

It is apparently not yet recognized that the proper development of these short-haul markets by local carriers, adequately equipped and intensely interested, will inevitably mean that the services will be especially geared to the local and connecting needs. Service of this type will lead to increasing frequencies of service and increasing volumes of traffic, of which the connecting trunk carriers will be a major beneficiary. The real air travel potential has as yet but scarcely been tapped. It is through this kind of joint airline participation that jet travel can be brought to all areas of the Nation. Then, and only then, will the vast air travel potential of the American public be fully realized.

Freedom Monument

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. BROYHILL. Mr. Speaker, the recent revival of the plan to build a Freedom Monument in Arlington, Va., has raised a storm of almost universal opposition in the neighborhood most closely affected. I think it may be well if Members of Congress from other areas have the opportunity to know how deep and how widespread the opposition is. Accordingly, I should like to offer for insertion in the RECORD the attached resolution from the Kiwanis Club of Old Dominion, and also several selected editorials that bear on this subject:

OPPOSITION TO FREEDOM WALL PROPOSAL

(Resolution by Kiwanis Club of Old Dominion)

Whereas it is the policy of the Kiwanis Club of Old Dominion and Kiwanis International to support maximum economy in Government and judicious use of tax dollars in Government operations, and

Whereas there has been introduced in the Congress of the United States legislation for expenditure of $12 million by the Federal Government to erect a marble and granite edifice on the Nevius tract adjoining Arlington National Cemetery, said structure being sometimes referred to as a Freedom Wall; and

Whereas the overall initial cost of this monument would be approximately $24 million, of which the Federal Government would defray one-half by an outright appropriation of $12 million of taxpayers' money and authorize the raising of an additional $12 million through public subscription. Said subscription could include tax-exempt funds. Thus, in one form or another, the cost of this monument would be borne by the taxpayers, including questionable expenditures of tax or tax-exempt funds for advertising, fund-raising activities, and payments to private promoters; and

Whereas after the initial $24 million cost, the taxpayers would be required to maintain this monument indefinitely at a substantial additional cost each year; and

Whereas in the opinion of many outstanding individuals and authorities, the size of this proposed massive monument, approximately 68 feet high by 204 feet wide, by 327 feet long, and its location, would reduce in stature the truly great impressive national shrines commemorating our country's history and ideals located in that immediate vicinity, including the Iwo Jima Marine Memorial, the Lincoln Memorial, the Jefferson Memorial, and the Washington Monument; and

Whereas, the Nevius tract adjoining Arlington National Cemetery, on which this structure would be located, has been requested by several national veterans organizations to enlarge Arlington National Cemetery; and

Whereas, proposals to place said monument in New York City in the 1930's and on a mountain top in the State of Georgia at a later date both failed; and

Whereas after the failure in Georgia, the substantial public funds solicited by private promoters of said monument were never returned to donors, as reported in the CONGRESSIONAL RECORD of March 27, 1958, on pages 5027 and 5031, which is the record of the debate of the previous monument proposal when it was considered by the House of Representatives; and

Whereas the monument proposal has been branded as extravagant, unnecessary and undesirable by such outstanding newspapers as the Washington Evening Star, the Washington Post, the New York Times, the Washington Daily News and Northern Virginia Sun, all of which have been highly critical of the proposal; and

Whereas the Arlington County Board, civic associations, and others in Arlington County, Va., where this monument is proposed to be located, have gone on record many times, as recently as May, 1960, formally opposing location of this monument within their area because of its excessive size, costs to taxpayers, and lack of historical merit, and

Whereas the Congress of the United States studied and formally rejected a similar proposal in 1958; and

Whereas the Old Dominion Kiwanis Club and the Kiwanis International favor the establishment of living memorials such as citizenship programs, scholarships, Kid's Day, boys and girls work, vocational guidance programs, instead of monolithic inanimate memorial structures: Now, therefore, be it

Resolved, That the Kiwanis Club of Old Dominion, after due deliberation by its officers, board of directors, and assembled membership, hereby this the 13th day of June, 1960, do formally oppose the Freedom Wall monument proposal and direct the club president and the chairman of the public affairs committee to exert every effort to defeat this measure in the U.S. Congress; and be it further

Resolved, That the Kiwanis Club of Old Dominion concurs with veterans organizations in the recommended use of the Nevius tract as an addition to Arlington National Cemetery and believes it should be consecrated for future burial of the Nation's hero dead; and be it further

Resolved, That in these times of international tension, which will require considerable expenditure of defense funds, and in view of the need to combat inflation and conserve our fiscal resources, the Kiwanis Club of the Old Dominion recommends that this monument proposal be shelved as a needless, wasteful expenditure not in accord with our Nation's present needs; and be it further

Resolved, That the Secretary be instructed to inform the Kiwanians in Congress and all Members of the Virginia congressional delegation of this action by the Kiwanis Club of Old Dominion, and further that this matter be brought to the attention of all other Kiwanis clubs in the 10th division requesting them to join with the Old Dominion Kiwanis Club in opposing this monument proposal.

[From the Washington Post, May 28, 1960]

MILLIONS FOR MARBLE?

Sponsors of the proposed Freedom Monument seem to have met objections of the Commission of Fine Arts by reducing the height of the memorial which they want to build on the Nevius tract near Arlington Cemetery. Under terms of the new bill endorsed by President Eisenhower, the monument would stand only 68 feet high instead of 90. Moreover the National Capital Planning Commission has endorsed the location.

Even though the project now has the blessing of these agencies, we think Congress ought to consider carefully whether $12 million of public funds ought to be spent on such a venture, despite the willingness of the sponsors to raise an equal sum privately. As a rule, we think memorials ought to honor persons or historic events, not abstract concepts.

Moreover, with the many and varied opportunities for useful memorials that abound here and throughout the Nation, we question whether another purely decorative mass of marble and granite ought to command public support. The $12 million of private money would make a much-needed contribution to the proposed National Cultural Center here. The same amount of Federal funds would provide the aditional land and roads needed for the Chesapeake and Ohio Canal Park. Such projects as these would not only be fitting memorials, they would also provide useful recreational and cultural opportunities for thousands of people.

[From the Evening Star, June 4, 1960]

NIT PICKING

Harry T. Thompson, who wears two hats with respect to the so-called Freedom Wall project—one as Superintendent of National Capital Parks and another as secretary of the National Monument Commission—has referred to criticism of the controversial proposal as nit picking. This sort of thing, he told reporters at a press conference in Nyack, N.Y. (Madison Avenue style), can be expected whenever such a project is launched in Washington.

Was it nit picking when the Fine Arts Commission objected to the original 90-foot height of the roofless wall in the location specified by Congress (without prior consultation with the commission, incidentally)? This site, adjacent to Arlington National Cemetery, long had been reserved by the Fine Arts Commission and the National Capital Planning Commission for a sylvan setting to mark the Virginia end of the Mall axis.

Was it nit picking for the Fine Arts Commission to request the right to pass on the final design for the freedom shrine? (At last reports, the Commission still was awaiting the final drawings.)

Was it nit picking for the Arlington County Board to oppose such a huge masonry structure on the very land which the Federal Government had bought as a safeguard, it was explained at the time, against tall private construction so close to Arlington Cemetery?

Is the county board still indulging in nit picking when it continues to oppose the monument, even though the height has been reduced, successively, to 80 feet and now to 63 feet?

Is it nit picking for the American Legion, the Veterans of Foreign Wars, and other patriotic groups to object to the erection of the wall on land which they and other groups contend should be held for future expansion of crowded Arlington Cemetery?

Is it nit picking to criticize sponsors of the undertaking for reneging on their past promises to Congress that not one cent of Federal money would be asked for the project? (Congress recently was asked to pay $12 million of the $24 million cost.)

The fact is that the Freedom Wall project is a monstrosity. It ought not to be jammed down the throat of a protesting community by the likes of Harry Thompson. And if nit pickers can prevent this, we are happy to be counted among them.

[From the Washington Post, June 6, 1960]

A BARRAGE AIMED AT FREEDOM WALL

A monument to Freedom?
I didn't know it died.
I knew that it had suffered
Some damage to its pride;
I knew humiliation
Had lately been its lot
But surely Freedom is not dead—
Oh say that it is not!

A monument to Freedom?
How fit—if need there be
To have it put beside the men
Who died to keep us free,
The heroes of Antietam
And Gettysburg and such
Who never once were heard to say
That Freedom cost too much.

Of monuments to Freedom
We surely stand in need,
But build them not of marble
But of noble act and deed,
Of purpose high and courage,
Of ends for which men strive,
No monuments to Freedom dead—
To Freedom—much alive.

J. W. RUSSELL.

WASHINGTON.

A monument to freedom.

Shrines commemorate the origins and accomplishments of living men and forces. Freedom's shrines are in Boston, Concord, Willamsburg and Philadelphia. But monuments honor the not-to-be-forgotten dead. Let us not erect a gravestone to freedom, not just now.

JAMES HODGSON.

ARLINGTON.

The concept of the proposed "Freedom Wall" eludes me as I believe it does others equally loyal and patriotic. Somehow I cannot equate the idea of a wall with freedom.

Freedom, in the dictionary I have at hand, is defined in 17 different ways having nothing with walls. Freedom is an open matter. Freedom allows charitable intercourse with all humanity.

Instead of providing cash for a pile of marble at a spot in Virginia where it is undesired, why not channel the funds to the Chilean Government for badly needed relief and redevelopment?

LYMAN D. LYNN.

ARLINGTON.

Our President insists that we should by
A "Freedom Wall," some sixty-eight feet high:
A wall of granite, open at both ends,
Like a taxpayer's pocket, as he spends
His meager income. He can use it all
For more important matters than a wall;
A wall, encroaching on the hallowed space
Which is the Nation's final resting place
For those who died that there should never be
A wall between my fellow men and me

I ask you, would it not make better sense
To spend two dozen millions on defense?

CLARK KINCAID.

ARLINGTON.

In your timely editorial, "Millions for Marble?" you say "Congress ought to consider carefully whether $12 million of public funds ought to be spent on such a venture."

Your clearcut, factual editorial also says the sponsors "are willing to raise the rest privately." That's mighty big of them. Why don't they admit that tax-exempt private contributions are borne by the rest of us to make up for the taxes exempted?

Think of the millions more to pay for the "carving which will go on for 75 years," the forever unending cost of permanent maintenance, grandiose landscaping another reflecting pool, everything down to earphones. No matter what they admit will be in there, nor forget to mention, there is only one source of revenue and no matter how it is collected, that source is you and me. Holding the bag when we would like rather to donate to worthwhile living memorials such as the National Cultural Center.

If this monument craze isn't stopped now the taxpayers should start a Boston tea party, but instead of dumping tea, let's dump the swelledhead renegade commissions and the mealymouthed Congress into the polluted Potomac.

It is easier to replace a Congressman than a good cup of tea.

M. E. JOHNSON.

WASHINGTON.

[From the Evening Star, May 20, 1960]

HARDY PERENNIAL

It's spring again and hence it is not too surprising that the hardy perennial, the so-called freedom wall, is struggling once again to see the light of day. This time, however, something new has been added. President Eisenhower has given his endorsement to a proposal that the Federal Government put up half the cost of the $24 million walled inclosure adjacent to Arlington Cemetery. Originally, sponsors of the controversial project promised that no Federal funds would be asked—that all the money would be collected privately, chiefly in pennies from the Nation's schoolchildren. In view of this we don't see why the taxpayers should put up the money, and we still are opposed to erection of such a huge structure on ground that ought to be reserved for the expansion of Arlington Cemetery. We hope Congress once more refuses to approve erection of this wall on the site proposed.

It is understandable that the President again has informed Congress that he favors the idea of an imposing memorial to the freedoms enjoyed by all Americans. Everybody outside of the Iron Curtain ought to indorse that idea. The Star repeatedly has said it thinks the concept is a good one—but that the Nevius tract near Arlington Cemetery is the wrong place for it. Furthermore, Congress should also consider most carefully the vigorous objections of Arlington County, veterans groups and others who object to the building of the shrine in the location planned.

In any event, Congress now is being presented with an entirely new shrine proposal. Bills previously considered by Congress and one passed by the Senate several years ago specifically barred the use of any Federal funds for the undertaking. In fact, Representative ASPINALL, of Colorado, a leading advocate of the monument, told the House Rules Committee in 1958 that if Congress ever were asked to pay for any part of the memorial he would oppose it himself. We trust that Mr. ASPINALL will cary out this pledge, now that the Government is being asked to pay half the cost, and that Congress will back him up.

[From the Evening Star, May 24, 1960]

DECENT BURIAL ADVISED

Since the so-called freedom wall has become more controversial than ever, Congress ought to inter permanently the revived and revised proposal for the on-again-off-again project. It does not seem reasonable to give serious consideration to the new plan for burdening the taxpayers with half the cost of a $24 million monument at a time when world conditions indicate that more money

may be needed for national defense. The $12 million could be used to far better advantage in protecting our freedoms, rather than commemorating them.

There was reason enough to oppose the plans for the walled enclosure in their original form, for the site proposed would deprive Arlington National Cemetery of land for future expansion. Furthermore, such a large structure would be out of place at the Arlington end of the Mall axis. Now, however, the proposal is more objectionable than ever, in that the original pledge that no Federal funds would be involved has been scrapped by the sponsors.

Representative ASPINALL, of Colorado, who once said he would fight any suggestion that Federal funds be used for the wall, has the chance now to carry out his promise. He is in a strategic position to kill the new proposal, for he is chairman of the House Interior Committee which must pass on any such legislation. We hope the committee will give the measure a decent, permanent burial.

[From the Washington Post, June 4, 1960]

TWELVE MILLION DOLLAR NIT

Harry T. Thompson, the superintendent of National Capital Parks and secretary of the National Monument Commission, says that "the nit picking of a few with a personal ax to grind" won't prevent eventual construction of that monstrous marble "Freedom Shrine" in Arlington County. President Eisenhower "loves this project dearly," he says, as if this should sweep away all opposition.

Well, our ax isn't a personal one, but we intend to go on picking some nits with it (if we may pursue Mr. Thompson's mixed metaphor a bit). One of them is the arrogance of Federal administrators who view local concern as "flea bites." Another is the effrontery of comparing the Freedom Wall with the Lincoln Memorial. But the biggest of the nits is that the sponsors of this monumental nonsense want the Federal Treasury to put up $12 million, or half the cost. Who is the wit of this nit, anyhow?

Mr. Thompson, of all people, ought to be conscious of the Washington area's urgent need for more parks and recreational facilities. If he thinks he can persuade Congress to give $12 million for a useless, ill-conceived and poorly sited wall of stone, why doesn't he turn so formidable a talent to the rescue of the parks program?

Nit or not, $12 million of public funds for a monument has a priority rating somewhere close to zero when Congress will not even continue the Capper-Cramton park program or approve plans for the Chesapeake and Ohio Canal Park. We hope that Arlington County, the American Legion and Amvets will continue to fight this silly project and that the next President will refrain conspicuously from giving it his support.

Think What Is True, Do What Is Right

EXTENSION OF REMARKS

OF

HON. NEAL SMITH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. SMITH of Iowa. Mr. Speaker, we have been discussing the problems we face with Cuba and as a result of the U–2 incident. A number of Members discuss the moral aspects of these problems and we must at all times keep in our minds the necessity of doing what is right based upon the truth. A constituent of mine has sent me a statement on this very subject matter and asked me to put it in the RECORD so others might study it. It is as follows:

If some great power would agree to make me think what is true and do what is right, on condition of being turned into a sort of clock and wound up every morning, I should instantly close with the offer.

Those are the words of Thomas Huxley.

Thus being a sermon by Henry Drummond. The theme intrigues and challenges. Why? Because we all recognize that the good life would be lived by every person thus controlled, even as Jesus lived it.

Let us change the figure of speech and find a workable formula.

If any man tried to make you his rubberstamp you would rebel. You would not copy his lies and wrongs, and thus invite trouble. But you can safely copy God's truths and become right. Thus you avoid trouble.

There is a formula: Make yourself a rubberstamp for God.

Live by that formula and you will be startled. You will discover the truth that will make you free. You will prepare to inherit heaven and earth. You will learn to solve every one of your problems.

You will live by the promises of all true religion.

Believe those promises and improve your life. Recognize the basis on which they rest. Always think what is true, and do what is right.

Sacrifice personal motives to the will of God.

Think of God as a spiritual power seeking expression in our material world through human beings. Be consciously available. Be a willing helper. Never invite confusion by trying to take over and run things.

Give yourself rules to help you be right.

Refuse to commit a wrong act. Do not lie, cheat, steal, slander, or hurt. Never speak in anger. Wage a permanent campaign for absolute honesty. Make every decision as you believe God would make it.

When that displeases man, content yourself with pleasing God.

Purge your conversation and your thinking. Police your conduct. Stop supposing that you must be practical instead of right. Face truth, however disagreeable. Admit that you have deluded yourself.

Undelude yourself. Restore truth wherever you have lost it.

Recapture the exact words of lies by which you deluded yourself. Escape from the curse of believing them. Undistort your logic. Break your bonds. Unshackle your mind. Relieve yourself of affliction.

Share the formula as widely as you can.

Fair Trade

EXTENSION OF REMARKS

OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. MOULDER. Mr. Speaker, on the 9th day of June 1959, after hearing many witnesses, pro and con, the Committee on Interstate and Foreign Commerce, of which I am a member, reported and recommended the enactment of the fair trade bill, H.R. 1253. This bill is still pending in the Rules Committee. Since that time, our able and distinguished committee chairman, the gentleman from Arkansas [Mr. HARRIS], has submitted a comparative print of proposed changes if the Committee on Rules grants a rule for consideration of the fair trade bill.

Mr. Speaker, most of the big publishers of this country are opposed to a fair trade bill. They are wrong because every attack on fair trade legislation I have read assumes that fair trade will reduce competition and drive up consumer prices. Any prudent man who will dig deeply and objectively into the Nation's experience under fair trade and who will study the kind of fair trade legislation that is being proposed in Congress this year may come to a precisely opposite conclusion. In fact fair trade would preserve and protect competition by keeping the independent average retailer alive in his unequal struggle against powerful chains, and in doing this provide a longrun protection for the consumer against local retail monopolies. The following publication in the Cincinnati Enquirer is an excellent editorial in support of fair trade legislation:

THE CASE FOR FAIR TRADE

Few subjects in our modern economic life have been discussed as vehemently—and with less real comprehension of the underlying principle—as fair trade.

The popular concept is that fair trade laws are enacted to keep people from getting bargains, or to prevent healthful competition, or to make the public pay more for manufactured goods than they are worth.

To see what fair trade really means, and how it operates, let's suppose you organize a company. You're going to manufacture electric irons—good electric irons, the best that can be made. You pay for research to obtain the latest features in your product. You buy expensive machinery, hire skilled craftsmen, organize a merchandising and advertising campaign to create a popular demand for your irons.

Your electric iron is not cheap, but you are convinced that the public will pay a fair price for a really good iron.

First, though, you must sell them to appliance dealers throughout the country—unless you intend to operate thousands of retail stores yourself, which would be uneconomical if not impossible.

The think that the appliance dealer wants to know is—can he sell them; or will he get stuck with them?

In your case, it being a good iron and properly promoted, he can be convinced of its salability. But he might be stuck with them in another way. Suppose, after he's purchased a good inventory and sold some to his best customers, a discount house or the like around the corner starts selling them at wholesale?

His best customers will accuse the dealer of having gypped them. And if the retailer tries to meet the wholesale price, he is soon out of business. After all, he is renting his store, paying his help and keeping going on the usual traditional spread between wholesale and retail prices.

This doesn't have to happen too often, or too long, before you and your good iron manufacturing company are caught in a deadly vise. Once your products has gone the round of the discount houses and the special sales, how many retailers are going to stock up on your iron? And when you lose the promotion and merchandising support of the ethical retailers, even the discount houses and special sellers will lose interest in you. Or they'll demand special

price concessions that would make it impossible for you to continue manufacturing a good iron.

Fair trade, in essence, requires all dealers in your product to observe the suggested price. It is a protection for the independent retailer as well as the manufacturer of trade name wares.

It does not end competition. Non-fair-traded products are subject to any price manipulation. And there always is the compelling factor of rivalry between manufacturers in the various fields.

What is so heinous about permitting a man—you, in the electric iron business—to suggest a retail price that will be adequate to keep you and your retailers in business?

The issue is being threshed out in Congress and the State legislatures. The public, we think, would do well to look at the broad principle involved. The bargains available when fair trade breaks down may be very illusory.

Mr. Speaker, I supported and voted for the fair trade bill in committee. It is a good bill for the protection of our independent merchants and American way of life. I hope the Committee on Rules will grant a rule on our bill and give Members of Congress the opportunity to pass on this important legislation.

Importation of Surplus Property

EXTENSION OF REMARKS

OF

HON. JOHN M. SLACK, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. SLACK. Mr. Speaker, I wish to go on record in vigorous opposition to the measure before the House, H.R. 9996, which is titled as "A bill to prescribe procedures to insure that foreign excess property which is disposed of overseas will not be imported into the United States to the injury of the economy of this country."

A great deal of confusion seems to have arisen about the objectives of this proposal. The proponents contend that the bill will simply devise a framework within which the administrators in the Department of Commerce may issue sound and equitable regulations governing the importation of foreign surplus property. By registering opposition, I do not imply that the Committee on Government Operations merits criticism for suggesting this means to that particular end. The fact is, however, that any rearrangement of existing regulations, in conformance with a new statute adopted in this body, must inevitably lead to the importation from abroad of more Government-owned surplus property to compete with goods produced for our domestic market, and I am unalterably opposed to that end result.

This fact is beyond question by anyone who has read the committee report on H.R. 9996. The report states that the Department of Commerce has maintained tight controls over the importation of excess property, and as a result the importers of such property have complained in consquence that the Department "had become so strict in its application of the law and so few authorizations were issued that a virtual moratorium was being placed on the importation of foreign excess property." Now, I submit, if a virtual moratorium exists today, then the passage of this bill can have only one effect—the opening of some new channel permitting the entry of such property in volume.

All of us, I am sure, favor orderly and equitable administrative processes in the Federal departments, but we must think of this issue within the framework of contemporary economics. Most of this surplus property consists of manufactured goods, produced in this country and shipped overseas. If it can be bought from the Federal Government, shipped back, and sold at a profit, then it has considerable utility. But, if so, it has not less than that amount of utility in less developed countries. Let it be channeled to those areas of the world whose friendship and support we seek.

This is not the time to return vast quantities of surplus property as a threat to domestic market stability. Our first responsibility is to the maintenance and advancement of our domestic production and employment structure. In that connection, we read in the daily press that there are an estimated 130,000 steelworkers idle, and the black word "recession" begins to crop up again in the writings of our economists.

As to the importers—no strong case has been made in behalf of their claims. It has not been established that they merit any special dispensation to enable them to compete with the established dealers and jobbers of this country who bear much of the burden of taxation and supply the bedrock on which so many American payrolls are based.

In view of these considerations, I am opposed to H.R. 9996 or any similar efforts to legitimatize increased imports of foreign excess property. I am confident that my opposition will find favor with an overwhelming majority of my constituents and equally confident that rejection of this bill will be approved by the great majority of all Americans.

Prayer for Captive Nations

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. BOW. Mr. Speaker, Captive Nations Week, 1960, falls between the national conventions of our two political parties, and should serve to underscore for all of us how fortunate we are to live in a nation where men govern themselves.

During this week, July 17–23, I hope that all of us will turn our hearts and our minds to the millions who have been denied the right of self-government.

The captive nations committee, under the chairmanship of Dr. Lev E. Dobriansky, has published "Prayers for Captive Nations," which I would commend to all Americans. I include the prayers as part of my remarks:

PRAYERS FOR CAPTIVE NATIONS

PREPARED, MAY 1960 BY GESHE WANGYAL, GRADUATE OF BUDDHIST SEMINARY, TIBET

O, Lord, The Blessed One, through Thy blessings and Thy unique compassions, succor all the human beings who are suffering under the oppression of the tyrannic and brutal acts of imperialist totalitarianism.

May they have the opportunity to enjoy their Freedom and Liberty, for they were equally created: may we, with courage, and strength, always work to magnify this opportunity.

PREPARED, MAY 1960 BY DR. FREDERICK BROWN HARRIS, CHAPLAIN, U.S. SENATE

Our Father God, Author of liberty, grateful for our own freedom we lift our prayer for the millions of God fearing people—Thy children, who look up to Thee crying "how long, O Lord, how long," even as they are bound with the chords of a temporary tyranny.

In this desperate hour when the world's hope for a brighter tomorrow is so largely committed to our frail hands, strengthen us in Thy Name to challenge all evil forces which deal in fetters of the body and mind and which seek to degrade human personality.

Without ceasing we would remember the captive nations in their cruel bondage—proud peoples with their precious traditions stamped into the dust while alien Caesars exercise their ruthless sway over them. Above all the tumult and shouting of these volcanic days we hear the summons of Thy voice as in centuries past, "Let my people go."

May we play our full part in the restoration of human rights everywhere. May no denial of human freedom by those who would crush the liberties of others contaminate our souls with the blight of expediency. Strengthen us with Thy might that the arrogant boasts of entrenched tyranny may but put steel into our purpose to break their grip upon the governments and lives they now enslave.

We thank Thee for the inner shrine in human hearts which no dictator can desecrate, and where blaze the candles of faith which no iron fists can snuff out.

Give us to see that to acquiesce in the crucifixion of freedom anywhere is ultimately to nail our own liberty on the same cross, knowing that with what measure we mete, it shall be measured to us again.

We ask it in the Name of the Redeemer who came to proclaim liberty to the captives and deliverance to those who are bound. Amen.

PREPARED MAY 1960 BY RT. REV. MSGR. JOHN B. ROEDER, VICE CHANCELLOR, ARCHDIOCESE OF WASHINGTON, D.C.

O Almighty Creator, who hast endowed every human being with the power of free choice, hear the cries of Thy children from whom this precious birthright has been stolen. In this day when whole nations groan under the yoke of godless oppression, let those countless martyrs who have willingly shed their blood for Thee give testimony of their desire for the blessings of liberty.

O God of our Fathers, once Thy chosen people begged Thee for deliverance from captivity in the land of Egypt, and Thou didst take pity on them. Show forth Thy power today and lead from bondage the millions of Thy people enslaved by men who revile Thy very name.

O God of wisdom, whose beloved Son has said, "You shall know the truth, and the truth shall make you free," let the light of Thy divine truth penetrate the hearts of those who hate and persecute Thy people. Only Thy truth can bring that peace which

the human race has ever sought—not merely the absence of armed conflict, but peace based on justice and freedom for every human creature.

O God of mercy, regard not our unworthiness, for we do not pray for ourselves—but for the unknown millions who are suffering in silence for love of Thee. For their sake, O Lord, we earnestly beg Thee to hasten the coming of Thy reign of peace. Amen.

PREPARED MAY 1960 BY DR. NORMAN GERSTENFELD, RABBI, WASHINGTON, D.C., CONGREGATION

O Thou who art the peace of the world: Save our generation from the terror that cometh by night and the arrow that flieth by day; from the pestilence that walketh in darkness and its destruction that wasteth at noonday:

O Thou who hast led us across the Red Seas and the wilderness of the yesteryears in a vision of a divine covenant; quicken that vision in our minds so that with renewed faith we shall be its living witness and inspire freemen toward a rebirth of freedom to face the promise of a new age:

O Thou who has been our refuge and our fortress through the ages, our altar of devotion, light our lives with Thy sacred fire and our hearts with Thy flame so that with strength of spirit and courage of purpose we will strive toward a world bringing Thy light and Thy peace unto the children of men.

Bless Thou the men who raise the standards of Thy law in our own time; the men who are not neutral in time of evil nor turn their face when the wicked would barter the birthright of freedom for a mess of red pottage; the men who would rise to new sacrifice so that the captives will be freed and the age of a free church in a free state shall come for all Thy children;

Guide us and guard us and lead us forward so that through our labors in this moment of history we shall be the witness of Thy covenant and the time will soon come when the world shall be filled with the knowledge of a righteous God even as the waters cover the seas.

Catholics on the Fourth of July

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of an address which I delivered recently at an Independence Day celebration of the Long Island general assembly of the Knights of Columbus at Prospect Park, Brooklyn, N.Y.:

ADDRESS BY CONGRESSMAN VICTOR L. ANFUSO, INDEPENDENCE DAY CELEBRATION, LONG ISLAND GENERAL ASSEMBLY, KNIGHTS OF COLUMBUS, PROSPECT PARK, BROOKLYN, N.Y.

Mr. Chairman, reverend clergy, my fellow members of the Knights of Columbus, ladies and gentlemen, it is indeed a real pleasure for me to be here today and to participate in this celebration. At a time when our Nation is on the defensive in many areas of the world, it is good to see proud and patriotic citizens get together on this occasion to celebrate our Nation's Independence Day.

May I first express my appreciation to the Knights of Columbus and to its capable and patriotic leaders for sponsoring this annual celebration. I am proud to be associated with such an organization. I wish many others would follow your fine example on this day.

From its earliest beginnings, America has been a land of immigrants of various national origins and religious faiths. All of us take pride in the fact that these people brought with them to this country the rich heritage of their national culture and religious beliefs, along with their passionate love for freedom and human dignity. They have helped build America, physically and spiritually, to its present greatness.

For Catholics, this Independence Day should be an occasion for joy and celebration. Up until the time of the Revolution of 1776, Catholics were prohibited from voting and holding office in every one of the Thirteen Colonies. They were forbidden to worship publicly, except in Pennsylvania. They were often the target of the most insulting epithets hurled in their direction. And yet, when the struggle for America's independence began, they were not only loyal to the cause of freedom, but were among the first to rally almost as a unit to the patriotic cause.

The names of many Catholics associated with that struggle are too numerous to mention at this time. Let me but add that, according to authentic records, about 38 percent of the men in Washington's armies were of the Catholic faith. Furthermore, Catholic France came to the aid of the patriots by sending money, supplies and arms, as well as a substantial part of her military and naval forces under the leadership of LaFayette, Rochambeau, and De Grasse. From Catholic Poland came two great military leaders: Pulaski and Kosciusko, while from Catholic Spain came money and arms. Without all this aid, victory would have been impossible and freedom would have been delayed in this country perhaps for many decades.

Let us remember these facts on this great day. Let us recall the role played by Catholics in helping to win our independence, in founding our Nation, and in defending its unity.

George Washington was aware of this aid throughout the Revolution. In fact, in years later as President Washington, he wrote to American Catholics:

"I presume that your fellow citizens of all denominations will not forget the patriotic part which you took in the accomplishment of our Revolution and the establishment of our Government, or the important assistance which they received from a Nation in which the Roman Catholic faith is professed."

One of the cherished historic relics of those historic days is the Liberty Bell, which can still be seen in Independence Hall in Philadelphia. It was that bell that proclaimed the Declaration of Independence on July 4, 1776—just 184 years ago today. On that bell is inscribed a very famous passage from the Holy Scriptures, which is still very clear and readable today: "Proclaim liberty throughout all the land unto all the inhabitants thereof."

That inscription shows the close relationship that existed in those days between freedom and moral responsibility, and the concern they had then for religious duty and public virtue. They understood that God gave them their freedom, and they cherished this freedom.

There is no incompatibility between the teachings of the Catholic Church and the concepts of liberty and responsibility as expressed in the Declaration of Independence, or the Constitution of the United States. In our catechism, which is used as the basis for religious instruction of Catholic children in this country, we find this statement:

"A citizen must love his country, be sincerely interested in its welfare, and respect and obey its lawful authority."

In this way, the church expresses its views on the obligations of citizenship, the concern for the country's welfare, and the citizen's obedience of lawful authority which comes from God—the source of all authority.

As we look upon American today, we see that its face is that of a land which enjoys vast material blessings, a land of plenty, of tremendous agricultural and industrial productivity, of great scientific achievements. It is a land which has reached the greatest peak not only in economic progress, but also in political liberty and religious freedom. In the long and turbulent history of mankind there has been no equal to it.

But the face of America, as we know it today, was made possible only by its people, by its own human resources, by the labor they put into it, by their sweat, toil, and tears, by their confidence in themselves—but, most important of all, by their confidence in America and in its future. We and our children do not want the face of America marred or overshadowed by any other concepts or foreign ideologies.

There is a very interesting story told about Leonardo da Vinci, the famous Italian painter, sculptor, and scientist of the 15th and early 16th century. When Da Vinci decided to paint the "Last Supper," he threw all his energies into the work. He labored day and night. He studied the pages of the New Testament where the sacramental feast is described, in order to fully grasp and reproduce the memorable scene. At last his work was finished and Da Vinci invited a few close friends to see it. They gazed attentively at the painting, and then one of them spoke up with great admiration of a golden chalice shown on the table where the Lord and his disciples sat.

"The shape, the color, and the size of this chalice are perfect," he said. "It is the most beautiful object in the picture."

When Leonardo da Vinci heard what he said, he took a brush, dipped it in black paint, and smeared it over the whole canvas. He then said to his astonished friend: "If what you tell me is true, that the chalice is the most beautiful object, then my painting it a failure. I meant my Master's face to be the chief and most beautiful object.

In a way, each of us is painting a picture of life, sometimes good and sometimes not so good. In painting this picture of our life, some of us will often make the trifles, the petty things, the most conspicuous objects on the canvas. The great majority of the people, however, are able to distinguish between the trifles and the important things in life.

If our country is richer and stronger today, if the face of America is that of a land enjoying many blessings, it is due in great measure to the efforts and the hard labor on the part of all these people who preceded us. It is due also to the infusion of their ideals, their culture, and their religious traditions. All of these have been blended with American democratic life, to give it greater substance, harmony, and unity of purpose.

America owes a great debt of gratitude to these religious groups, who have joined their destinies with those of America in order to make it truly a land of freedom and a leader among nations. I ask you, my friends, where but in a land such as ours could people of various national origins and religious beliefs get together at a public meeting like this?

The Scriptures tell us that "as a man thinketh in his heart, so is he." This Biblical admonition reminds us that we cannot think in terms of failure, and then hope to succeed; we cannot think in terms of weakness, and hope to be strong—any more than we can think in terms of doubt, and then have faith. We must think in terms of faith in God, faith in our fellow men, and faith in America. We must think in terms of a strong America, an America that has suc-

ceeded in the past and will succeed also in the future.

This is a time of responsibility which finds us at the crossroads of human affairs—where one road leads to higher destiny, the other to horrible destruction. This is also an heroic period in the annals of human history which requires heroic efforts, just as July 4, 1776, was in the early days of our Republic. We have the opportunity to help lift the impoverished and undernourished nations to a better life. But, in addition to the great hunger for food and sustenance, there is an even greater hunger in the world today for freedom and equality.

Here, in the United States, we fought a revolution to attain freedom and independence. Yet, we cannot understand the surge for freedom in other nations. We call it Communist-inspired. We are wrong. It may be encouraged by the Communists, but the inspiration and surge for freedom and independence exists in all peoples—whether black, yellow, or white. When we understand this, we will have these peoples as our friends and prevent the influence of communism—and only then.

Let the world learn from the Catholic faith because it has been this faith, more than anything else, which has thwarted the efforts of Communist leaders to gain world domination.

May God give us the strength of faith to carry on our crusade for peace and religious freedom throughout the world.

Appreciation of J. Edgar Hoover and Federal Bureau of Investigation

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. PELLY. Mr. Speaker, the Washington Association of Chiefs of Police meeting in their annual conference at Chelan, Wash., June 9, 10, and 11, 1960, passed a resolution which expresses the appreciation that law enforcement officials of my State feel for the help they get from the Federal Bureau of Investigation.

Members of Congress recognize, of course, that the Director of the FBI, J. Edgar Hoover, and the members of his fine organization, have done an excellent job in training professional law enforcement career officials through their courses. This has not only served to upgrade the local career men but also has been an important factor in upgrading the work of combating crime.

The following resolution expresses the sentiment of Washington State's chiefs of police:

Whereas the Washington Association of Chiefs of Police are assembled in conference in Chelan, Wash.; and

Whereas members of the Washington Association of Chiefs of Police are most appreciative to Mr. J. Edgar Hoover, of the Federal Bureau of Investigation, for the assistance and all the facilities which have been most generously provided by the Federal Bureau of Investigation, the National Police Academy, the Identification Bureau, the Crime Laboratory, and including the outstanding leadership and effort which has made police training in the State of Washington a most successful program: Therefore be it

Resolved, That this association express in writing their appreciation to Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation and Mr. J. Earl Milnes, special agent in charge by forwarding to them a copy of this resolution.

Charles A. McCarthy

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. TEAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Sunday, June 12, 1960, edition of the Cincinnati Enquirer relative to Mr. Charles McCarthy, national commander of the Veterans of World War I, Inc. Commander McCarthy and I have enjoyed a friendly and understanding relationship with respect to the objectives of his organization. He is a devoted individual and human in every respect. I am glad to be in a position to have inserted in the RECORD this short biographical sketch of him.

THE CONSTITUTION IS A PASSION WITH HIM—CHARLES A. MCCARTHY, EX-MARINE, RETIRED POSTAL WORKER AND VETERANS LEADER, IS AGAINST ANY WAVERING FROM THE ORIGINAL

(By James E. Powers)

Some would say he's a fanatic, but to Charles A. McCarthy his passion for the Constitution of the United States is a natural love that should be shared by many more Americans.

It's been a long romance, starting with an awakened interest in a civics class at Fayetteville, Ohio, High School around 1910. But the real clincher came through an understanding, friendly officer in the ordinarily rigid caste system of the Marine Corps.

Commander McCarthy—he's national chief of the Veterans of World War I of the U.S.A., Inc.—doesn't remember many names from that period of his life but that of Lt. Loyld Williams shines like a beacon.

"He was almost a fanatic on the Constitution."

Their association began one day in 1916 in a tent on Santo Domingo where the Marines were calming one of the many uprisings. One of the men drew a horselaugh from his buddies when he told the lieutenant during a discussion of something the marine had done that he had "his constitutional rights." Lieutenant Williams quaffed the ribbing and said, "That's right, son, you have."

The officer asked if anyone could recite the preamble. None but Private McCarthy could. With this beginning he came to know Lieutenant Williams "as well as a buck private could know any officer" and from him broadened his knowledge and deepened his interest in the Constitution.

Mr. McCarthy grew up outside Fayetteville where his father ran a bicycle shop which he later converted to automobile repair—one of, if not the first garage in southwestern Ohio. One of seven children, the younger McCarthy was born in 1894. After high school he attended Xavier for a spell before joining the Marines in 1915.

His service ended in 1920—after surviving a shipwreck off Cuba and doing World War I patrol duty abroad the U.S.S. *Arkansas*. He was sent to Cincinnati to wind up his tour as a recruiter. It was here also that he became acquainted with another line of McCarthys while on a furlough and married one named Sue.

Sergeant McCarthy was not very enthusiastic about recruiting nor very effective. "I just didn't have the heart to ship them to the marines." He knew from experience what they would be getting into.

"I shudder to think how many guys I cost the Marine Corps. * * * Young boys not out of high school—nice, husky kids—would come to me and I'd tell them to go back and finish high school, then give the marines a try if they wanted to."

He landed a civilian job with the railway mail service, rising from clerk to supervisor ("glorified clerk") in the 37 years that ended with his retirement in 1957.

In the meantime, he became quite an expert on the U.S. Constitution and constitutional government. Attendance at civic meetings where the topic was government led to opportunities to present his views and these appearances in turn led to invitations to appear before various and sundry groups.

Also in the meantime, he and his wife were busy with the tribulations of bringing up a family of 10 children—7 boys and 3 girls. All seven boys have done their turn in military service, five of them in the Marine Corps. The "baby," Barry (Butch) McCarthy, is currently a marine.

Mr. McCarthy has the bushy eyebrows and bulldog appearance of John L. Lewis, but his warmth and eagerness to please soon set you at ease—he is obviously a man with a mission seeking converts.

His missionary zeal for the Constitution reached its highest pitch after 1955 when he addressed a group in Columbus which called itself the Constitution Club. They and he were of kindred spirits. Mr. McCarthy convinced them that their purpose could be served only by becoming nationwide in scope. This they affirmed and it was only natural that he should be chosen the president of the proposed national movement.

He made progress until a meeting in Washington some time ago at which leaders of what was to become known as the Constitution Party tried to divert the movement from its nonpartisan approach. Though the group stayed intact, it is obvious that its chances of success were dimmed.

Always active in veterans groups, Mr. McCarthy last year was chosen national commander of Veterans of World War I, a group that came into being in 1953 primarily because the older vets had been rooted out of control of the American Legion and Veterans of Foreign Wars by the younger members from the Korean war and World War II.

The job, with headquarters in Washington, is full time and keeps him on the go, but he has by no means neglected his interest in the Constitution, carrying his message everywhere he appears.

Speaking of himself, Mr. McCarthy said, "I don't think I am a fanatic, but I admit I'm almost 'screwy' on the subject."

For Thompson

EXTENSION OF REMARKS
OF
HON. JAMES H. MORRISON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 1, 1960

Mr. MORRISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the July 25, 1956, edition of the Lake Charles American Press, Lake Charles, La., which

was called to my attention a few days ago. Even though the editorial was written 4 years ago when my good friend and colleague, the Hon. T. A. THOMPSON, was a candidate for reelection to his third term in the Congress, I feel the statements about the job Congressman THOMPSON has done in representing the Seventh District of Louisiana are as true today as they were in 1956. He has 4 addition years of working with the Members of this body and increased seniority on the Public Works, and Merchant Marine and Fisheries Committees; he has greater experience in assisting his constituents in their problems and a record of many more accomplishments for the Seventh District and the State of Louisiana since 1956. I was so impressed by this statement regarding Congressman THOMPSON'S qualifications for reelection that I wish to bring it to the attention of the membership of the Congress. The editorial follows:

FOR THOMPSON

On numerous occasions during recent weeks we have been asked our opinion in regard to the Seventh District congressional race.

This is written in answer to those questions. It is not an attempt to dictate to our readers, but merely a statement of our stand and why we have taken it.

We believe the incumbent, United States Representative T. A. THOMPSON, should be returned to Congress.

While he was not our choice when he first sought the office, we believe T. A. THOMPSON has done a fine job representing the Seventh District in Washington during the past 4 years.

We also think his voting record on matters affecting the Nation and the world has been, by and large, a good record. He has received a great deal of praise and commendation from his fellow legislators, and it is obvious that his conduct in the Nation's Capital has reflected considerable credit on his home district.

There is no doubt that T. A. has been a workhorse on the job. That line about the sun never setting on unanswered mail on his desk is almost literally true. We have talked to hundreds of his constituents, including farmers, laborers, businessmen, fishermen, oilmen and others. The story is always the same. When they have contacted the Congressman on any problem, no matter how small, the response has been immediate. And whatever work had to be done in the matter was done promptly.

Further, we are convinced that Representative THOMPSON has worked for all of the people in his district—and not just those who supported him in one or both of his previous campaigns. We have seen him in Washington greeting various delegations and individuals from the Seventh District, and if there was a difference in the cooperation he gave those who had supported his opponents and those who had supported him, it was not evident.

It takes a big man to do that.

Most of his record is well known. It varies from wholehearted support of such projects as obtaining permanency for the Lake Charles Air Force Base to being the prime mover in obtaining a new postoffice and Federal court building for this city. It has affected individuals in almost every known walk of life in the district. It is not by accident that Representative THOMPSON has received endorsements from rice farmers, oilmen, businessmen, labor leaders, contractors, professional men, cattlemen, shippers, fishermen and newspapermen.

The simple fact is that he has worked hard for the people of this district and done a good job for them.

Another point which influenced our decision is that Representative THOMPSON now has 4 years' seniority on a number of major committees in Congress—and it is no secret that the critical stage for any legislation lies in the committee room. Were someone else to replace the incumbent in Washington, this district would lose that vital committee seniority—as well as the 4 years of experience which goes with it.

Now to look at the other side of the coin:

With all due respect to Representative THOMPSON'S three opponents, we see nothing in the qualifications, experience, or political record of any one of them to indicate that he would do a better job than the incumbent has done. In fact, considering all things, including their lack of experience, we find good reason to doubt that any could do as well.

Under the circumstances, it would seem foolish to exchange an experienced Congressman of proven ability for an unknown quantity.

There is one thing which the other three have and Representative THOMPSON does not have—the backing and support of Gov. Earl K. Long. Even Long, however, has said he does not care which one of the three wins. He just wants to see THOMPSON defeated.

We believe the people of the Seventh Congressional District have more at stake in this election than the mere settling of the Governor's personal spats. But there is a point in that situation which is deserving of attention:

T. A. THOMPSON was first elected to Congress over the opposition of the anti-Long forces. If he is reelected this time over the opposition of Long himself, he will be in the position to be the most independent Congressman the Seventh District has ever had.

That strikes us as a pretty healthy thing in a democracy.

"The Value of Life"—An Address by the Reverend Theodore M. Hesburgh, C.S.C., President of the University of Notre Dame, at the University of Rhode Island, June 13, 1960

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. BRADEMAS. Mr. Speaker, I am pleased to include in the CONGRESSIONAL RECORD the text of an excellent address delivered by the distinguished president of the University of Notre Dame, the Reverend Theodore M. Hesburgh, C.S.C., at the commencement exercises at the University of Rhode Island, on June 13, 1960.

Father Hesburgh's address follows:

THE VALUE OF LIFE

One of the most popular endeavors today is the quest for goals, personal, national, international, and, even to some extent, interplanetary. As indoor sports go, this is a difficult one. In an affluent society, advertising tries to simplify, or should I say, vulgarize the quest for personal goals. The political parties are in the usual frenzied quadrennial quest for national goals: to be all things to all men, at least to those of voting age. The current most pressing international goal seems to be survival in its most elemental sense. This gives urgency to the astronautical quest to get off the earth while it is still here and unradioactive.

For all of you who graduate today, some of this goal searching may seem a little unreal. Getting yourself phased into this cosmic picture may seem unnecessary, or at least unprofitable with so many more immediate concerns facing you. Allow me to nudge you into this broader framework with a reasonably serious thought.

Did you ever stop to think that a hundred years ago you were nothing, if not a thought in the infinite mind of God of someone who could be and would be some day. A hundred years hence you will, I believe, still be someone, somewhere, although for all that, only a statistic or a memory here on earth. Between these two focal points you live, well or badly. You affect the world and some few or many of the people in it, well or badly. You spend your days, these future days left to you, doing significant or trivial things. And when it is all summed up, one might say, as on television, this is your life.

All of life is a kind of looking ahead, almost always to greener pastures, more exciting days, the fulfillment of dreams, security, and I suppose the satisfaction of having lived well. A larger part of our lifelong hope assumes that all of this will come true, if not inevitably, at least in due time. All of you who graduate today have earned your share of hopes. I can say in all sincerity that I hope your best hopes come true in the days ahead. But I must say something else: that nothing really worthwhile in life comes true automatically, and very little of real value comes true by chance. All of our lives are just about what we, with the grace of God, make them, and what we make of our lives reflects the goals or the values that we cherish and seek and establish throughout our days.

NEED FOR CONSCIOUS GOALS

The important consideration at this juncture of your lives is, I believe, to have some conscious goals that will govern your days ahead. That they be conscious goals is the least that might be asked of your education. Woodrow Wilson once wrote that "the educated man is to be discovered by his point of view, by the temper of his mind, by his attitude toward life and his fair way of thinking. He can see; he can discriminate; he can combine ideas and see where they lead; he has insight and comprehension. His mind is a practiced instrument of appreciation. He has the knowledge of the world which no one can have who knows only his own world or only his own task" (Woodrow Wilson on Education, Harper & Bros., 1958).

What is the alternative to this picture of a conscious, intelligent, discriminating view of your life with all its opportunities, challenges, and possibilities? The alternative is an uneducated, unconscious, passive point of view that is at the mercy of every wind of passing fancy—the ship without a rudder, the unquestioning, uncommitted person who drifts through life.

A WORLD OF INEQUITIES

On other days, this latter attitude might have survived more easily in a world less full of tensions, less competitive, more stable, and less changing. But today we face a situation that demands education and the fruits of the educated point of view, not just to get along, but to survive. In easier days, you could be born a peasant, live a peasant life, and die a peasant death. We have the picture of the Incas who were born in an unchanging stratified society on the high plains of the Andes. Or of the Africans who for centuries were born, lived, and died within

the radius of a few miles of jungle. We even have periods of slower social change within the history of our own Western culture: A Renaissance that took a few centuries, an industrial revolution that took a few more. But now within a lifetime there can be witnessed the coming of electricity, automobiles, airplanes, telephones, radio, television, electronics, atomic power, fusion and fission, jets and rockets, satellites and deep space probes. There can also be witnessed a world whose outermost parts now are only split seconds apart by modern communicative devices, and yet a world where millions of people refuse to communicate with each other, and even threaten daily to destroy each other. And you live in a world of great inequity which will give rise to even greater tensions. Ten percent of the world's population living on the North American Continent have 75 percent of the world's income. And if you want to change the figures around 75 percent of the world's population receives no more than 10 percent of the world's income. Many of these people work longer and harder than we do. The 20 largest underdeveloped countries produce over half of the free world's industrial raw materials; but they themselves consume less than 5 percent of what they produce. Do not think of this as mere money or wealth, but of the things that wealth makes possible: food, clothing, shelter, medicine, education—or in a broader context—the reasonable material situation in which basic human dignity can be a reality and not a tragic fiction or an unfulfilled dream. Recall that half of the world's population goes to bed hungry every night; that half of the world's children never see milk or medicine, that half of the people on the South American Continent have never slept in a bed.

This then is the world that the educated person, the person with comprehension and insight must face: a world of explosive technological change, a world of gross, even inhuman inequity and rising tensions, a world, that to compound the complications, has had more net increase of population in the last 50 years than there were people existing on earth in the 18th century, a world that has used more natural resources in the past 30 years than in the whole history of the world before that.

Do you wonder then that I say to you that the least one might expect of your years of education is that you face the remaining years of your life in such a world with conscious goals that will give a dimension of significance, meaning, and depth to your life. When I say goals, you might substitute other equally valid words: ideals, convictions, or values. I care not what words you choose, but I am sincerely concerned that you consciously and conscientiously subscribe to some deepset and intelligent convictions regarding direction of your life in the years to come.

MATERIAL GOALS UNSATISFACTORY

While it may sound selfish at first glance, I think you might begin by asking yourself what you want out of life. At least this defines a goal. There are no dearth of goals presented to you today. Most of the visible goals, however, are hardly worth more than a passing glance, if what Woodrow Wilson wrote of the educated man has any validity in your life. Take a quick look at the goals that emanate from Madison Avenue—they are pleasant to the touch, the taste, the eye—but by any ultimate standard they lack substance. You would not be alone in our country if you made them your total life goal: The ranch house, the sleek sports car, the Ivy look, the sophisticated vacation spots—in a word, the easy, comfortable life of security. Other nations have gone this way before us, and in Arnold Toynbee's sense, gone is the word. They exist no longer.

Am I saying here that there is something wrong in comfort, pleasure, sense satisfaction, material security, ease? No, nothing wrong per se, by themselves, as the philosophers say, but something terribly wrong if this Madison Avenue picture of life becomes your total goal in the days ahead. If you think that these things alone can satisfy you and totally motivate your days tomorrow, then you cannot truly discriminate, you do not really see where this motivation is leading you, your knowledge of life and of the human situation today is naive, and your insight is tantamount to blindness. Let me add something else which is not really original: You can, in fact, choose material goals as the end-all of life, and you can achieve them in small or large measure, but you will not be really happy, for man does not, indeed cannot, live by bread alone. We can ignore the spiritual dimension of our lives, but we ignore this at our own risk, and at the price of bartering the best for that which may be good, but infinitely less important and even less satisfying in the total picture of a human life.

A HIGHER WAY OF LIFE

At this point, I may most aptly refer you to the enigmatic and paradoxical words of Christ, our Lord: "A man must lose his life to gain it," or again, "It is better to give than to receive." May I suggest that the spiritual goals of life fall within these categories: They involve giving rather than receiving, they seem often to mean losing one's life, whereas in fact they fill a man with happiness and satisfaction beyond the capacity of any food or drink or material pleasure. Do you think that Albert Sweitzer is unhappy at Lambarene, in French Equatorial Africa, because he might have been a professor at a great German university? Do you think that Dr. Thomas Dooley is unhappy caring for the abandoned sick in Laos because he might have had a lucrative practice on Park Avenue? Do you think that your professors are unhappy here at the university because they might be making more money in industry? No, these people, and all people who have dedicated themselves to a higher cause have in a true sense gained their lives by losing them, have found more joy in giving than in receiving, have lifted themselves to the height of that to which they have devoted themselves.

All of you cannot give in equal measure, but wherever you go, whatever you do, there are unchanging facts of human nature that will inevitably bear upon the meaning, significance, and importance of your lives in the days that lie ahead. To repeat what Woodrow Wilson said of the educated man: "He can see, he can discriminate, he can combine ideas and see where they lead; he has insight and comprehension."

Here then is your basic problem: the world is changing rapidly and will change even more explosively within your lifetime. The tensions will heighten throughout the world and, especially, in our country, endowed as it is with the mantle of world leadership at this time. What insight and comprehension will your life reflect—what impact will it have—what goals will consciously give your life meaning and direction in the days to come?

I need not say that my vote is for giving, for dedication, for ideals, values, and goals that transcend the quest for your own exclusive comfort, pleasure and personal security. What are some of the values and ideals that the present condition of man, the state of the world, and the whole historical moment seem to demand of educated people?

I would first commend to you the values that characterize the academic community in which you have been living: the high and continuing quest for truth, on every level, by every legitimate means. Commitment to this value has given us our universities, indeed our whole educational system. Here is the basic value of the scholars who have enlightened the minds of men and led them in the paths of wisdom. Here is the continual struggle of truth against error, the war against the blind forces of ignorance, prejudice, passion. No one of us is fully educated until we die. Only by lifelong commitment to truth, as we can daily learn truth, embrace it, and love it, do we rise above the vast army of those who feel instead of think, the great mass of those who accept all of their opinions and ideas, tailormade from the columnists, commentators, and even from the funny papers and cartoonists, unthinkingly, uncritically and blindly. Lifelong commitment to the pursuit of truth—who can hope to live a reasonable life in any measure without this value of the mind and of things intellectual as the very base of living.

Then there is the love of beauty in all its truest forms: commitment to this value has given us all the artists who have brightened our days with music, our dwellings with sculptury and painting, who have illumined our human situation with poetry, drama, and literature. The world is full of man-made ugliness and only a sense of discrimination can recognize the multiform beauty, God-made and man-made, that like sunlight brings bright flowers to blossom in the swamps and deserts of this world. The truest instinct of this value is to shun habitually that which cheapens human life, human love, and the rich tapestry of a world that mirror's God's perfection.

COMMITMENT TO MORAL VALUES

Then there are the great moral values that badly need commitment today: the passion for justice, for example, that engenders respect for law and order, basic human rights, all of the blessings of civilization that are made possible by intelligent freedom under the law, by personal integrity of life. Utter commitment to this value has given us our great lawyers, jurists, legislators—those who have given our world a dimension of order and rule that reflects the eternal law of God by way of natural law, divine and human ordinance. There are many today who want rights exclusively for themselves, but only obligations and inhuman servitude for others. There are those who want to be a law to themselves, in whose lives justice to others and respect for basic human rights are nothing but a mockery or a special prerogative of those who happen to have been born with a white skin. Passion for justice will or will not be a value in your life. If it is, it will enable you and others, if it is not, injustice will degrade other and you, too.

I cannot refrain at this point from emphasizing that you graduates of the University of Rhode Island have a special contribution to make—because of the founder of this State and the tradition he first instilled here. Roger Williams was not popular in New England. He was in fact expelled from the center of it. Because of him and what he made of this little Commonwealth, his place of exile, this State was for more than 200 years called Rogues Island and the State of Confusion. But America owes much to him and to your State, much that it could well ponder and practice today in our most serious present domestic crisis of civil rights.

Listen to what a great scholar has said of Roger Williams:

He was "certainly the most generous, most openminded, most lovable of the Puritan emigrants—the truest Christian among many who sincerely desired to be Christian. He believed in men and in their native justice, and he spent his life freely in the cause of humanity. Neither race nor creed sundered him from his fellows; the Indian was his brother equally with the Englishman. He was a leveler because he was convinced that

society with its caste institutions dealt unjustly with the common man; he was a Democrat because he believed that the end and object of the political state was the common well-being; he was an iconoclast because he was convinced that the time had come when a new social order must be erected on the decay of the old" (V. L. Parrington, "Main Currents of American Thought," vol. I, pp. 74–75).

We are still fighting that battle, and none of you can disengage yourselves from taking a stand on this national blight that makes one tenth of the American people second class citizens, without truly equal opportunity in voting, education, housing, employment, or even in the administration of justice. We have had enough of compromise, of gentlemen's agreements, restrictive covenants of the myth of white superiority, of white citizens' councils. Roger Williams said: "I have not hid within my breast my soul's belief." In a world whose uncommitted peoples, one-third of all humanity, are almost entirely colored, let us who believe in freedom and justice for all not hide that belief within our breasts or deny it by our practices here at home. The cost of following Roger Williams' lead today is not exile, just courage. The whole world looks anxiously to America and expects a passion for justice that will make the promise of our Constitution and Bill of Rights come true for all, here and elsewhere. This much we can say: Without a burning commitment to justice on the part of every American, in every section of America and in every walk of life, the American dream will not come true tomorrow or any day thereafter.

NEED FOR DEDICATION

I have thus far spoken of some personal values that should characterize the life of the educated person: the quest for truth, the love of beauty, the passion for justice. We might now pass from these values that give deeper meaning to your personal life to other social values that somehow enhance the quality and style of our life as a nation, while also giving your own life a richer dimension of significance.

Something that is of dire need in the world today is a capacity for dedication, sacrifice, and hard work geared to excellence of performance. These values are in direct opposition to the current spirit of our age that panders to security, ease, and mediocrity. Try to think for a moment of any single advance that was made in our history by indolence, by the safe rather than the adventurous way, by the shoddy, undemanding performance. Whatever you do in the days to come, you may be sure of this one basic fact of life: your life will be as significant as those things to which you dedicate your days. To high dedication one must also join high performance worthy of this dedication. Without high dedication and excellent performance in every age, there would have been no great religious or educational leaders, no outstanding scholars, artists, statesmen, scientists, doctors, lawyers, businessmen or engineers, no, not even any good husbands or wives, fathers or mothers. There is no substitute for dedication, sacrifice, and excellence of performance. There is no easy way to achieve that which is worthwhile and first rate.

SPIRITUAL VALUES

You will note that all of these values or goals that I have been commending to you are of a spiritual order: the undying quest for truth, the appreciation of beauty, the passion for justice, the capacity for dedication, sacrifice, and a personal commitment to that which is excellent. Consequently, I would at long last commend to you a final value: respect for that which is spiritual, that which transcends the body, its pleasures and its comforts. It is in the spiritual order of our mind and will that we are made in the image and likeness of God, and it is in respecting and using these higher qualities to their utmost that we best serve God, and man too.

In respecting God and the order which He has made, we are truest to ourselves and to our common mankind. I might add that in commitment to these spiritual values we are most likely to fill our days tomorrow with the kind of activity that makes for true human happiness, satisfaction, and significance, both in time and in eternity.

THE AMERICAN DREAM

When one lists the monumental challenges that face us today—personally, nationally, and internationally—it may seem unrealistic, purely academic, or unduly idealistic to speak, as I have, of spiritual values and ideals. But, may I ask you, if you will glance backward on the thrilling history of our country what stands out in greater relief than the faith of Washington on his knees in the snow at Valley Forge, the hope of Jefferson in hammering out the great ideals of liberty and justice in the ringing sentences of our Declaration of Independence, the love of all mankind that kindled the heart of Lincoln in making his Emancipation Proclamation. Strip our past history of its heroic human values and its noble ideals and you have nothing of the greatness that we have inherited today.

The fundamental challenge to America and to each of you who graduate today is to advance this American dream—by intelligence and wisdom, by integrity and courage, by faith and works—and to enable this dream to become more true in our day, for the millions of people here and abroad for whom America is the great white hope for an end to injustice, ignorance, hunger, disease, and the multiform kinds of more subtle human indignity that reduce a man to a beast and this world to a monstrous zoo.

This hope in America will be an empty illusion if young educated Americans of our day lose their taste for adventure, dedication, hard work, excellence, and the will to stand above the fat, unthinking amorphous crowd. If passion attracts you more than compassion, security more than sacrifice, convenience more than consecration—then the tensions will continue to rise, inequities will multiply, the ruthless will enlarge their rule, and all unconscious and uncaring, we will witness the demise of mankind's hopes and humanity's honor—which are also our own. With half a world hungry for bread, we will rant against spending $2 billion of our precious money on foreign nonmilitary aid while we continue to spend $6 billion annually on tobacco, $9 billion on alcohol, and $20 billion on gambling.

At long last one must ask: What are you going to do about it? Even global problems must ultimately find solutions in the intelligent decisions and the moral convictions of individuals. If only you decide that you are going to think about these great burning issues of our times—and not leave their solutions entirely out of your dreams for the future—that is a beginning. If justice somehow plucks at your heart the next time you have the opportunity to help or hurt a Negro—even in the secret of your thoughts and judgments—America will be that much richer. If you are determined to achieve excellence in whatever you do, despite the hard work and sacrifices it will demand; if you steel yourself to be honest despite all the cheap examples of cheating all around you; if you can find within you some good aspirations that transcend your own personal pleasure and indulgence, some call to dedication, some faint glimmer of heroism, something that will stretch your mind, and heart, and soul, in a word, that will enlarge your humanity, then thank God and give it a chance to grow and pray God that you are equal to the call and worthy of our great heritage.

I sincerely believe that there are great days ahead. You can coast with the crowd or be a part of that greatness.

Supplemental Appropriations, 1961

SPEECH

OF

HON. ALBERT THOMAS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. HAYS. Mr. Speaker, will the gentleman yield?

Mr. THOMAS. I yield to the gentleman from Ohio.

Mr. HAYS. In connection with this $205,000 miscellaneous item, can the gentleman give us a little hint about what this is in view of some of the speeches made by some of the Members of the other body, notably the senior Senator from Ohio, about the terrible people in the House? I just wondered whether this was a little attempt to conceal some of their expenditures.

Mr. THOMAS. May I say to our distinguished friend from Ohio, we follow the rule of comity between the two bodies.

Mr. HAYS. Oh, we do, but they do not.

Mr. THOMAS. Let us follow it here, and if the other body sees fit to violate it, why, that will be on their shoulders.

Mr. HAYS. Can you give me any explanation about what this is for?

Mr. THOMAS. The answer is "No."

Mr. HAYS. And we have to take it on faith?

Mr. THOMAS. Yes.

Mr. HAYS. Well, my faith is pretty weak.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. THOMAS. I yield to the gentleman from Iowa.

Mr. GROSS. Is there something classified about this? Is this a military secret?

Mr. THOMAS. This is for housekeeping items made up of 10 or 12 things, and we do not question those things. There is nothing secret about it. It is a matter of public record over there. They held debate on it, and I am sure it is carried in the Journal.

Mr. GROSS. And the gentleman cannot tell us what the substantial amounts are?

Mr. THOMAS. No; I have not the slightest idea of the details.

Mr. HOFFMAN of Michigan. Mr. Speaker, will the gentleman yield?

Mr. THOMAS. I yield to the gentleman from Michigan.

Mr. HOFFMAN of Michigan. Is this item similar to what we had in the For-and bill?

Mr. THOMAS. In what?

Mr. HOFFMAN of Michigan. Well, the appropriation to help people, to take care of them in some way.

Mr. THOMAS. I understand those gentlemen take care of themselves fairly well over there.

Mr. HOFFMAN of Michigan. Is this an assist?

Mr. THOMAS. This is what they call miscellaneous. The real big items do not come under miscellaneous.

Mr. GARY. Mr. Speaker, will the gentleman yield?

Mr. THOMAS. I yield to the gentleman from Virginia.

Mr. GARY. This says for an additional amount for fiscal 1960 for miscelleaneous items, $205,640. Can the gentleman tell us what that will make the total for the year?

Mr. THOMAS. No; I cannot.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. THOMAS. I yield.

Mr. GROSS. Can the gentleman tell us why this increase from $225,000 to $5,256,000?

Mr. THOMAS. I will say to the gentleman it is by virtue of two items. The first item was an international item involving one of the cities of southern California and Mexico. The House reduced the item by 10 percent for a construction project. The other body restored the 10-percent cut. We are trying to insist on the 10-percent cut. The $5 million item is by virtue of a treaty with Mexico for the construction of a dam.

Mr. GROSS. I thought that when the bill went through the House it was stated that the $225,000 was adequate, was all that they needed at this time.

Mr. THOMAS. The other body just restored the budget estimate; I agree with the gentleman.

Mr. GROSS. So it is upped $5 million.

Mr. THOMAS. Yes.

Mr. GROSS. Just a slight increase.

Supplemental Appropriations, 1961

SPEECH
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. GROSS. Mr. Speaker, this bill is reminiscent of last September 15, in the early hours, about 2 o'clock in the morning, when we got the annual giveaway bill back to the House as an omnibus appropriation bill, with some 65 amendments, 35 of which were completely ungermane to the bill.

Here we are today with another one of those deals. It seems to me the leadership ought to be able to do better than this. I hope we do not come up to another September adjournment under the same circumstances insofar as a foreign handout or any other bill is concerned.

What is the reason for rushing into consideration of this conference report? The gentleman from Missouri [Mr. BOLLING] told us that there is an aggregation of foreigners waiting hat in hand at a meeting to be held soon, and our representatives at the meeting must have cash in their pockets when they go. Some of our bureaucrats downtown are palpitating and panting; they cannot wait to get this $73 million downpayment and go to this meeting. At least there was the decency in behalf of the taxpayers when the inter-American bank bill was enacted last year to write in a provision that the United States would not put up any money until other nations came in on a date certain.

I had some contact with that situation last December, and I know it was a mad scramble to get even their small contributions from participating foreign nations before the expiration date.

But there is to be an international meeting and the gentleman from Missouri tells us that the Secretary of the Treasury, who can scream long and loudly about budgetbusting if the spending involves the people here at home, apparently wields some kind of mysterious influence in making Congress jump through the hoop to rush through this $73 million to benefit foreigners. I do not know whether it is because of banking interests, or what, but it is obvious the Secretary of the Treasury put the pressure on for this appropriation and the speed with which it has been considered. I am sick and tired of hearing this administration demanding economy and denouncing budgetbusting, yet demanding the rush act on this kind of spending.

It was only yesterday I asked the distinguished Chairman of the House Appropriations Committee, the gentleman from Missouri [Mr. CANNON], if it was necessary that we consider any further appropriation bills in this session, or conference reports relating to appropriation bills. You will find his answer in the RECORD on page 14308. Let me read it to you.

Mr. GROSS. With the adoption of this resolution, it will not be necessary to drive conference reports through the House under forced draft.

Mr. CANNON. It will not be necessary to perfect them now before we adjourn.

So what are we doing with this resolution before us now?

Mr. DENT. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield.

Mr. DENT. Mr. Speaker, I believe this is the first time that we have publicly admitted by this action that we have no standing in the world today; that the nations will believe that this country will come up with its commitments after the Congress of the United States has said that it will join the IDA. If we are to believe the administration spokesmen, they will not believe we will go along unless we come there with the money in our pockets and in our hands. We have to bring the money to the able before any of those countries will believe that the action of this Congress is official, that we have said that we will participate in the fund. These countries, most of them better countries to us a few years ago, say they will not believe us unless we bring the money and put it on the table and say: "Look, we have brought our share, you put yours in."

Mr. PILLION. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield.

Mr. PILLION. Who can commit this country to an appropriation except this Congress itself? Who can do that? Can anyone commit this country except Congress?

Mr. GROSS. The gentleman is right. The Congress of the United States has made the commitment, but I, for one, am not going to jump through this kind of hoop. Consideration of this appropriation bill ought to be stopped, and dealt with when the House reconvenes in August.

Transportation of Mail by Air

SPEECH
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12595) to clarify the law with respect to transportation of airmail, and for other purposes.

Mr. CUNNINGHAM. Mr. Chairman, I want to say first off that I am very appreciative to the chairman of our full committee, the gentleman from Tennessee [Mr. MURRAY] and the ranking minority Member, the gentleman from Kansas [Mr. REES], because without their cooperation this legislation would not be before us today. I also want to express my appreciation to the subcommittee chairmaned by my very dear friend, the gentlewoman from Pennsylvania [Mrs. GRANAHAN], and the full committee which brought this legislation out; also to the Committee on Rules, who gave us every consideration, and to the gentleman from Massachusetts [Mr. MCCORMACK] for allowing it to be scheduled.

I might say, to begin with, that this legislation has been introduced by several Members of this body. I might name them in order: the gentlman from Idaho [Mr. BUDGE], the gentleman from Missouri [Mr. CARNAHAN], the gentleman from Oregon [Mr. PORTER], the gentleman from Pennsylvania [Mr. CLARK], the gentleman from Pennsylvania [Mr. FLOOD], the gentleman from Utah [Mr. KING], the gentleman from Illinois [Mr. MURPHY], the gentleman from Illinois [Mr. O'HARA], and the gentleman from Minnesota [Mr. WIER].

Testimony in behalf of this legislation was offered by the gentleman from Missouri [Mr. BROWN], the gentleman from New Mexico [Mr. MORRIS], and the gentleman from Wyoming [Mr. THOMSON]. We had 3 full days of hearings on this legislation, and the subcommittee voted it out with only one dissenting vote. The full committee voted it out with three dissenting votes, a total of 14 to 3.

There are many interested groups and organizations throughout these United States that have supported this legislation, and I will just name a few: The American Association of Railroads; the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees; Railway Labor Executive Association; National Association of Railroad and Utility Commissioners;

National Postal Transport Association; Midwest Association of Railroad and Utility Commissioners; Mountain Pacific State Conference of Public Utility Commissioners; Southeast Shippers Advisory Board; Central Western Shippers Advisory Board; Southern Railway; Joint Conference of Affiliated Postal Employees of Greater New York and northern New Jersey.

And, there have been many newspaper editorials favoring this particular legislation. I am sorry to say that a paper or two here in the District of Columbia saw fit to disagree with this bill, but I can understand their position. After all, the Postmaster General, I am sure, has a great deal of influence with these newspapers because of the tremendous mail subsidies that they receive, and I am sorry that they did not understand the bill and took the position that they did.

Mr. Chairman, I might say now that there has been a traditional spread, and the Congress has passed legislation to provide that there shall be a 4-cent letter rate for surface transportation and a 7-cent rate for air mail. This spread is in very great jeopardy as the result of the Postmaster's unauthorized and illegal program of airlifting 4-cent letter mail by air. He started this out in 1953 as an experiment. Many of us were not too concerned at that time, because an experiment is an experiment, and we perhaps closed our eyes to it, even though there was no authorization that he should do this. But, he has never from that day had legislative authority to undertake this experiment, and, now this year, he has expanded the airlift in tremendous proportions.

I might tell you, if you are not familiar with the way this operates, that this so-called experimental airlift operates in this manner: The Postmaster General takes a 4-cent letter, which belongs to surface transportation, and sends it by air on what he calls a space-available basis. Under his regulations the airline people must take the mail once it is delivered to them within a 12-hour period. If he trucks the mail from the post office here in Washington to the airport on its way to New York, it may wait down there at the airport for 10 or 12 hours before it is moved by air. When it reaches New York, if it ever does, it is then taken from the airport in New York back to the post office in New York where it is sorted and worked and distributed.

Now, this airlift proposition is definitely more expensive. This was brought out in the testimony we had before the committee. There is no question that, any position to the contrary. There is no question but what this is a more expensive way of moving mail than by surface transportation.

Furthermore, the airlift does not speed up the mail as the Postmaster General claims. There is a very good reason why it does not.

When you ship this mail on this airlift basis, it has to wait at our airport for up to 12 hours, for example, and then goes to New York. Then it has to be sorted and worked; whereas, if this mail leaves the Washington railroad terminal, the moment that train leaves, that mail is being worked en route by the postal employees in a railway mail car. So that when it gets to New York it is ready for distribution.

It seems to some people that, surely, you can send this mail faster by air than by rail. But the point is that under this airlift program, with the possible 12-hour delay and the fact that it has to be sorted and worked after it reaches its destination, it has not speeded up the the service. So I want to make it very, very clear that there is no substitution for en route distribution.

One of the most amazing things that came out in our hearings—and this is something that concerns all of us, because the Post Office Department operates at a deficit—is this: It is clear that the airlift is going to increase the deficit. First of all, this airlift is more expensive than surface transportation, but there is another financial problem. We found that between 1955 and 1960 the volume of airmail letters, those carrying a 7-cent stamp, had decreased by 356,300,000 pieces. That means that a large percentage of the regular airmail is no longer being used. It has fallen off that much in the few short years between 1955 and 1960. What is the answer? The answer is simply this, that people have heard that the airlift is in operation; they are familiar with it, so instead of putting a 7-cent stamp on their letter, they put a 4-cent stamp on it, thinking that this is going to go by air anyway. So that is going to have a very serious financial impact upon our postal rate structure deficitwise. That is something that ought to be borne in mind by every single member of this committee, because it could lead to this situation: that as the airlift is expanded, it could mean that everybody will be sending their mail at a 4-cent rate. That is going to have very serious consequences.

Mr. Chairman, let me tell you something about the economic effect that this airlift has upon our Nation's railroads. Between 1953 and the middle of 1958, 115 trains have been discontinued, after the Post Office Department had withdrawn the railway post office cars. I would like to quote from page 25 of the committee hearings, from the testimony before our committee of a representative of the railroads, when he stated:

> Nor should there be any secret that if the plans of the Post Office Department to divert large portions of first-class mail from the railroads are carried out the decline in railroad passenger facilities will be accelerated at a rate which has never before been seen in this country.

And never before have truer words been spoken.

The CHAIRMAN. The time of the gentleman from Nebraska has expired.

Mr. REES of Kansas. Mr. Chairman, I yield the gentleman 2 additional minutes.

Mr. CUNNINGHAM. Mr. Chairman, I am sorry I cannot complete my statement in 2 minutes, but I will say this.

The Postmaster states that X number of trains have been taken off. In fact, he says 1,215 mail-carrying trains have been taken off since the airlift began. That is certainly proof that when he started airlifting this mail, a great number of passenger trains have been taken off. Where the airlift is used, it is used for transporting mail between major cities, usually on a hop of 500 miles or more. Most of these trains that have been taken off were short run trains, branch lines, because the statistics are that 83 percent of the trains that have been discontinued have operated less than 200 miles.

They are using that as an excuse for the airlift of mail. In those situations the airlift is of no use because when these short runs are discontinued the mail will move by truck.

During the snowstorms of February and March it was necessary for the Post Office Department to divert over 205,000 pounds of regular airmail to the railroads because the planes were grounded. If this airlift program continues and all the passenger trains are taken off, it simply means that in another emergency such as weather the railroads are not going to be there to move this mail. Further in times of national emergency, where the National Government would take over all or almost all of our passenger trains, and this airlift program continues, there are going to be no trains left to move the mail. That is certainly a very, very serious situation that confronts us.

Mr. WOLF. Mr. Chairman, will the gentleman yield to me if I get him more time?

Mr. CUNNINGHAM. Yes. I would be delighted to yield to my friend and able colleague from Iowa.

Mrs. GRANAHAN. Mr. Chairman, I yield 3 minutes to the gentleman from Nebraska, at the request of the gentleman from Iowa.

Mr. WOLF. I want to congratulate the gentleman. I intended to speak on this, but he is doing such an excellent job that I think anything I might say might be superfluous.

Mr. CUNNINGHAM. I thank the gentleman. He is an excellent legislator and I appreciate his remarks.

What is the opposition to this? I have been working hard and diligently with other members of the committee since January on this matter. I have never received one letter urging that this program be continued except the letter from the Postmaster General. There are some people who are interested in this, of course; the Postmaster General and the airplane lobby, and they have been quite busy these last few days.

It is not quite enough that we build runways for the airplane people, we build them terminal facilities, we give them weather guidance, radar, and control towers; we give them 7-cent mail, which gives a very lucrative return to them. They are not satisfied with that. Now they want to take the little that is left, the 4-cent mail which rightfully belongs to the railroads, away from them. I think they have certainly gone too far, and certainly a stop should be put to this. There is no justification for this. There is a legal way to do this. If the Postmaster General wanted to, he could come to Congress and ask for it. There is a legal way to do this. I will not go into it because I do not have time, but there is a way he can do it.

To get back to the airplanes, with all of the subsidies we give them and have given them, I do not think we should subsidize them any further by giving them this 4-cent mail. We cannot take this away from the railroads, which is rightfully theirs. This has nothing to do with a subsidy to the railroads. The railroads do not want a subsidy, they do not ask for a subsidy. But if we take this mail away from them and give it to the airlines we are giving the airlines an additional subsidy.

Transportation of Mail by Air

SPEECH
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12595) to clarify the law with respect to transportation of airmail, and for other purposes.

Mr. GROSS. Mr. Chairman, I carry no torch for the railroads, the airlines, the Postmaster General, or anyone else except the public. I think that all first-class letter mail that can be transported overnight and made available for delivery the next morning ought to be carried on surface transportation. But I am unwilling through this bill to meat ax all of what is presently being done to expedite delivery through the use of aircraft. I do not believe that is the proper way to legislate in the interest of the public.

I am pleased to see Mr. GARY, the chairman of the Subcommittee on Post Office Appropriations, on the floor, because I take my cue in offering this amendment from the report of that committee in connection with the 1961 appropriation. This is what the committee said:

Accordingly the committee recommends that there be no extension of the airlift until the Congress has taken legislative action on the question.

I think that is reasonable, and my amendment would validate the tonnage of airlift of 4-cent mail in effect up to June 1 of this year, removing the expansion that has taken place since. Then let the legislative committee meet early next year and go to the basic law that gives the Postmaster General authority to transport mail, and write a formula for the Postmaster General telling him what Congress wants him to do.

Let us not use a meataxe on the present transportation of mail.

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I gladly yield to my friend.

Mr. GARY. I would say to the gentleman that our committee acted because it had been brought to our attention that the Postmaster General was expanding his service. We did not think there should be any expansion. The authority granted to him in the first instance was to experiment with it. We thought that before he left the experimental stage and expanded the program the Congress should give him further authority.

Mr. GROSS. Let me ask the gentleman this question: In view of what you said in your report do you not think my amendment is fair and in the best interest of the orderly transportation of the mails? Does not the gentleman think it is a fair amendment?

Mr. GARY. I think so, I will say to the gentleman that our purpose was to stop the expansion. The gentleman's amendment will do that and at the same time permit the Postmaster General to do what he has been doing in the past.

Mr. GROSS. Up to June 1.

Mr. CANFIELD. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. CANFIELD. I agree with the statement just made by the chairman of the subcommittee handling appropriations for the Treasury and Post Office Departments. I think it only fair to say, though, that the Senate subcommittee handling these funds did not agree with the position indicated in our report, but I support the amendment, as does our committee chairman.

Mr. GROSS. I thank the gentleman.

Mr. BARRY. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. BARRY. I am sure the gentleman knows that $325 million of rail revenues, the largest amount the railroads have ever received, they received last year, and the prognostication is that next year they will receive the largest revenue from mail ever in history. So the gentleman's amendment would in no way cut into the mail revenue that the rails have received in the past.

Mr. GROSS. Let me add just this: That there is no guarantee, if you approve this bill ending the airlift of 4-cent mail, that it would go back to the railroads. It may go to other forms of surface transportation.

Mr. BARRY. The gentleman's amendment would not hurt the railroads one iota because they are going to receive $25 million mail revenue more than they received last year according to the present estimates that have been made.

Mr. GROSS. As a friend of the railroads, as a friend of the airlines, I want this situation handled as nearly right as possible. That is the only purpose of my amendment.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

(On request of Mr. REES of Kansas, and by unanimous consent Mr. GROSS was allowed to proceed for 2 additional minutes.)

Mr. REES of Kansas. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. REES of Kansas. Does the gentleman's amendment continue the present contracts?

Mr. GROSS. Those contracts in existence on June 1. There has been some extension since.

Mr. REES of Kansas. You do not want to cancel any of them out. I think the gentleman's approach is fair.

Mr. GROSS. I thank the gentleman.

Mr. ALLEN. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. ALLEN. Is it not true that the committee had 3 days of hearings and they reported out this bill by a vote of 14 to 3?

Mr. GROSS. I do not remember the vote.

Mr. ALLEN. The gentleman will find that is correct. Here we come in with an amendment the effect of which we do not understand. Just the other day on the wage-hour bill we accepted an amendment offered, I think, by the gentleman from Mississippi [Mr. SMITH] under conditions of severe limitation and we finally found ourselves in a jam.

Mr. GROSS. Just a minute. I hope the gentleman is not attempting to say that I have offered an amendment in an attempt to deceive the House in any way.

Mr. ALLEN. I do not think it was intended to deceive the Members the other day, but I think we should support the committee on a bill which they reported out by a vote of 14 to 3.

Mr. GROSS. I may say to the gentleman that I do not want my amendment to be compared to any amendment that has ever been offered before in the House. I have offered this amendment in good faith.

Mr. HOFFMAN of Michigan. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield.

Mr. HOFFMAN of Michigan. Did not the ranking minority member of the committee accept your amendment just now?

Mr. GROSS. Yes; and the chairman of the Appropriations Subcommittee said he thought it was a good amendment.

Mr. HOFFMAN of Michigan. That is what I thought.

Transportation of Mail by Air

SPEECH
OF
HON. ROBERT J. CORBETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12595) to clarify the law with respect to transportation of airmail, and for other purposes.

Mr. CORBETT. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, this is an excellent amendment. Contrary to what the gentleman from Illinois just said, this does the very opposite of causing confusion. The amendment was considered in committee. It was pleaded for by the Postmaster General in charge of transportation, and it boils down to this very simple matter.

Mr. ANDERSEN of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. CORBETT. I yield.

Mr. ANDERSEN of Minnesota. Personally, it has been my observation that

the gentleman from Iowa, Mr. GROSS, usually knows what he is doing.

Mr. CORBETT. I am sure the gentleman from Iowa appreciates that remark, and I will associate myself with it.

Referring back to the amendment, what it tries to do is to say that all contracts entered into by the Post Office Department prior to June 1, 1960, shall be valid. Therefore, it puts a prohibition on all contracts that might be entered into in the future.

The effect of this will be, if the amendment is adopted, all of the schemes which presently are carried through in connection with the distribution of mail can be continued. But if this legislation should pass without the amendment, then we would have to tear up all of our contracts, all of our scheme examinations, and it would result in utter confusion and chaos in the Department's transportation system.

We have a simple situation wherein we validate existing contracts, as the distinguished chairman of the Subcommittee on Post Office Appropriations agreed and the committee agreed, so what we are pleading for is a continuation of orderly progress in the Post Office Department. We are trying at the same time to say "speed up."

Mr. Chairman, I recognize it is rather difficult to establish reason at this time of day, but I repeat again, this is a good amendment. It would allow the Post Office to continue to improve its service, it would permit all the present transportation schemes to be continued, but without this amendment I would say this is very, very detrimental legislation. Therefore, the amendment should be agreed to, then we can all support the legislation.

Mr. FOLEY. Mr. Chairman, will the gentleman yield?

Mr. CORBETT. I yield to the gentleman from Maryland.

Mr. FOLEY. I would like to pose a question of the gentleman. This is an experiment, it is 7 years old. The question is this: Has not this experiment proved everything it set out to prove? Has is not supported everything it was supposed to prove? If it has not, has it not proved nothing, if I may use a double negative? In either case it is time to put an end to the experiment.

Mr. CORBETT. I may say to the gentleman very definitely in attempts to improve the mail service of these United States, this experiment has proved it to be successful to the point where that which has been proved good should be continued.

Mr. THOMSON of Wyoming. Mr. Chairman, will the gentleman yield?

Mr. CORBETT. I yield to the gentleman from Wyoming.

Mr. THOMSON of Wyoming. How long would this prohibition continue on the Postmaster General to enter into these contracts?

Mr. CORBETT. Under the bill, after January 1, 1961, no new contracts could be entered into under the terms of this amendment for carrying first-class mail by the airlift, after that date, January 1, 1961.

Supplemental Appropriations, 1961

SPEECH
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. THOMAS. I yield.

Mr. GROSS. This million and a half dollars was not in the House bill as I understand it.

Mr. THOMAS. That is my understanding, too.

Mr. GROSS. Where is this money to be expended?

Mr. THOMAS. I understand it is proposed to be expended in a little town in the southwestern part of Texas about 600 miles from where I live. It is a loan, and it will not cost the taxpayers one 5-cent piece.

Mr. GROSS. That helps a little.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Text of Byrnes' Speech on Red Subversion in Dixie

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. THURMOND. Mr. President, on June 30, one of South Carolina's most distinguished and outstanding citizens of all times, the Honorable James F. Byrnes, delivered a very able address before the Texas Bar Association on Communist attempts to stir up racial agitation and strife in the South. I commend this excellent address to the attention of the Nation and ask unanimous consent that the address be placed in the Appendix of the RECORD for others to read.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF BYRNES' SPEECH ON RED SUBVERSION IN DIXIE

Next week the people of this country will celebrate Independence Day. I wish that in addition to making it a day of recreation, it might be made a day for rededication. It would be heartening if even for a few hours, we should meditate upon the wisdom and the courage of those who were responsible for the establishment of our Government.

The problems that confronted those patriots undoubtedly were serious, but not as complex as those now confronting us. In the early days of the Republic there was no effort to change the relationship between the national and State governments. Then our geographical position made it possible for us to view with regret and sympathy—but not with alarm—the quarrels of the Old World. We followed the warning of George Washington in his Farewell Address against entangling alliances. With the two oceans serving as moats for the defense of our homeland, we developed friendly relations with Canada and Mexico and for all practical purposes, let the rest of the world go by.

This Independence Day is another day. The revolutionary changes in communication and transportation, plus the influence of atomic weapons, and bombs, of missiles and rockets, have destroyed much of the protection afforded us by the oceans. We cannot live alone, and we live in a world where a dictatorship with great power, bent on world conquest, is a threat to world peace.

The Soviet Government has infiltrated one country after another. It has sent its agents into the departments of our Government, our industries, and more serious, into our educational institutions. Part of Soviet strategy in attempting to attain world domination, is by directing and controlling the thinking of the youth of the world.

They believe it is easier to destroy a government by subversion from within than by attacks from without. To do this they first incite internal dissension and encourage civil strife. In Eastern Europe this strategy was successful. Because of the secrecy of their methods, it is difficult to secure positive proof of their acts, but circumstantial evidence convinces me the recent lunch counter demonstrations were inspired and directed by Soviet Russia.

Let us look at some of the circumstances. Never before have Negro students engaged in such demonstrations to influence governmental action. Suddenly, on February 1 Negro students staged the first demonstration in North Carolina. These demonstrations were of the same pattern in nine States, extending from Virginia to Texas, and from Memphis to Miami.

Senator RUSSELL, of Georgia, noting the uniform pattern, made inquiries, as a result of which he declared in a notable speech in the Senate that the demonstrations which resulted in acts of violence in two or three places and threatened serious race riots in nine States, were directed by the Congress on Race Equality (called CORE), a well-financed group with headquarters in New York.

This organization conducts schools to train organizers for the demonstrations. The literature sent out soliciting recruits and money, tells how they will be taught to secure publicity in the press and on television. The director admitted to the press he had sent organizers into the South to train Negro students. He failed to say by whom and where he had been trained. However, detailed information published about the demonstrations by the New York Daily Worker, the official organ of the Communists, disclosed the close connection with CORE.

To understand why these demonstrations should have been started at that particular time, we have to look at the world situation, for it was world affairs, not local problems, that prompted the demonstrations.

For several years Khrushchev had urged a meeting at the summit. The President was not impressed, but our British ally continued to clamor for it and other allies urged our agreement. We have military bases in those countries and must consider their views. They urged that as we were battling for the minds of the free peoples, we could not refuse even to confer with the Soviets in the hope of lessening war tensions. Looking back, one may say the President should have anticipated trouble. That is Monday morning quarterbacking—interesting, but fruitless.

Khrushchev was interested in the summit because of Germany. The primary objective of the Soviets in their struggle for world domination is to control all of Germany. Khrushchev hoped at the summit to get at least an agreement for the withdrawal of troops from Berlin and to establish a free city. President Eisenhower and our allies knew it would mean that within a short time the Soviets would control all of Germany. He and his associates of the free world reached an agreement that they would stand firm against withdrawal from Berlin. Shortly before the meeting Khrushchev learned of this firm agreement. Allied unity surprised and disappointed him. In an effort to secure an agreement on Germany he had stopped jamming broadcasts of the Voice of America in Russian. Our programs had interested the Russian people. A dictatorship cannot exist without complete censorship. Khrushchev began to have trouble at home while Red China charged him with being too friendly to us. He decided he would not be able to explain a failure at the summit, and determined to sabotage the meeting.

Before the U–2 flight, at Baku, mid the oil fields near the Iranian border, Khrushchev made a bitter speech denouncing Secretary of State Herter and Under Secretary Dillon. It was the first time in 6 months that he had attacked us. His purpose we should have recognized, but did not.

Following Soviet strategy, Khrushchev proceeded to increase tensions throughout the world. He threatened to make war on every country where we had a military base. Suddenly in Turkey and Korea there were student demonstrations. Communist agents knew the time was ripe in both countries to attack the governments. The student demonstrators were joined by professional Communists, and forced changes in both governments. Khrushchev hoped by these disturbances in allied governments to impair the prestige of the Western governments at the summit.

At the same time Khrushchev determined to give aid and comfort politically and financially to Castro, who has become a Soviet stooge. Most important of all, he hoped that by inspiring the lunch counter demonstrations in nine Southern States, race riots would result, troops be called out, lives lost and the United States be placed in a hopelessly weak position at the conference table.

In a cold war, as in a hot war, a leader has breaks for and against him. The U–2 plane incident was a "gift" for Khrushchev. The only thing wrong about the fight was that Powers was caught. Last week in Rumania Khrushchev boasted he knew of pictures taken by our U–2's 3 years ago proving his cries of anguish at Paris were only an excuse for sabotaging the meeting.

In Japan the breaks were also with Khrushchev. The United States-Japanese treaty was pending in the Diet. There was opposition not only from those with strong nationalist feelings, against another government having bases in Japan, but determined opposition by the Communists. They staged the customary student demonstrations, augmented by Communists, and forced Kishi to ask the President to postpone his visit. In Moscow, Khrushchev announced it as a great victory. It was. But race riots here in the South is the victory he wanted, and had it not been for the wise action of the law enforcement officers of nine Southern States in handling the Negro students, he would have had that victory too.

Khrushchev, in addressing the Rumanian Communists, referred joyfully to the student demonstrations in Turkey, Korea, and Japan. He did not mention the Negro student demonstrations in the South. But while these demonstrations were on, the Russian press daily published lurid stories. Khrushchev's silence indicates he was disappointed that there was no serious rioting here.

Not for a moment do I think these Negro students were aware that they were being used as cat's paws by Communist leaders. I can see how they could be misled. The southern Negro is religious and is emotional. When this New York director sent his trained workers south to train the demonstrators, he placed Bibles in their hands. That impressed young Negroes that theirs was a holy cause. Law officers recognized the trick and though under great provocation at times, they were tolerant and even gentle.

Of course, these students were not reading the Bibles they carried, and the people who inspired and trained them for the demonstrations were not Christians—they were

Communists. They alone have the world-wide organization to stage the same pattern of demonstrations by students in Turkey and Tokyo and in Tennessee and Texas.

But the Communists overplayed their hands when they asked us to believe that over the world in five countries, without Soviet direction, students spontaneously attempted to direct the policies of their governments, whereas in no Communist-controlled country was there a student demonstration.

What is the result of the lunch counter demonstrations, other than arousing bitter feeling between the races?

The New York Times of March 20 quoted the chief counsel of the NAACP as saying that he and 60 legal associates had agreed that in every case where a student demonstrator was fined, his organization would appeal to the U.S. Supreme Court. He said that while the 14th amendment had been held to apply only to State action, that "the use of public funds either in the form of arrest by the police or conviction by the courts, is in truth State enforcement of private discrimination and is in violation of the 14th amendment." He admitted the common law and the decisions heretofore had been against his position but said he believes now there is a different trend. He expressed the opinion of the Court might make a distinction between small and large business establishments, but he was not very clear as to just how large must be your business before your acts become the acts of the State.

The Supreme Court decisions to date offer no support for his contention. Seventy-six years ago, in *U.S.* v. *Nichols* (109 U.S. 3), the Court held the 14th amendment did not deny to a citizen the right to select the persons with whom he wants to deal, even when it is supported by an act of Congress.

As late as 1947, in *Shelley* v. *Kraemer* (334 U.S. 1), the Court held the action inhibited by the 14th amendment "is only such action as may fairly be said to be that of the States. That amendment erects no shield against merely private conduct, however discriminating or wrongful."

In Williams (Howard Johnson Restaurant) decided July 16, 1959, by the Court of Appeals for the Fourth Circuit, the court held that the owner and operator of a restaurant is at liberty to deal with such persons as he may select, and the fact that his business was licensed by the State did not make his act the act of the State.

Practically all issues suggested by counsel for the NAACP were raised in that case and rejected by the court in an opinion written by Chief Judge Sobeloff, who, as Solicitor General, argued the school segregation cases for the U.S. Government.

Since then, in February 1960, in *Stack* v. *Tower System*, a restaurant case from Maryland, the Howard Johnson decision was followed by a U.S. district court.

Under all decisions of the Supreme Court and the courts of appeal to date, the lunch counter demonstrations are unlawful. Have you heard any integrationist criticize these demonstrators for deliberately flouting the decisions of the Court? Is it possible they believe a Court decision is the law of the land only when it is approved by the NAACP?

Senator RUSSELL suggested that all candidates for the Presidency be asked if they approve the lunch-counter sitdowns. It is relevant because two Justices of the Supreme Court are now eligible for retirement and the next President probably will appoint their successors.

If we criticize the school segregation decision of the Court, it is attributed to prejudice against Negroes. That is not true. We criticize those decisions because of our respect for the Constitution of the United States.

On the morning of May 17, 1954, statutes providing for separate but equal facilities for the races in public schools existed in 17 States, the Supreme Court having held in at least 6 cases that it did not violate the 14th amendment. That afternoon the Court declared the 58-year-old doctrine was inhibited by the Constitution.

Who changed the Constitution? The Court did.

The Justices of the Supreme Court can change their views but they cannot change the Constitution without violating their oaths to uphold it.

However, criticism of the Court is not confined to that case nor to residents of Southern States. The Court has aroused fears of many by expanding the doctrine of preemption and invalidating the Constitution and statutes of many States where Communists and Communist sympathizers were involved.

In the Nelson case (1956) the Court struck down a Pennsylvania law providing punishment for criminal conspiracy to overthrow the Government by force, holding that the Federal Smith Act superseded the law of Pennsylvania. Many other States had similar statutes.

There were other disturbing cases. In Slochower, the Court decided that New York, by law, could not prescribe qualifications for teachers. California and New Mexico were told they could not regulate the licensing of persons to practice law.

As we watched the trend we wondered whether local governments could survive. In the Congress several bills were introduced to regulate the appellate jurisdiction of the Court. In 1958 a bill introduced by Congressman SMITH of Virginia, limited the interpretation of the preemption doctrine, overwhelmingly passed the House and in the Senate was defeated by only one vote. The public was aroused, and the Court realized it. In 1959, in Uphaus, another 5-to-4 decision, the Court apparently reversed its 1956 Nelson decision, making a feeble effort to distinguish Uphaus from the Nelson case.

The Watkins decision, where the Court restricted the power of Congress to investigate, resulted in additional efforts to have Congress curb the Court.

Apparently the Court had begun to read the CONGRESSIONAL RECORD. In 1959, by another 5-to-4 decision, it took a different view of congressional investigations and declared, "The judiciary lacks authority to intervene on the basis of motives which spurred the exercise of that power."

Justice Frankfurter voted with the new majority. A vigorous dissent by Justice Black was concurred in by his usual associates, the Chief Justice, Douglas, and Brennan. The dissent charged that "exposure and punishment is the aim of the committee and the reason for its existence." Further, it said that the Un-American Activities Committee's inquiries "amount to an encroachment on the judiciary which bodes ill for the peoples of this land."

Of course, it is for the people to decide which bodes the greater ill, the encroachment of the House Un-American Activities Committee on the Judiciary or the attempted encroachment of the four Justices upon the power of the Congress.

During the recent session, the Court has been more conservative. Certainly the threatened legislation has done no harm, but for the improvement I shall always give credit to the 36 chief justices of the State supreme courts and the members of the American Bar Association who dared speak out against the trend of the Court to make of itself a third legislature.

In an effort to brainwash the South, it is argued that discrimination against Negroes is used by the Soviets to arouse prejudice against us. Well it has been 6 years since the Court decided the school cases. Do you think our relations with the Communists have improved?

If the Communists use such propaganda, the northern press, instead of furnishing them ammunition, should answer these falsehoods. They can show the superior living standards enjoyed by Negroes in the South as compared with the Soviet population. They can show that Negroes are engaged in all the professions; that in the large cities some are wealthy; that a large percentage of them own their farms and their homes; that those homes are equipped with modern conveniences and comforts; and, for instance, even in the small State of South Carolina, Negroes own more automobiles than the people of all Russia, excluding officials of government and the Communist Party.

We must let it be known that we will not change our way of life in the United States in the hope that it will lessen false Russian propaganda. Our liberty was not secured by a referendum among the rulers of other nations of the world, nor will it be preserved by slavish truckling to a Gallup Poll of the uninformed masses, literate or illiterate, throughout the world. Had we in 1776 submitted the issue of our form of government to a referendum, we doubtless would have established a monarchy and we would now have no excuse for the celebration of Independence Day.

We should have the courage to regulate for ourselves our domestic policies. We cannot let either the Asians or the Russians control the education of our children.

Our views about the wisdom of separating the races to promote peace and order are not provincial. It was a realization of the wisdom of separating the races that prompted 46 governments, including the United States, to agree in the Geneva Convention of 1929, that "belligerents, shall so far as possible, avoid assemblying in a single camp prisoners of different races or nationalities."

Of course, among our white citizens there are people of different views. Some few say they favor segregation in schools but are not opposed to token integration. They call themselves "moderates." That word has a new connotation. Now a moderate means an integrationist who lacks the courage to admit.

If the southern integrationist is a journalist and publicizes his views in some northern newspapers and magazines, he will be called a man of vision and courage. He may even be awarded a Pulitzer Prize.

If he is a member of the clergy, he will receive great publicity and possibly some compensation for magazine articles. If he uses the pulpit to preach politics instead of the Gospel, he may profit, but his church will suffer.

I respectfully disagree with those ministers who, in or out of the pulpit, now declare segregation laws to be un-Christian.

For more than a century in churches, North and South, the clergy led their flocks in segregated congregations. The people have looked to the church for theological guidance. If a minister honestly believed segregation un-Christian, it was his duty to make known his views, but I do not recall ever hearing this un-Christian charge until after the decision of the Supreme Court on May 17, 1954.

If any minister bases his theological views upon the decision of the Supreme Court, he ought to be reminded that the Court based its decision on the writings of radical sociologists and that no Justice made claim to having received divine guidance in reaching a decision in that case.

But you ask, What of the future? In the field of National and State relationships the new 5 to 4 majority on the Supreme Court gives hope of greater regard for the rights of the States and less judicial legislation.

In the field of segregation, only a reckless man would predict a reversal of the 1954 decision. However, we must not forget that for 58 years the doctrine of separate but equal facilities was repeatedly upheld by the Supreme Court, and yet it was reversed.

Now there is no evidence of a change of attitude in the Court or a change of sentiment in the political field, but I recall when our lawyers and politicians believed it would be impossible ever to repeal the 18th amendment. They said it couldn't be done. But it was repealed.

We must avoid a defeatist attitude. Our representatives in public office must not compromise principle for political support. What will it profit them if they gain public office and lose their own self-respect?

We must have courage. We must resist in every lawful way what we believe to be wrong, remembering the words of Abraham Lincoln, "To sin by silence when we should protest, makes cowards out of men."

Eau Claire Press Calls for Greater Opportunity for Small Business To Secure Government Contracts

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. PROXMIRE. Mr. President, Marshall Atkinson, the editor of the Eau Claire, Wis., Press, has written an unusually persuasive editorial calling for greater opportunity for small business to take part in Government procurement.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered printed in the Appendix of the RECORD as follows:

PROXMIRE BILL WOULD AID SMALL BUSINESSES

Senator WILLIAM PROXMIRE'S latest bill to be introduced in the Senate makes sense to small manufacturers, but it may not to the Department of Defense.

The purpose of the measure is to give small businesses a greater opportunity to secure competitive Government contracts. Senator PROXMIRE points out that for the first 9 months of fiscal 1960, small businesses received only 15.7 percent of the total defense procurement as compared to 16.6 during fiscal 1959. In 1954 small businesses received 25.3 percent, the Senator reported.

The total defense procurement program in fiscal 1949 was $22,744 million, and 86 percent of the amount was negotiated. The small business share of this was about 11.8 percent. On the other hand, Senator PROXMIRE said, of the competitive contracts, only 14 percent of the total, was competitive, but of this amount small business' share was 47.5.

There is no question but what the Senator and the others who contributed to his bill have grounds to protest at the lack of competitive bidding for defense procurement. The bill, being introduced very late in the session, would require the Department of Defense to refer contracts of any substantial size to the Small Business Administration, so it can set up a screening process to see that small business is given the greatest opportunity.

Undoubtedly, a small number of very large corporations have been given the benefit of negotiated contracts. The reason given by the Department of Defense is that the complexity of new weapons and the exigencies of time make negotiated contracts preferable.

This, Senator PROXMIRE disputes, saying that he cannot believe competition would lengthen the time of delivery of needed weapons. He believes the bill would add incentive to competing companies to provide better products.

The chances of the bill passing this session of Congress appear, at this distance, to be dim. The lateness of its introduction and the probable opposition of the Department of Defense are two strikes against it. Nevertheless it is worthy of serious study and consideration, if not at this session then at the next.

Brooklyn Polish-American Home of Cleveland Celebrates 25th Birthday

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. FEIGHAN. Mr. Speaker, on Sunday, June 12, 1960, the Brooklyn Polish-American Home of Cleveland celebrated its 25th anniversary. On that occasion a silver anniversary banquet was held at the home, under the chairmanship of Mr. J. E. Szukalski, president of the Brooklyn Polish-American Home, Inc.

It was my pleasure to speak at this banquet and to pay tribute to the great work that has been accomplished through this organization for the civic, cultural, and religious advancement of the city of Cleveland.

By leave previously granted, I insert in the RECORD my address on the 25th anniversary of the Brooklyn Polish-American Home:

I am very happy to participate in the 25th anniversary observance of the Brooklyn Polish-American Home. This home is a landmark in Greater Cleveland and a beacon light for many of the finest citizens in my district. It serves as a landmark for all to observe that here stands a tribute to those who came to our country and to our city from Poland to build a new life in freedom and to help us build this great country. It also serves as a beacon light for the rich culture, traditions, and religious dedication which mark the life and times of the Polish Nation throughout 1,000 years of history. The brick and mortar as well as the decorative features of this building would be meaningless without the spirit these thoughts convey. This, then, is the spirit in which we meet here today.

How comforting it is to reflect on the manner in which Americans of Polish origin have prospered and climbed the ladders of success in these United States. In all walks of life—the professions, the religious, the business world, our scientific and industrial life, in the arts and in government—we see the positive contributions of the American of Polish extraction. All this was accompanied by hard work and personal sacrifices. Nor must you see these results as a destiny fulfilled because the success story must be repeated in each generation. This is part of the story of America in which each of us are players and in which all of us carry responsibilities.

With this, the beauties and inspirations of Polish culture have been preserved and passed on to the coming generation. This, too, is part of the American story. It has always been the diversity of our people which has given the inner strength to our country. We are not a one-culture nation, nor are we a monolythic people who look alike, think alike, and act alike. We are a nation of many cultures, a nation in which native cultures from many distant lands have taken roots and have flourished. This, in turn, has given our Nation a treasure chest of values unequaled among the nations of the world. But with all this diversity, we are a people who are bound together in a common cause which takes its purpose from those great moral values and political ideals which have been the inspiration in all generations of Western civilization. These bonds of unity reach into the heart and mind of all our people. This, too, is part of the American story, that part which forms the hub around which the hopes and high expectations of our Founding Fathers have taken form and substance.

But there is another part to the American story which makes up the contemporary chapter. In our times, all that we hold to be dear as life itself is being challenged by a crude, noisy, but determined tyranny on the march. That tyranny is Russian communism, which today holds the land of your forefathers in a pitiless grip, which seeks to destroy 1,000 years of Polish heritage and to replace it with a soulless ideology. The chains of imperial Russian communism have been dropped over more than a score of once free and independent nations. And the appetite of conquest has not been satisfied. The Russians boast they are going to make the entire world their empire. Every still free nation is marked, but for conquest. No nation, no people, are exempt from the master plan the Muscovites are now attempting to impose upon the world.

It is fitting, therefore, on this occasion that we should turn our thoughts to captive Poland. By so doing we can catch a glimpse of what the Russians have in store for us and thereby we shall find the course of action our Nation must pursue in the immediate years ahead. For those who may doubt the true Russian intentions toward the United States, let me quote no less an authority on this subject than Tzar Khrushchev. Last September Khrushchev visited the United States on the invitation of the present administration in Washington. Within 1 week after departing our shores he visited Communist China to take part in the 10th anniversary of the Communist seizure of power in that country. Arriving at the airport in Peiping, he made this public statement: "We Communists believe in just wars, that is, wars of liberation through which we liberate people from capitalism." There can be no doubt of the meaning of this declaration. It means the Russians offer us peaceful surrender or a hot war. They allow for no other alternative in their global plans. It would appear that Khrushchev's visit to the United States and the reception given him by those who should know better only made him bolder in his claims.

The Congress of the United States, on the other hand, was not deluded by the Russian call for peaceful coexistence. Only a few weeks before President Eisenhower announced his invitation to Khrushchev to visit our country, Congress enacted the Captive Nations Week resolution. This is now Public Law 86-90. As you know, this law designates the third week of July as Captive Nations Week, a time for the American people to recall the sad plight of the people in these Russian occupied nations and to rededicate ourselves to the support of their just aspirations for liberty and independence. This law made the dictator Khrushchev furious—almost as frightened as he was over the U-2 incident. Vice President NIXON was in Moscow as the guest of Khrushchev one day after Congress passed the

law. Khrushchev asked him: "How could you do this to us." Apparently he expected much better treatment from the Vice President. I have wondered many times since whether the invitation to Khrushchev to visit our country was recommended by Vice President NIXON as a means of demonstrating that he knew how to deal with the Russians when they became angry. The Vice President has never disclaimed his connection with this political blunder of the century so I continue to wonder how important a part he played in this farce on the American people.

Neither Khrushchev's blustering nor his official visit to our country can remove or weaken the determination by Congress to keep alive the hopes for liberty and independence in Poland and the other captive countries. That law remains on the books until all the countries behind the Russian Iron Curtain are free.

It was my privilege to introduce this resolution in the House of Representatives. I worked to the limit of my abilities to cause its enactment. I remain dedicated to its high purposes.

The language and spirit of that law points the way for a new foreign policy under a new administration in Washington next January. I say this for two basic reasons. The first is that the law makes a finding that the desire for liberty and independence by the people of the captive nations constitutes a powerful deterrent to war and one of the best hopes for a just and lasting peace. So long as our allies behind the Iron Curtain, the captive non-Russian people, remain united with us in the spirit of human freedom, the Russian imperialists will not dare to launch a hot war. If they do, the Poles and other captive peoples will seize upon this opportunity to fall upon their Russian tormentors and destroy them. Thus, the Russians are certain to end up in total destruction of their empire. The only salvation for the Russians is for them to give up their empire of fear and to retreat behind their ethnographical frontiers—as did the Golden Hordes of the Mongols many centuries ago.

My second reason is that the American people have become fed up with the threats, boasts, and insults of the Russian tyrants. They are demanding a realistic policy toward the Russians, a policy which gives practical promise of peace with justice. We can no longer stand by while the captive people call out for their emancipation. The time has arrived when we must exert a relentless political, economic, and diplomatic pressure on the Russians to get out of all the captive nations or face the wrath of a thoroughly aroused free world. We have the military strength to back up such a policy and we had better act before it is too late.

Only last week the world was reminded of the endless struggles of the Polish nation to regain its freedom. Riots broke out there again over the denial of religious freedom to those devout people. Not one word of protest against the Russian-inspired action to destroy the historic faith of the Poles was made by official Washington. This is but another example of inert government, of government by absentee leaders, of government that must be changed if we as a nation are to measure up to the challenge which faces us.

The Brooklyn Polish-American home has been a beacon light these past 25 years for a people who know the meaning of faith in the future. I urge you to share this light with all your fellow Americans, to lead the way in calling out for justice for the long suffering people of Poland. In so doing you will be acting in the finest American traditions because we are a people dedicated to justice for all nations and all people.

Legislative Record of 86th Congress

EXTENSION OF REMARKS
OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. LESINSKI. Mr. Speaker, when the 86th Congress adjourns sine die this fall, it will have, I am sure, written an impressive legislative record for the betterment of our Nation and its citizens. As we recess at this time, I believe it would be well to review some of our actions thus far and to look at the work remaining to be done. After the elections this fall, I am confident that we who will be reelected to the 87th Congress can look forward to receiving cooperation from a friendly administration in the enactment of progressive and enlightened legislation to secure and enhance America's future.

I have been pleased and gratified by a number of actions which have been taken in fields in which I have been especially interested.

I was particularly pleased to see both Houses of Congress produce programs to extend Federal aid for school construction purposes. Having made close and careful study of the classroom shortage problem in my own district, I realized that Federal aid was necessary to help not only my area but also the other States and local school districts. As you know, I have introduced a number of bills on the subject, and one of my suggestions on a loan program was adopted in part by the administration. I have maintained that one of the greatest investments we can make today to insure continuation of our way of life is in the boys and girls of America who will grow up to be the future citizens of this great Nation. If we are to triumph over the ideologies that seek to destroy our way of life and form of government, we must see that these future citizens are trained and ready to meet the challenges of the future. To do this, we must start by providing facilities within which to educate them. I look forward to completing action on this legislation when Congress reconvenes this fall and to formulating new programs to meet new needs in the education of our children.

Another area in which I have been seeking legislative action is on the problems which confront the economically distressed areas throughout the Nation. Automation, changes in the consumer market, an ever-increasing population rate are all making their impact on the labor market and causing pockets of unemployment and depression in our country. Such conditions are to the detriment of the entire country. Coming from one such area, which suffers one of the highest rates of unemployment, I have introduced and sought action on a program to extend Federal assistance in the rehabilitation of these areas and to provide jobs for the jobless. It was heartening to see the Congress pass this vitally important legislation, but it was extremely disappointing to see the President veto the measure. I hope, Mr. Speaker, that when we return, this matter will be again brought up and favorable action secured on a program to meet the needs of these depressed areas.

With approval of the rivers and harbors bill, I saw the realization of a project on which I have been working for several years, the improvement of the Trenton Channel in the Detroit River. This is one aspect of my program to enhance the economic welfare of my own area, which, of course, will ultimately benefit the State of Michigan and the Nation as a whole. I was pleased to secure the cooperation of my colleagues in the House and in the Senate in obtaining approval and funds for the implementation of this project this year. And I look forward to securing similar approval in the succeeding Congress on projects which I have in varying stages of completion and others which I will initiate to improve the economic climate in my area, by making available the deep-water channel and port facilities that industry is always seeking for their expansion programs.

As a member of the Committee on Post Office and Civil Service, I have been actively working on the problems of the postal and civil service employees. We have been successful in having granted to these worthy citizens a much needed cost-of-living pay increase which puts their salaries more in line with those in private industry. The committee has reported for favorable action a number of other measures important to the welfare and well-being of our civil servants. Among them are three of my bills, one to provide a health and hospitalization benefits program for retired civil service employees, another to protect postal employees from sudden and unjustified salary cuts, and another to establish a more equitable salary schedule for employees promoted from one grade to another to provide for an incentive for the promotion of the better qualified people. I shall actively seek final approval of these measures when we reconvene in August.

It was my pleasure to support and see passage of the civil rights bill this year to insure that every citizen in the United States will be allowed to exercise his constitutionally guaranteed right to vote for the people he wishes to have represent him in public office.

I had hoped for favorable action on my proposals to revise the Federal income tax structure so as to give the individual taxpayer and small businessman relief and to eliminate excise taxes which had been imposed during emergency periods. You will recall, Mr. Speaker, that my bills were drafted to provide this tax relief without any loss of revenue which the Federal Government needs to provide the services that our citizens need and demand. By closing some of the loopholes and special concessions in the tax laws, this purpose can be accomplished. However, in the absence of such revision and realizing that the Federal Government must have revenue to continue functioning, I reluctantly

joined in the passage of another year's extension of the excise tax laws. I strongly feel that serious consideration must be given to the tax situation and I shall continue my efforts to have action taken.

All of us are very much concerned with the plight of our older citizens who must live on fixed incomes while the cost of living spirals ever upward. The passage by the House of Representatives of a bill to provide for increased benefits under the existing social security programs and to authorize a new program to help the retired folks meet the high costs of hospitalization and medical care is, I believe, a clear indication that we are aware of and responsive to their needs.

Mr. Speaker, much remains to be done in the months ahead, not only on the subjects which I have mentioned here briefly but on numerous measures for the welfare of our Nation and our citizens. When the final session of the 86th Congress comes to a close this fall, our record, individually and collectively, will demonstrate to the American people that we have acted wisely, judiciously, and in their, and the Nation's best interests.

Support Growing for Lorenzo de Zavala Park

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. YARBOROUGH. Mr. President, upon the resolution of the Harris County Commissioners Court and after expressions of interest and support by several other individuals and organizations, I recently introduced a bill providing for the Federal Government to transfer portions of the surplus San Jacinto Ordnance Depot land to the State of Texas for establishment of a State park.

This property consists of 281 acres adjacent to the family homestead and cemetery of Lorenzo de Zavala, a great Texas patriot who was the first Vice President of the Republic of Texas, and one of the signers of the Texas Declaration of Independence.

Since I introduced the proposal, four more organizations—the Harris County Historical Society, the Sons of the Republic of Texas, Sons of Confederate Veterans, and the Sons of the American Revolution—have passed resolutions asking the preservation of this property as a Texas shrine.

In addition, the Houston Post, one of Texas' finest daily newspapers, published an editorial supporting the bill which I filed. I ask unanimous consent to have printed in the Appendix of the RECORD the editorial from the Houston Post of July 3, 1960, entitled, "Ordnance Depot Land Sought for Park."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ORDNANCE DEPOT LAND SOUGHT FOR PARK

Across the Houston Ship Channel from San Jacinto Battleground lie 10 acres which include the homestead of Lorenzo de Zavala a signer of the Texas Declaration of Independence and the republic's first Vice President. Within the acreage is the Zavala Cemetery, containing remains of members of this remarkable family. The cemetery and the homestead are included in San Jacinto Park, which includes the famous battleground, although the two areas are separated by the channel. The Zavala site itself is surrounded by land belonging to the San Jacinto Ordnance Depot.

There has been a growing feeling that the historic land which once belonged to this important early Texas family should have a stronger connection with the popular San Jacinto Battleground. Certainly, the historical connection between two is strong enough. After the battle which won for Texas her independence from Mexico, the Zavalla home across the San Jacinto River was used as a hospital.

The danger that the separation of the two historical sites may be a permanent one and even result in complete isolation of the Zavala site lies in action by the Government's General Services Administration, which has put the ordnance depot property up for bids. If this land should be sold, Zavala site would be completely isolated from the rest of the park and its historical significance confined to the pages of history books, since it would no longer be accessible to the public.

In an effort to prevent this from happening, the commissioner's court of Harris County has passed a resolution asking the Federal Government to refrain from disposing of the land immediately adjacent to the homestead and cemetery, and asking for necessary legislation to give the land to Texas as part of San Jacinto Battleground Park. Now Senator RALPH YARBOROUGH of Texas has made a similar request of the Federal Government, which gives some hope to those interested that this important historical site will take its rightful place alongside the battleground with which it shares historical importance.

There is every merit to the request that the Federal Government release the ordnance depot land adjacent to the Zavala site. Citizens of Houston and Harris County should put their sentiments in the matter on record in support of the county commissioners' resolution and Senator YARBOROUGH's request, and send them to him in Washington before the August 1 deadline. With sufficient local backing, the Senator may succeed in his effort.

A Reminder by Francis Walter

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. SCHERER. Mr. Speaker, FRANCIS WALTER, chairman of the Committee on Un-American Activities, delivered an outstanding and memorable address at the Wyoming Monument commemorative exercises, Wyoming, Pa., which should be read by every American in these days of Communist aggression. Mr. Speaker, his timely warning to all of us follows:

Come with me as we walk back through the corridors of time a century and a half and more. We find ourselves right here in this beautiful valley which is the favorite gathering place of Indian tribes who come from miles around. Here we see the Six Nations of the Iroquois in their tribal conferences, and here we see an area which the white man covets. Then we see the Indians, over the strong opposition of King Hedrick, greatest of the Mohawk chiefs, deeding this very land to the white man.

As we linger in this valley, the shot heard around the world pierces the quiet of this very air. The Revolutionary War begins. Practically all of the able-bodied men leave here to serve in Washington's army to fight for freedom from British rule. The attraction of this valley does not go unheeded, for now we are in June of 1778, and we witness a combined force of Indians, British troops, and Tories under General Butler, who have set out from the village of Queen Esther, then the Iroquois monarch in New York. They have traveled by canoe down the Susquehanna. By July 1 they have captured the northern half of the valley and have reached Mount Lookout, leaving behind them a trail of blood and death. Their progress through the valley is marked by methodical massacre of everyone who falls into their hands—men, women, and children. We now behold them as they stand astride Mount Lookout, where they map their plans to pillage and sack the remaining villages.

In the valley, besides the women and children, there are only old men, boys too young to serve in Washington's army, and men of military age too sick to serve. Under the leadership of Cols. Zebulon Butler and Nathan Denison, they organize a force some 300 strong. Though outnumbered 3 to 1, they march out of Forty Fort on the morning of July 3, 1778, to meet an enemy they know they have no chance of defeating.

The British troops wait in their concealed positions until the Americans are within 300 feet—and then open fire. The Indians attack and fold the left flank of the American force. The battle itself lasts scarcely 30 minutes. The American ranks are decimated. The survivors surrender or try to flee.

The end of the battle, however, does not mean that the bloodletting is to end. Instead, it marks the beginning of the Wyoming massacre which lasts until at least the following morning. On the battlefield and around the Indian campfires that night, we see Americans who had surrendered honorably on the field of battle and other inhabitants of the valley who had been captured, being put to death by savage torture. Some have their bodies pierced by spears. Others are burned at the stake.

We grimace as we look toward Bloody Rock and see over a dozen Americans executed by Queen Esther herself. We shudder as the Indians hold them—one by one—singing the Indian death chant, while Queen Esther crushes their skulls with a huge maul.

Slowly you and I plod back again to the 20th century, and we find ourselves today with certain questions which we must ask. Why did this feeble band not flee as soon as word of the advancing enemy forces reached them? Did they not realize the futility of engaging in mortal combat an enemy that outnumbered them; that was fresh from victory after victory; that was infinitely better equipped and trained?

My friends, the answer to these questions rings through the ages until today. It is this—that there are certain causes for which men are willing to give their lives.

"Give me liberty or give me death"—"I regret that I have but one life to give for my country." Where are these voices today?

Instead, we hear: "I would rather crawl on my knees to Moscow, than die under an atom bomb." Or—"It would be better to live un-

der communism than to risk death and destruction in a thermonuclear war."

If we could bring to this scene today, here on July 4, 1960, those brave men and boys who were massacred here 182 years ago, I am confident they would utter these words: "We would rather that our bodies be blown to bits by all the destructive physical force of the international Communist empire, than to succumb to communism which destroys the soul and the mind, as well as the body."

Was the Battle of Wyoming—and the Wyoming Massacre—a needless waste of American lives? An 1837 petition to the Congress from the people of this valley made the following statement:

"The blood and tears shed at Wyoming were not shed in vain. Perhaps few incidents during the war provoked stronger sensations of horror and pity, throughout Europe, than the Wyoming Massacre. Perhaps few circumstances had so powerful a tendency to discredit, in public estimation, the arms and efforts of the enemy or had a stronger influence in arousing the people of the whole civilized world in behalf of the American cause."

Yes, hundreds of people died in this valley on July 3, 1778. But they did not die in vain. Their blood, their sacrifice, not only strengthened the resolve of the American armies, but were vital factors in rallying world support to the cause of the Colonies. In this sense, it was a defeat for the enemy. In death, the people of this valley achieved a victory.

A little over 3 years ago, the people of Hungary rose up against their Communist oppressors in what was deemed a completely hopeless cause. To the amazement of the world, they utterly defeated the Red occupation armies and won a complete initial victory. Then the Soviet Union threw in new massive forces. The Hungarians begged the free world, in God's name, to help them. But the most powerful free nations on earth responded with nothing but pious words and phrases, and, since that time, have welcomed the "Butcher of Budapest" everywhere within their borders. And so the people of Hungary were slaughtered by the tens of thousands. Many thousands more were shipped off to slave labor camps in Siberia—and Hungary today still lives under Communist tyranny.

Did the Hungarian freedom fighters die in vain? Like the Wyoming Valley Army, will they win a victory in defeat? To paraphrase the petition of the people of this valley to Congress in 1837, few incidents "provoked stronger sensations of horror and pity" than the Hungarian massacre and few circumstances "had so powerful a tendency to discredit * * * the arms and efforts of the enemy or had a stronger influence in rousing the people of the whole civilized world" in behalf of the Hungarian and the whole anti-Communist cause.

May I again ask: Did the Hungarian freedom fighters die in vain? The answer to that question will not be known until history records the last battle in the struggle between communism and the forces of freedom. In the ascendancy of the Communist conspiracy, it is reliably estimated that at least 40 million human souls have been murdered. In Red China alone, the most conservative estimates are that 20 million human souls have been crushed by this human meat grinder. It is almost impossible for us, as we stand in this peaceful valley, to comprehend just what these statistics impart. All the wars in history have not taken anything like this number of human lives. Let me give you at least a faint idea of what these statistics mean.

Let us suppose that when this ceremony is ended we were to embark on a tour that took us to every corner of our native State, the Commonwealth of Pennsylvania, and that, after we had covered every inch of its territory from north to south and east to west, we went into the neighboring State of New Jersey and did the same thing there; then we traveled south to Delaware; west again through every mile of the State of Maryland; then into the District of Columbia, our Nation's Capital; and finally all through the State of Virginia.

Let us suppose that on this tour we saw not a living soul, but that everywhere we went in each one of these six formerly populous States we saw nothing but corpses—thousands, hundreds of thousands, millions of them. We would then have some idea of what, according to the most conservative estimates, the Communists have done to the people of China alone.

West Virginia, Kentucky, and Ohio would be added to the list if I were to use the higher estimates of the human slaughter committed by the Chinese Reds. It would be beyond our ability to imagine, even in a gruesome nightmare, each one of these millions of deaths taking place one by one—many of them as a result of fiendish torture.

This is an appalling picture, a picture painted by a monstrously inhuman regime—a regime which some people in this country and some of our allies say should be recognized by the United States and admitted to the United Nations as a peace loving nation.

Today, we hope that, with God's grace, nothing like what has happened in Russia, Hungary, in China, Tibet, and Eastern Europe will ever take place in this country. But we must not think that it cannot possibly take place here. Our enemy is rapidly extending his power throughout the world. His agents are growing in strength in every nation that has so far been spared Red bloodletting. To date, we have failed to stop him. Today, he is not only entrenched 90 miles from our shores, but has thousands of agents within our borders. They are in our schools, our PTA's, our churches, civic groups, our entertainment media—in every phase of our national life—and are growing in strength. This I know from incontrovertible evidence and testimony presented before the Committee on Un-American Activities. The enemy is working day and night to destroy our freedoms and our Government, just as surely and with as deadly a purpose as that of the British, Indians, and Tories in the Revolution.

What can we do now to assure that it will not happen here?

My friends, the hour is late. We must begin today to do everything in our power to see that the enemy forces entrenched in our society are eliminated, beginning on the local community level and going on up through the highest levels of our political, economic, and social structure.

We must insist that our Government do everything in its power to destroy the international forces of communism which threaten not only our lives and our freedom, but every advance wrought by thousands of years of human civilization in every part of the globe.

Today we know the enemy is at hand. He himself has told us so over and over again. And he has told us, too, just what he intends to do with us. "We will bury you," he says.

Today, unlike our Wyoming Valley forebears, we have all the tools, the weapons, the strength, needed to defeat our foe. But we have refused—and are still refusing—to make full use of them. We lack the will. We seem to lack the devotion to freedom that all men must have if they are to remain free.

The Great Wall of China was designed and built centuries ago to be impregnable. Its massive strength was tested time and time again by direct physical assault. But three times within a single generation enemy forces pierced this barrier, not by reason of physical strength, but by bribing the guards. In this hour we know that the military might of the free world is such that we can destroy in a matter of hours any aggregation which might unleash physical attack upon us. Like the walls of ancient China, our armed might appears to keep us invulnerable. How about the guards? At this very moment, while I am speaking to you, hundreds of Communists and other subversives who at one time were denied security clearances to serve on merchant vessels have now gained Coast Guard documentation to serve on the merchant vessels which are vital conduits for our defense—all because of strained constructions by the courts which fail to recognize the conspiratorial nature of the Communist operation.

While I am speaking to you at this very hour, there are over 100 employees of the Federal Government who were dismissed as security risks, but who have since gained reemployment in the Government, because of still other decisions by the courts which have all but destroyed our loyalty security program.

While I am speaking to you now, the tie-lines and lease-lines carrying security information out of the Pentagon itself, and the North Atlantic Cable, are serviced by the American Communications Association, which is controlled, lock, stock and barrel, by the Communist Party.

While I am speaking to you now, traitorous American citizens who are international Communist agents, are coming and going around the world with U.S. passports issued to them because of the breakdown in our passport control system.

Yes, my friends, our freedom is at this instant imperiled, not by lack of military might, but by lack of the spirit, vision and courage which prompted our Wyoming Valley forebears to challenge with their all, that force which threatened them.

These are things we must think about today as we remember and honor the spirit and the deeds of the early settlers of this valley and the way many of them died. They have given you and me, each one of us, the most precious thing of life—freedom and honor.

We leave this brief ceremony then with this question which each must answer to himself: Will I be true to the memory of our Wyoming Valley forebears who gave their all for the cause of freedom?

Highlights of National Affairs Platform of American Veterans Committee

EXTENSION OF REMARKS

OF

HON. STEPHEN M. YOUNG

OF OHIO

IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. YOUNG of Ohio. Mr. President, the American Veterans Committee has distinguished itself as an organization dedicated not to the interest of veterans alone but to the welfare of all Americans and to the growth and well-being of our great Nation.

Recently, at its national convention at Atlantic City, N.J., which I had the pleasure of addressing, the AVC adopted a farsighted and praiseworthy national affairs platform, giving its views on the needs and goals of the United States

during the age of change and challenge of the 1960's.

I ask unanimous consent that highlights of this platform be printed in the Appendix of the RECORD.

There being no objection, the platform was ordered to be printed in the RECORD, as follows:

HIGHLIGHTS OF NATIONAL AFFAIRS PLATFORM OF THE AMERICAN VETERANS COMMITTEE, ADOPTED AT THEIR 1960 CONVENTION, JUNE 10–12, AT ATLANTIC CITY, N.J.

GOVERNMENT AND LIBERTY

I. The Nation's freedom—The Bill of Rights

1. We reaffirm the basic right of all Americans to due process of law, the right to counsel and to freedom from unlawful search and seizure. We oppose all efforts to suppress freedom to believe, speak, write, assemble, criticize, and dissent.

2. A. We urge the passage and enforcement of Federal legislation and regulations which will insure the equal protection of the laws, regardless of race, color, ancestry, national origin, religion, or sex.

B. In furtherance of the decision of the U.S. Supreme Court calling upon the States to integrate their school systems "with all deliberate speed" we urge the passage of Federal legislation which will—

(1) Direct the Secretary of Health, Education, and Welfare to give technical assistance to communities engaged in integration—as well as draw up plans for any community which has failed to initiate such integration plans of its own.

(2) Give the Secretary of Health, Education, and Welfare the duty of seeking assistance from the Attorney General to enforce the above through all legal means at hand.

(3) Provide Federal funds to help support school systems deprived of State financing because of State or local laws designed to hinder or evade integration.

(4) Empower the Attorney General to seek injunctions or proceed under law on behalf of persons claiming deprivation of civil rights or liberties.

C. We urge the enactment of Federal, State, and local legislation to prevent discrimination in—

(1) Voting.
(2) Housing.
(3) Employment.
(4) The use of facilities and accommodations open to the public.

D. We urge inclusion in all Federal legislation of a provision requiring loans or grants to be used without discrimination (recognizing, however, the right of any institution to limit its religious services to the members of a particular religious denomination or to limit its services to the members of one sex).

E. We urge protection by Federal law of all members of the Armed Forces from physical violence, because of race, color, ancestry, national origin or religion.

F. We urge making lynching a Federal crime.

G. We favor Federal legislation making it a crime to bomb or to conspire to bomb school, church and other public and quasi-public property.

H. We believe in the principal of church-state separation and are therefore opposed to the use of public funds for church-administered schools.

I. We favor freedom from censorship of newspapers, magazines, radio, television, motion pictures and other media.

J. We oppose wire-tapping and electronic eavesdropping.

3. A. The right against self-incrimination should not be diluted or impaired.

B. The right of an American citizen to travel abroad should not be arbitrarily abridged by the Federal Government.

C. We urge revision of the immigration and naturalization laws to eliminate racial and religious discrimination, to eliminate the outdated national origins quota system and to do away with distinction in the treatment of native born and naturalized citizens.

We urge that all hearings on immigration and naturalization matters be subject to the safeguards of the Administrative Procedure Act.

We urge a revision of the statutes and practices governing deportation (a) to provide a reasonable statute of limitations; (b) to preclude deportation of those charged with activities which were legal when undertaken; (c) to preclude deportation of those who arrived in the United States as children and who have spent the major portion of their lives in the United States.

II. The Nation's Government

1. The right of the people to full knowledge of Governmental affairs must not be abridged, except where disclosure would imperil the national security.

2. We urge proper changes in the rules of the Congress of the United States which will make it possible for the majority of the Members to vote cloture or close debate on legislation after a reasonable period, and which will make merit, not tenure alone the standard to be used in the selection of committee chairmen.

3. Federal payments to the States for aid to schools in federally impacted areas, for assistance to the blind, disabled, dependent children, and the aged, for slum clearance, waste treatment facilities, vocational education, and hospital construction must be continued.

4. We urge reapportionment within the States based on current population distribution.

5. The Federal civil service:

A. Apart from discharges based on reorganization of Government activities or reductions in force, Government employees should be discharged only for cause and through due process of law.

B. The rights granted to veterans in the Veterans Preference Act in regard to discharge procedures and appeals should be extended to all Government employees except those in probationary status.

6. We urge that the District of Columbia receive (a) the right to full local self-government; (b) the right to vote in presidential elections in proportion to its population; (c) the right to elect one nonvoting Commissioner to the House of Representatives; (d) a fixed annual contribution in lieu of property taxes on federally owned property within the District.

ECONOMIC SECURITY

III. Basic economic policy

1. We continue to support the Employment Act of 1946 which states it is the policy of the Government to create and maintain "conditions under which there will be afforded useful employment opportunities, including self-employment, for those able, willing, and seeking to work and to promote maximum employment, production, and purchasing power."

2. We urge Congress to establish a Department of the Consumer, to be headed by a Secretary of Cabinet rank.

3. Maximum prosperity, without inflation, can only be attained and maintained so long as the national economy continues to expand at a rate equal to our population growth, plus rising productivity per man-hour. National policies and programs to insure this rate of national economic growth should be established.

IV. Monetary and tax policy

1. Monetary policy:

A. We urge the increase of and additional appropriations for much-needed social, welfare, and economic measures as sound investments in the well-being of our Nation.

B. We urge easier credit for small business, homebuilding, and the family farm.

C. We urge the establishment of a Federal capital budget for reimbursable public-works projects with a life in excess of 5 years.

II. Tax policy:

Increased economic activity, together with stricter enforcement of our tax laws, should produce much of the income needed to finance the Government programs which we support.

We urge the elimination of special provisions in the internal revenue laws which are discriminatory in nature.

We also call for an end to the abuse of the deductibility of business expenses.

V. Housing and urban renewal

AVC is vitally aware of how closely the country's economy and well-being are dependent upon the building and housing industries and of the continued need for additional housing at reasonable rents. With this in mind, we offer the following housing program:

1. That the FHA and VA insure mortgages for a term up to 40 years with low down-payments, and that the Federal Government make said mortgages attractive investments to lending institutions.

2. An enlarged and vigorous middle-income program, both publicly owned and privately sponsored, including consumer cooperative housing.

3. That the Government (municipal, State, Federal) pursue a vigorous program of urban renewal planning and make provisions for the smaller builder-owner and individual owner to participate actively.

4. Vigorous enforcements of present Government antidiscrimination clauses in FHA and VA loan provisions and a Federal law insuring open occupancy in all sales and rentals.

5. Continued and expanded publicly owned housing for low income groups, together with a government stimulated, privately sponsored program to provide housing for said groups.

6. That the Government (Federal, State, and municipal) make allowance in the form of subsidized additional mortgage guarantees and real estate tax abatement to builders and owners who make special provisions for the disabled and the aged.

VI. Conservation and development of natural resources

We view the development and conversation of our natural resources as a vital part of the Government's role and policymaking function in the economy.

1. We suggest the reorganization of the Department of Interior as a Department of Natural Resources to promote effective application of the principles of conservation and development to all segments of our national life concerned with natural resources, and to center Federal responsibility in this field clearly within a single agency.

2. We urge the Department of Interior and Agriculture to continue and expand their programs of education and control designed to encourage wise conservation practices. We further request the appropriate committees of Congress to remain constantly vigilant to prevent by any unnecessary destruction or loss of the truly irreplaceable resources of soil and forest.

3. We recognize that, if water use continues to increase at its present rate, we shall be faced within a century with the necessity of using and reusing every gallon of water available from natural sources within our country.

A. We, therefore, reaffirm our strong support of the comprehensive river basin development (one river—one plan) principle.

B. We urge the accelerated application of this principle to our great river basins and

condemn the abandonment of this principle by the present administration in the Hells Canyon conflict and the violation of the comprehensive plan for the Columbia River Basin.

C. We favor enactment of legislation to establish a coordinated Great Plains Administration and the coordination of separate regional developments of this type, both with respect to river valley considerations and to national economic policies.

D. We urge the Federal Government to undertake the planning and construction of multipurpose water and power projects similar to the one provided for in the Tennessee Valley.

E. With the limitations of fresh water from natural sources clearly in view, we ask for development and conservation of all our water resources for maximum domestic, agricultural, industrial, and recreational uses.

F. We urge the Department of the Interior to expedite the program to develop economic means of converting brackish and saline waters into usable fresh waters at economic cost.

4. We call for the establishment of a rational, comprehensive national policy to guide the development and use of our energy resources, especially:

A. The maximum feasible development of our only perpetually renewable energy resource, the hydroelectric power of our great river systems, including Federal construction of such multipurpose power dams.

B. A continuation and acceleration of the Federal programs to develop and stimulate development of effective processes for the utilization of our immense reserves of oil, shale, and coal.

C. The speedy development of atomic energy (both fission and fusion type) for power and other peaceful purposes.

D. We urge the establishment of a rational and coherent national policy to maximize the benefits available from the great strides technology has made in high-capacity, high-voltage generation and transmission of electric energy.

5. We urge an increasing expansion of our national park system and national forests for recreation of the people of the United States and for preservation of wildlife and the conservation of the few remaining wilderness areas in our country in their natural state.

6. We strongly recommend enactment of laws making it mandatory for the executive branch to submit to Congress for prior approval any proposal to sell or grant proprietary privileges in Federal-owned land or resources to private interests. We oppose revocation of Federal commitments entered into by treaty between the U.S. Government and various Indian tribes.

VII. Agriculture

We believe that the land, water, and other natural resources should be used and conserved by owners and operators in such a manner as to pass on these irreplaceable natural resources undiminished to future generations.

We are convinced that families on family farms can best conserve these priceless national assets.

We believe that these aims can be attained through combined individual and cooperative private action with and under programs of democratic government.

Industrialized agriculture, in competing unfairly with family-type farming, must be brought into compliance with all labor and welfare legislation which now protects nonfarm industrial workers. Only as these long overdue extensions of coverage are made can more than 2 million migrant farmworkers be given first-class citizenship in our economy; only as this is done can family farm operators be assured of the fair competition needed for their survival.

VIII. Labor and social policy

We urge:

1. An increase in the Federal minimum wage to $1.25 and extension of Federal minimum wage legislation to cover employees now excluded.

2. Federal standards to increase unemployment insurance benefits, more realistic eligibility standards, and lengthening of the period for which benefits are paid.

3. Improved social security benefits.

4. Amendment of the Taft-Hartley Act to outlaw State right-to-work laws, to compel the NLRB to accept jurisdiction whenever an employer is actually engaged in interstate commerce, to grant strikers the right to vote in certification elections, and generally to establish labor's equality with management in labor's own sphere.

5. Enactment of laws for the full disclosure of the administration of pension and health and welfare plans, whether administered by unions or management or jointly by both.

6. The recently disclosed abuses in labor union management call for labor vigorously to clean its own house with the aid of Federal remedial legislation. Caution should be exercised in regard to legislation dealing with internal union management so that it will strengthen, not weaken, an independent democratic labor movement. In particular, we oppose proposals to bring the labor union under the sway of the antitrust laws.

7. Legislation requiring unions to admit to membership qualified applicants without regard to race, color, ancestry, national origin, religion, or sex.

8. Legislation granting official recognition to Federal employee unions.

IX. Education

We call for active governmental leadership and support:

1. To promote widespread recognition of the fact that "in the quality of education lies the fate of freedom itself," to provide educational opportunity for every American to the limits of his capacity, and to identify the talented among us and challenge them to their highest achievement.

2. To insure the availability of adequate funds for public school construction and raising teachers' salaries, and for necessary expansion of the physical plant in tax-supported institutions of higher learning.

3. To improve and extend existing scholarship and loan programs for college and university students.

4. To extend scholarship and exchange programs for study by Americans abroad and by nationals of other countries in the United States.

5. To appropriate adequate Federal aid to communities impacted by Federal programs.

X. Public health

We urge:

1. Increased Federal expenditures for research in the prevention and cure of illness.

2. Expansion of medical insurance and group medical care plans, including a plan for national health insurance.

3. Expansion of public health facilities and services, hospitals and nursing homes, and facilities for the rehabilitation of the aged and disabled.

4. Access by patients to all health facilities and services, hospitals and nursing homes without regard to race, color, ancestry, national origin, religion, or sex.

XI. Civil defense

Aware of the importance of a vigorous civil defense effort to the very survival of the United States and its people, AVC favors effective action at all levels of governmental and individual effort in order to secure the maximum degree of protection.

The Two Tasks of Conservatism

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD the following address delivered by Robert F. Croll at a Youth for Goldwater Rally, held in Chicago, Ill., June 22, 1960:

There is a saying that nothing is so powerful as an idea whose time has come. In trying to foresee what ideas will grow to power in the future, Americans often consult the trends of thought among young people. The ideas which stir them, which move them to action, are the ideas which, in years to come, will rule the Nation.

The burden of my talk here tonight is that collectivism, so long considered the movement of the future, is fading; that a new idea is surging through the young people of this country, and that its day is coming soon.

The new idea is the idea of conservatism.

Exactly how soon its time will come is hard to say, for this is not a normal period of history. It is a period of continual crisis, which imposes a twofold task on the conservative: to deal with the crisis that is upon us, and to build for the time when the new idea will move to dominance.

It used to be that standing for principle, on the one hand, and riding "the wave of the future," on the other, were considered as separate and mutually exclusive activities. You could not believe in time-honored traditions and still be in league with tomorrow. Thus collectivism, driven by its will to power, moved into political control in most of the countries of the world—and to a large degree in the United States. But statism contains the seeds of its own destruction, both in terms of working economics, and in terms of fundamental value.

Because it is not rooted in anything permanent, collectivism could not last. Like all things which are essentially frivolous, it became stale and empty with a little use.

So, I believe, we are now in the down-cycle of collectivism. At college campuses across the Nation, young people are turning away from the dogmas of the left, and taking up what to them are the new ideas of limited government, the free economy, and a firm regard for the sovereignty of the United States. They have had their fill of Government intervention, swollen bureaucracy, and the variety of internationalism which holds that America can do no right, and her enemies can do no wrong.

As the pendulum swings, conservatism is resurgent. As an idea whose time is coming, it is comparable to collectivism in its own hey-day. But there is this crucial difference: whereas the collectivist movement was based solely on the urge for novelty, and on adolescent denial of the moral order, the conservative revival combines the appeal of the new and the different with the lasting power of transcendent value.

America's young conservatives today, as I have seen them, are united both by their enthusiasm in a common fight, and by their deep belief in the traditions and values of this Nation. Thus, as its time approaches, as it is toughened and refined in the fires of crisis, conservatism grows always stronger, and must inevitably triumph.

But that, as I say, is the long-range objective, and so only part of the conservative's task. While the process of change is taking

place, the young conservative realizes that the political framework of the struggle can itself be destroyed—and that the struggle can therefore be rendered meaningless.

His worry is that the current orthodoxies of statism at home and weakness abroad may either wreck our country from within or deliver it inadvertently into the hands of the foreign enemy.

He knows that with the swing of the pendulum his side will triumph, but his first concern must be to preserve the existence of the clock.

For these reasons, today's young conservative must be a tactician; he must have a good working knowledge of the political alternatives available to him and choose those which offer the best chance of holding the line in the contemporary political arena while the dynamic forces of change are doing their work.

Thus, America's youth is today gathering beneath the political banner of Senator BARRY GOLDWATER, of Arizona, the statesman who, in our opinion, speaks most clearly in behalf of the policies which can preserve our freedoms at home and sovereignty abroad.

For those who are not fully acquainted with Senator GOLDWATER's views on current issues, I highly recommend his book, "The Conscience of a Conservative." It is, I think, the most straightforward confrontation of the problems we face that has ever appeared under the byline of a public official.

I will not go into all the particulars of the Senator's views now, or the particulars of the conservative position as a whole, but will offer instead this paraphrase: "The practical conservative begins, first of all, by acknowledging that these are not normal times; that this is, indeed, a time of crisis, which demands extraordinary effort. Until we recognize that unusual effort is called for, we cannot hope to achieve practical results."

The most serious aspect of the crisis, I believe, is presented by the threat of Soviet communism and its designs on the sovereignty of the United States. It is the most serious because it is the problem we have shown the least ability to understand, and so have dealt with least effectively.

It is now routine, of course, to say we have dealt improperly with the Communist menace, to decry the vast strides the Communists have made, and to demand greater effort in the struggle with the Kremlin. The trouble is that most of these demands themselves betray the very misconceptions which have brought us to our present impasse.

For example, the recent statements by a member of my own party, Governor Rockefeller, of New York. Rockefeller recently issued a statement criticising the Eisenhower administration and Vice President NIXON for, among other things, not having spent enough on defense, and in general alleging that the administration had not properly handled national policy relative to communism.

So that there will be no misunderstanding of my own position, I would like to take this opportunity to repudiate, as forcefully as I can, the stand taken by Governor Rockefeller. As a Republican, I believe I am more than willing to give my first loyalty to principle, rather than to considerations of partisan advantage. And I would be among the first to agree that a political party thrives on the free discussion of issues.

But I think Rockefeller has done a grave disservice not only to his party—and to Vice President NIXON, his party's acknowledged candidate for President—he has done a disservice to the country as a whole, by clouding issues and giving aid and comfort to the very forces of weakness and confusion which have contributed so much to our series of retreats at the hands of the world Communist empire.

I think I second the sentiments of Senator GOLDWATER, and of all other conservatives, when I repudiate utterly the kind of criticism that Rockefeller has directed at the administration, and express my solidarity with Vice President NIXON in the face of it.

I note with interest that the Rockefeller stand has been endorsed by one of the Democratic candidates for President, STUART SYMINGTON, who says: "I thought his proposals were all right." SYMINGTON added that "our only differences were in degree"—meaning that Rockefeller proposed about 10 times as much additional defense spending as did SYMINGTON.

All of this, in my view, represents a complete misunderstanding of what is happening in the world, and of what the United States must do to cope with it.

To the Rockefellers and Symingtons, greater effort against communism means simply spending more money. Reacting in terms of the mistaken assumptions which have put us where we are, they believe that a satisfactory response to communism can be purchased out of the Federal Treasury—that a challenge at the level of fundamental value can be met with dollars.

But the point about our present crisis, as the conservative sees it, is precisely that the challenge cannot be answered in these terms. And we have stumbled into our present dilemma precisely because we have consistently let them control our thinking about the Communist onslaught.

The crisis is not a crisis of dollars or of military hardware. It is a crisis of mind and will.

It is a crisis of mind because we have not properly measured the intentions of the Communist leaders, and so have not created a policy that can counteract them.

It is a crisis of will because, even when we have glimpsed what the Communists are up to, we have not had the firmness to stand up to them.

If anyone thinks that the answer to Communist techniques of aggression is simply to manufacture more arms, he is sadly mistaken. Let him consider the fact that in the decade immediately following World War II, the United States was unquestionably the preeminent military power of the world. Yet in that same decade, world communism pushed forward its offensive in every sector of the world—without satisfactory response from the United States.

We had the physical means of stopping the Communists; but, not understanding their techniques of aggression, we did not know how to apply the means. And even when the application was clear, we did not have the will to act.

This lack of understanding and lack of will are aggravated, rather than helped, by statements such as that issued by Governor Rockefeller.

By suggesting that the problem is a mechanical one, to be met with increased dollar outlays, Rockefeller sustains the country's confusion as to what the Communist challenge consists of.

By picturing the United States a second-class power, and building up an image of a Soviet colossus ready to obliterate us, he further weakens our national will to resist.

Contrary to Rockefeller's statements, the objective facts show that the Eisenhower administration has not beeen at all derelict in providing the physical means for national defense; the United States is today, by every known test, the paramount military power of the world; and while continued efforts to keep her so are desirable, those efforts themselves can do little to stop Communist advances around the world.

The conservative believes that America's performance can be improved, first and foremost, by clearing away the delusions shared by many people in both parties—the delusion that we can get along with communism, or coexist with it, if only we try hard enough.

The conservative believes that the first step toward wisdom in foreign policy is to realize that the free world is already at war with communism, and that our choice is therefore simple: to win the war, or to lose it. This means that no foreign policy can succeed which simply stipulates peace as its guiding objective.

Senator GOLDWATER puts the matter this way in his book: "We want a peace in which freedom and justice will prevail, and that—given the nature of communism—is a peace in which Soviet power will no longer be in a position to threaten us and the rest of the world. A tolerable peace, in other words, must follow victory over communism. We have been 14 years trying to bury that unpleasant fact. It cannot be buried and any foreign policy that ignores it will lead to our extinction as a nation."

The conservative believes, then, that an improved foreign policy has little to do with Governor Rockefeller's pleas for greater spending.

What is needed, instead, is to transform the basis for our strategic thinking—to move away from the defensive goal of coexisting with communism and toward the goal of destroying communism as a world force. We must arm ourselves in the determination necessary to win the war we are in.

Does this mean that we start shooting? On the contrary. As Senator GOLDWATER observes, it means that we must adopt a realistic course which can save us from being pushed into a corner where shooting alone can get us out.

Detailed prescriptions for such a course are set forward in the final chapter of Senator GOLDWATER's book, entitled "The Soviet Menace." Without enumerating them, I will note that they have to do with stopping all activities aimed at conciliating the Communists and with seizing the initiative from Moscow. The object of our policy should be to confront the Communists with the continual problem of whether to yield to our demands rather than the reverse.

This means, in particular, a strategy which no longer considers Communist-held territory as an immutable status quo, never to be disturbed by our policy. It means a strategy directed at the liberation of the nations now held captive by the Soviet Union, using all conceivable means at our disposal.

Such is the counsel of conservatism in the crucial area of preserving America's national existence against Communist aggression. It is counsel that calls up and depends upon the system of value which collectivism has sought to extinguish—commitment to freedom and to national sovereignty and honor.

It is counsel which, we think, will secure the continued existence of an arena of free thought and free political activity in the United States. It is the first task of practical conservatism which makes the second task possible.

Bishop A. Frank Smith, One of the Great Leaders of Methodist Church, Is Honored in Houston

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. YARBOROUGH. Mr. President, a short time ago Bishop A. Frank Smith, of Houston, one of the Nation's best

known and loved Methodist leaders, retired after 43 years of dedicated ministry.

In honor of his outstanding and devoted work, Houstonians recently joined Methodists and many others from across the Southwest in observance of Bishop Smith's unstinting service.

In an editorial marking the occasion, the Houston Post observed:

No minister in Texas was ever held in deeper affection by his fellow clergymen or the church membership, which fact is a tribute to his own high character, his brotherly love, and his sincere interest in his fellow men. His retirement will be a distinct loss to the church, but all its members will hope and pray that he will continue his association unofficially for many years to come.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the excellent editorial on Bishop Smith's work as it appeared in the Houston Post of June 1, 1960, under the heading, "Bishop Smith One of Methodism's Greatest."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BISHOP SMITH ONE OF METHODISM'S GREATEST

Methodists of Texas will honor one of Houston's most revered and admired churchmen Wednesday evening in the Sam Houston Coliseum. He is Bishop A. Frank Smith, and he is retiring after 43 years of dedicated ministry. For 30 years of that time he has been a bishop—one of the few in Southern Methodist history to fill a bishopric for that long.

The annual meeting of the Methodist Church's Texas Annual Conference, in session in Houston this week, will be the 26th and last at which he will preside.

He came to Houston as a young minister, 32 years old, in 1922, to be pastor of the First Methodist Church, the largest in southern Methodism. He came here with a bright record of 8 years' ministerial experience, at Alto, Detroit, Dallas, Austin, San Antonio, and, during World War I, as an Army chaplain.

Beginning as bishop of the Oklahoma, Missouri, and Indian Conferences in 1930–31, one of the youngest ever elected a bishop of the Methodist Episcopal Church, he has since presided over the St. Louis, southwest Missouri, Missouri, Illinois, Indian Mission, Texas, north Texas, Oklahoma, west Texas, Louisiana, southwest Mexican, and Rio Grande conferences. Among various other high offices he has held in Methodism was the presidency of the council of bishops.

At Wednesday evening's special service, some of the leading figures in Methodism will pay tributes to Bishop Smith; and everyone present, from all parts of the Texas Conference, who know and love him, will sincerely share the plaudits.

No minister in Texas was ever held in deeper affection by his fellow clergymen or the church membership, which fact is a tribute to his own high character, his brotherly love, and his sincere interest in his fellow men. His retirement will be a distinct loss to the church, but all its members will hope and pray that he will continue his association unofficially for many years to come.

Mr. YARBOROUGH. And, Mr. President, the story from the Houston Post of June 2, 1960, concerning the meeting honoring Bishop Smith, which was entitled "Four Thousand Methodists Salute Retiring Bishop Smith."

There being no objection, the story was ordered to be printed in the RECORD, as follows:

FOUR THOUSAND METHODISTS SALUTE RETIRING BISHOP SMITH

(By Kent Demaret)

Approximately 4,000 Methodists gathered in the Sam Houston Coliseum Wednesday night to say goodby to retiring Bishop A. Frank Smith.

Bishop Smith, one of the two Methodist bishops assigned to Texas, has served the Methodist religion for 46 years, the last 30 years as a bishop, the last 27 years as a bishop of the Houston area.

He is 70 years old and the spiritual leader of 400,000 Methodists.

The ceremony to honor Bishop Smith was one of the highlights of the 22d annual meeting of the Methodist Church's Texas Annual Conference which will continue through Friday in Houston. It will be the last conference over which Bishop Smith will preside.

His retirement becomes official June 26 at the South Central Jurisdictional Conference in San Antonio when the Methodist Churches of Texas will elect his successor and five additional bishops to serve the seven-State area taken in by the jurisdictional conference.

Bishop Smith and his wife Bess were presented with a new automobile and an undisclosed amount of cash as a token of esteem by Texas Methodists. Mayor Lewis Cutrer officially proclaimed June 1 as "Bishop Smith Day" in Houston.

Bishop Smith and his wife also received telegrams from statesmen, businessmen, university presidents and ministers of all faiths who expressed regret at his retirement and gave thanks for his past services to the community.

Bishop W. C. Martin of the Dallas-Fort Worth area represented the Council of Bishops and Texas Methodism at the farewell ceremonies.

Bishop Martin praised the abilities of Bishop Smith. "We thank God that He's given you to us," Bishop Martin said.

Dr. Ralph W. Sockman of Christ Church, Methodist, New York City, delivered the sermon. He hailed Bishop Smith as both a "prince and a pioneer." Dr. Sockman said Bishop Smith had maintained his contacts with all that was good in the past and still looked ahead.

Dr. Sockman said Bishop Smith's influence in the church at large has been tremendous, and marveled at his abilities to maintain a personal touch with lay members of the church despite his many administrative duties.

Bishop Smith also received tribute from representatives of the ministers and laymen of his conferences.

Dr. Monroe Vivion, representing the ministers, cited Bishop Smith's "devotion to duty * * * devotion to God, his good will and kindly, patient and thoughtful personality" as outstanding traits.

John S. Redditt, representing the laymen, said, "Bishop Smith has been applied Christianity."

Bishop Smith, obviously touched by the display of devotion by the Methodists, spoke to the audience for a few minutes along with his wife.

"It is impossible to transfer the thoughts and emotions of this hour into words," Bishop Smith said. "I can't say anything tonight except thank God for all of you. If everything you have given me tonight was gone but the memories I could ask for nothing more."

Mrs. Smith told the audience she would use their cash gift to buy a home, the only one they have ever had besides the parsonages.

Bishop and Mrs. Smith have three grown children and several grandchildren. They live at 1049 Kirby Drive.

SBA Renders Disservice to Vermont Community

EXTENSION OF REMARKS
OF
HON. WILLIAM H. MEYER
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. MEYER. Mr. Speaker, early in February of this year my office was contacted by persons interested in the disposition of a furniture company in Brattleboro, Vt., which was facing bankruptcy, and thereupon began a story of disservice and disregard by the Small Business Administration which I believe should be made a matter of record. This account is from the point of view of efforts made by me and others to obtain cooperation and assistance from SBA for local business leaders who were trying to save a small industry. Their efforts were thwarted, and the manner in which the affair was handled by the Small Business Administration deserves to be recounted.

Templeton Furniture Co. of Brattleboro was the industry in question. Small Business Administration carried a mortgage of some $149,000 on its property, and parenthetically, this in itself is an item which should have an explanation when one considers that the total amount for which the assets were finally sold was only $84,000.

The problem for Brattleboro early in February was what steps could be taken to save this manufacturing plant as a going concern to provide income and jobs for the community. Original contact was made with my office by W. Robert Johnson, Sr., on behalf of the Industrial Development Committee of the Brattleboro Chamber of Commerce. Mr. Johnson asked that I contact Small Business Administration to see what disposition would be made of the plant, and especially what could be done in cooperation with local business interests to make it possible for another local furniture manufacturer, who needed it, to acquire the space and equipment.

My first discussions on the matter were with the staff of the House Small Business Committee, and it became apparent from their inquiries that SBA would dispose of the property by auction. It was my understanding that SBA probably had discretionary powers as to the manner of resale, but apparently it is their policy in such cases not to negotiate directly with buyers. Rather they go for the top dollar, and this they seek at an auction.

Later in February, Mr. Johnson was passing through Washington, and this afforded opportunity for him to talk directly with responsible officials at SBA to see what could be done to help interested local parties acquire the Templeton plant. A meeting was arranged, and this

took place on February 25 with Mr. Frederick C. Stoddard, Director of the Office of Loan Administration at SBA. Mr. Stoddard was joined by Mr. William A. Chadwell, Chief of the Liquidation Division, and both Mr. Anthony Buraczynski of Brattleboro and Mr. John Carnahan of my staff were with Mr. Johnson. It was reported that they discussed the whole range of problems in disposing of the Brattleboro property, and Mr. Stoddard was most cordial in assuring that SBA was interested in helping the community retain the plant as a going concern. In particular, it was the understanding of the Vermonters present that final approval of any sale would have to be given here in Washington, although arrangements would be handled by the SBA office in Boston. In the meantime, other representatives of the chamber of commerce, including Manager George Vakalis, and Mr. Leon Sandman, president of Alpine Wood Products Co., which wanted to acquire the plant, had talked at length with Mr. Albert O'Shea of the Boston office. From both sources, the understanding clearly was that final approval of any sale would be given by Washington.

This matter of final approval has importance to the outcome of the story, because all through the events that followed it was the definite understanding of the Brattleboro people that there would be top level review following the auction. It was hoped that in this way final consideration could be given to the community's efforts to save the property intact as a going concern, and that the needs of the community and small business could and would be taken into account in the final disposition of the property.

Community concern was indicated by local activity to make arrangements for helping to finance a buyer such as Alpine Wood Products, and it was expressed in various statements, including the following petition by the selectmen of the town of Brattleboro:

TOWN OF BRATTLEBORO,
Brattleboro, Vt., April 20, 1960.

Hon. WILLIAM MEYER,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN MEYER: It has been brought to our attention by the Industrial Development Committee of the Greater Brattleboro Chamber of Commerce that it would be very much in the best economic interest of the town of Brattleboro if the forthcoming sale of the Templeton property could be held as soon as possible and sold as a package so that it can be maintained as a productive manufacturing plant.

There is, at the present time, at least one local manufacturer extremely interested in acquiring the property. This party needs additional space desperately in order to meet increased production schedules this summer. The present employment of this manufacturer is 35 to 40 and would increase to 50 to 60 as soon as they could move. They have the potential of employing 90 to 100 production workers within 90 days.

We are also informed that there are other industrial prospects who are interested in acquiring the property as a unit and feel certain that there would be several bidding.

In view of these facts, we respectfully petition the referee and the Small Business Administration:

1. That the arrangements be made to hold the sale at the earliest possible date.
2. That the property be offered and sold as a package which would include the land, buildings, machinery and equipment.

Very truly yours,

W. H. MOORE,
ERIC G. W. BARRADALE,
WILLIAM R. CAMPBELL,
HENRY ANGELL,
L. R. WHITMAN,
Selectmen, Town of Brattleboro, Vt.

A letter similar to that from the selectmen was also received from Mr. Leslie E. Snow, president of the Brattleboro Chamber of Commerce, and he reiterated the importance of selling the Templeton property intact so that it could continue to function as a local industry. Jobs for Brattleboro workers were a principal concern of all involved, and the Brattleboro Daily Reformer on May 18 called editorially for an outcome to assure that "the building and machinery could be put to work again providing jobs and incomes for Brattleboro families."

The petition of the selectmen was forwarded to the Small Business Administration with my letter urging action along the lines sought by the Brattleboro leaders, and a reply was received as follows:

SMALL BUSINESS ADMINISTRATION,
Washington, D.C., May 3, 1960.

Hon. WILLIAM H. MEYER,
House of Respresentatives,
Washington, D.C.

DEAR CONGRESSMAN MEYER: This is in reply to your letter dated April 22, 1960, to Mr. Frederic C. Stoddard, Director, Office of Loan Administration, concerning the interest of the selectmen of the town of Brattleboro, Vt., in Templeton Furniture Co., Inc.

We have received a letter from the selectmen and have assured them that we will be glad to cooperate with them in any way we can, consistent with the laws of Vermont and the regulations under which this agency operates.

As you may know the company filed a petition in bankruptcy in August 1959 and the trustee attempted without success to sell the property over a period of approximately 7 months. He abandoned the plant about the middle of March, at which time the U.S. attorney, representing this agency, instituted foreclosure. We are advised that under the laws of Vermont a period of approximately 3 months will be required to complete the foreclosure.

The foreclosure sale will be under the jurisdiction of the court in which the action was filed and the property will be sold to the highest bidder.

We have requested the selectmen to advise our Boston regional office of any plans they may develop for purchasing the property and have asked our Boston office to keep the selectmen informed of the progress of the foreclosure action so that all interested parties may make arrangements to bid at the sale.

Your interest in the matter is appreciated.

Sincerely yours,

PHILIP MCCALLUM,
Administrator.

Again, we were assured of cooperation, and also there was written assurance that the foreclosure sale would be under the jurisdiction of the court. This, together with our understanding that Washington would give final approval to SBA's sale, had the effect of misleading Brattleboro leaders as to how final disposition would be made. Contacts had been made with the Boston SBA office as recommended, and negotiations locally to help finance an industry to take Templeton's place were progressing satisfactorily.

The next report was on the day of the sale itself, June 9, 1960. Procedure at the auction called for the property to be offered first as an entirety, and on this there was some bidding in which Mr. Sandman, the local manufacturer with local backing, was successful at $80,000. The real estate was then offered as a separate lot, and taken by a Mr. Denerstein, for $40,000. Sandman did not bid on this as the only financing arrangement offered by SBA of which he was aware was on the land and equipment as an entirety. Machinery and equipment were then offered as a separate lot, and this also was taken by Mr. Denerstein, after raising his own bids to $44,000. Denerstein, listed as an auctioneer and machinery dealer, is reported to have been at the sale representing several interests, including his own, a woodworking machinery company, and a machine and motor company, all in New York. To many who were there he was a speculator.

To complete the auction the machinery and equipment were then offered piecemeal, and for this the total bid was $43,935—or $65 less than Mr. Denerstein had bid for the machinery in a lot. A conference followed between Mr. Denerstein and Mr. O'Shea, the Boston SBA representative, and through some understanding which has never been adequately explained, Mr. Denerstein waived his right to the machinery and Mr. O'Shea announced that the piecemeal bids would be accepted. In fact, he announced also that the sale had been completed, and buyers began carrying out pieces of equipment.

At this point the question was raised immediately about final review of the terms of sale by higher officials in SBA, and contrary to all previous understandings from Boston and from Washington, it was finally learned that Mr. O'Shea had gone to Brattleboro with full delegated authority to complete the sale, provided the total price exceeded $80,000. This fact came out for the first time in conversations here in Washington with Mr. Chadwell on June 10, the day after the auction began, when he stated that authorization had been given the Boston office 2 weeks earlier to go ahead to sell on terms set under SBA regulations. Despite all of our understandings and our entreaties of concern about the manner in which the sale would be handled, this delegation of authority had been settled and approved 2 weeks earlier here in Washington, and not one word about it had been given to any of the interested parties. Not only that, but Chadwell assured us that there was no further court responsibility in the sale, despite Administrator McCallum's written assurance on May 3 that the "foreclosure sale will be under the jurisdiction of the court."

There was also a question raised immediately about the terms on which the sale had been completed. The Brattle-

boro understanding was that SBA would offer terms on the property only when sold in the entirety. At the sale, terms were given to Denerstein on the real estate alone. In reply to questions from my office, SBA states it was announced that terms would be given on the real estate and machinery separately, provided the successful bidder on both was the same person. Possibly this was announced verbally at the opening of the auction, but it certainly is not to be found anywhere in the written brochure for the auction. Furthermore, the Brattleboro business people who had talked with Mr. O'Shea and others at length, were never aware of the possibility of such an arrangement. From all appearances Denerstein was the only one of the interested bidders who knew of this possibility, and furthermore, in his agreement to waive his right to the higher bid on the machinery as a lot, he apparently made a deal with Mr. O'Shea by which the financing terms would still be available to him on the real estate alone. Thus, not only was he allowed to withdraw his top dollar bid to which SBA was so firmly committed in holding the auction, but also a special, unannounced ,and unexplained arrangement was made by which his purchase was financed by SBA.

No such consideration was ever shown to the Brattleboro community. In fact, in retrospect it clearly appears that the town was thwarted in all its efforts to work out an arrangement for keeping the industry. For one thing, the procedure of offering the property intact first, and then by lots, puts those wanting to hold the industry together at a disadvantage. Although this is evidently standard practice for such auctions, the Brattleboro experience raises serious questions as to whether this best serves the purpose of keeping the plant together.

SBA told my office on June 10 that all Alpine Wood Products needed to do was to make a higher bid on the entirety than Denerstein did on the lot bids. How was Alpine or anyone to be sure of doing that when the bidding on the lots followed the entirety? And more important, why should not the order have been just the other way so as to let the man who wanted to buy the whole plant see if he could outbid the lot buyers? Set up as it was, the burden was all against the man who wanted the whole plant, and the advantages were all in favor of the speculator or lot buyer who wanted to clean the business out. Does this procedure serve the purposes for which Small Business Administration was established?

There were many unanswered questions in Brattleboro as a result of the way the auction was conducted. The Reformer described it as "a strange piece of business," and the matter has even been referred to the U.S. attorney for investigation as to possible irregularities or illegalities. So far no report has been made as to whether technically such was the case. Regardless of technicalities, it is clear that the SBA rendered a disservice to this Vermont community, and certainly broke faith on every count with the civic groups that tried so hard to work out something to keep the property intact so that it could be maintained as a productive manufacturing plant. Indignation has been expressed on every side in the community, and this editorial from the Brattleboro Daily Reformer for June 24 expresses local sentiment:

UNANSWERED QUESTIONS

When U.S. Attorney Louis G. Whitcomb was asked by the chamber's industrial committee to come to Brattleboro last week to discuss the public auction conducted by the Small Business Administration on the former Templeton property, the local businessmen were seeking information and advice on what had appeared to them to be "highhanded" methods of operation by the SBA. It had been hoped, prior to the auction, that the Templeton building and equipment could be acquired by a local furniture manufacturer who was seeking means of expanding a successful business and that by this means many of the former Templeton employees could again find jobs in their trade.

But a Federal auction proved to be a strange piece of business, leaving many unanswered questions in local minds. There was the question of why the SBA should have shown so little interest in helping put this property back to work creating jobs; why the local manufacturer seeking to acquire it should have been denied a Federal mortgage on the building when the successful bidder was granted one; why the building and machinery as a package were put up for auction first and then auctioned separately, rather than in opposite order; why—especially—a successful bidder on the machinery as a whole was permitted to be relieved of his bid and his suggestion followed that the machinery go in separate units at a lower "take" for the Government and the taxpayers. To be sure, the lower figure was only $65 less than the high bid for the whole lot; but even if it was only 65 cents lower the question of why a lower bid was accepted would be legitimate.

As taxpayers and as a group of citizens working for Brattleboro's industrial growth, the chamber committee turned to the U.S. attorney to shed light on a Federal procedure. They still don't have the answers. They have, rather, the feeling that they got the "brush off" from Mr. Whitcomb, in the process of which they were told by the U.S. attorney "not to say anything to the newspaper about anything discussed at this meeting." Since Mr. Whitcomb refused to say anything to "this newspaper" himself, we also are unable to report whether the auction procedure of the SBA was proper.

We can say, however, that the more we see of Federal officials who profess to work for the best interest of "the Government" we wonder at just what point they began to forget that the Government is "the people."

A small business has been dismantled, and the manufacturer who wanted to operate it is now reported to be looking elsewhere for a plant. A community effort to reopen a small industry was thwarted. The moral of this apparently lies in the policies and attitudes of the Small Business Administration, and certainly this experience raises serious doubts as to the agency's real concern for small business. SBA cannot point to a single concrete way in which it helped small business in this Brattleboro episode. Possibly by relating this experience others can be forewarned of the pitfalls in such negotiations.

There may even be some poetic justice, too, in the report lately received that the boilers at the plant in question have been condemned and thus the speculator may have paid considerably more than its worth.

America as Seen by Its Presidents

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. MUNDT. Mr. President, as Congress began its recess on July 3, This Week magazine published its Fourth of July issue. In keeping with the spirit of the day, as well as the spirit of the era, this well known weekly reprinted words uttered by each of our Presidents to show that each had confidence in the American system and that each predicted great expansion and greater strength for our Nation.

I believe that this compilation of quotations should be of interest to all Americans. It is something that many will want to keep, to reread, and to remember.

I ask that this article, entitled "America as Seen by Its Presidents," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICA AS SEEN BY ITS PRESIDENTS

George Washington, 1789–97: "The name of American * * * must always exalt the just pride of patriotism. * * * The independence and liberty you possess are the work of join councils and joint efforts, of common dangers, sufferings and successes."

John Adams, 1797–1801: "I must study politics and war, that my sons may have liberty to study mathematics and philosophy * * * in order to give their children the right to study painting, poetry, music."

Thomas Jefferson, 1801–09: "The new circumstances under which we are placed call for new words, new phrases, and for the transfer of old words to new objects. An American dialect will therefore be formed."

James Madison, 1809–17: "The face of our country everywhere presents the evidence of laudable enterprise. * * * In the extension of manufactures * * * we behold a rapid diminution of our dependence on foreign supplies."

James Monroe, 1817–25: "The emigrants * * * although of different political parties and of different religious sects * * * all flow from persecution, in pursuit of liberty, and they inculcated that sentiment on their descendants."

John Quincy Adams, 1825–29: "America, in the assembly of nations * * * has invariably * * * held forth the hand of honest friendship. * * * She has uniformly spoken among them * * * the language of equal liberty, equal justice, and equal rights."

Andrew Jackson, 1829–37: "As long as our government is administered for the good of the people, and is regulated by their will * * * it will be worth defending."

Martin Van Buren, 1837–41: "The effects of distance have been averted by the inventive genius of our people, developed and fostered by the spirit of our institutions."

William Henry Harrison, 1841: "Of all the great interests that appertain to our country, that of union * * * is by far the most important, since it is the only true and sure guaranty of all others."

John Tyler, 1841–45: "Let it, then, be henceforth proclaimed to the world, that man's conscience was created free; that he is no longer accountable to his fellow man for his religious opinions, being responsible therefor only to his God."

James K. Polk, 1845–49: "While the people of other countries are struggling to establish free institutions, under which man may govern himself, we are in the actual enjoyment of them—a rich inheritance from our fathers."

Zachary Taylor, 1849–50: "Sixty years have elapsed since the establishment of this Government * * * and the United States presents to the world the most stable and permanent government on earth."

Millard Fillmore, 1850–53: "The ability to produce every necessary of life renders us independent in war as well as in peace."

Franklin Pierce, 1853–57: "While men inhabiting different parts of this vast continent cannot be expected to hold the same opinions * * * they can unite in a common object and sustain common principles."

James Buchanan, 1857–61: "We shall best promote the prosperity of the new States and Territories by furnishing them with a hardy and independent race of honest and industrious citizens."

Abraham Lincoln, 1861–65: "Fellow citizens, we cannot escape history. We * * * will be remembered in spite of ourselves. * * * The fiery trial through which we pass will light us down, in honor or dishonor, to the latest generation."

Andrew Johnson, 1865–69: "It is the only government suited to our condition; but we have never sought to impose it on others, and we have consistently followed the advice of Washington to recommend it only by its careful preservation."

Ulysses S. Grant, 1869–77: "Our republican institutions were regarded as experiments up to the breaking out of the rebellion. * * * Now our people have proven themselves to be the most formidable in war of any nationality."

Rutherford B. Hayes, 1877–81: "It is vain to hope for the success of a free government without the means of insuring the intelligence of those who are the source of power."

James A. Garfield, 1881: "To all our means of culture is added the powerful incentive to personal ambition. * * * No post of honor is so high but the poorest may hope to reach it."

Chester A. Arthur, 1881–85: "No higher proof could exist of the strength of popular government than the fact that, though the chosen of the people be struck down, his constitutional successor is peacefully installed without shock or strain."

Grover Cleveland, 1885–89, 1893–97: "Our Nation * * * lives in us—in our hearts and minds and consciences. * * * The land we live in seems to be strong and active. But how fares the land that lives in us?"

Benjamin Harrison, 1889–93: "Our growth has not been limited to territory, population, and aggregate wealth. * * * The facilities for popular education have been vastly enlarged and more greatly diffused."

William McKinley, 1897–1901: "The mission of the United States is one of benevolent assimilation, substituting the mild sway of justice and right for arbitrary rule."

Theodore Roosevelt, 1901–9: "Like all Americans, I like big things: big prairies, big forests and mountains, big wheatfields, railroads * * * and everything else. But no people ever yet benefited by riches if their prosperity corrupted their virtue."

William Howard Taft, 1909–13: "We have taken millions of foreigners into our civilization, but we have amalgamated them, and * * * we have made them all Americans. We have bred to a type."

Woodrow Wilson, 1913–21: "America * * * consists of all of us; and it can consist of all of us only as our spirits are banded together in a common enterprise. That common enterprise is the enterprise of liberty and justice and right."

Warren G. Harding, 1921–23: "The motor car has become an indispensable instrument in our political, social and industrial life. There is begun a new era."

Calvin Coolidge, 1923–29: "It would be folly to argue that the people cannot make political mistakes. They can and do make grave mistakes. But compared with the mistakes which have been made by every kind of autocracy they are unimportant."

Herbert Hoover, 1929–33: "We believe in equal opportunity for all, but we know that this includes the opportunity to rise to leadership, to be uncommon. The great human advances have not been brought about by mediocre men and women."

Franklin D. Roosevelt, 1933–45: "This great Nation will endure as it has endured, will revive and will prosper. * * * The only thing we have to fear is fear itself—which paralyzes needed efforts to convert retreat into advance."

Harry S. Truman, 1945–53: "We want to * * * do the things in peace that we have been able to do in war. If we can put this tremendous machine of ours * * * to work for peace, we can look forward to the greatest age in the history of mankind."

Dwight D. Eisenhower, 1953——: "What we call foreign affairs is no longer foreign affairs. It's a local affair. Whatever happens in Indonesia is important to Indiana. * * * The world must learn to work together—or finally it will not work at all."

Armenia Commemorates 42d Anniversary of Independence

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. FEIGHAN. Mr. Speaker, on June 4, 1960, a rally was held in New York City to commemorate the 42d anniversary of the national independence of Armenia. This was a significant occasion because the Armenian nation and people were among the first to declare their national independence and complete separation from the Russian empire during the period 1917–18. At that time many other nations declared their national independence and separation from the Russian empire. This was an era in which the spirit of freedom and national independence dominated the lives of the people between the Baltic and Caspian Seas and signaled the beginning of a new order among the nations of this vast area based upon the promises of life, liberty, and the pursuit of happiness. This great hope was snuffed out by the Russian Bolsheviks who, by the use of terror, infiltration, and armed aggression, destroyed the national independence of Armenia and many other newly independent countries.

The flame of freedom, the hope for a return of national independence, burns brightly in the hearts and minds of the people of Armenia. They are not satisfied with the dismal and oppressive way of life imposed upon them by Moscow. Armenians in the free world and their friends commemorate this anniversary each year as a means of strengthening the bond of friendship which exists between these subjugated people and the American people.

Under unanimous consent I include my address in the Appendix of the RECORD.

ARMENIA WILL BE FREE AND INDEPENDENT

Forty-two years ago a series of inspiring events took place in many distant lands which gave promise of bringing to war-weary mankind a long era of peace with justice.

This inspiring series of events were the declaration of national independence by the many nations submerged by the tyranny and despotism of Russian imperialism. The stimulating air of freedom, liberty, and personal dignity was everywhere as the chains of imperial slavery were smashed by the will of millions of people who determined to be masters of their destinies. In a real sense, history records that period as the golden age of national independence.

Today we commemorate the 42d anniversary of the establishment of the Armenian Independent Republic. May 28, 1918, marks the official date of the rebirth of the national independence of that ancient and honored nation. This is a day which will never be forgotten by Armenians everywhere and anywhere in the world. It is a day cherished by all people who love freedom, and particularly by Americans because our basic political belief is that all men are endowed by their creator with certain inalienable rights—that among these are life, liberty, and the pursuit of happiness.

Our Founding Fathers determined that the pursuit of happiness required the national independence of the Thirteen Original Colonies, that life and liberty for the colonists would not be secure until that independence was won. Each generation of Americans has been dedicated to this great ideal. We in this generation want nothing more for ourselves and we seek nothing less in our national purposes for all the people of the world. That is why Americans in all walks of life pay tribute to the freedom-loving people of Armenia on this anniversary of their national independence.

This year 1960 marks the 42d anniversary of National Independence for many other nations. On this day we are mindful that the people of Estonia, Latvia, Lithuania, White Ruthenia, Ukraine, Georgia, Azerbaijan, Cossackia, Turkestan and Idel-Ural marched arm in arm with the people of Armenia in the common fight for a better world, a world order based upon the right of all nations and people to self-determination. Nor do we forget that the people of Poland, Czechia, Slovakia, Hungary, Romania, and Bulgaria were allies in this great struggle. Our memory of this golden era of national independence is not dimmed by the present tragic plight of all these nations. We remain convinced that it is the destiny of all mankind to be free, that the divine order of the world moves steadily in this direction and that we are on the threshold of a new and brighter era.

The Congress of the United States gave official voice to this conviction in the passage last year of the Captive Nations Week resolution, now known as Public Law 86–90. This law now stands as the basic framework for a positive and realistic foreign policy for the American people.

Events of the recent past expose both the fallacy and the dangers of attempting to resolve world tensions by dealing with the jailers of the Russian Communist prison of nations. The Russian leaders have demonstrated beyond any doubt that this meaning of peaceful coexistence is the road to war or peaceful surrender. They leave us no other alternative once we accept the mirage of this high-sounding slogan. The Eisenhower administration must be credited with providing all the evidence necessary to awak-

en the American people to this reality. No one can, in honesty, argue that the present administration did not go the full distance on the theme of peaceful coexistence with the Russian Communists, nor can it be said that the visit of Tzar Khrushchev to the United States was not a part of this dangerous game. Vice President NIXON deserves and should be given credit for the part he played in this international drama which ended up with a Russian villain, but no American hero.

It is time that the debris and offensive odor resulting from the collapse of the peaceful coexistence drama was cleared from the national political arena. It is time that the American people were presented with a foreign policy which corresponds with the hopes and aspirations of the common man the world over. It is time that we turned our attention to the oppressed and away from the oppressors. It is time that we recognized the worldwide struggle, for the minds and hearts of the common man cannot be won with dollars and will be surely lost unless we unshackle the power of our American moral and political ideals. It is time that we recognize wars have never been averted by timid men or halfway measures and that the winning of a just peace entails risks which free people must accept if they are to remain free.

These are fundamentals which we, as a united people, must face now and in the foreseeable future. I am convinced the vast majority of our people have awakened fully to this need. The bursted balloon of peaceful coexistence has awakened them from the sleep of a Disneyland world into which they were led by the slogans of the Madison Avenue soap salesmen. As a nation, we are back on the hard and rough road to a just and lasting peace and the road markers are found in the convictions and moral principles set forth in Public Law 86-90.

These thoughts, I believe, are both fitting and proper on this day when we commemorate the 42d anniversary of Armenian national independence. The valiant struggles by the Armenian people to win their national independence and the terrible sacrifices they have made in these past 40 years to preserve their national heritage demand that we who are free, speak with candor. We must be honest in the analysis of our national affairs, unafraid to accept the responsibilities which our nation, as the citadel of human freedom, inherits from the march of world events, and responsive to the aspirations for freedom held by the people of Armenia and all other captive nations. These things we must do if we are to pass through the threshold to that new and brighter era when peace with justice and freedom shall prevail for all nations and all people.

Tribute to Richard W. Hoffman

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. DIRKSEN. Mr. President, it was my privilege to serve with a very distinguished Congressman from Illinois, Richard W. Hoffman, who represented the 10th Illinois District and who voluntarily retired in 1956.

In addition to his public service in the Congress, he was deeply interested in education and for a number of years served as president of the board of education for the J. Sterling Morton High School in that area. Under his guidance this great school became one of the top 10 educational institutions in its class in the entire country, and has made magnificent progress in the field of scholarships, efficient administration, and in returning to the taxpayers of that area a full dollar's worth of value for every tax dollar spent.

I believe the tribute carried in the Life paper, published in the 10th Congressional District, is a fitting tribute to one who served with such distinction in the Congress and who has served his community so well.

I ask unanimous consent that this editorial accolade be printed in the Appendix of the RECORD as a part of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Like a substitute who is sent into a game in the closing minutes to lead a last desperate rally, Hoffman literally and figuratively pulled up Morton by its own bootstraps in the depths of the depression in 1933 when he started his first term on the high school board.

From his wealth of experience as a successful businessman, Hoffman eliminated some 135 payrollers. With the school district's credit exhausted, Hoffman showed his resourcefulness by going emptyhanded to the Western Electric Co., where he obtained a sizable and unsecured loan so that the high school could remain open and its teachers could be paid.

He won respect for himself and the school by his obvious sincerity and his responsibility, plunging into the complex problems and emerging with winning solutions at great personal financial sacrifice to himself and to his own expanding business.

At the end of his first term in 1936, Hoffman found it necessary to devote more time to his personal business affairs—but he never lost his interest in Morton High School.

When 1939 rolled around, Morton's affairs had degenerated into even worse shape than was the case in 1933. Our community was embarrassed by nationwide unfavorable publicity from school strikes, and low teacher and student morale.

Teachers and other employees were being paid in scrip, which was being discounted as much as 50 percent by insiders in the high school picture.

The sad state of affairs at Morton was documented in a bill of particulars drawn up and approved by the North Central Association of Colleges and Secondary Schools, the accrediting agency responsible for approval of high school and college educational standards.

Only strong protestations prevented Morton from being ousted by the association. A year's probation, however, was voted with a provision for reinstatement if Morton cleaned up its mess within a year.

Urged by scores of true Morton friends, Hoffman agreed to be a candidate. The rest is history. During the next three terms, until he was elected to Congress as the 10th District's first Representative, Hoffman gave unsparingly of his time, his efforts, and his resourcefulness to make Morton the outstanding institution it is today—free of political domination, respected by educators everywhere, a leader in the educational field and in sound financial condition.

What better tribute could there be for a man—and who would be more deserving than for the Morton High School Board of Education to name the stadium for Richard W. Hoffman, whose ever-increasing majorities at the school election polls demonstrated the feelings of the people in the district for his efforts on their behalf.

Minimum Wage Bill: Completing the Record

SPEECH

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 30, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12677) to amend the Fair Labor Standards Act of 1938, as amended, to provide coverage for employees of large enterprises engaged in retail trade or service and of other employers engaged in activities affecting commerce, to increase the minimum wage under the act to $1.25 an hour, and for other purposes.

Mr. WOLF. Mr. Chairman, in order for me to give my full support to this bill, I feel that I must offer the three following amendments:

SERVICE STATION OPERATORS

On page 18, line 2, delete the word "or" and add the following "and any enterprise primarily engaged in the retail sale of gasoline and lubricating oils."

HOTELS

On page 19, strike out lines 11 through 19 up to the semicolon on line 19, and insert the following:

"(16) any employee of an employer engaged primarily in the preparation and offering of food or beverages for human consumption either on the premises of the establishment where such employee is employed or by such services as catering, banquet, box lunch or curb or counter service, to the public, to employees or to members or guests of members of clubs; and services in connection therewith; or any employee of a hotel employed in connection with the preparation or offering of food or beverages for human consumption and services in connection therewith."

RESTAURANTS

On page 5, line 23, after "merger" insert the following:

": *Provided further*, That in determining the aggregate annual dollar volume of sales of a hotel for the purposes of this definition, sales by restaurants and other eating places operated in connection with such hotel shall not be considered."

In private discussions with the gentleman from California, Congressman ROOSEVELT, the author of the bill, I have his assurance that we will accept these three amendments. I will state further that if some other Member gets recognition ahead of me and offers amendments similar to these, I shall support them. The gentleman from California, Congressman ROOSEVELT, substantiated my discussions with him when he stated on the floor:

There are two or three other things about which some of the Members seem to be quite concerned. One is in connection with the restaurant business of hotels. It was our intention to try to clear this up in the best possible way we could by exempting the tipped employees of hotels. We did this in order that they might be put on a fair com-

petitive basis with other restaurants that are exempted under the bill.

There is some feeling that this bill has not gone far enough and that an amendment will be offered which would go somewhat further in this line. While I would not ordinarily be happy about this amendment, rather than take this so-called substitute if the gentleman is going to offer it I will not resist it too extensively because I believe that it might make it possible for some of the Members here to answer the problems which are clear to them or problems in their districts.

I have already indicated also, of course, that we will take care of the problem of the retail gasoline dealer, although again in this instance I think we have done it, because we have said that any franchise dealer shall be exempt; in other words, the individual who is running the risk of gain or loss in his business shall be exempt from the bill. That would take in all of the gasoline retailers with the exception of those dealers who are actually working for the big owner-operated oil company stations. They come up to about 2 percent of all stations. In order to be clear on what we mean, I would be willing to accept the amendment. I think it would be proper to do so.

The other great problem seems to be with the escalator clauses, the $1.15 and then two jumps to $1.25, and then the $1.15 and up to $1.25 for those new people. I think a fair compromise should be worked out on this. I must submit that if you are going to raise it to $1.15 you certainly over a period of years should also provide that the newly covered people should get that same $1.15. If an amendment is offered on that basis I would seriously consider accepting it because I think it is a reasonable compromise under the circumstances. So we have tried, then, to meet the honest efforts here. I think we have tried. I think we have proven this is a constitutional bill. I think the questions of economics have been answered, and I hope with all my heart that the substitute will be defeated.

The Choice Is Ours

EXTENSION OF REMARKS

OF

HON. JOHN SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. SPARKMAN. Mr. President, in the July 1 issue of the Selma Times-Journal, a well-known daily newspaper, there is a most sensible editorial relating to Khrushchev and our presidential election this fall.

I commend the editorial to you all and request unanimous consent that it be placed in the RECORD following these brief comments.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CHOICE IS OURS

Adlai Stevenson's advice that both 1960 presidential nominees act quickly to toss Soviet Premier Khrushchev out of the campaign is well considered.

Khrushchev has been extremely free with comment on the American election. Both parties naturally fear that he could have some effect by endorsing one or the other nominee. It could be the kiss of death.

Yet it should not be. For this would be to give Khrushchev, a hostile totalitarian, influence in the free elective process of which we are so proud.

That process should and must be carried forward without intervention from any outside quarter, free or otherwise.

Our nominees should state at the outset that the American voter should be guided entirely by what is said and done within the confines of the United States. No word from Khrushchev either in praise or derogation of any presidential candidate should be given the slightest heed.

This injunction should be earnestly supported and enforced by all men of both parties. The man who dares to offer a serious campaign argument that Khrushchev wants the Democratic nominee or Khrushchev wants the Republican should be discredited instantly by his fellow Americans.

Concern over this matter is necessary. In the 1940 campaign, at least one prominent Democrat descended to the level of saying Hitler wants Willkie.

We had no sound reason to care then who Hitler wanted, and we have no reason to be interested in Khrushchev's recommendation.

The choice is ours, and ours alone. When it ceases to be, then our vaunted elective system will have lost its most prized element: Its total freedom.

The tariff on entry of Khrushchev's comments into the American political scene ought to be 100 percent. Not for a single day do they deserve to be allowed in competition with the real substance of our own political debate.

Marshfield News-Herald Urges Greater Opportunity for Small Business To Secure Government Contracts

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. PROXMIRE. Mr. President, an excellent editorial recently appeared in the Marshfield (Wis.) News-Herald urging Congress to liberalize both legislation and administration of the laws to encourage a greater participation in Government procurement by small and independent business.

This is not only a thoughtful and logical editorial, it is enriched by personal experience of the editor with Marshfield people who have been both successful and unsuccessful in securing Government contracts, and by realization that in Marshfield, Wis., as is true throughout America, too few small businessmen have had this opportunity.

Mr. President, I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered printed in the Appendix of the RECORD as follows:

SMALL BUSINESS

Senator PROXMIRE has introduced a bill in the Senate to amend the Small Business Act in such a way as to enable small business to participate in some of the contracts huge corporations are negotiating with the Federal Government.

The Senator cites figures to show how small the percentage of business going to small corporations and how much is handed to a few large corporations. At the same time, he reminds his colleagues that many contracts are negotiated without advertising for bids. He complains that competition is lost, and as a result the Government—the taxpayer—is the real loser.

Certainly, those communities throughout the Nation—and Marshfield is one of them—that have no big industry in their midst and do not participate indirectly through employment of labor and the garnering of profits are interested in the Senator's proposed legislation. Incidentally, he is joined in the bill by Senators CAPEHART and SPARKMAN.

In discussing the need for the legislation before the Senate, PROXMIRE told of one small business which furnished supplies to the Government because the owner's father happened to be a member of the President's Cabinet. He remarked: "Unless a small businessman has a good and generous friend in Government, his chances of getting a negotiated contract are mighty small."

This is probably true; and undoubtedly the chances for small business getting Government contracts are becoming fewer all the time. Yet we know some are successful. We heard some time ago about a Marshfield man who entered into a contract during World War II with the Government to furnish caskets to be used in shipping bodies of American dead from foreign battlefields and cemeteries to their hometowns in this country. Yet he made "a killing," to quote the friend who told us of the transaction. And, having learned the ropes, he went on to get more contracts with private business until today he is classified as a millionaire. No, it didn't happen in Marshfield. The young man in question left here for California where success all but overwhelmed him.

We have often wondered why more area "live wires" have not attempted to break into Uncle Sam's purchasing system in favor of local enterprise—factories, and such. In these days and in this great country of ours, an idea that works is worth lots of money, especially if it is hooked up with initiative, vision, finance, and integrity. We think of our mobile homes' industry in central Wisconsin which originally was an idea and now is an important segment of our economic life.

We wonder if the good Senators could develop an idea to make it easier for "live-wires" to approach Government purchasing agents. After all, laws are pretty cold, as one attempts to read and understand them, but something that will open the doors of these Federal purchasing agents to small enterprise is really what is needed.

There isn't a doubt but that the experience of the former Marshfield youth can be repeated by present day citizens seeking a place in Marshfield's industrial world. But he must have an idea, and initiative, and integrity.

We hope Senator PROXMIRE can tie all these "musts" together.

Rural Development Program

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. NATCHER. Mr. Speaker, the people of Butler County, Ky., are convinced that the rural development program is the soundest approach yet devised to gaining long-range economic development and growth in our rural towns and communities. Under leave to ex-

tend my remarks in the RECORD, I include herewith an article entitled "Butler County Shows Blueprint," by Avery T. Jenkins:

BUTLER COUNTY SHOWS BLUEPRINT—SUCCESS IN RURAL DEVELOPMENT

(By Avery T. Jenkins)

A demand for action several years ago to bolster the sagging economy in many low-income counties across the Nation brought about establishment of the rural development program under the auspices of the U.S. Department of Agriculture.

State and National leaders recognized the need for a program that would introduce small industry to rural areas to supplement income to farm families. Along with the program came Federal aid which helped establish rural development programs in 30 States and Puerto Rico.

Three counties were selected as demonstration or pilot counties to launch the program in Kentucky. These were Butler, Metcalfe, and Elliott.

Butler County is rated as the top county in the Nation for improvements made under the program.

Four years ago an attitude of "passing the time of day" had engulfed many sections of Butler County. Farm income was at a low ebb and many merchants in Morgantown—the county seat—saw no reason to spend money to improve the appearance of their stores. Commerce in the town of 1,200 persons had slowed to a trickle.

Perhaps it was this dismal atmosphere that brought out the determination by nearly all of the county's residents to do something about their plight.

The stage for the amazing success story of Butler County was set when University of Kentucky Extension Service representatives met with local leaders in the county's general stores.

Eight persons showed up at the first meeting in the Reedyville section. Now, only 4 years later, it is not uncommon for 100 persons to attend the meeting in a new community building.

The people in each community showed a growing interest in improving their farms and homes. Each person was encouraged to take part in the discussions and introduce his ideas.

As each project was completed, the participants took pride in their work and increased their efforts. Soon the news of what was happening in Butler County had spread across the Nation. Testimony that the achievements are outstanding is the fact that more than 150 visitors in delegations from a dozen States and 30 foreign countries have been visibly impressed by the work that has been done.

Nine communities now participate in community improvement contests. Cash awards totaling more than $500 are placed into a fund and each community is presented a prize for its outstanding project. The money is in turn placed in reserve for use on future projects. The first award money was donated by the Keeneland Foundation, an agency of Keeneland Race Track at Lexington.

Here is a list of the improvements made in Butler County since the rural development program moved from the organization stage to the work stage, 2½ years ago:

A $46,700 health center was built.

A new post office has been erected.

Purchase of 20 acres of land for development of a recreation center, fairground, and park.

Two new community centers have been built and four others established by remodeling older buildings.

A county fair was held for the first time in 2½ years.

An artificial breeding association has been organized.

The dairy cattle of the county were tested for Bangs disease.

Work is being done to eliminate a small slum section and replace it with a public housing project.

Five industrial sites have been located.

The rural development county committee has sponsored two dairy shows.

A vegetable and fruit growers' cooperative was organized.

The communications committee has succeeded in establishing a better telephone system for several communities and telephones have increased as a result.

All agencies are cooperating and are being coordinated under the rural development program to do more effective work.

Town-county relationships have improved considerably. Farm-City Week has been observed for the past 2 years.

Loans are easier to obtain as a result of changed attitudes.

Grade A and grade C dairy routes have been started.

The foregoing list of accomplishments were noted by True D. Morse, Under Secretary of Agriculture, and chairman of the committee for rural development program, in an address in which he dedicated the new Sharer Community Center.

"Through your community improvement contest, with $1,950 in prizes and eight communities participating," Morse continued, "you have brought about such improvements as the following: Many homes remodeled, huge increases in running water being installed in houses, several new houses being built, hundreds of additional head of livestock added, roadside and fence rows cleaned out, mail boxes renovated, a new blacktop road in two communities, a drainage program costing $15,000 or more which involves 13 people in one community, thousands of acres of improved pasture, strengthening of several existing 4–H Clubs and new ones added, cemeteries have beeen cleaned off and are being kept neat, and signs to identify communities have been erected."

The Central Committee for Butler County is composed of the following persons: J. C. Spradlin, chairman; Guy Cook, vice chairman; Billy Clark, secretary-treasurer. The board of directors includes Arthur Ingram, Paul Cohron, Raburn Hood, Edwin Wilson, plus Spradlin, Cook, and Clark.

Each of the nine participating communities are also directed by a similar committee organization.

"We don't put any pressure on the committees, they make their own decisions," Spradlin emphasized.

"They do their own thinking on what projects they undertake in the annual contest," he added.

Other persons who helped set up the program in Butler were U.S. Representative William H. Natcher, Democrat, Bowling Green, Dean Frank J. Welch, College of Agriculture, University of Kentucky, and Associate Director of Extension Ernest J. Nesius, and George M. Nelson, Jr., who is the associate agent for the extension service in Butler County. All have noted that credit for the success of the program must be given to each and every individual in Butler who took part in the development program.

Agency committees contributing to the rural development are: Farm Home Administration, extension service, department of forestry, vocational agriculture, Soil Conservation Service, Agricultural Stabilization and Conservation, Department of Health, Education, and Welfare, and the superintendent of schools.

Evidence of the community spirit that has made the program a success can be found in nearly all sections of the county. New homes are being built and others remodeled. When the sheet steel for Reedyville Community Center arrived by truck from Dayton, Ohio, a large number of the community's residents were on hand and ready to work. The concrete floor had been poured in advance and the workers put up the walls and roof, installed the windows and doors in 36 hours.

Western State College Vocational School representatives taught courses in upholstery, electrical wiring, plumbing, bookkeeping and typing.

Reedyville and Sharer Community Centers serve as a meeting place for many rural organizations and activities such as the 4–H Club, farmers meetings, homemakers, and rural development, educational and recreational meetings.

On Saturday night the buildings are used by teenagers for chaperoned parties and dances. The young people bring their own record player.

Land for the center was donated by the late Cliff Childress, whose son, Al Childress, served as president of the Reedyville program for 4 years. Business commitments forced him to resign from his post several weeks ago.

Land for the Sharer Community Center was donated by Chess Johnson. This center is furnished with a large fireplace, an electric range, refrigerator, serving counters, sinks, and highly polished picnic-type tables and bench of pine lumber.

Some additional work is planned for the Reedyville building. A farm pond is being dug nearby and will be a source of water after a filter system is installed. Some plumbing work must be completed and insulation of the ceiling and walls is included in the plans.

In addition to the other improvements in Reedyville section, more than 1,800 acres of grassland were sowed in 1959.

A sawmill located north of Morgantown has supplied a source of additional income for farm residents—logging is one of the county's industries to be stepped up since the development program was started.

Butler Countians completed their Clean-Up—Paint-Up Week on July 2 and are now devoting a lot of time and planning for their sesquicentennial celebration which will be held in conjunction with the county fair in September.

Thus, Butler County has made many improvements since the program was begun 4 years ago. Leaders in the program have stated that it was the satisfaction of a job well done, of working with the neighbors and the nationwide recognition for their work that has given the people incentive to carry on in their efforts to make the entire county a better place to live.

Letter Carriers Aid Victims of New Hampshire Fire

EXTENSION OF REMARKS

OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. COTTON. Mr. President, on May 6 a disastrous fire swept through parts of Derry, N.H., leaving that small community with its worst disaster in history. The fire left 53 families homeless and destroyed the town's largest industry.

A disaster such as the one which struck Derry brings out the full spirit of helpfulness and generosity of the American people. One of the groups which responded magnificently to the needs of its community was the letter carriers of

the U.S. post office. These men voluntarily covered their regular routes on a Sunday to canvass the entire community in behalf of the victims of the fire. They collected over $2,000 in relief funds, compiled a list of vacant apartments and houses, and secured extensive donations of things like refrigerators, stoves, and furniture.

I believe the efforts of this group of letter carriers are a remarkable example of the spirit of good neighborliness which should be an inspiration to all of us.

I ask unanimous consent to have printed in the Appendix of the RECORD, an article from the New Hampshire Labor News describing this volunteer labor by the letter carriers of Derry, N.H.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POSTAL EMPLOYEES AID DURING DERRY FIRE

DERRY, N.H.—Postal employees throughout the Nation can be justifiably proud of a small group of letter carriers in Derry, N.H., who responded magnificently when an estimated million-dollar fire swept the Chelmsford Shoe Co.'s buildings in Derry in the afternoon of Friday, May 6, leaving this small fire-ravaged Rockingham County community in less than 2 hours with its worst disaster in its history and one of the worst in New Hampshire.

Under the direction of Michael Cassidy, president of Branch 1198, National Association of Letter Carriers, AFL–CIO, and Leander Burdick, former president of the New Hampshire State Association of Letter Carriers, AFL–CIO, letter carriers in Derry conducted a house to house canvass on Sunday to raise funds for their less fortunate neighbors. And when darkness had set in Sunday evening Derry's carriers had walked most of their "appointed rounds" and had collected $1,800, compiled a list of vacant apartments, and had material donations of refrigerators, washing machines, stoves, sewing machines, furniture, TV sets and an automobile. Returning to their routes the following Monday, Tuesday, and Wednesday evenings after work, they increased the total to $2,088.

The Merrimack County Labor Council, AFL–CIO, in Concord teamed up with the First National Bank of Derry to aid the letter carriers by supplying printing and postage in order that rural patrons could be afforded the opportunity to also donate to the fire stricken citizens. To date the carriers' effort has raised over $2,500.

Burdick described the response for his townspeople as the most gratifying experience of his life. "We all owe a debt of thanks," said Burdick, "to the radio, TV and newspaper coverage for our success, particularly to the Manchester Union-Leader, Lawrence Tribune, Haverhill Journal and the Boston papers."

As a result of the spontaneous effort of the small group of postal workers in Derry, a Derry Relief Fund has been established with Frederick Manning, vice president of the First National Bank of Derry, serving as its treasurer.

Derry's worst fire left 53 families homeless, completely destroyed its largest industry, and left 360 members of Local 230, United Shoe Workers of America, AFL–CIO, without their normal livelihood. It was estimated that 4 percent of the community's population was made jobless. Tax valuation of the destroyed building was set at $200,000.

With the Derry community being declared a disaster area by Governor Powell, aid in the form of surplus food from the U.S. Department of Agriculture, assistance from the Small Business Administration and the Department of Employment Security was furnished the needy citizens.

Individual heroes were numerous, however, special praise was given President Michael Cassidy for donating a week of his vacation leave to work with the American Red Cross in securing low-cost housing in Manchester for the homeless families. And to Henry Dion, president of Local 230, United Shoe Workers of America, AFL–CIO, who diligently worked around the clock to secure employment for his union members.

From the Washington headquarters of the United Shoe Workers of America and National President George Fecteau a donation of $1,000 has been presented to the Local 230 Relief Fund. And an urgent appeal has been sent by Thomas J. Pitarys, president of the New Hampshire State Labor Council, AFL–CIO, to all affiliated locals for financial assistance.

What Is Our Heritage?

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the magnificent address by the Honorable Ross R. Barnett, Governor of the State of Mississippi, before the conference of presidents and other officers of State medical associations in Miami Beach, Fla., on June 9–11, 1960:

WHAT IS OUR HERITAGE?

(Address by the Honorable Ross R. Barnett, Governor of the State of Mississippi, before the conference of presidents and other officers of State medical associations, Miami Beach, Fla., June 9–11, 1960)

The rights of the individual and the rights of the several States, as guaranteed by the Constitution of the United States, have been marked for total destruction by power-mad and greedy politicians in Washington. Both of our major political parties—the Democratic and the Republican—are guilty of this offense against the people and the sovereign States. Neither can offer proof to the contrary.

The freedoms and liberties of individuals and the rights of the States have become almost nonexistent, so effective has been the work of those who, for their own greedy purposes, have steadily chopped away at these basic rights.

What are you, as an individual and as a citizen of your community, doing to prevent this trespassing upon your rights?

What are you, as one of this Nation's most powerful organizations, doing to stop and reverse this fatal trend?

The medical profession, of which you are a part, is a noble one. There is no way to measure the services that you have in the past and are now rendering to mankind. The entire world owes a deep debt of gratitude to you for the work you are doing in medical care and research. You are more than meeting the responsibilities imposed upon you by the profession which you chose to pursue.

Yet, all of us—physicians, lawyers, clergymen, businessmen, and so forth—have obligations or responsibilities beyond the scope of our chosen profession. Too many of us have failed to face up to the responsibilities that are ours in maintaining the liberties and freedoms established by our forefathers and protected on the battlefields of the world by generation after generation of young Americans. We have been complacent and self-satisfied and allowed ruthless politicians to reshape our lives. We are now paying the price for this negligence and will continue to pay more and more until we, the people, have the courage to stand up and fight for our rights.

Soon it will be too late to salvage this Government from the hands of those who would dictate our every action from bureaucratic Washington. It may be that we have already waited too long.

You, the officers of the State medical association and the American Medical Association and leaders of medicine, and your colleagues in the medical profession throughout this great Nation, are leaders in your respective communities, or you should be. If you are not, you had better reexamine yourself and find out why you are not.

In this position of community leadership, you are in an excellent position to counsel with your neighbors and friends concerning the unhealthy state of this Nation and the strong tendency of our leaders in government to rush blindly and without forethought toward a socialistic state. You of the medical profession have experienced in recent years the efforts of governmental leaders to impose socialized medicine upon your profession and upon the people of the United States.

I make no secret of my strong opposition to socialized medicine and all other socialistic ideas that are hatched in Washington by the politicians. In Mississippi, we will take care of our own. I'll pick my own doctor and my own hospital and let them prescribe my treatment and medicine. I don't want a sewing-machine salesman to dictate my medical treatment, no more than you would want one to represent you in a court of law. I assure you that I am supported in my position on socialized medicine by a vast majority of the people of the great State of Mississippi and I feel certain this attitude prevails strongly throughout the Nation. Only a handful of opportunists are promoting what would be a tragedy to the people of this country.

For some months now, many people have had many things to say about the aging. We have had Mr. FORAND'S proposal for care of the aging under social security. We have had the so-called administration proposal which wrongfully assumed that everyone over age 65 was automatically sick and in urgent need of health care. More recently, we have been told that a compromise proposal will be advanced by the House Committee on Ways and Means would extend public assistance to certain categories of the aging. As we see this in Mississippi, the measure is unnecessary and extravagant.

None of us needs to be reminded of the fallacies of the Forand bill. You in medicine have spoken most effectively and eloquently in this connection. As a matter of fact, I tried to explain this fallacy to the people of Mississippi during my campaign last year. I am convinced—totally apart from any and all political considerations—that Federal medicine is totally unnecessary for the growing segments of our population who are now arbitrarily called the aging.

We know that monetary income is not in itself a sufficient measure of true economic means. But, wherever a person is genuinely indigent—regardless of age—he is eligible for the assistance which we in Mississippi give without Federal means.

We believe that health maintenance is an individual responsibility. We further believe that this responsibility properly succeeds from the individual, to his family, to locally sponsored assistance which in no case goes beyond the State level.

Our doctors in Mississippi furnish almost 300,000 patient days of in-hospital care each year. This is done through a meaningful liaison between our State government and the medical profession in Mississippi without any Federal funds.

On many occasions, I have affirmed that we will take care of our own and I am happy to

make this statement again today. We want no Federal program which claim to be a cure-all for the real and fancied ills of our aging. We know that we can take care of our own. We have done so and will continue to do so.

A few days ago, I was reading some American history in my study at the Executive Mansion in Jackson, when I ran across an item penned by Abraham Lincoln in 1847. I feel that it is appropriate that I bring this to your attention. I quote now from Mr. Lincoln:

"Inasmuch as most good things are produced by labor, it follows that all such things of right belong to those whose labor has produced them. But it has so happened, in all ages of the world, that some have labored, and others without labor enjoyed a large proportion of the fruits. This is wrong and should not continue. To secure to each laborer the whole product of his labor, or as nearly as possible, is a worthy object of any good government."

Those words written by Abraham Lincoln were true then and they are just as true today. I agree 100 percent with his statement.

However, my objection to the current trend of the Federal Government away from local self-government and the rights of individuals and of the sovereign States is not based upon what one person or another has had to say about the way this Government should be run. I stand firmly upon article X of the Constitution of the United States and I shall not waver from the wording contained therein.

Article X reads as follows:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

These 28 words, written originally into the Constitution of the United States, mean exactly what they say. Most any normal school child could tell you the meaning of that simple sentence, even though the black-robed Justices of the Supreme Court of the United States in Washington have at times had difficulty in interpreting the words to fit the purposes of present-day politicians. The Nation's highest Court, for some strange reason, has turned its back upon the Constitution and previous decisions of the Court over a period of many years and flipped open foreign-authored sociology books in search of fancy words for use in court decisions. It is a sad day, indeed, when such as this occurs in our country, but it has happened and, no doubt, will happen again unless some restraint is placed upon them by the people through the Congress.

Many people have a mistaken idea as to the powers of the Federal Government as provided by the Constitution. The United States is a creature of the several States. In the beginning of this Nation, the then existing States met to form a union of States. They very carefully delegated certain powers—and no more—to the central Government; the States retained other powers and rights for themselves; and still other rights were retained by the States for the people themselves. The Constitution draws clear lines between the rights of the Federal Government, the rights of the States, and the rights of the individual.

The situation in which we find ourselves at the present is this: The Federal Government, through the hands of greedy politicians, is usurping the rights of the States and the rights of the people without constitutional authority to do so. The people have become the tragic victims of the creature to which we gave birth.

If America is to remain free, her people must never submit to any candidate or public officeholder undertaking to barter away any part of our Constitution for political advantages. We must resist this shameful betrayal of our national charter. We must stand beside the Constitution of the United States with drawn sword. We must be ready to stand, even at the expense of life itself, for individual liberty and freedom, for the right of the people to govern themselves. The rights of the States and local self-government are older than the Constitution. They existed before the Union was formed and were recognized and protected by Thomas Jefferson and the other Founding Fathers when they wrote the Constitution itself.

The preservation of the prerogatives of the people of a sovereign state, their right to deal exclusively with domestic problems, and the absolute and unqualified denial of a totalitarian State in the United States, are vital and intimately affect the welfare of every man, woman, and child in America.

If we lose the rights of the States, which safeguard the most precious of all human rights—the right to control and govern ourselves at home, the right of life, liberty, and the pursuit of happiness—then we may ask:

"For what is a man profited if he shall gain the whole world and lose his own soul?"

My friends, if this Nation—the Nation to which the world is looking for leadership—abandons the principles of government that have given us the capacity to lead; if we throw overboard the compass that has guided us to the port of greatness; then we are headed for the rocks of totalitarianism and the persecution and cruelties of a totaritarian state.

This is no sectional nor regional matter. It is just as important to the people of New York and Ohio as it is to the people of Mississippi and Texas. It is just as important to people yet unborn as it is to you and me here today.

We must establish to the satisfaction of the world, as well as to politicians of little faith at home, that the basic fundamental rights of the people of the several sovereign states are not for sale and cannot be sold or exchanged, even for the Presidency itself. I was not elected Governor of Mississippi to preside over the liquidation of personal freedom. Eevery section of this Nation, your section and my section, favors human rights. But it is a fraud on the American people to pretend that human rights can long endure without constitutional restraint on the power of government.

The proposals to take from you your right to deal with your local problems in a way that is satisfactory to you, and to invest the right to deal with those problems in Washington in a way that is wholly unsatisfactory to you, is so antagonistic to our form of government and so contrary to everything that we have stood for since 1775, that it is obliged to be totally foreign in concept, un-American in principle, and un-Democratic in execution. The moment that government becomes remote, distant, mysterious, and beyond the comprehension of the people themselves, danger arises and we subject ourselves to the possibility of abuse of power and utlimate dictatorship.

Government essentially is a dangerous thing. There is no truth more fundamental than that power seeks always to increase. Human nature is a compound of many things. Its sole, continuously recurring characteristic is the desire deep in the hearts of all for power. Government is a dangerous thing, and the great leaders of the past (except the military men who have been despots), the great leaders since there came into existence the theory of the rights of men, have with universal tongue cautioned the people against the danger of power in the hands of the Government. This was completely understood by the great founders of this Nation.

I hope that you will weigh seriously and prayerfully the observations which I have made in regard to the preservation of the rights of the States and the rights of the individual. You, in your respective communities, can be the powerful instruments that will guarantee the survival of this Nation as a nation of freedoms and liberties as was the intent of those who founded it.

Veterans' Insurance Legislation

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. TEAGUE of Texas. Mr. Speaker, I am inserting in the RECORD a letter which I have written to the Honorable EDITH NOURSE ROGERS regarding her erroneous remarks which appear in the CONGRESSIONAL RECORD of July 5, 1960, on page 14706. I trust this letter will serve to correct the misinformation which is being disseminated. The letter follows:

HOUSE OF REPRESENTATIVES, U.S.,
COMMITTEE ON VETERANS' AFFAIRS,
Washington, D.C., July 6, 1960.

Hon. EDITH NOURSE ROGERS,
House of Representatives,
Washington, D.C.

DEAR MRS. ROGERS: I am writing regarding the erroneous statements which you made on the floor of the House on July 5, 1960, which appear on page 14706 of the CONGRESSIONAL RECORD.

I was not in error when I stated that the Subcommittee on Insurance voted unanimously against favorable consideration of bills to reopen the national service life insurance program. The Subcommittee on Insurance considered this matter on two occasions. On March 30, 1960, with 4 out of 5 members present it considered all of the insurance bills before it, reported four bills and passed over the remainder, including the national service life insurance bills, without action. On April 27, 1960, the subcommittee met with all members present for the specific purpose of reconsidering the bills to provide for reopening the national service life insurance program. At that time the subcommittee voted unanimously to defer action on the national service life insurance bills. The subcommittee made no plans for subsequent reconsideration at that meeting. There have been no subsequent meetings by the Subcommittee on Insurance and there has been no discussion by the subcommittee regarding reconsideration of these bills.

You state that the subcommittee never turned down these proposals. This is contrary to the facts. The subcommittee had these proposals before it on two separate occasions and passed over or deferred action. In your remarks you expressed the hope that I would ask the Committee on Rules to grant a rule for the consideration of this legislation. You are advised that I took such action immediately following my attempt to secure a vote on this legislation.

Both you and the minority clerk received notices of all committee and subcommittee meetings. Minutes of the committee reflect that you did not attend either of the subcommittee meetings where the action described above occurred. Since you did not attend the meetings and did not consult the minutes of the committee, it seems to me you should have at least shown me the courtesy of checking these points with me before making these incorrect statements for publication in the RECORD.

I expect to place this letter in the CONGRESSIONAL RECORD to correct your erroneous inference of July 5.

Sincerely yours,

OLIN E. TEAGUE,
Chairman.

Rumanian Independence Day

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. FEIGHAN. Mr. Speaker, on Sunday, May 15, 1960, a large rally was held in Carpatina Hall, Cleveland, to commemorate Rumanian Independence Day. It was 15 years ago last March 6 that the Russian Communists destroyed the free government of that old and honored nation and imposed upon the Rumanian people a form of tyranny which is completely alien to their rich culture, traditions, and love for human freedom. Despite these years of occupation and despoiling of their heritage, the people of Rumania stand as stanch allies of the West. It is fitting, therefore, that this Rumanian national independence observance should be held in Cleveland, Ohio, in order that the people of Rumania would be reassured that the American people have not forgotten them, and that we look forward to a restoration of their freedom and national independence.

I was privileged to address this rally and to reassure Rumanians living in the free world and those in the homeland that we have not and shall not forget their fight for freedom. Under unanimous consent I insert my address in the RECORD:

RUMANIAN INDEPENDENCE DAY

May 10 is a day of great importance to Rumanian people everywhere in the world because it is Rumanian Independence Day. In these days it has special significance because the people of Rumania have been robbed of their national independence by the Russian imperialists. It was 15 years last March 6 that the Russians destroyed the free government of that old and honored nation and imposed upon the Rumanian people a form of government which is completely alien to their rich culture, traditions, and love for human freedom. In the darkness of those 15 years the people of Rumania have never lost faith in the destiny of their nation. They remain convinced that justice will triumph throughout the world—that the cause of freemen will prevail in the affairs of nations and that Rumania will rise once again in all the splendor and beauty of her ancient civilization. It is this dedication, this unwavering conviction, which holds the people of Rumania in an unbreakable alliance with the people of the United States and all other free countries.

The people of Rumania will be prohibited from celebrating this memorable day by the alien government which has been imposed upon them by the masters of the new imperialism in Moscow. No public observance of this day will be allowed because the Russians are dedicated to destroying all hope for a return of national independence and because such public manifestations carry the possibility of getting out of hand so far as the occupiers are concerned. However, the Rumanian people will find ways to observe this historic day, despite the efforts to prevent them from doing so. What rests firmly in the hearts of men cannot be wiped out by the order of a dictator.

Rumanians in the free world will properly celebrate this day. I am happy and proud that in my district one of the most significant of these celebrations is taking place today. Free Rumanians will carry high the hopes of the captive people of Rumania. They will, as in the past, remind all those who love freedom that these past 15 years of darkness have strengthened the determination of the Rumanian people to regain their national independence. In this they will be performing a service for their adopted country, the United States, because the cause of peace with justice requires the dedication of all our citizens.

Tomorrow the second summit conference will open in Paris. There a contest will take place between men who represent the cause of human freedom and those who lead the cause of slavery for all mankind. This will be a test of justice as the foundation for a lasting peace; that is, justice for all nations and all people. The one paramount issue, the issue which rises above all others at the Paris Conference, is that of political status quo. The spotlight of public attention has been focused upon such issues as disarmament, a ban on nuclear weapons, the future status of Berlin and a free and united Germany. Important as these issues are, they avoid the critical question of human rights, the rights of nations, and the unnatural division of humanity by the Russian Communists.

It is clear beyond any reasonable doubt that the Russians are going to Paris with but one objective in mind. That objective is to force the free-world leaders to accept a political status quo; that is, to put a stamp of finality upon their empire of captive nations. Nor can there be any doubt that the Russian leaders desperately need this recognition. A serious internal crisis grips the vast empire of the Russian Communists. It is not an economic crisis, even though there is a critical shortage of food and consumer goods throughout the empire. It is not a crisis at the top, resulting from the constant struggle for total power which is the common characteristic of the regime. It is a political crisis brought on by the failure of the Communist regime to win the confidence and support of the people and the corresponding demand by the non-Russian peoples of the empire for a complete change in the order of things. The old order of Russian imperial communism is bankrupt. It is centuries behind the needs and aspirations of the common man. Its failures are well known to those who are its captives. The need for drastic change to avoid total collapse is evident to all who are confined behind the Iron Curtain, including Khrushchev and his crowd. It is beyond the ability of Russian imperial communism to grant the changes necessary to avoid the great human explosion which is in the making. If the Communist leaders grant the changes demanded by the realities of life they will open the floodgates to their own destruction. They cannot possibly accommodate their system to the changes needed to preserve the empire. The leaders in Moscow recognize these hard facts of life and are accordingly going to use the Paris Conference as a temporary remedy for their internal crisis.

They seek to cause the nations of the free world to associate with them in efforts to preserve the empire. The Russians insist that the captive peoples must be made to realize that there is a finality to their unhappy state of life, that there is no hope for their future, that they must make their peace with communism and adjust to the imposed peace of Moscow.

The Russian leaders also need a legal license to employ whatever methods become necessary to hold the empire together. They feel they must neutralize the conscience of the West so that there can be no public protest or legal proceedings in the United Nations against such future actions as they may find necessary, including genocide and the other crimes against humanity. This is the insurance policy they want the leaders of the free world to underwrite at Paris.

So, to secure these objectives the Russians propose a status quo and Khrushchev has announced that this will be his goal at the Paris meeting.

Now the question is how will the leaders of the free world meet this challenge? Up to this moment there is no evidence available to the public which would indicate what we might do or not do to prevent a Russian victory on this critical issue. However, it is clear to all that if President Eisenhower fails to raise in principle the right of all nations to self-determination, to self-government, in the context of the Captive Nations Week resolution as defined in Public Law 86-90, the Russians will win their point by default. Khrushchev has made it clear in public statements that he considers the basic question of the Paris meeting to be status quo. By so doing he has established the issue as pertinent to all the discussions which will take place. If our leaders fail to raise the issue and state our position on it, silence will be taken as assent to the demands made by Khrushchev. This is a fundamental law of international diplomacy.

It is entirely possible that the Russians can leave the Paris meeting with sound precedent to believe that the United States has accepted a status quo. Nor is it necessary for the three Western Powers to have unanimity on this issue in order for our President to speak out. Rumors are rampant in Europe that the British are actively pushing for a status quo, even to the point of a permanently divided Germany. It is unlikely that France could make herself party to such a deal. In any case, it is imperative that the United States make its position clear on this issue regardless what Great Britain and France elect to do about it.

The future of Rumania and all the other captive non-Russian nations hangs in the balance at the Paris summit. While Rumania as a nation will not be an agenda item, the future of Rumania is involved in the issue of status quo which has been created by Khrushchev. Nor is status quo likely to become an agenda item but it will hang over all the proceedings and discussions at Paris. It is the unavoidable issue. It is in fact the reason why Khrushchev forced the leaders of the free world into a second summit meeting.

These are fitting thoughts for this Rumania Independence Day commemoration. Those of us who have fought for the rights of the Rumanian Nation, for justice for all the nations of the world, do not give lip service to this cause. More than words are needed. Political action must be given to this cause. I, therefore, have urged President Eisenhower to seize the initiative at Paris, to flush out into the open the issue of status quo, to disclaim any degree of acceptance of status quo for the American people, and to rekindle the hopes of suffering millions behind the Iron Curtain by a firm advocacy of the rights of all nations to self-government, to freedom, and to national independence.

Let us pray that President Eisenhower will lead all free nations of the world in a successful fight for the right of self-determination for all nations and people. Such positive, affirmative, political action will enable the great nation of Rumania to determine its down destiny and to take its proper place among the free nations of the world.

Summary of Poll Results

EXTENSION OF REMARKS
OF

HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. BRAY. Mr. Speaker, I have recently conducted an opinion poll among my constituents of the Seventh District of Indiana. I believe the tabulation of the responses will be of interest and significance to my colleagues.

Continued stiff opposition to communism is supported by Seventh District voters. Despite recent threats of Russia and the attempts of some Americans to belittle our own strength, voters show no inclination to back down to the Russians. Many say such a retreat would lead to our eventual collapse.

One of the questions asked if the United States should retreat from its position in West Berlin, where the free world forces show the day-to-day living contrasts with life under communism in East Berlin. Despite Khrushchev's ultimatums, 95 percent of those responding said the United States should not abandon West Berlin. Less than 2 percent said we should withdraw and 3 percent declined to give an opinion.

On the subject of recognizing the Communist government of China, only 8 percent advised such recognition and an overwhelming 85 percent said we should not; 7 percent were undecided.

Opinion is sharply divided on the adequacy of our defense spending—42 percent believe the United States should spend more money for national defense; 43 percent said no more should be spent and 15 percent ventured no opinion.

About three-fourths of those responding favor reduced funds for foreign aid projects. Of the 19 percent who do not favor a cut, many commented that our aid programs should be better directed and administered.

Dissatisfaction with the Cuban regime of Fidel Castro has grown daily. This was evidenced in answers to a question as to whether the United States should continue to pledge to buy about one-third of our sugar requirements from Cuba at prices above the world level. The percent of people favoring our withdrawal from such agreements has grown steadily to an average of 88 percent; 7 percent believe we should continue to try to work with the Cubans through such agreements, and 5 percent had no opinion.

There is increasing awareness of the problems created for domestic industry by the imports from countries where labor rates are much lower than those in the United States: 73 percent of those replying favor import controls to protect local industries from foreign competition; 18 percent are opposed to such quotas; and 9 percent did not respond.

As a further indication of public sentiment in the defense and foreign affairs field, I asked if we should retain the Connally amendment which allows this country to reject the jurisdiction of the World Court. This issue is apparently not well understood by a large segment of the general public, for 26 percent said they had no opinion on this question; 61 percent favor retention of the Connally amendment; 13 percent favor its repeal.

Seventh District voters have strongly endorsed a proposal I put forth concerning the possibility of supporting schools by returning to each State a part of the Federal cigarette tax collected in that State—85 percent of those responding to a question about this said they favor such a program; 8 percent are opposed, and 7 percent have no opinion.

This was one of the most clear-cut responses on the questions affecting certain aspects of our domestic policies, and quite frankly the response surprised me. For years there have been insistent claims that our school systems required more financial support than could be maintained by local real estate taxes. Yet there has been strong opposition to Federal support on the grounds that it would lead to control and regimentation of our schools. This alternative, which would merely refund the money to the States and require that it be spent for education, guarantees that local school authorities would remain free and autonomous. In addition, questions as to whether such money should go for classroom construction only or should be used for teachers' salaries, whether it should be restricted to public schools or shared with parochial and private schools, could be left to the discretion of the States. The Federal Government would only insist that it be spent in the educational system of the State according to its programs.

Opinion was not so decided on the subject of Government-sponsored medical care for social security retirees. This referred to the Forand bill, which has been rejected on two occasions, and by a large margin, in the House Committee on Ways and Means: 36 percent favor some such program; 57 percent are opposed; and 7 percent indicate no opinion.

The much-discussed soil bank was also the subject of a wide difference of opinion. Among those who checked that they are engaged in farming, 45 percent favor expansion of the soil bank to about 60 million acres, which experts say would reduce production sufficiently to meet consumption and thus avoid the problems of surplus production; 45 percent of those in farming oppose this; and 10 percent express no opinion.

Among those not in farming, 25 percent gave no comment; 21 percent favor the expanded program, and 54 percent are opposed.

Deficit financing is frowned upon by a majority of Seventh District voters: 81 percent say we should limit national expenditures to balance the budget; 12 percent say we should not be bound to stay within income; and 7 percent are without a firm opinion.

The question of the loyalty oath which is required of students requesting aid under the National Defense Education Act elicited much interest. The repeal of the loyalty oath requirement is favored by 17 percent; 76 percent oppose its repeal.

In addition to the thousands of letters, telegrams, and phone calls I receive and the many personal visits I make throughout the district, I have found these polls of great value in assessing voter sentiment. I am encouraged by the wide and favorable response to this questionnaire and I am gratified by the careful attention given to the answers.

The results of the poll follow:

Final summary of opinion poll conducted by Congressman William G. Bray, 7th District, Indiana

	Percent		
	Yes	No	No opinion
1. Government-sponsored medical care for social security retirees?	36	57	7
2. Limiting national expenditures to balance the budget?	81	12	7
3. Use of import quotas to protect local industries from foreign competition?	73	18	9
4. Increased spending for national defense?	42	43	15
5. U.S. recognition of Red China?	8	85	7
6. Reduced funds for foreign aid?	74	19	7
7. Returning to each State ½ of the cigarette tax collected from its residents for educational uses without Federal direction?	85	8	7
8. Giving in to the Russians by abandoning West Berlin?	2	95	3
9. Withdrawing from pledge to buy sugar from Cuba at above the world price?	88	7	5
10. Repeal of loyalty oath requirement of students receiving aid under the National Defense Education Act?	17	76	7
11. Retention of the Connally amendment which allows the United States to reject the jurisdiction of the World Court?	61	13	26
12. Increasing the conservation reserve—soil bank—from 28,000,000 acres to 60,000,000 acres?:			
Those engaged in farming replied	45	45	10
All others replied	21	54	25

Address by Robert H. Eagle Before Organization Meeting of the Federal Supply Management Association

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. WILEY. Mr. President, recently it was my privilege to hear a discussion by Robert H. Eagle, a comparatively young man who is in the employ of our Government, on the subject of a need for "Federal supply management." The field covered in the discussion involved the fields of procurement, distribution, utilization of supplies and equipment, and the storage thereof.

I was much encouraged to note that a number of employees of the Government were interested in this matter, thinking that they could save a great deal of money for the Government in the respective fields mentioned above. This, of course, coincided with the conclusion recently disclosed by the Senate Subcommittee on Military Procurement.

Among the ideas that struck me particularly was that the whole supply management field in the Federal Government could be revolutionized and in so doing there would be a resulting constructive impact on the national economy, as the U.S. Government is the largest procurer of supplies and equipment in the world. We know that the Commission found that there is a failure in keeping records and that in many instances the Government has bought too much of the wrong thing.

Now, after this discussion I was given a copy of the talk which Robert H. Eagle gave before the organization meeting of the Federal Supply Management Association. I think his ideas are worthy of consideration by all Members of the Congress. Therefore, I ask that they be printed following my remarks in the body of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BEFORE ORGANIZATION MEETING OF THE FEDERAL SUPPLY MANAGEMENT ASSOCIATION, JUNE 28, 1960

(By Robert H. Eagle)

We in this room have it in our power to set into motion a chain of events which could revolutionize the whole field of supply management in the Federal Government—the procurement, distribution, and utilization of supplies and equipment. The fact that supply management in the Federal Government needs professionalizing lies not only in the fact that the Federal Government too often spends too much for what it buys, although this is a part of the story (as recently disclosed by the Senate Subcommittee on Military Procurement); or that the Federal Government buys too much of the wrong thing and not enough of the right thing, although this is also a part of the story; or that too often decisions are based not on need but on irrelevant or noneconomic considerations. Again, this is not the whole story, but another part of it. The management of property and supplies is an integrated problem requiring an integrated approach.

People all too often are prone to be merely critical and faultfinding. It is more difficult to help bring about improvements. However, our attitude is not one of mere faultfinding. We are in a position to do something constructive and effective about an admittedly unfortunate situation. And if we were to revolutionize supply management in the Federal Government, this profound change would have an appreciable impact on the whole economy, because the U.S. Government is the largest procurer of supplies and equipment in the world. Not only are the quantity and value of the physical assets presently held by the Federal Government not completely recorded anywhere, but they are beyond calculation, as has been reported by factfinding commissions established for this purpose.

SUPPLY MANAGEMENT AND ENGINEERING

Perhaps we can throw light on the supply management situation by comparing it with another profession—engineering. People believe, and rightfully so, that bridges must be built in such a way that the likelihood of collapse under specified strains is minimized. We expect engineers to give competent consideration to such pertinent factors as stresses and strains, relative strength and economy of materials, and the like. We think office buildings, machinery, and equipment should be constructed solidly and precisely, according to engineering principles. We would not think of throwing together in a hapharzard manner these physical things that serve important human purposes without carefully planned and engineered blueprints and specifications, without tests and analyses of a complex and intricate nature and character.

The products, buildings, machinery, and technological devices of all kinds which are basic to our present culture would be impossible without knowledge and application of scientific and technological principles; yet is not the economy, upon which all these physical phenomena rest, more fundamental, though perhaps less tangible? Simply because the technical complexity of the procurement, distribution, and utilization of resources and supplies is not apparent to the layman, this is no reason for us engaged in these activities to be ignorant of the scientific nature of our functions or to ignore them.

The nature and characteristics of supply management are as complex and technical as those involved in the production and construction of equipment and machinery, transportation facilities, and the like. The allocation of resources and the management of materials should not be considered separately from the uses to which these resources are put. The means and ends are interrelated.

IMPACT OF SUPPLY MANAGEMENT DECISIONS

The impact of the decisions of supply managers on the economy is such that the wellbeing of our country is involved. What can we have in the way of machinery, equipment, defense, schools, and all that makes our modern civilization worthwhile—what can we have if the decisions of those who allocate the basic resources that comprise these physical assets result in a continuous waste and misuse of these resources?

In view of the constant search for sufficient funds for defense and education, for example, the need for the best possible allocation of resources is apparent. You and I and our colleagues collectively constitute the largest group making the biggest number and dollar value of decisions determining the use and distribution of resources.

NO CRASH PROGRAM

Now we all know that we cannot return immediately to our individual places of employment and change the thinking of our colleagues, our supervisors, and our management overnight. But what we can do is to professionalize ourselves, gaining a more exact and more comprehensive understanding of the problems we are dealing with. Then as a recognized group of professionals in the same category as engineers, the significance of whose professional advice and decisions is not questioned by laymen, we can reasonably expect to have our decisions and our professional advice more respectfully considered by those whom we serve, and not casually cast aside.

IMPORTANCE OF EDUCATION

Basically our program is a long-range education program—education of all kinds—a program of educating ourselves and educating others. It is also a long-range research program of accumulating and evaluating the existing literature of all kinds on the various branches and techniques of supply management, as well as developing and pooling our own ideas, discussing and publishing them. These activities have already been undertaken in other management fields—accounting, industrial engineering, marketing, and even general management.

In this way, we bring to bear on our problems the best resources at our command. Knowing our problems personally and intimately, we can act in effect as management consultants without the disadvantages often accruing to the use of outsiders who sometimes do not have the time to acquire an understanding of our problems in the context of our actual day-to-day operations. We can operate as only insiders can, but we can gain a broader viewpoint than insiders generally possess and exercise.

SCIENTIFIC APPROACH NECESSARY

Your organizing committee believes that the scientific approach applies to the problems of supply management.

What do we mean by the scientific approach? Is it limited to people with Ph. D.'s, goatees, or math degrees? All kinds of people are scientists and scientists are all kinds of people. Scientists have their foibles and their idiosyncracies, like each one of us, but in their professional work they must adhere to certain basic fundamentals—truth, reason, logic, evidence, as opposed to mere opinion or prejudice. This does not mean that scientists are not often prejudiced or opinionated. Far from it; but they succeed in their work only to the degree they subordinate their personal prejudices to an objective approach. The key word here is succeed, and we can succeed only on the same basis, by ever striving toward the goals of objectivity, clear thinking, factual analysis, and experimentation—in short, professionalism.

Scientists are concerned about the caliber and quality of arguments advanced for or against a given proposition. They are not concerned about rank or personality. To the extent that science would get bogged down in personality considerations or personal opinion it would become lost and meaningless. It would disappear.

That we should all embrace and endorse the scientific approach in this association does not mean that the same level of education and experience is required of each member. Far from it. What it does mean is that each member within his individual capacity strive to live up to these aims and ideals in his professional life. Actually no one is expected to meet these standards absolutely and no human being can—not even the world's greatest scientist. Human beings in our present stage of development just aren't

made that way. But there is all the difference in the world between establishing such goals and standards, and striving to live up to them, and testing our relative progress in meeting these goals—there's all the difference between that approach and just drifting along from day to day in a haphazard fashion.

NEED FOR PROFESSIONAL SOCIETY

Why is it necessary and important for supply management people to have a professional society? Without the cooperation and stimulus gained through associating with our colleagues in other agencies, it is difficult, if not impossible, to maintain a clear perspective of our daily activities. An association such as this enables us to compare and contrast our methods with others, to see alternative ways of doing our jobs, and to determine whether our present procedures can be improved. Different approaches to our problems and new solutions come to light as a result of the forums provided by a professional society. Can we afford not to have this kind of collaboration?

We have many skeptics to convince, and we must convince them on the basis of facts, logic and evidence. To do this, we must constitute ourselves an information bureau as well as a fact-finding commission. Only in this way can we hope to revolutionize supply management in the Federal Government.

PROFESSIONAL DISCUSSIONS

Freedom of speech is essential to a scientific approach, and a professional society provides a kind of freedom of expression that is not generally available to us in our everyday activities. In a professional society, dissenters from a majority position are not ostracized or put into a deepfreeze. Why is this freedom of expression so important? Its importance is exemplified by the difference between a pointless, aimless "bull session" and a professional discussion. The kind and quality of the discussion is the key.

There is a big difference between merely asserting a personal belief, and defending one's position on the basis of logic and evidence. There is a big difference between saying, for example, "Supply management is an art and not a science", and saying, "I believe that supply management is largely a matter of intuition and experience because of the nature of the case. I believe that principles and theories do not apply, because the characteristics of supply management being chaotic, haphazard, uncertain, the problems that arise from such a situation do not lend themselves to logical analysis."

The last statement is at least subject to intelligent discussion and objective evaluation, simply because the premises on which the statement is based are laid bare, and the reasons for the speaker's position explicitly stated. Then the participants can go ahead and consider each piece of the argument and test it against known facts and specific situations and thus arrive at a more enlightened viewpoint.

I, for one, would argue with the position just stated, but since the reasons for that position are clearly given and the alleged facts itemized, one has something concrete and tangible to discuss, instead of a mere personal prejudice or opinion.

IS SUPPLY MANAGEMENT A SCIENTIFIC FIELD?

Supply managers are beginning to realize that the movement of supplies and equipment from their primary sources to ultimate destinations involves many interrelated numerical values. These quantities, prices, costs, and distances must be considered collectively in order to provide maximum service at minimum cost.

In discussing the scientific nature of supply management one could, for example, point out that in the realm of inventory management, replenishable stock levels fluctuate up and down, and that in order to exercise some control, certain maximums and minimums are established based on specific considerations, including procurement costs, holding costs, lead times, and availability objectives. Further analysis reveals functional interrelationships among all elements of supply. A change in any one of these factors may affect all or most of the others. This kind of a reply would be pertinent to a statement that supply management is not susceptible to analysis. This kind of discussion, rather than a mere airing of prejudices and opinions, illustrates the objective approach.

It is expected of any kind of scientist or professional that he support his position with logic and evidence; that his resistance to a proposal be not mere resistance to change, but be directed to the foundations on which a proposition rests, as to its soundness or realism or importance, or to the alleged facts and the evaluation of them, or to gaps or inconsistencies in the chain of reasoning.

In other words, this scientific approach means putting all the cards on the table and not concealing important considerations for personal or political expedience. In a professional society, a soundly considered and clearly presented minority position is welcome.

ORDERLY CHANGE

The scientific approach has brought into being the technological and scientific age we know today. This is the environment in which we have to operate, and what we are proposing is to carry this very same approach, this spirit of inquiry, testing, comparison, discussion, into our complex fields of supply and property management. The scientific approach recognizes the ever-present relationship between cause and consequences as the context within which all progressive changes have been made and must be made.

We must recognize the inevitability of change in technology, production, and taste, but in order to work most effectively with the changeable, we must also recognize those things that never change. Changes that ignore basic principles are not feasible because they eventually result in chaos and turmoil. Operating in accordance with the laws and values that are changeless enables change to be progress, brought about rationally, based on principle, and consciously directed toward the enduring goals of mankind. What we want is purposeful change in contrast to purposeless drifting, a meaningless ebbing and flowing.

The task we have assigned ourselves is big and important. If we do not succeed, we have only ourselves to blame. The purpose of this association is to better enable ourselves to shoulder our own responsibilities.

We are confronted with only three fundamental choices: Changes for the better, the status quo, or retrogression. Which shall it be?

Statement of Gov. Nelson A. Rockefeller at Governors' Conference, June 29, 1960

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. DOUGLAS. Mr. President, on June 29, 1960, the Governor of New York, Hon. Nelson A. Rockefeller, participated in a discussion at the Governors' conference in Glacier National Park, Mont., dealing with the issue of health benefits for the aged. In his statement, Governor Rockefeller presented a detailed outline of the kind of legislation which would best meet this serious problem. Despite some differences in details, the Rockefeller position is basically the same as that taken by the McNamara bill which I have been very happy to cosponsor. I ask unanimous consent to have printed in the RECORD the text of Governor Rockefeller's statement.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY GOV. NELSON A. ROCKEFELLER PREPARED FOR DISCUSSION AT THE GOVERNORS' CONFERENCE, MANY GLACIER HOTEL, GLACIER NATIONAL PARK, MONT., WEDNESDAY, JUNE 29, 1960

The provision and equitable financing of adequate medical care for our senior citizens is one of the great unsolved problems of our Nation.

Those over 65 years of age constitute a substantial, steadily growing and predominantly low-income segment of the population.

By 1975, there will be 22 million Americans over 65 years of age, or more than 10 percent of the then population. Yet, while the elderly are increasing in number, their ability to be economically self-sufficient through employment is decreasing. The proportion of older workers in the labor force has decreased from nearly 75 percent of those over 65 in 1890 to about 35 percent in 1958.

The net result is that, according to Government estimates for the year 1957, only about 20 percent of our senior citizens have incomes of more than $2,000 a year—and 60 percent of them receive less than $1,000 a year. These figures include social security payments received.

These senior citizens require, on the average, two to three times more medical care than the rest of the population. Many have special need for long-term institutional care. Estimates for 1958 indicated that 78 percent of those over 65 were afflicted with one or more chronic diseases. In spite of the great need of the aged for health insurance protection, nearly 60 percent of them have no health insurance at all, and of the remaining 40 percent who do, the coverage is frequently inadequate to meet the demands of chronic illness.

These facts constitute a human problem of major proportions. A substantial portion of the burden of providing necessary health services falls upon dwindling savings, upon relatives, and upon public welfare, or upon hospitals, and the medical profession through charity treatment.

The magnitude of the problem is underscored by the fact that in New York State alone there are some 83,000 persons aged 65 or over receiving care in hospitals or nursing homes at State expense.

All too often, a lack of funds may discourage the elderly from seeking the early care and preventive treatment so essential to mitigating the effects of illness and prolonging life. Many of those living on small social security payments or pensions or annuities may face—or feel that they face—a choice between paying the rent or seeking health care—often with tragic results.

There is substantial reason to doubt that commercial insurance carriers or voluntary health insurance organizations can ever hope to meet the total health insurance needs of the aged as matters now stand.

From the standpoint of the older persons themselves, such insurance is often too expensive for their limited incomes or is unavailable because of existing illness or for

other reasons. Recognizing this, the New York Legislature recently passed a law at my request mandating the conversion of group health insurance policies to individual policies upon retirement at premium levels not exceeding 120 percent of prior payments. This measure represents a major advance, but not a complete solution. No one State can solve this problem alone. It is essentially a national problem.

From the carrier standpoint, health insurance for the aged is likely to be a most unprofitable type of business unless premium costs can be spread over all age groups. The latter is difficult in the competitive, experience-rating conditions which exist in the insurance industry.

For voluntary plans, there are serious financial problems in providing such coverage. In 1958, for example, I am advised that the Philadelphia Blue Cross collected $3.5 million in premiums from its 65-and-over subscribers and paid out $9.7 million to meet their hospital bills. Had the Blue Cross not spread this loss among all its subscribers, the premiums of the older subscribers would have been prohibitively high. At the same time, the increasing numbers of such high-cost subscribers not only raise costs for everyone, but threaten the very existence of the Blue Cross system.

It is now clear that some type of Federal Government action is needed to solve this problem—a fact recognized in the wide variety of plans now under consideration in the Congress. In 1954, as Under Secretary of Health, Education, and Welfare, I participated in developing an administration proposal for limited Government involvement through a Federal reinsurance system to assist voluntary health plans in undertaking broadened protection, including improved protection of the aged. The proposal was not adopted by Congress. Since then, the problem has become no less acute.

The issue has ceased to be whether to do anything at all. The issue is how best to do what so obviously needs to be done.

And the issue is immediate. Last Thursday, the House of Representatives passed a bill contemplating some medical care benefits, through Federal grants sharing costs with States, provided on a basis of need. This is an extremely limited measure—seemingly in the nature of an election-year stopgap. There is substantial evidence that the Senate during the coming week will begin serious consideration of expanding this measure into a comprehensive effort to meet the problem. I sincerely hope that this is the case.

Of the various proposed programs of health insurance for the aged, the best known are the Forand bill and the administration bill. There are many differences between these two bills, but the fundamental difference is in the two approaches to financing the proposed benefits. The Forand bill would increase the social security payroll tax to encompass health insurance for those over 65, while the administration bill proposes a Federal-State program of health insurance for older persons, paid for primarily by general tax revenues of the Federal and State governments, but with the older persons themselves (other than those of public assistance) paying an enrollment fee of $24 a year.

As a businessman concerned with employee welfare, as Under Secretary of Health, Education, and Welfare, and as Governor of New York, I have been concerned with the health insurance question for many years. It seems to me that there are four grave weaknesses in the Forand measure.

1. The Forand bill would not provide health insurance coverage for any of the 4 million persons now over 65 years of age who are not included in the social security system.

2. It lacks any element of choice and would therefore tend to stifle further development of voluntary health insurance for the aged in this country.

3. Administration of the Forand bill program would be under centralized Federal control with no flexibility for accommodation to varying conditions in the different States.

4. It fails to provide the standards needed to maintain the quality essential to good medical care.

In the administration bill, the basic flaw is the method of financing, which I regard as fiscally unsound. Instead of extending a proven contributory system of insurance—the administration bill provides subsidies from the general revenues, shared by the States and the Federal Government under an equalization formula.

Under a contributory system a definite percentage of the cost is born by those who ultimately receive the benefits. This provides a built-in safeguard against the constant pressure for irresponsible and extravagant additions to the scheme which is politically difficult to resist. The administration plan would be particularly vulnerable to such pressure, based as it is on the concept of subsidy.

The financing of the administration plan also would represent a serious financial drain on the States; New York, for example, would have to allocate to the program nearly 10 percent of its current State purposes budget if it participated. It is likely that a number of States would decide not to participate at all, as would be their right.

In addition, the administration bill has "means test," deductible and coinsurance features unrealistically limiting benefits and requiring cumbersome and costly administrative mechanisms in all 50 States. It does, however, provide for minimum standards of care and its benefits would come closer to meeting the medical care needs of the aged than do those of the Forand bill.

What, then, are the elements of a workable approach? In my judgment, we must begin with the principle that our basic reliance for health insurance protection for the population as a whole should be voluntary health insurance. But, recognizing the special problem of insuring the health of the aged, I believe Congress should enact a program based on the principles I shall set forth.

In considering these principles, we should keep in mind that taxes levied by the Government to support a health insurance system are equally compulsory, whether they are in the form of general revenue taxes or earmarked payroll taxes. Hence, the alleged distinction between plans on the basis of "voluntary" versus "compulsory" is, in my opinion, both illusory and irrelevant insofar as financing is concerned. As to the voluntary or compulsory nature of the receipt of benefits, I shall comment further.

The principles I advocate are these:

1. Health insurance should be provided for as many as possible over 65 without reference to a means test.

The concept of an "earned benefit" resulting from a contributory system is an important one to retain—one which stresses individual initiative and dignity in our society.

2. The basic mechanism for achieving this should be the contributory social insurance system, supported by payroll taxes, which exists in the old-age, survivors, and disability insurance system. A separate "health benefit trust fund" should be established in this system to account for the taxes received and benefits paid.

This well-administered system has proved to be effective and economical. Its contributory nature has been completely accepted and is, indeed, strongly supported by employees as well as their employers.

3. The full payroll-tax increase required to finance the additional health benefits should be enacted at the same time as the new benefits.

The maximum additional tax needed for the benefits I propose would be one-half of 1 percent for employees and the same amount for employers.

4. Some 4 million persons over age 65 are not covered by OASDI insurance. Nearly half of these are recipients of old-age assistance payments, paid from Federal, State, and local general revenues. A second group among these 4 million are receiving retirement benefits from the civil service, railroad retirement, or other programs. A third group receive their support from other personal resources or are dependent on others for their support.

Those older persons not eligible for benefits under the OASDI system must, nevertheless, have comparable health insurance protection available to them.

I believe that the Federal program should permit payments into the separate health benefit trust fund for the purchase of the same health protection for these persons as would be available to retired OASDI beneficiaries. The Federal Government should match according to a formula any payments which an individual State wishes to provide to assist its older persons not eligible for OASDI in purchasing the OASDI health benefits. The Federal Government would also, of course, continue to provide Federal matching grants for old-age assistance payments, including those for medical care purposes.

5. Each OASDI beneficiary eligible for the statutory health benefits should be given an option to forgo those benefits in favor of receiving a special monthly cash benefit added to his regular social security check, provided he presented proof that he carried a health insurance policy at least equivalent to the protection afforded by the statutory benefits.

This option would give the benefit phase of the program, as distinct from the financing phase, a truly voluntary nature. It would encourage commercial carriers and voluntary health insurance organizations to continue their efforts to develop sound coverage plans for the senior population. Furthermore, individuals covered during employment by outstanding health insurance plans would thus be encouraged to continue such plans after retirement.

6. The program should provide at its outset for hospitalization, nursing home care and visiting nurse services, with additional benefits to be added as experience may indicate their desirability and feasibility.

A benefit schedule offering more total days of care according to the proportion spent in nursing home care and visiting nurse services would encourage beneficaries to use less costly facilities as soon as their medical condition permitted.

Early diagnostic services should be added to the benefits as soon as possible, to help minimize instances of hospitalization. Subsequently, it should be found possible to cover broader forms of organized home-care services, the costs of certain drugs, surgery, and possibly other physician services.

7. A State agency should be chosen or established to maintain standards set by the Secretary of Health, Education, and Welfare.

This agency would make reimbursement to hospitals, nursing homes, and visiting nurse services on the basis of actual costs. The agency would review and certify rates for payment based on actual cost as determined by uniform cost accounting methods. It would certify expenditures under the program and maintain a continuing review of operations within the State.

This program should be regarded as only one part—though a major part—of a larger overall effort to make better provision for our senior citizens who have already made their great contribution to our way of life.

For example, improved housing for the aged ranks as an important aspect of their well-being. But a sound health insurance

program is the most urgent immediate need—to the end that the retirement years shall be made as free as possible from the crushing cost burdens and anxieties attendant upon illness.

In the achievement of these objectives, our elder citizens deserve decisive and prompt action.

The Legislative Representative of the WCTU Reports to the People

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. REES of Kansas. Mr. Speaker, under unanimous consent approved by the House, I am including herewith "The Washington Letter," by Mrs. Glenn G. Hays, representative, bureau of legislation, Woman's Christian Temperance Union. Her report is interesting and is worth the serious consideration of those who read the CONGRESSIONAL RECORD. Mrs. Hays is doing outstanding service on behalf of her organization. She has our commendation. Her article follows:

THE WASHINGTON LETTER

(By Mrs. Glenn G. Hays, representative, bureau of legislation)

THE AIRLINE BILLS

Congress will be closing its present session when this issue of the Union Signal comes to you, so you will have a later report on S. 1432 and H.R. 1075. The latter is still on the agenda of the Interstate and Foreign Commerce Committee of the House of Representatives. Since the House acted favorably on similar legislation in 1957, it is assumed tht the bill will pass if it can receive the attention of the entire House of Representatives.

On May 18 the Aviation Subcommittee of the Senate Interstate and Foreign Commerce Committee recommended S. 1432 favorably to the full committee. On May 25 the full committee discussed the bill, but did not act on it. Instead, a hearing was scheduled for June 16 for the purpose of hearing General Quesada, administrator of the Federal Aviation Agency, explain why his agency feels that its new ruling is a sufficient safeguard.

During the 2-hour hearing, representatives of two airlines, National and Continental, were heard in opposition to the bill in addition to Mr. Quesada. Representatives of the Airline Pilots' Association and Senator ANDREW F. SCHOEPPEL, of Kansas, spoke and placed in the record statements in support of S. 1432. Senator STROM THURMOND, of South Carolina; Senator E. L. BARTLETT, of Alaska; and Senator SCHOEPPEL brought out evidence in support of S. 1432 by their searching questions during the course of the hearing. Senators Moss, of Utah, and CARLSON, of Kansas, filed statements in support of S. 1432. Senators ENGLE, of California, and SCOTT, of Pennsylvania, members of the committee, participated in the discussion and questioning.

Presumably, S. 1432 will again be placed on the agenda of the Senate Interstate and Foreign Commerce Committee for consideration when the report of the June 16 hearing has been printed for their study. Letters from homefolk will be an important and possibly a deciding factor. If you have followed directives in previous issues of the Union Signal, your own Senators and Senator LYNDON B. JOHNSON have heard your opinion that action on S. 1432 is vital during this session.

MORE LIQUOR TO DRINK

The distillers of this country apparently produced almost 145 million gallons of whisky in 1959, and they are looking forward with confidence to 1960 and the years throughout the "fabulous sixties." One commentator in a liquor publication gave an optimistic forecast, "All grains, including corn, rye, and barley malt are in excellent supply and at reasonably low prices. Water is plentiful, labor is plentiful and the spring of 1960 looks favorable to whisky making, at a reasonable cost."

Spirits magazine believes that 1960 will be the greatest year yet for the hard liquor interests, "greatest in sales, greatest in production, greatest in favor as a normal part of American life." They see the decade of the sixties as "prosperity, secure and growing in richness."

Spirits regards the American families with an annual income between $4,000 and $8,000 as the "shank of the liquor market, the bread-and-butter part of the population for the majority of distillers, importers, package stores, and bars." The number of purchases made by this salary group will not be much less than those made by higher salaried families in the over $8,000 salary level. Nor will the proportion of money spent for liquor be much less according to Spirits.

The ascending wage scale enters into the distillers' rosy prophecy for 1960, the year that will probably be the biggest since repeal. Women and younger people are an encouraging factor. Vodka's fantastic rise is largely a young people's boom. The urban Negro and the Puerto Rican are counted upon to help the liquor industry open a golden door in 1960.

While envisioning a consumption of liquor exceeding even the historic year of 1946, Spirits still insists that drinkers are drinking less liquor. It was the spread of consumption over many customers, not the amount each consumed, that made 1959 a big year. Thomas J. Donovan, president of Licensed Beverage Industries, said per capita consumption was only 1.24 gallons, against the post-repeal average of 1.26. And that figure is 35 percent of the prohibition average, he said.

Mr. Donovan's figures do not tally with those recorded in the statistical abstract of the United States. His source of information has not been indicated. Nor has the U.S. Government made public any statistics as to the per capita consumption of illegal liquor either during prohibition or since. It would be interesting to consult the crystal ball which enables Mr. Donovan to refer to the "prohibition average."

Reprinted here are the records on per capita consumption prepared by the U.S. Government and printed annually in Statistical Abstract of the United States.

Distilled spirits—Apparent average annual per capita consumption in the continental United States, 1850–1958

[In tax gallons]

1850	2.24
1860	2.86
1870	2.07
1871–80	1.39
1881–90	1.35
1891–95	1.37
1896–1900	1.12
1901–05	1.39
1906–10	1.43
1911	1.46
1912	1.45
1913	1.51
1914	1.44
1915	1.26
1916	1.37

Distilled spirits—Apparent average annual per capita consumption in the continental United States, 1850–1958—Continued

1917	1.62
1918	.87
1919	.79
1920	.22
1921	.32
1922	.18
1923	.11
1924	.10
1925	.09
1926	.09
1927	.08
1928	.09
1929	.09

1936	.81
1937	1.03
1938	1.00
1939	.93
1940	1.02
1941	1.04
1942	1.13
1943	1.11
1944	1.03
1945	1.22
1946	1.39
1947	1.28
1948	1.06
1949	1.02
1950	1.02
1951	1.23
1952	1.00
1953	1.10
1954	1.12
1955	1.07
1956	1.13
1957	1.17
1958	1.12

(NOTE.—1922–34, inclusive, include quantities withdrawn for certain manufacturing, compounding, medicinal, and sacramental uses.)

The "prohibition average" would presumably be the per capita average for the years 1920–33, inclusive, or approximately 0.12 which does not support Mr. Donovan's contention.

The Communist Conspiracy

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks, I submit a speech which I gave before the United Veterans Council in San Jose, Calif., on Memorial Day, entitled "The Communist Conspiracy":

THE COMMUNIST CONSPIRACY

(By the Honorable CHARLES S. GUBSER)

We meet today to honor those who have given their lives in the defense of our country.

We meet under another great cloud of international tension and view shattered hopes which fell when a shameless ruler in the Kremlin used the U–2 as a readymade excuse for a decision he had already made—to torpedo the summit conference and with it the hopes of the world for peace.

There is only one way in which we can truly honor our war dead and that is to

rededicate ourselves today to the preservation of the things for which they died.

They died to preserve liberty. Today we must rededicate ourselves to the same purpose.

Preservation of liberty requires strength—the strength to meet and conquer military aggression.

The much discussed U–2 plane flight to a depth of 1,300 miles over Russia clearly shows that our military strength has been underestimated in many circles. Our Strategic Air Command has been telling us for years that they have the ability to penetrate and destroy Russia. This ability has been described in detail to those of us who have access to classified material because of our membership on certain committees and it has also been given to the general public. But for some reason or other some have chosen to disregard the facts.

The U–2 incident shows that Russia can be penetrated and can be destroyed.

It is important to mention here that most criticism about our military defense system has been of the so-called missile gap. While it is true that Russia does possess more ICBM's than do our forces, it is also true that when everything is taken into consideration—all missiles, all planes, all ships, and all ability to retaliate, the United States is now, and will remain a superior force to that of the Soviet Union.

But there is another strength far less dramatic and far more difficult to achieve which we need if we are to preserve the liberty which the men we honor today fought for and earned. This is the strength to resist subversion.

I am sorry to say that I have serious doubts about our ability to resist Communist subversion. I never fear the ability of the American people to resist aggression when they expect it. This is the reason our people have willingly voted $40 billion defense budgets; because we know of the danger from Russian armament. But where the U–2 flights have given us the intelligence and the information necessary to build military strength, we have no reconnaissance flights to show us the strength and the danger of internal subversion. What small effort has been directed to alerting the American people of this danger from a Communist conspiracy has, I am sorry to say, been shot down by our own people.

In the book, "A Night to Remember," the story is told of the five iceberg warnings sent by wireless to the steamship *Titanic*. When the sixth message, "Look out for the icebergs," came in, the *Titanic's* wireless operator wired back, "Shut up, I'm busy." Thirty-five minutes later the ship, whose captain had said, "God himself could not sink it," was sinking.

The phrase "Remember Pearl Harbor" should remind us that we were cocksure and complacent before the afternoon of December 7, 1941. The much-maligned Dies committee reports of Japanese espionage by fishing vessels had been ridiculed as headline hunting—much as some of the effort of today to alert the public to the Communist conspiracy is also ridiculed. We even ignored the messages we intercepted in the broken Japanese code.

I well remember the famous commentator, Fulton Lewis, Jr., speaking in the San Jose Civic Auditorium in November of 1941. Asked about the possibility of a war with Japan he replied, "I can best answer that with a bit of blank verse. 'That noise you hear in the Orient, them ain't sabers, neighbor, them's knees'."

Since the close of World War II distinguished Americans have been warning us and one cannot help but wonder on this Memorial Day of 1960 if we shall heed these warnings.

In his speech to the 1957 national convention of the American Legion, Mr. J. Edgar Hoover, chief of the FBI, said, "To dismiss lightly the existence of the subversive threat in the United States is to deliberately commit national suicide. In some quarters we are surely doing just that."

Communist doctrine is known to be founded upon conspiracy. It has not changed.

The Communist master plan for world conquest was stated by Lenin in these words, "First we will take Eastern Europe, then the masses of Asia, then we will encircle the United States, which will be the last bastion of capitalism. We will not have to attack. It will fall like an overripe fruit into our hands."

On another occasion Lenin added, "As long as capitalism remains, we cannot live in peace. In the end one or the other will triumph."

In a speech to the Lenin School of Political Warfare in 1931 Dmitri Manuilski, at one time presiding officer of the United Nations Security Council, said, "War to the hilt between communism and capitalism is inevitable. Today of course we are not strong enough to attack. * * * So we shall begin by launching the most spectacular peace movement on record. * * * The capitalistic countries, stupid and decadent * * * will leap at another chance to be friends. As soon as their guard is down we shall smash them with our clenched fist."

Georgi Dimitrov advised the Lenin School of Political Warfare how to make use of innocents and dupes as he called them. "As Soviet power grows there will be a greater aversion to Communist parties everywhere. So we must practice the techniques of withdrawal. Never appear in the foreground; let our friends do the work. * * * A university professor, who without being a party member, lends himself to the interest of the Soviet Union, is worth more than a hundred men with party cards. A writer of reputation, or a retired general, are worth more than 500 poor devils who don't know any better than to get themselves beaten up by the police."

Have these views so long held by Communists changed in recent years?

As late as September 17, 1955, Nikita Khrushchev warned us: "If anyone thinks that our smiles mean abandonment of the teachings of Marx, Engels, Lenin, he is deceiving himself cruelly. Those who expect this to happen might just as well wait for a shrimp to learn how to whistle."

On November 18, 1956, the same Khrushchev said, "Whether you like it or not history is on our side. We will bury you."

And just a few weeks ago in Paris, Khrushchev heaped insults upon our President and the American people as he dashed the hopes of peace-loving people before the summit conference even commenced.

I don't believe anyone in his right mind can say that Communist intentions have changed—nor have Communist techniques.

There is a Communist conspiracy. And it is well protected by our own law.

It is ironic that the very liberties, which the men we honor on this Memorial Day died to preserve, have been twisted and perverted to protect and shelter subversives and Communists who would destroy that liberty. I speak of the new interpretation of the commonly used phrase "civil liberties."

Traditionally our interpretation of an individual's rights was to consider them sacred except when they were in conflict with the rights of the Nation or the rights of other people. Under this concept of individual liberty we are prohibited from dumping garbage on our neighbor's front lawn because such an act would endanger the health of others. The same concept prohibits us from driving too fast because in so doing we place others in jeopardy. But the new concept of individual rights and civil liberties seems to be that they are supreme even above the rights and the best interest of the Nation. Even our courts have held that the individual has the right to engage in subversion against his government. Look at some of our recent court decisions.

Our Supreme Court has denied the right of States to enforce their own sedition laws.

It has turned Communists loose who have taught the forcible overthrow of our Government with evil intent.

The Court has held that the State Department could not discharge a Government employee who had given secret military plans to the editor of a Communist magazine.

Our courts now say that a State attorney general does not have the right to ask a lecturer in a State university if he believed in communism.

It has said that the U.S. Attorney General did not have the right to ask an alien if he had recently attended Communist meetings.

The Court has ruled that Communists seeking the right to practice law need not answer questions about Communist affiliation.

It has questioned the right of Congress to investigate communism and suggested that it is broad scale intrusion into the lives and affairs of private citizens.

And to cap the climax the Court has ruled that the State Department must give a passport to Communists including one who was involved in the spy ring of Julius Rosenberg and was going to India to live with a Communist who had renounced his American citizenship.

With the greater strength that comes from this weakening of our laws, the Communists and their fellow travelers are hard at work at this very moment to achieve their objectives.

First of these objectives is the elimination of Federal and State security programs. Everyone admits that Government employment is not a right but a privilege. Yet the effect of many of the aforementioned Supreme Court decisions is to prevent the Federal and State Governments from withdrawing this privilege from those who associate with Communists and who are security risks. We are even required to give the dignity and protection of a U.S. passport to a Communist who leaves this country for the purpose of harming the country which issues the passport.

Many well meaning groups in this country whose loyalty is not in question, have swallowed the Communist propaganda campaign that security programs both Federal and State, smack of fascism and nazism. This genuine fear of a police state has been seized upon by Communist conspirators. Well meaning persons have, without knowing it, been fighting the Communist battle for them.

Another Communist objective is the recognition of Red China. The Communist espionage apparatus needs the diplomatic immunity of its embassies and consulates to set up spy centers. It needs the unbroken seal of the diplomatic pouch to transmit orders to its spies and couriers and to receive back their reports and microfilm documents.

Many well meaning individuals have swallowed the Communist line, hook, line and sinker and have said in effect, "The Chinese Communist nation exists, why must we refuse to admit it? Wouldn't it be better to meet them face to face and gain access to their country? As long as they exist we cannot continue to refuse to recognize their existence." To these people I say, the greatest mistake this Nation ever made was the recognition of the Soviet Union. Four American Presidents refused to recognize the Communist government of Russia and it remained weak and ineffective so long as it was unrecognized. Communism began to spread through the world as soon as the United States extended diplomatic recognition in 1933, because, in violation of all international morality and even of the execu-

tive agreement by which recognition was extended, Soviet Russia used her embassies and consulates as centers of espionage, subversion, and propaganda. In spite of this some Americans say that we were morally wrong in sending a U–2 plane 60,000 feet over Russia into air which, to my knowledge, no international lawyer has said belongs to Russia. And we do it for the purpose of learning the facts which are necessary to prevent the world from being plunged into another war.

Another objective is to halt nuclear tests, and well meaning and sincere individuals in this country support the same objective. In so doing they do not feel that they are supporting Russia but merely supporting what is good for mankind.

Obviously nuclear tests should be halted; but can they be halted without some assurance that the Russians will actually live up to agreements? Look at the record of Russian violation of their solemn commitments.

During the last 25 years the United States has had 3,400 meetings with the Communists. All this talk led to 52 major agreements and Soviet Russia has broken 50 of them.

The Communists have followed Lenin's dictum about treaties and agreements: "Promises are like piecrusts—made to be broken."

In the 3 years prior to 1958 the United States met 73 times at Geneva with the Chinese Reds to negotiate a release of 450 American prisoners. How many American servicemen have been accounted for or released?

In light of such a record, how can anyone plead for limiting our military potential by refusing to develop weapons through nuclear testing when we have no assurance that Russia will do the same? Suspending of nuclear tests unilaterally without guarantees that Russia will adhere to her agreement is exactly what Russia wants.

Some counter this argument and say, "Well, we are the peace-loving country, we should prove to the world that we are sincere by taking the first step to relieve tensions."

I am truly concerned about the attitude in some circles that the United States must take a succession of first steps. If we do and it is a step backward and Russia doesn't take a similar step, then we have a new and compromised position which isn't as good as the position we occupied before. Then there will be a new status quo and after a time you can expect these same people to urge a new and bold first step from the new position. Can't they see that such a policy means nothing in the world but a gradual retreat toward slavery?

Understand that I do not say for 1 minute that anyone who advocates unilateral suspension of nuclear testing is knowingly serving the Communist cause. But whether he knows it or not, and I am sure he does not in most cases, he is truly giving the Communists what they want.

Another Communist objective which is inadvertantly served by many innocent Americans is that of propaganda. Communists are spending $3 billion a year on propaganda which is reaching every city and hamlet in our Nation. In one day the Communist propaganda coming through New York City alone fills three large warehouses and not a single piece is labeled "Communist propaganda" as required by the Foreign Agents Registration Act.

In viewing my daily congressional mail it is amazing to me to see the same words crop up in the letters from sincere and unsuspecting constituents that one sees in this type of Communist propaganda. Reference to the FBI as "a Nazi-like gestapo," to the House Un-American Activities Committee members as Fascists and witch hunters are repeated each day by people who haven't the slightest idea how those phrases were planted in their minds. If they were to know, they would realize that this is the product of the Soviet propaganda machine operating on $3 billion per year.

Another objective of the Communist conspiracy is to humiliate the United States.

It is well known that Communists masterminded the insulting demonstration against Vice President NIXON which included spitting on him and the throwing of rocks and garbage.

Some may doubt, but I do not, that the deeds of Fidel Castro in Cuba are masterminded by the international Communist conspiracy.

Recently in our city of San Francisco, known Communist agitators were seen in the crowd whipping young college students into a frenzy to demonstrate against the House Un-American Activities Committee. It strikes me as something more than coincidence that these demonstrations were organized on the weekend which preceded the ill-fated summit conference and were prominently played up in the Russian press as a demonstration by the American people against their Government and one of its congressional committees. I doubt seriously that these young students demonstrating before the San Francisco city hall, some of them not ready to shave and some who refuse to as all good beatniks should, none of them dry behind the ears, actually knew that they were being used as tools of trained Communist organizers.

In the crowd of students and beatniks at San Francisco, were known Communist agitators who were passing out literature that had been mailed directly from the Congress of the United States.

Though it may be undignified I can only say that had one of the students been my child there would have been a very urgent date between me and that child in the woodshed.

Another objective of the Communist conspiracy is to stimulate a peace offensive. Let me quote once again the words of Dmitri Manuilski, "the bourgeoisie will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record."

Remember the Palo Alto Peace Club, now officially listed by the Attorney General of the United States as subversive? And there are many other organizations which fall for the Communist peace offensive and by no stretch of the imagination can be considered as disloyal or subversive. But disloyal or loyal they are still influenced and taken in by the Communist peace offensive. These people urge us to take bold first steps on the presumption that Khrushchev and other Kremlin leaders will negotiate in good faith and will keep their agreement. This belief is held in spite of the long record of Soviet violations of their solemn promises.

My words are not those of a warmonger. I sincerely do believe in peace and sincerely believe we should do everything reasonable to achieve it. But I repeat that a succession of unilateral first steps can mean nothing but a gradual retreat toward slavery. It is time the American people were alerted to what a Communist peace offensive really means and stopped serving it in their wishful thinking.

Another of the major Communist objectives is to nullify all anti-Communist legislation. On January 16, 1958, FBI Director J. Edgar Hoover, testified that 49 of the top 108 Communists convicted by Federal juries under the Smith Act have been set free by Supreme Court decisions. The Subversive Activities Control Act of 1950 has been nullified by decisions of our own courts, and so have the antisedition laws of 44 States. This is not preservation of civil liberties, this is giving it away.

And the last Communist objective which I will discuss is muzzling the FBI and congressional investigations. For years the Communist Party has poured out its most hysterical language against what the Reds call the gestapo-like FBI.

During the month of May 1959, high school seniors applying for admission to the University of California took an examination in which they were required to write a 500-word essay on 1 of 12 topics. The seventh topic of the 12 contained the following language: "What are the dangers to a democracy of a national policelike organization, like the FBI, which operates secretly and is unresponsive to public criticism?" This statement is absolutely untrue. In the first place the FBI is not a national police organization, but works with State and local police authorities. Secondly, it is responsive to public opinion because the Director of the FBI reports to the Attorney General who in turn reports to the President and who in turn is responsible to the people. It gets its funds from a Congress which certainly is responsive to public opinion.

The university has since disavowed the question and apologized to the FBI.

I shall not make the assertion that this question was deliberate service to the Communist conspiracy. But whether it was deliberate or not, the fact still remains that one of our great universities imprinted the fact upon young minds that the FBI was a sinister organization. This is the Communist line and whether it was intentionally planted or not is immaterial. The fact still remains that the Communist cause was served.

It is well known that card-carrying, identified Communists are registered as lobbyists in the Congress of the United States. Is it wrong for a congressional committee to expose this fact to the public and tell them about it?

Let me quote from a speech made in the House of Representatives on May 5 by my colleague from Ohio, the Honorable GORDON SCHERER, a member of the House Un-American Activities Committee. He says:

"To accomplish its objective of destroying the Committee on Un-American Activities, this Communist-controlled group (the Emergency Civil Liberties Committee) has sent its cohorts into cities throughout the United States in advance of committee hearings. Its paid agents have done everything possible in advance of, and even during, such hearings to stir up animosity, contempt, and hatred for the committee. Its agents have circulated petitions; appeared on radio programs; arranged meetings, rallies, and picket lines; issued press releases; and placed ads in newspapers."

Mind you this speech was made on May 5, which is exactly 1 week before the recent hearings of the Committee on Un-American Activities in the city hall at San Francisco. Wouldn't you say from hearing that quotation that my colleague from Ohio was a prophet? Certainly there were petitions, there were radio programs, meetings arranged, there were rallies and picket lines, there were ads in newspapers.

Unfortunately these ads and these petitions told outright lies. What is more unfortunate is that those lies came from a speech by a Member of the House on the floor of the House of Representatives. This speech said, "that the committee had subpenaed 110 public schoolteachers in early June 1959. Most of the subpenas were served on the teachers at school at 9 in the morning on June 5."

Ladies and gentlemen, this is not the truth. Upon checking the files of the committee it is found that of 101 subpenas served, 97 teachers were actually served in their homes. Only four were served at their schools, and it is my understanding from unofficial resources that these four were not served in their classrooms.

Recall for a moment the recent San Francisco hearings of the Un-American Activities Committee. What fact enters your mind first? The rioting. Who stirred up the rioting? Known Communists.

What would have happened without the demonstrations? The hearing would have been orderly and brief newspaper reports would have been written instead of glaring headlines.

If reputations were damaged, the rioting and the resulting headlines did it. And who incited the riots? Known Communists. It necessarily follows that the object of the demonstrations, whether participants knew it or not, was not to preserve civil liberties, but to discredit the committee.

Forget for a moment the Communists who participated and the gory details of the San Francisco incident. Ask this question: What is the justification for this committee?

Here it is in simple terms: The security of the United States is the business of Congress. Most Congressmen feel that the Communist conspiracy is a threat to our security. Therefore, Congress should have a committee to investigate communism to alert the public to its danger and to revise our laws to cope with that danger.

This objective and this tactic of the Communist Party of discrediting the committee which seeks to expose the Communist conspiracy is to me the most serious threat to our efforts to resist internal subversion.

It was Pope Pius XI in 1937 who said, in response to a searching question about communism, "How is it possible that such a system long since rejected scientifically and now proved erroneous by experience, how is it, we ask, that such a system could spread so rapidly in all parts of the world?" He answered his own question in these words: "The explanation lies in the fact that too few have been able to grasp the nature of communism."

When our enemy was Nazi Germany our Government and military leaders studied every detail of the enemy and his strategies. One of our great generals was George S. Patton. Early in World War II when the Germans were advancing, General Patton was asked one day if he wasn't discouraged. His answer was precise: "I have studied the German for 40 years. I have read the memoirs of his great men. I have studied every detail of all his military campaigns. I have attended some of his staff courses. I know exactly how he will react under any given set of circumstances. He does not know what I will do. For this reason when the time comes I shall beat the hell out of him."

And this he did.

We can no more save our Republic from communism merely by saying we are against communism than we can cure a cancer by saying we are against cancer. To conquer the cancer we must kill it or it must kill us.

But to cure cancer, to cure any disease, or to defeat communism we must know how serious it is. Knowing how serious it is, we will not fall prey to the overgeneralization that civil liberties must not be restricted even when they are against the interest of the entire Nation. We will continue the Un-American Activities and other congressional committees and give them freedom to investigate Communists and pro-Communists. We will keep present anti-Communists laws and we will strengthen them. We will strengthen security provisions and the laws which keep Communists out of our government. We will restore to the executive branch the right to question aliens awaiting deportation and give it the right to deny passports for those who refuse to sign non-Communist affidavits. We will say to ourselves that no man, regardless of his occupation, is immune from investigation when there is reasonable cause to believe that his actions are aiding the Communist conspiracy.

If we do these things we will act positively against communism and repudiate our past policy of reacting too late with too little.

With such an attitude, and only with such an attitude, can we lick the Communist conspiracy and keep faith with those we honor today—the men who have given their lives in order that we might live as free men and women.

I recall the story of the lost child on a Kansas prairie on one of the coldest nights the prairie had known in years. After hours of searching the neighbors of the frightened family decided they would all join hands and walk across the prairie in an effort to find the little boy. In so doing they covered every square inch of the prairie. After a short time they found the boy but unfortunately he had succumbed to the cold and was dead. The bereaved father gathered the boy into his arms and through his sobs and tears said, "God, why didn't we join hands sooner?"

Twenty-fifth Anniversary of Oakdale Cooperative Electrical Association

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. WILEY. Mr. President, this year, the Oakdale Cooperative Electrical Association, of Oakdale, Wis., celebrates its 25th anniversary.

During its 25 years of service, this fine co-op has written a commendable record of service; in addition, it has played an important role in the economy of the community. For such a record of constructive work, the members, officers, and employees deserve congratulations.

At the 25th annual meeting, the members of the co-op adopted a number of resolutions, many relating to legislation pending before Congress.

Recently, these resolutions were forwarded to me by Manager Lloyd McCaskey. I request unanimous consent to have the resolutions printed in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION NO. 1—OAKDALE 25TH ANNIVERSARY

Whereas the Oakdale Cooperative Electrical Association in 1960 is entering into its 25th year of existence; and

Whereas tremendous progress has been made by the association in the years of its existence toward the providing of service to its members now totaling 4,293; and

Whereas the splendid cooperation of members, officers, employees, past and present have been entirely responsible for the growth and success of the association: Now, therefore, be it

Resolved, That the Oakdale Cooperative Electrical Association extend to all former and present officers, employees and members its grateful thanks.

RESOLUTION NO. 2—REA LOAN SOURCE AND INTEREST RATES

Whereas the Oakdale Cooperative Electrical Association by virtue of its operating in predominately rural communities faces inherent handicaps in providing adequate and full service to all its consumers, not faced by its competitive privately owned utilities with more consumers per mile than Oakdale; and

Whereas this and other handicaps prevent Oakdale from being strictly competitive with private investor owned utilities operating in metropolitan areas with high density of population and high industrial loads; and

Whereas the need for an adequate source of low interest rate capital to finance expansion and new construction to serve growing needs, continues; and

Whereas certain groups are urging legislation to force rural electrical systems into the private money market which would result in increased interest rates on its capital needs: Now, therefore, be it

Resolved by the Oakdale Cooperative Electrical Association, That our congressional representatives be urged to oppose any and all legislation which would remove the Rural Electrification Administration from being our source of capital loan funds and which would in any way increase the prevailing interest rate.

RESOLUTION NO. 3—HEADWATER STORAGE BILL

Whereas bill H.R. 7201 known variously as the upstream benefit bill, the downstream benefit bill and the headwater storage bill is due to come up for consideration before the Congress of the United States; and

Whereas said bill if passed will tend to confer unearned, windfall benefits upon private power companies owning a dam upstream from a Federal dam at the ultimate expense of rural electric systems which purchase all or part of their power from Federal hydro projects: Now, therefore, be it

Resolved, That this 25th annual meeting of the Oakdale Cooperative Electrical Association go on record as opposing unrestricted headwater benefit payments on Federal hydroelectric developments and its opposition to bill H.R. 7201.

J. C. CURTIS,
ALBERT REMINGTON,
WILLARD BURKEPILE,
Resolutions Committee.

True Feeling of the Japanese People

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1960

Mr. PELLY. Mr. Speaker, the following letter from a Japanese trade association describes the feelings of one group of people for the United States.

This letter was written to a former mayor of Seattle who has visited Japan in the interest of good will on several occasions.

I am confident the majority of the Japanese people entertain a friendly feeling for the United States in spite of recent Communist-stimulated activities and understandable but misguided pacifist manifestations.

The letter follows:

DEAR MR. DEVIN: It is with deepest regret that we had to face the stark reality of our Government being compelled to solicit postponement of the much anticipated visit of President Eisenhower to our country, on the occasion of the 100th anniversary of the sign-

ing of Treaty of Amity between the United States and Japan. Agitation manifested at Haneda Airport of Tokyo, upon the arrival of White House Secretary James Hagerty to arrange for the President's visit, had grown to undreamt of proportion, culminating in the necessity of our Government's most reluctant decision of June 16.

The decision was greatest disappointment to the largest majority of our people who were all looking forward to welcome one of the greatest and most honorable guests to our country we ever had the honor to welcome. It would have afforded them that much desired opportunity for them to manifest their utmost gratitude for the President's inestimable contribution to the promotion of friendly relationship between our two countries.

We sincerely hope that this most unfortunate circumstances will not be misunderstood by Americans at large. Manifestations of violence shown by a very small minority in Tokyo, certainly do not represent feeling of the Japanese people. We are all aiming and striving for everlasting friendship between our two countries.

We are taking the liberty of addressing you these few lines to ask you for your sympathetic understanding on the matter and for your kind cooperation in explaining our true sentiment on this occasion to your friends and associates.

Renewing our regret for this most unexpected and unfortunate turn of events and soliciting your valuable assistance in conveying the true feeling of our people to your colleagues, we are

Yours very truly,

KOBE FOREIGN TRADE ASSOCIATION,
TORAMITSU YASUDA, *President*.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my newsletter of July 2, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

The battle over adjournment was won by the Democrats. Instead of finishing all work and adjourning "sine die" (until the new Congress), the Democrat leadership decided to recess and to convene again in August. We could have easily finished our work. This leaves unanswered the question, "Why?" The reason will become evident later—but only to those people who concern themselves in learning what Congress is doing.

I summarized my views during consideration of the sugar bill in this way: "Mr. Chairman, it seems to me that action against Cuba is long overdue. Why subsidize your enemy? Why delay responsible action as we have done up to this point? Why has the House Democrat leadership delayed so long in programing this bill before committee and Congress? As we face a recess adjournment instead of adjournment sine die, I am reminded once again of the failure of Democrat leadership to provide leadership. Obviously something must be done, and done now, to stop this expensive subsidy to Cuba. Meanwhile, we can let our domestic producers provide the sugar, and also buy from friendly allies." While the sugar bill is a good example of the failure of Democrat leadership, there are many others.

The minimum-wage battle wasn't over whether or not to hike the amount and increase the number of people covered, but over how much of an increase would be made in each instance. The radical and far-reaching bill brought to the floor by the Education and Labor Committee and supported by an overwhelming majority of Democrats was amended into a moderate measure by the bipartisan effort of almost all the Republicans, including me, and a goodly number of southern Democrats. The vote on the "moderating" amendment was close, 211 to 203. My own view was stated bluntly and succinctly to the House: "Mr. Chairman, I believe that the Federal Government has no constitutional authority to set wages. Therefore, I oppose minimum-wage laws." That view was supported by only 71 others in the vote on final passage. The count, 341 to 72.

All Federal employees, including postal workers, received a substantial pay raise when both Houses of Congress voted to override President Eisenhower's veto of the something-for-everybody election-year package Congress had passed earlier. Thus, we kicked another three-quarters-of-a-billion-dollar hole in the administration budget. My views on this sort of politicking were stated at the time of the vote in the House:

"Mr. Speaker, in overriding the President's veto of this pay increase we have capitulated to the political pressure of lobbyists, in this case representing the postal workers' unions. We are guilty of permitting legislative dictation. If one pressure group can do it, so can others. Then in the aggregate total our representative government will fail. No longer will we have judicious study of legislation, but roughshod political dictation. This course can only result in the disintegration of our form of government and our society of free people.

"I condemn this pay raise as factually wrong and financially unsound, though politically expedient. Therefore, I voted to uphold the veto. The President's statement contains the facts, including his recommendation that the temporary 2.5 percent raise already in effect be made permanent, and indicating his willingness to go along with a further reasonable hike commensurate with increased living costs.

"That this bill goes far beyond those reasonable norms is manifest. To the extent that it does, we are simply rewarding one group—well organized Federal employees—at the expense of all other taxpayers. At this time, as much as ever, we legislators need to exercise self-discipline, letting November's votes fall where they may."

Senator BARRY GOLDWATER, of Arizona, is the guest of my final television program of the current series. Senator GOLDWATER, a frequent visitor to Dallas, discussed his new book, "The Conscience of a Conservative," with me, going into the true definitions of the terms "conservative," "liberal," and "radical." This program will be shown Sunday morning, July 10, over WFAA–TV.

Cairo and the Panama Canal

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. MURRAY. Mr. President, I should like to call attention to an important article appearing in the current issue—No. 56, summer 1960—of Prevent World War III, published by the Society for the Prevention of World War III, Inc., 515 Madison Avenue, New York, N.Y. I refer to the article Cairo and the Panama Canal, an original analysis of activities by President Nasser's agents in Panama.

This article states that the Cairo regime in association with the Castro government, has been endeavoring to undermine the U.S. position at the Panama Canal and incites Panamanians against the United States while receiving tens of millions of dollars from the U.S. Treasury.

I submit, Mr. President, that this is a most unhappy situation and certainly deserves the closest attention of Congress. I ask unanimous consent to include the article in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAIRO AND THE PANAMA CANAL

Testifying before a subcommittee of the House of Representatives in April of this year, Mr. G. Lewis Jones, Assistant Secretary of State for Near Eastern Affairs, assured Members of Congress that there was "progress in normalization of our relations with the United Arab Republic." It would seem to us that in the lexicon of international diplomacy "normalization of relations" between countries implies that each side has agreed by deed as well as word to respect the rights and interest of the other. Moreover, it would also seem to mean that each side has taken upon itself the obligation not to commit any acts which would seriously damage and/or discredit the interests of the other country. If we judge "normalization of relations" by these standards, then we must frankly express our astonishment at Mr. Jones' optimism.

SOUTH OF THE BORDER

Certainly, Cairo's blacklisting of U.S.-owned ships and harassment of American seamen by Egyptian officials and their minions cannot be regarded as proof that the U.A.R. has at last begun to respect the interests of the United States. However, nowhere do we find a more meaningful example of Nasser's deliberate aim to undermine the position of the United States than in Latin America. Comparatively little has been written about this subject, but this does not mean that it is of no significance. On the contrary, recent developments clearly indicate that the U.A.R. is steadily building up its apparatus of subversion south of our borders and is employing all of the tricks it has learned in its drive to damage the standing of the West in Africa and in Asia.

It is true, of course, that Egypt is still a very poor country and certainly does not possess the resources, let us say, of the Soviets, in probing Latin America. Nevertheless, given this disadvantage, the Cairo regime is making the best out of it. The move is not a massive one as yet. On the contrary, it appears to be primarily concentrated on Cuba and Panama. The reason for this concentration is not only due to the lack of resources but is also related to the fact that in both of these countries there are enormous opportunities for inflicting grave harm on the security interests of the United States.

CAIRO AND CUBA

Cuba is in the throes of a highly emotionally charged anti-American campaign sponsored by the Castro government. Consequently, Cuba has become the focal point of all sorts of anti-American intrigue and

activities. It is, therefore, a most suitable headquarters for alien forces, not only of the Soviet variety but also of the kind fostered by Mr. Nasser and company. Thus, collaboration between Cuba and Egypt has been strengthened over the past few months by mutual visits of leading figures in both regimes. Cuba's Foreign Minister paid a special call on Nasser in the earlier part of this year. In this connection Newsweek magazine (Apr. 4, 1960), revealed that Nasser's Deputy Foreign Minister Hussein Sabry, promised Castro help in the event of "Yankee aggression." As reported by Newsweek, Sabry boasted, "We have lots of arms and ammunition, some we no longer need, we are ready to ship them to you free."

The collaboration between the United Arab Republic and Cuba has found expression in their joint activities in Panama against the United States. Panama has enormous strategic significance, in view of the fact that the Panama Canal runs through its territory. American strategists know very well that even in this day of the jet plane and the ICBM the usefulness of the Panama Canal, both for military and commercial purposes, is beyond question. If someone were to lay hands on that canal, it would do a great deal of harm to the United States and the democratic cause throughout the world. Yet it is precisely here that Castro and Nasser have teamed up. Writing from Panama (Mar. 12, 1960), the New York Times noted military commentator, Hanson W. Baldwin, had this to say: "The Ambassadors of the United Arab Republic and Cuba have established cordial relationships with anti-U.S. elements in Panama.

"The envoys are promoting the idea of pan-Arab-Latin American cooperation with the Nasser revolution in Egypt on the one hand and the Castro revolution in Cuba on the other."

Mr. Baldwin further revealed that the U.A.R. Legation in Panama, headed by its Minister, Mohammed el Tabei, is very active and is, indeed, disproportionally large compared to the number of Arabs living there. Moreover, there are virtually no Arab commercial interests which could justify such a large staff of Arabs in the legation.

Mr. Baldwin noted that Mr. el Tabei had made numerous contacts with key Panamanian officials, including Aquilino Boyd and Prof. Ernesto Castillero, "whose acts helped to lead to anti-U.S. riots on the Canal Zone borders last fall." Of course, Mr. el Tabei, according to Mr. Baldwin, rejected the charge that the Cairo government was intervening in Panamanian-United States relations. He discounted the idea that anti-Semitic outbreaks in the Canal Zone had anything to do with the appearance of U.A.R. agents in Panama. "Our policy is to expand our relations with all Latin American countries," Mr. el Tabei said.

It goes without saying that there is nothing wrong for countries to expand their mutual relations, provided that they do not serve as a coverup for subversion and other provocative activities. However, the Cuban-Cairo duet is anything but a harmless exercise in spreading good will and cheer. As noted in the London Daily Express (Mar. 14, 1960), U.S. authorities are convinced that Nasser's chief agent in Panama has joined hands with the Castro forces to destroy the American position at the Panama Canal. "Both U.A.R.'s Ambassador Mohammed el Tabei and Cuban Ambassador José Antonio Carbrera Villa are busy behind the diplomatic scenes making friends and influencing people."

It appears that leading Panamanian officials have joined the Mutual Admiration Society which has been established by Nasser and Castro. Thus, the Panamanian Foreign Minister Miguel Moreno made a trip to Cairo in March of this year. During his stay there, Senor Moreno made a series of statements sharply castigating the United States "which could suggest that Panama is considering taking a leaf out of Egypt's Suez book as regards the Panama Canal" (London Times, Mar. 18, 1960). Indeed, Senor Moreno did not hesitate to state that his mission was to study the administration of the Suez Canal. As a matter of fact, he subsequently remarked that there was a close parallel between Egypt and Panama. In this connection, it is interesting to note that on the very same day that Senor Moreno was vilifying the United States in Cairo, the Cuban newspaper Revolucion, Castro's mouthpiece, published a scathing attack against alleged mistreatment of Cuban labor at the U.S. naval base at Guantanamo. Apparently, there seems to be some kind of coordination of tactics and propaganda between the Castro forces and the Cairo regime vis-a-vis the United States.

TARGET PANAMA

For the time being, Panama seems to have been chosen as one of the chief targets for Nasser's probing operations in Latin America. Undoubtedly, U.S. policy with respect to Panama could stand improvement. Certain conditions require rectification and the State Department has indicated an awareness of this fact. In this connection, the President recently announced a new series of grants, including a 10-percent wage increase for Panamanians employed in the Canal Zone. However, it does not appear that U.S. concessions alone will do the trick. Living conditions for the average Panamanian are very bad in contrast to the opulence of a handful of aristocratic families controlling most of the country's leading industries. In order to divert attention from these sharp and embarrassing contrasts, Panamanian politicians find the canal issue to be a handy weapon for whipping up anti-American sentiments. As a result, the United States is made a scapegoat. This is where the Egyptians and their agents come in. They have taken advantage of this situation to steam up the emotions of the Panamanians by making it appear as though the United States is responsible for all of the ills besetting that country. It should be noted that Nasser has employed this very same tactic in his own country.

The United States controls the Panama Canal in perpetuity under the Hay-Bunau Varilla Treaty of 1903. U.S. equity in the canal is estimated to be in the neighborhood of $460 million. Moreover, the United States pumps more than $60 million a year into Panama's economy. This total includes an annual rent of close to $2 million, wages for some of the 10,000 Panamanians employed in the zone and payments to Panamanian concerns for supplies and services.

It must be recognized, however, that U.S. aid, and more which will undoubtedly be forthcoming, will not suffice, because the issue is no longer one of legitimate grievances as such. Instead, the United States is now confronted by unscrupulos demagogic politicians who use the canal issue as a battle cry while they are egged on by agents of Nasser and Castro. All expert observers agree that nothing will satisfy these politicians except complete surrender on the part of the United States. These were the terms expressed by Senor Moreno when he declared on November 29, 1959, that the time has come for Panama to break "the chains of servility."

It was precisely during November of last year that violent riots took place in the Canal Zone. The U.S. News & World Report (Dec. 14, 1959) stated: "Agents of Egypt's Nasser have been in Panama advising the politicians of that country on the moves to make to get eventual control over the Panama Canal away from the United States. Nasser is able to pose as an expert, having taken the Suez Canal from its owners." The activities of these agents were spurred on by Cairo propaganda inciting Panamanians against the United States. In this connection, the New York Times (Dec. 2, 1959) reported: "Two broadcasts are beamed nightly from Cairo to Panama, dedicated almost wholly to the alleged unfair treatment the nation is receiving from the United States in respect to the canal."

The activities of Nasser's agents have been confirmed by American journalists who have been on the scene. Thus, the Washington Star's correspondent, Richard Fryklund, referred to the Egyptian, Communist and Cuban rabblerousers, who boasted that the demonstrations against the United States "have paid off and urge more of the same" (Mar. 30, 1960). Members of Congress, including Congressman DANIEL FLOOD, of Pennsylvania, have also expressed alarm over this situation.

CAIRO'S "DIPLOMACY"

Meanwhile, diplomatic activities between Panama and the U.A.R. have accelerated. On March 14, 1960, the first agreement was signed between the U.A.R. and Panama providing "for cooperation between the cultural and educational institutions of the two countries." Shortly before the agreement was signed, Cairo announced that Egypt's Deputy Foreign Minister Sabry would undertake a good-will mission to Latin America including Panama. As regards Mr. Sabry's activities in Panama, it is noteworthy that he participated in the University of Panama's seminar on "political ideas." The Panama radio reported that Mr. Sabry was "invited to reply to several questions regarding the nationalization of the Suez Canal by the Egyptian people. The topic is of particular significance to the Panamanians, due to the analogous situations of the two canals."

Mr. Sabry's missionary work in Latin America has been reported with enthusiasm in Cairo. One Cairo newspaper reported that the Egyptian Deputy Foreign Minister had declared that "imperialist domination in the past separated the Arab countries and the states of Latin America. But now we have acquired our independence and we must bolster our relations because of our common [sic] cultural heritage." Mr. Sabry further expressed the hope that the U.A.R. mission to the Latin American States would realize "something good and beneficial." A week later the Cairo radio returned to that theme, praising Sabry's good will mission to Latin American countries "whose circumstances are similar to those of the African and Asian countries" (Mar. 13, 1960). According to Cairo (Apr. 5, 1960), Sabry presided "over a conference of U.A.R. ambassadors to the Latin American States." Presumably, this is intended to further tighten and coordinate Cairo's "diplomatic" campaign.

Needless to say, Nasser's diplomacy in Latin America has been receiving ample assistance from Egypt's propaganda mills. From time to time, Cairo propagandists will dwell on alleged exploitation in South America at the hands of "Yankee imperialists." When Vice President NIXON was stoned by mobs during his South American tour, Cairo propagandists could hardly conceal their joy. When differences broke out in Bolivia last year, the Cairo newspaper Ash-Shab declared (Mar. 5, 1959): "The people of Bolivia revolt in order to get rid of slavery, domination and American exploitation. In fact, the revolution of the Bolivian people is a part of the comprehensive revolution of all the states of Latin America, aimed at ridding themselves of the domination and exploitation of the United States. The Bolivian people will undoubtedly attain their aim. Neither America's military base nor its monopolizing domination will be of use to it."

NASSER RAGES AGAINST UNITED STATES

Anti-U.S. propaganda is the stock in trade of the Cairo regime. Admittedly, it fluctu-

ates depending upon Nasser's estimation of how determined the United States will act on one issue or another. Sometimes, of course, Nasser will conceal this anti-U.S. bias by hypocritical denial that his regime aims to injure the United States. On March 22, 1960, he told a delegation of American journalists, in discussing relations with the United States, "we do not harbor any hostilities toward any country." Yet, on this very day when he avowed his peaceful and friendly intentions, he received the credentials of the first Panamanian Ambassador to the U.A.R. In February of this year, Nasser accused the United States, Britain, and France of interfering in Arab affairs and threatened to block the shipment of oil to the West. During that very same month, Nasser accused the "imperialist powers—the United States, to be exact" of inciting anti-Egyptian forces in Syria. The New York Herald Tribune correspondent noted that this was Nasser's "first attack on the United States in months" (Feb. 19, 1960). Apparently, some people who should know better but who prefer to indulge in wishful thinking, were taken aback by Nasser's anti-U.S. tirade. The fact is that even when Nasser is quiet, his intrigues against the United States never cease. Cairo's propaganda, on the other hand, is like a faucet that can be turned on or off depending upon the time and circumstances.

In March, Nasser resumed his attacks against the United States, this time calling the leaders of Jordan stooges of imperialism. The Cairo strong man shouted: "The rulers at Amman have dedicated themselves to British and American domination in their work against Arab nationalism" (New York Herald Tribune, Mar. 8, 1960).

In May of this year, Nasser delivered an incendiary speech describing Members of the U.S. Senate as thieves. He heaped scorn on American aid and in words reminiscent of Hitler, described American assistance as "the methods of Cohen." In the very same speech he defended his piratical policies at the Suez Canal declaring that it was "an Arab canal" while implying that the United States had no right to the Panama Canal.

AND THE UNITED STATES PAYS

Nevertheless, the United States continues to pour tens of millions of dollars into Egypt. A few months ago, the World Bank with the blessings of our State Department, agreed to turn over $56 million to the Cairo regime for improving the Suez Canal. This was done without insisting that Nasser respect the principles of international law and permit all nations access to the Suez Canal as an international waterway. About $120 million worth of U.S. agricultural commodities have been turned over to Egypt. Millions of dollars' worth of gifts, grants, and other forms of American assistance are going to Cairo. Needless to say, this does not deter the Egyptians from accepting substantial contributions from the Soviets.

Nasser has been playing this game for some time. It is the old strategy of pitting one side against the other to extract a maximum advantage from both. Of course, he will publicly deny his anti-Americanism and proclaim his passionate love for peace. But what does it all mean? El Amal, the Government newspaper of Tunis, supplied the answer: "Colonel Nasser's 'words of peace' can by no means be reconciled with the arrogance, incitement, and plotting published daily over the Cairo radio and the U.A.R. press. Nasser's words of peace have one aim and one aim alone; to get more dollars from the United States" (Dec. 16, 1959). The Tunis newspaper has hit the bull's eye. Members of the House subcommittee who listened to the testimony of Under Secretary Jones should ponder this evaluation of Nasser's "peaceful" intentions toward the United States.

UNHOLY ALLIANCE

Double trouble for the United States. In Panama, the Cuban and Egyptian Ambassadors get together to encourage the Panamanians to take over the U.S.-owned Panama Canal.

Ever since Nasser seized the Suez Canal the Americans have feared for their property in Panama. With good reason.

For if one nation can get away with robbery, why not another? If Egypt, why not Panama? (Daily Express, London, Mar. 5, 1960.)

A New Outlook on American Foreign Policy

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. FEIGHAN. Mr. Speaker, Sunday, June 19, marked the 10th anniversary of the founding of the Ukrainian American Youth Association. To mark this occasion a mass rally was held in Cleveland.

In recent weeks the American people witnessed the role that youth can play in support of Communist objectives when led and stimulated by agents of Moscow. The riots of Japan which made it necessary to cancel President Eisenhower's visit to Tokyo were the actions of misguided youth. This lesson will long remain in the memory of the American people and should stand as a warning sign of the importance of youth in the domestic affairs of any nation.

It is therefore refreshing to find youth groups in the United States who are motivated by love of liberty and freedom and the desire to assist in removing the threat of imperial Russian communism from the face of the earth. The Ukrainian American Youth Association is such a group. The young men and women who comprise this organization know full well the meaning of communism, the tyranny of Russian imperialism, and the consolidation of these two evils as the source of the dangerous tensions which now grip the world. They take pride in the traditions which are the American way of life; they support, without reservation, the moral and political ideals which form the foundation of our American democracy. They are determined that these same moral and political ideals shall be the birthright of all nations and people because thereby they know the Ukrainian nation, the land of their forefathers, will be free and independent.

Under unanimous consent I insert my address given before the Ukrainian American Youth Association in the RECORD:

A NEW OUTLOOK ON AMERICAN FOREIGN POLICY

Mr. Ciszkewycz, officers, and members of the association and friends, I am happy to play a part in this 10th anniversary celebration of the Ukrainian American Youth Association. This is an important milestone in the affairs of your organization, and I am confident it marks a period of progress toward the high goals which you have set for your association and for its members. For all of you it is a time to look back at your beginnings, a time to examine your purposes in terms of the realities of this hour, and, a time to plan your future activities in the light of these realities. You are much better qualified than I to evaluate your accomplishments of these past 10 years, but I believe I have something to offer you in your examination of the realities of the present and some suggestions you might consider as you chart your future course.

This moment in history reflects deep and far reaching changes in the social and political order of the world. On all sides of us we see these changes taking place and we are alert to the great changes in the offing, changes which correspond to the aspirations of almost one-third of enslaved humanity for freedom, liberty, and national independence. We are entering the climatic period of the revolutionary era. This will be the period of crucial trial and test for the political and moral ideals of freemen. At issue is the question whether our free, open society; the democratic way of life; has the inner strength and external driving power to survive the organized onslaught of Russian imperial communism and to extend the frontiers of freedom until all nations and all men are self-governing. It will not be enough for us to hold back the wave of red totalitarianism, we cannot survive through defensive efforts alone. We are now faced with the immediate challenge to hold and strengthen the areas of freedom and to launch a political, economic, and diplomatic offensive against the enemy of all mankind.

The task before us is, therefore, twofold. We must have a defensive capability which openly warns the Russian imperialists that we have the military power to render them helpless and that we will not hesitate to use it if they instigate circumstances which would make such action inescapable. This defensive capability must be attained by us and our associated allies without 1 month, or 1 week, or 1 day of delay. Then we must launch an offensive against the Russians with the assurance that we have the power to back up the political, economic, and diplomatic actions which the reality of the present danger demand. Nor should we back off from any risks involved by taking such political, economic, or diplomatic actions The responsibility for risks should be placed firmly on the backs of the Russian tyrants; if they choose to interfere with the orderly progress of all nations toward freedom and national independence, the responsibility will be theirs and not ours.

Looking to the urgent need for a program of positive actions in the cause of peace with justice, a scale of values must be set if the program is to measure up to the challenge. There are those who call for diplomacy as the major arm of this offensive. These are the people who advocate summit conference after summit conference and personal diplomacy such as the infamous visit of Tzar Khrushchev to the United States. These same people are calling out for a new President who has had personal experience in dealing with the Russian Communists, a man who by experience would be qualified to drag our Nation into more summit conferences, a man whose experience would make him a senior operator in personal diplomacy with Khrushchev and company. The candidate they have in mind is, of course, Vice President NIXON, because he meets all these qualifications.

I have often wondered how Americans of Ukrainian origin felt after Vice President NIXON, during his visit to Moscow last year, referred to Ukraine as the Texas of Russia. This was the startling statement he made after stopping a young lady on the streets of Moscow and saying, "What a pretty Rus-

sian girl," and receiving her pointed reply, "I am no Russian, I am a Ukrainian." All of us know that George Kennan is the one who launched this false idea about the Ukraine being the Texas of Russia, but we could hardly expect Vice President NIXON to be so badly informed on this basic matter. Perhaps Mr. Kennan is one of Mr. NIXON's many silent advisers.

Then there are those who are calling out for an economic offensive against the Russian Communists, including the proviso of trade with Red China, economic assistance to the so-called satellites and a variety of other strange formulas for victory. They are fundamentally economic determinists, people who see life as nothing more than the material advancement of the individual regardless of the system under which it is attained. I do not make any reference in this connection to the need for our country to have a sound, realistic program to assist the newly independent nations and the newly emerging nations in the economic development of their countries. The case for these nations is clear, we must help them by means of development loan funds, technical assistance, friendly advice and at all times extending the hand of genuine friendship. But this formula must not be extended to Communist regimes imposed upon the people of once free nations by force, intrigue, and violence. Nor should this program be extended to those who prefer to sit on the fence between the free world and the camp of the Russian Communists in the belief they can blackmail us into supporting their economic development schemes. This is no time for fence straddlers—either they get down off the fence or suffer the tragedy of Humpty Dumpty.

Then there are those who see the challenge of our times as political, the struggle of ideals and ideas, a conflict of two political systems which can not be reconciled one with another. Either one or the other must triumph, there can be only one winner and the loser is doomed to extinction from the face of the earth. I belong to this school of thought. Cold reason and long experience prohibits my being otherwise. Now, what are my thoughts on the scale of values in the program of positive actions against the Russian Communists?

To begin with, we, as a nation, must set our political goals and make them known to all the people of the world. These political goals must dominate all our thinking. All other aspects of the program must be subservient to them. That which does not support our international political objectives must be put aside. All actions in the field of economic assistance and diplomatic contact must be measured by this compelling rule. These things we have not done. These things we must do. This is the real task which will confront the new President and his administration come January 1961. This is the task which has confronted the present administration for the past 7 years, and their failure to measure up is demonstrated by the fact that summit conferences, personal diplomacy, exchange of visits between NIXON and Khrushchev have been the substance of their efforts. These efforts have failed. The evidence of the failure is to be found on all sides. We cannot afford 4 more years of such failures.

Now for more pleasant things. Let us look to the future, what are the elements of a political action program against the Russian Communists? I see these as the elements:

1. Self-determination for all nations and all people. This policy must be applied to all people on all the continents, on both sides of the Iron Curtain.

2. In appying the principle of self-determination we must get rid of the Russian concocted dilemma which exists in the Department of State, popularly known as nonpredetermination. This current policy is interpreted to mean that we must not speak about self-determination for the captive non-Russian nations of the Soviet Union because to do so would prejudge the situation. Consequently, State Department interpretations of Public Law 86-90 are in violation of the spirit of the law and play right into the hands of the Russian imperialists. We must resolve this Russian dilemma in the State Department and all those who support the confusion techniques of nonpredetermination.

3. We must support the national independence movements behind the Russian Iron Curtain. In so doing we must take into official account the fact that all the non-Russian nations of the Soviet Union have already exercised their right to self-determination during the period 1917-18 and elected for national independence, for the dismemberment of the Russian Empire. Having done this, all these nations had their independence robbed from them by the Russian Communists, just as happened to such nations as Poland, Hungary, and Rumania following World War II. Therefore, the question of self-determination for these nations is not pertinent. The question of restoring national independence to all these nations is the real issue.

4. We must stop doing business with the oppressors in the Russian Empire and start doing business with the oppressed in the Empire. By this I mean we should look to the majority peoples of the Soviet Union, the oppressed non-Russian peoples, for a solution to the tensions which grip the world. These people have the answer. The answer is the return of their liberties and their national independence. They are willing to fight and die for this objective. All they ask of us is our political support, the stimulation of world opinion to understand the truth of their present plight and the power of their aspirations. They will peacefully dismember the present-day Russian Empire—the real threat to all humanity—if we will but stand by them. This can be done; we can develop world opinion in support of the aspirations of these captive nations, and by so doing we can put the responsibility on the Russian masters to accept the will of the people or face the wrath of a thoroughly aroused free-world community. But we cannot do this while playing footsie with Khrushchev and company, by forcing our people against their conscience to be courteous and considerate of the bloody-handed Khrushchev during his unwelcome visit to the United States.

5. We can begin to use the United Nations as a platform for such a political campaign. As a first step, we should take action to cause the Russians to live up to the United Nations resolution on Hungary or be expelled from membership in that body. As a second step, we should declare the non-Russian nations of the Soviet Union and the so-called satellites of Central Europe as non-self-governing territorics and demand that they be treated as such in the Council, the Assembly, and the work of the various organs of the United Nations. This will be sufficient as a starter. Such action will pry the lid off the fakery barrel which has been imposed upon the people of the world and open the door to a just and lasting peace.

This program I commend to your consideration as you plan your program for the immediate years ahead. It is a program worthy of your support, a program which I believe you could support with vigor and confidence. Having known the Russians and their Empire of fear from firsthand knowledge, many of you are in a position to speak with authority about the aspirations of the good people of Ukraine. By making these aspirations known to all the American people, you will strike a powerful blow for peace with justice, which is and will remain our goal.

Address by Senator Wiley Over Wisconsin Radio Stations

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. WILEY. Mr. President, the Congress—when it reconvenes in August—will have a sizable workload to handle—if it is to write a real record for the year.

Recently, I delivered an address over Wisconsin radio stations viewing some of the major legislation yet to be acted upon in the final days.

At this time, I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EXCERPTS OF ADDRESS PREPARED FOR DELIVERY BY SENATOR ALEXANDER WILEY OVER WISCONSIN RADIO STATIONS

Friends, as you know, Congress has now recessed—the House of Representatives until August 15 and the Senate, until August 8. Why? The legislative workload has piled higher and higher in recent weeks.

As a result, the majority leadership decided to adjourn—rather than attempt to push through all the pending legislation.

Question. Will this mean a long session in August, Senator WILEY?

Answer. Well, that depends upon many things. It will depend upon whether Congress is ready and willing to "roll up its sleeves" and get to work; or whether an effort will be made to "play politics" with the issues.

For myself—as prior to recess—I am prepared to stay as long as necessary to get the whole job done when Congress reconvenes in August.

Question. Senator WILEY, how large a workload remains in August?

Answer. A big one.

WILEY-SPONSORED LEGISLATION PENDING AFTER RECESS

Briefly, now, I'd like to review some of the proposals—which I have sponsored—that I believe are of major interest to Wisconsin. These include:

1. S. 910, to authorize the payment to local governments of sums in lieu of taxes and special assessments with respect to certain Federal real property.

2. S.J. Res. 208, to establish a commission to study and report on the impact of foreign trade on business and new industrial expansion in the United States. As a cosponsor of this measure, I feel we need to take a "hard look" at the effect—the adverse effect—which the increased flood of imports, for example, is having on our domestic industry.

3. Expansion of agricultural research through enactment of S. 690 now in conference. The purpose of this legislation would be to expand research of utilization of agricultural products for commercial purposes.

Incidentally, still pending also is my bill for establishing a dairy research laboratory—with similar objectives—at Madison, Wis.

Question. What are other measures of particular interest to Wisconsin?

Answer. Although there are many more, a number of additional areas include:

4. S. 2917, to provide an increase in price supports for dairy products to provide a

brighter outlook for the dairy farmer in America. Currently, the measure is pending before the Senate.

5. S. 894, to establish an ice-age national park, encompassing the glacially formed moraines in Wisconsin. Unfortunately, the long-delayed studies by the Department of Interior had held up action on this legislation.

6. S.J. Res. 186, to establish a National Voters Day. Prior to the recess, this resolution—for encouraging greater voter participation in elections—passed the Senate. Currently, it is pending before the Judiciary Committee in the House of Representatives.

7. S. Con. Res. 96, to provide for an updated Internal Security Manual—a useful guidebook to strengthen the internal security of the country. This measure has also passed the Senate and is pending before the Administration Committee in the House of Representatives.

8. Legislation to extend the termination date for the Menominee Indian Tribe, as well as to provide exemptions from Federal documentary stamp tax on transfer of property from Federal control to the tribe. To accommodate the change in status, the Wisconsin State Legislature has created a 72d county. Unless additional time is provided to put the tribal affairs in order, serious economic and social problems may arise for the Menominee Indians. Unless these are resolved, it will handicap their ability to integrate properly into the political and economic life of Wisconsin.

OTHER MAJOR LEGISLATION PENDING BEFORE CONGRESS

Question. Now, Senator WILEY, what are some of the other major issues which would be a matter of priority—or major controversy—when Congress reconvenes?

Answer. When the "closing gong" of the recess came, the unfinished business included the following:

Consideration of the proposals for increasing the minimum wage and extending it to more workers.

Proposals for providing medical and hospital care for the aging citizen.

What to do about Federal aid to schools.

Expanding the housing program.

Carrying forward the mutual security program.

Public works bill—including funds for flood control and port and harbor development and additional planning, manitenance, and surveys for projects including: Eau Galle River, Menominee Harbor, Milwaukee Harbor, Sheboygan Harbor, Cornucopia Harbor, Duluth-Superior, Pecatonica.

A great many of these major programs are highly controversial. Consequently, they could touch off real battles after Congress reconvenes in August.

UPCOMING NATIONAL CONVENTIONS

Question. What about the upcoming Democratic and Republican Conventions, Senator WILEY?

Answer. As we are aware, the conventions are scheduled as follows:

The Democratic meeting in Los Angeles on July 11.

The Republican meeting in Chicago on July 25.

The nominations of candidates for the Presidency and Vice Presidency—as well as adoption of platforms—by the respective parties, of course, is a significant—and essential—step in our two-party system toward filling the highest public offices in our country.

Because of the breakup of the normally continuing sessions of Congress, however, we must be careful not to allow politicking to unduly influence the outcome of action on the pending legislation.

Politics—in its best sense—can, and does, effectively serve the interests of our people—locally, statewide, and nationally.

At the same time, irresponsible efforts to make political football out of issues for "personal or party" gains can work against the public interest.

Consequently, we must—in these challenging times—encourage adherence to the highest standards of conduct by candidates and parties in electioneering.

ESTABLISHMENT OF FUTURE GOALS BY STATES AND COMMUNITIES

Question. Senator WILEY, today—inside and outside of politics—we are hearing, and reading a great deal about "goal setting" for our country.

Answer. Yes.

Currently, the Nation and its leaders are attempting to establish—and "shoot for" goals to meet the Nation's future needs for economic progress and security.

Personally, I think this is a good idea. Highlighting this effort has been the appointment of a National Goals Commission by President Eisenhower. Among its purposes are the establishment of objectives and assuring a good "forward pace" by channeling human and natural resources into programs that best serve the interests of the country.

To obtain maximum progress, however, I believe we need a coordinated effort also to assure a top-to-bottom voluntary mobilization of the Nation's people and resources.

Question. How can this be accomplished, Senator? What goals shall we be shooting for?

Answer. We recognize, of course, that—if this is to be done—each State and community can helpfully contribute by establishing such goals in relation to its potential. This involves such steps as:

Surveying manpower, natural, financial, commercial, and other resources.

Reviewing needs for services, products, transportation, housing, education and other needs, together with recommendations for fulfilling such needs.

Following a realistic survey of a community or State's potential, then the task is to establish—and attempt to reach—high-achievement goals within the range of their human and natural resources.

To accomplish such a program, however, certain additional requirements need to be fulfilled. These include:

1. A thorough analysis of its potential by a State or community—and then realistic efforts to "set its sights" on promising objectives in such fields as agriculture; housing; education; social progress; trade; expansion of industrial and business activity to create more jobs; and other purposes.

2. Encourage citizens to support—and invest in—local and State projects, to further provide much-needed—and sometimes scarce—finances for projects;

3. Assure local and State tax systems favorable to industrial and business development.

4. Look for new markets for local—or State—produced products or services to provide greater business and industrial activities—which means more jobs—and economic health.

5. Improve our "human resources" development program;

6. Create a spirit of cooperation between management and labor to minimize costly strife that jeopardizes progress.

7. Improve and expand air, rail, road and water transportation systems to better meet present and future needs of the economy and the people;

8. Carry on unexplored opportunities for development of mineral, timber or other natural resources; expansion of tourism; participation in trade; locating new markets for communities' products or services; and other opportunities.

Each State and each community can, of course, best determine its requirements,. potentials and objectives, and set up the machinery for mobilizing its human and natural resources to attain its goals. If such a grassroots program can be effectively established, I believe it will go a long way toward successfully paving the way for an ever-brighter future for the State and the Nation.

The overall objectives, of course, is to stimulate a greater, communitywide effort to make each hometown or community the "best place" to live in America.

CONCLUSION

This, then, is a brief, between session review of the legislative and other tasks that remain ahead of us.

As in the past, I shall look forward to hearing from you folks, from time to time, as issues of public interest arise in the days ahead.

Now, again, this is your senior Senator, ALEX WILEY, saying: Thanks for taking time out of your busy days to "tune in" to this program.

The Enemy Is No Amateur

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks, I offer for the RECORD an editorial which appeared in the Tampa Tribune, Tampa, Fla., on Sunday, June 19, 1960. It is a great statement in behalf of my Freedom Commission bill, laying down the battlelines in clear and uncompromising terms:

THE ENEMY IS NO AMATEUR

There was once a statesman who sought to arouse his people to more vigorous action against an enemy who was encroaching, bite by bite, upon the edges of their domain.

"You have never framed any plan of campaign for yourselves," he said. "You take your marching orders from him. You have never foreseen any event until you learned that something has happened or is happening. All this was once permissible. Now things have come to a crisis."

The statesman was Demosthenes, warning the citizens of Athens against the threat posed by Philip of Macedonia. The complacent Athenians, enjoying the world's richest civilization, paid little heed. So Athens fell and its power and glory survive only in the history books.

Demosthenes' words seem peculiarly fitted to the United States and its allies today.

In the struggle with communism we seem habitually to wait for the Communist attack before we devise a defense. All too often we are caught by surprise—as in the Communist takeover in Cuba and the Communist-led riots which forced President Eisenhower to cancel his visit to Japan.

And we still console oursleves with the thought that if we just spend enough money on guns and missiles and foreign aid we can make the free world secure against communism.

The recent disasters in Japan and Cuba should help us to realize that we can outgun communism and outspend communism and still lose the cold war.

It has been said, in tiresome repetition, that what we are fighting is a new kind of war—a war not for physical objectives, but for the minds of men. No truer evaluation of today's struggle could possibly be made—yet America is failing to take the measures necessary to win such a war.

Our great fault is that we fail to sell democracy with the same zeal and efficiency

with which the Russians and Chinese go about promoting communism. We have the world's finest system of government here in America and we tend to feel that the Cuban farmer or the Japanese student or the Afghanistan herdsman ought to recognize as much. But that's not necessarily so. There are millions of gullible Snow Whites in the world to whom communism's apples look irresistibly delicious; too late they discover the poison inside.

It is to these people that we must convey both the fatal fraudulence of communism and the virtues of democracy.

How?

Primarily, by a bigger, better organized, shrewder campaign employing more highly trained workers.

One plan for helping to accomplish this purpose already is before Congress. For months it has been gathering dust in committee pigeonholes.

This is the proposal offered by Representative SYD HERLONG, of Florida, and Representative WALTER H. JUDD, of Minnesota, for the establishment of a Freedom Academy.

The Academy, in the words of one advocate, would serve as "a West Point of political warfare." It would prepare Americans to go forth in the world as effective crusaders for democracy and against communism; it would equip foreigners to take back to their own lands an appreciation of the blessings of freedom and the evils of Marxism. It would, in short, enable the United States to do what Russia has been doing for years—train both natives and foreigners to fight its cause unceasingly on the battlefronts of the cold war.

Congressman JUDD summed up the need very well in testifying before a Senate committee. He said:

"The amateur will always lose against the professional. I want professionals on our side. We have the better cause, but we are not professional in the presentation and advancement of it."

The Freedom Academy plan has not advanced very far in Washington, apparently, because some Congressmen think it's unorthodox and some bureaucrats fear it might encroach on their own areas of authority.

Well, this country has got to use some unorthodox measures and it's got to sweep aside politics-as-usual in behalf of the national welfare. The Macedonians are on the move—and they're no amateurs.

Address by Gov. Ernest F. Hollings at Commencement Ceremonies of the Medical College of South Carolina, Charleston, S.C.

EXTENSION OF REMARKS

OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. McMILLAN. Mr. Speaker, under unanimous consent, I include in the CONGRESSIONAL RECORD a copy of a speech delivered by the Honorable Ernest F. Hollings, Governor of the State of South Carolina, to the South Carolina Medical College, which should be of great interest to every person.

We are extremely proud of the medical college in our State as it has a national reputation of being one of the leading medical and research institutions in the United States. I hope every Member of Congress will take a few minutes to read our Governor's speech.

The speech follows:

ADDRESS BY GOV. ERNEST F. HOLLINGS AT COMMENCEMENT CEREMONIES OF THE MEDICAL COLLEGE OF SOUTH CAROLINA, CHARLESTON, S.C.

Hippocrates, the greatest of Greek physicians, warned, "Strong maladies require strong medicine." This forebear of today's medical profession also wrote, "In order to cure the human body it is necessary to have knowledge of the whole of things." With the prophetic greatness of the ancient Greeks, Hippocrates' words have special meaning today.

The transcending malady of our times is the plague of compromise. Insidiously, it eats away at American principle and the free enterprise system in America. The strong medicine we need is vigorous action to reverse this deterioration. The medical profession must play a major role in treating this malady. It will require that you be broad enough in scope, and incisive enough in insight to help diagnose and treat the ills of compromise and equivocation. You must "have a knowledge of the whole of things."

The patient today is the equivocal man—a strange creation who stalks the land in growing numbers. He bears faint resemblance to the American of earlier day who believed in human responsibilities as well as human rights, who wrung personal achievement from his own initiative, thrift and prudence; who knew that the best governed was the least governed, who believed the American Constitution meant what its noble words said as written, rather than as interpreted by psychological or sociological theory.

This patient is marked by symptoms which are distressing in their potential impact on the welfare of the Nation. His economic pulse is slowing and becoming erratic because he is finding the rewards for personal initiative are being crushed by confiscatory taxation and stifling governmental regulation. Instead of seeking the thrills of achievement and profit through his own creative ambition, he is turning to the seductive beckoning of security. His goal in life is a safe niche in some paternal organization with pensions for old age rather than the risks of building his own future through competitive effort. He finds it easier to drift in groups than to strike out on his own. His instinct for thrift is being chewed to bits by the greedy jaws of loose money and credit. He is caught in the grip of rising costs and deflated value of the dollars he earns. If he is a farmer, he is told what he may plant. If he is a businessman, he is taught that his operations and profits must conform to the dictates of a silent partner—the Government. He learns further that if his profits reach a certain level, then this partner becomes owner of the business. If he is a worker, he is often told his right to work is governed by powerful group forces rather than by his own choice. In short, he is losing his self-reliance and with it fades the vibrant spirit of free enterprise which made this Nation great.

In addition to his weakening pulse, this patient finds himself suffering from cancerous moral fiber. Integrity becomes a word of relative meanings. Things which his forebears would never have condoned come easier to rationalize and explain away. Cheating on income tax returns becomes a national pastime and codes of personal conduct become "anything goes" so long as you can get away with it. This deterioration boils out in open sores when payola schemes are brought to light, Government officials are indicted for frauds, and general crime statistics soar. The no-compromise-with-evil spirit of his forefathers grows dimmer.

The mind of the patient is becoming clouded and unsure on fundamentals of self-government. He is told that powers reserved to the States under the Constitution are really meant to be in the hands of the Federal Government—that the original Federal-State balance of power is outmoded. He knows that the strength of the American system of government lies in its three separate but equal Federal branches—legislative, judicial, and executive. But in reality he sees the judicial taking over legislative power through far-reaching political decisions and the executive branch usurping the powers of Congress through the instrument of the Executive order and the preponderant weight of bigness. Legislatively, he sees government by pressure groups. He watches the strength of local government being sapped into the massive sponge of a paternalistic central hierachy. He is told the great American passion for liberty should be subjugated to so-called equality demanded by groups which have never learned that equality is an earned dividend of liberty.

Internationally, on the basis of unconditional surrender, he wins the war to end all wars, but learns that conditions exacted by our so-called ally have put us in the role of conquered. It is for us to concede. The great victories of World War II have been dissipated by the defeats of Yalta, Teheran, Potsdam, Panmunjom, and Geneva. He sees his nation being led to the summit time and again, each time coming away with less prestige and more concessions than before. He hears his national leaders talk of disarmament agreements with a nation which has never kept its previous agreements. He dreamily plays a game of international diplomacy while the Soviet engages in hard international politics. Because it is polite to do so, he sings the song of peaceful coexistence while he knows, and the Soviets know, that there can never be morally or politically peaceful coexistence between god-fearing democracy and atheistic communism. Because he plays the part of stupid one so well, he is treated in kind. From one unarmed reconnaissance flight, the Soviet accuses him of being an "aggressor" and derides him as "liar," "cheat," and "the one who never keeps his agreements." Immediately he responds with an investigation to make sure that there will never be a recurrence of conditions that will cause a summit failure, again pleading guilty as if he caused the conditions, as if he could control the conditions. Again playing the part of stupid one, what concessions he can't give at a summit he concedes at home to make sure the world knows that he has conceded. Even his best sellers at home carry this line. He reads in a current Pulitzer Prize winning novel that an American Senator "brought down the house" by telling an American audience "he would rather crawl to Moscow than die under a bomb." He wonders what can be the end result of it all.

The very heartbeat of this equivocal man is being slowed by the strictures of conflicting philosophies, haziness of principle and gray shadows of compromise which surround him. His history books tell him that America has always nobly risen to conquer whatever obstacle beset her, whether it be war against a foreign enemy or breaking through a domestic frontier. The national purpose has always hardened in the face of crisis and national effort has brought victory. But the great giant was brought to its knees in the Korean conflict. Unconquerable America would settle for less than victory. Today our patient is led to believe that peace is more important than victory. He is led to believe that any threat to America in her support or leadership of the free world should be met with peace. The plague of peace has immunized our national purpose. Working for freedom causes tension, and the great fetish of this decade is to ease tension. Unwilling

to preserve freedom apparently our national purpose is to consume its fruits.

Nothing could be more dangerous. Never has America faced a greater challenge, a greater need for national purpose. Never has our mission been more difficult.

The difficulty lies in failure to have knowledge of the whole of things. The equivocal man, like many medical patients, presents the frustration of improper self-diagnosis. It is no longer considered smart to feel bad and call the doctor to see what's wrong. Fashion, plus our present mania for specialization, requires that the patient know what's wrong so that he can call the right doctor in the first place. This trend, plus the disease of psychiatry, has all of us guessing the malady at the least pain, and mentally treating it. A wrong guess can become so fixed that many times a doctor must dedicate most of the treatment to dispelling fantasies, so that the patient may be conditioned to receive the proper cure. Such is the case of the equivocal man. He has sold himself the idea that changes from fundamentals or compromise of principle are desirable as "understanding." The equivocal man must first be conditioned. He must be sobered up from so-called understanding, so that he can receive the cure. Secondly, the difficulty is compounded in the equivocal man's failure to recognize he is in an epidemic—world war III. There are no high fever symptoms in this epidemic. World war III is cold. Rather than the warning of high fever or a Pearl Harbor, today we face a wily, vicious, unscrupulous foe who engages in cold warfare on the political, economic, and ideological fields. He intentionally keeps this war cool, lulling us to sleep with flights through the free world like a dove of peace, dangling before our eyes visions of sugarplums at the summit.

If we will appreciate these difficulties then we will realize that to win this war we must mobilize every resource at our command. We must close ranks. We must set our national purpose and that purpose must be to so strengthen ourselves in mind and body that we are impenetrable. Such strengthening can only begin at home and in the individual. In short, we must purge ourselves of the equivocal man by the strongest cathartic possible—a return to American fundamentals.

You must not only administer this cathartic, you must also take part of the dose yourself. The very breakdowns and weaknesses—the symptoms of equivocation—which threaten the Nation also threaten the professions. None have been exempt from their influence. In the law, courts and legal procedures are constantly employed to promote and provoke litigation, rather than dispose of it. In the teaching profession, so-called academic freedom in certain places has become so free as to make un-American a pledge of allegiance to America. In the church, many religious leaders seek inspiration and guidance from a Supreme Court rather than a supreme being. And the way for a southern journalist to obtain national acclaim is to bear false witness against his neighbor.

The equivocal man has infiltrated the medical profession. No longer is it a simple step from graduation to the treatment of the sick. Instead, the young graduate is swept into the flow of convention and conformity. Although standards have brought much progress to medical training, the tendency to conform has deprived the doctor of a vital element—his individualism. Working relationships must be established with the right hospitals. Professional referrals must be weighed in many balances. The office procedures you follow, the treatment you prescribe, the fees you charge, the office hours you keep, the clubs and civic organizations to which you belong, the neighborhood in which you live, the manner of dress, and even other more intimate details of your life will be dictated by forces which deprive you of all individuality. In short, the young graduate finds himself caught in a web of conformity and demands on his time, his talents, his energies even before he can ever get down to his basic mission—treating patients. But the great edifice of medicine has been built upon pillars of individual achievement—by the Halsteads, the Oslers, the Bialocks, and other illustrious men who were not afraid to stand alone rather than follow the line of least resistance.

I believe the best advice any young medical graduate today may receive is this: Remember the patient. Keep all other demands in perspective. Don't allow financial rewards or social status to cloud your sense of mission or your service to mankind. Work actively in your professional organizations toward individual and group progress rather than as drones seeking prestige. Never stop improving yourselves professionally. You must pursue perfection in medicine and mold your lives after the magnificent men you follow and the Great Physician which all men follow. While research has brought us miracle drugs and remarkable recoveries, there will be no discovery which will eliminate the hard work of a doctor. Of all professions, the medical profession still calls for the hardest work. You hold the highest of public trust. You also hold the greatest of opportunities as a profession to help the Nation rid itself of the equivocal man.

Your profession stands as a symbol of the finest achievements of American free enterprise. The American medical profession has brought this Nation the world's foremost record in medical care and progress. This has been accomplished by the personal efforts of devoted men and women such as you and by private and State educational facilities, always doggedly resisting pressures to bring this dynamic system under the deadening anesthesia of Federal control. Our State may well be proud of how she has met her responsibilities in this field, reflected here in this splendid Medical College of South Carolina. You as individuals may render no greater service than to devote yourselves to maintaining and strengthening the standards of your profession, providing the very best in care, and holding fast to the integrity of your profession as a profession.

The French historian de Tocqueville found in 19th century America, "There are men of integrity in almost all parties, but there is no party of integrity." I am sure he would say today that in its medical profession America has achieved both men of integrity in the profession as well as a profession of integrity. Our enemies would like nothing more than to see this noble profession, this symbol of American achievement, compromised by mediocrity.

To you of the high calling of medicine, there is no higher mission today than to help America cleanse itself of its greatest ill—the equivocal man. The malady is strong. The medicine must be stronger. Nothing less than a complete and swift return to American fundamentals can cure the patient.

Chiefs Praise FBI

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. WESTLAND. Mr. Speaker, the Federal Bureau of Investigation under the leadership of Mr. J. Edgar Hoover has worldwide reputation for efficiency and fine work. The FBI has provided through the years many services to State and local law enforcement agencies and has been responsible to a great extent to the continuous improvement of law enforcement in the various States and cities.

Recently, the Washington Association of Chiefs of Police expressed its appreciation for the many services provided by the FBI in Washington State. This expression was in the form of a resolution which I wish to insert in the RECORD following my remarks. I also join the chiefs of police from my State in paying tribute to Mr. Hoover and Special Agent J. Earl Milnes.

The resolution follows:

Whereas the Washington Association of Chiefs of Police are assembled in conference in Chelan, Wash.; and

Whereas members of the Washington Association of Chiefs of Police are most appreciative to Mr. J. Edgar Hoover, of the Federal Bureau of Investigation, for the assistance and all the facilities which have been most generously provided by the Federal Bureau of Investigation, the National Police Academy, the Identification Bureau, the Crime Laboratory and including the outstanding leadership and effort which has made police training in the State of Washington a most successful program: Therefore be it

Resolved, That this association express in writing their appreciation to Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation and Mr. J. Earl Milnes, Special Agent in Charge by forwarding to them a copy of this resolution.

WM. E. BJORK,
Secretary-Treasurer.

CHELAN, WASH., *June 10, 1960.*

Promote the Rule of Law

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. LINDSAY. Mr. Speaker, the chairman of the Committee for Collective Security has written a cogent letter to the New York Herald Tribune of April 7, 1960, concerning the self-serving restrictions to the jurisdiction of the International Court of Justice.

Under unanimous consent I include a copy of that letter in the RECORD:

PROMOTE THE RULE OF LAW

To the New York Herald Tribune:

The Senate Foreign Relations Committee recently tabled a resolution calling for repeal of the Connally reservation to acceptance by the United States of the jurisdiction of the International Court of Justice. This reservation permits us to decide whether a dispute is within our domestic jurisdiction.

The American Society of International Law and the Institute of International Law have declared that it makes acceptance of the Court's jurisdiction illusory and urge its repeal. The President, the Vice President, the Secretary of State, the Attorney General, and leaders of the American Bar Association have also urged its repeal.

Two issues are involved: (1) Does the United States seek to promote the rule of

law in international relations? If so, it should be willing to accept the jurisdiction of an impartial tribune to decide legal disputes with other nations. A law which each party to a dispute can interpret and apply in its discretion is hardly effective. (2) Does the International Court of Justice inspire confidence in its competence and impartiality? The record of the Court has commanded approval both by governments and eminent legal authorities.

The Court has made it clear that it will regard any dispute as domestic unless it involves the interpretation of obligations established by international law or treaties binding the parties. The powers of the Security Council, where the United States may exercise a veto, would have to be invoked to enforce an unacceptable decision. This fact provides us ultimately with full protection against interference in our domestic affairs.

The Connally reservation not only prevents other nations from filing a suit against us in the Court, but it prevents us from similar action against other nations because it is applied reciprocally. The Court has been therefore unable to function either in the settlement of disputes or the clarification of international law as it was intended at the San Francisco Conference.

The United States can hardly assume leadership in developing the rule of law among nations while the stultifying Connally reservation creates the impression that our country does not mean what it professes. The Senate should repeal it now with the proviso that our waiver of the right to determine jurisdiction applies only in cases of disputes with nations also accepting the right of the Court to determine jurisdiction.

GOODHUE LIVINGSTON, Jr.,
Chairman, Committee for Collective Security.
NEW YORK.

Keeping Our Military Men at Peak Fighting Trim

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. GARMATZ. Mr. Speaker, how to sustain interest in international problems is a subject that is challenging us all. An important appraisal of the need of keeping our military men at peak fighting trim has been written by Hal Miller, staff writer of the Baltimore News-Post, which deserves wide study. Mr. Miller has reviewed a volume on the subject by a Canadian author and has contributed comments based on his personal knowledge of military affairs. The review follows:

A SOLDIER NEEDS FIGHTING SPIRIT

("The Soldier in Our Time," by G. M. C. Sprung, 167 pages. Dorrance & Co., reviewed by Hal Miller)

An Army major general, and former associate of this writer in World War II days, facetiously described a raw rookie lieutenant as "the lowest form of human life."

This old ranker gripe was unique only in that it was repeated by a senior military officer, obviously not a West Pointer. More loyalty to his own species would be expected from a "ring-knocker," a wearer of the academy ring with the supersized emblem.

It has, however, been a job well done by an officer, a colonel in Canada's distinguished Regiment of the Canadian Guards, to write a significant commentary in "The Soldier in Our Time," on the need for combating civilization's tendency to soften fighting men.

His message comes at a time in world history when soldiers for freedom should be the toughest in the world.

Readers will recall that when Russia was our ally against Hitler, encomiums were heaped upon the Red troops and people for their bravery. Without adequate weapons, food, or transportation, they defeated elite Nazi forces.

Russian peasants, men, women, and children, it was said, joined the soldiery and together they virtually fought "with their hands" to repel German invaders.

We have heard the question debated whether luxury-accustomed young men of other nations could fight like that. The answer has, of course, been given in combat by American, Canadian, British, Greek, and other allied fighting men. Their courage is battle-proved.

Colonel Sprung deals with the question on two themes:

The spirit of the modern fighting man.

The relevance of this spirit to the wider crises of our time.

The suggestion is raised that Americans and Canadians are moving toward a critical era when their ways of living could make them militarily too feeble to survive in combat.

Colonel Sprung believes this a problem of epochal importance and that the highest priority should be given to toughening our moral, mental, physical, and military fiber.

Personal courage as the soldier's most vital weapon has been reemphasized by Brig. Gen. S. L. A. "Slam" Marshall, one of the few effective interpreters of the military to their real bosses, the American people.

From a physical standpoint, peacetime soldiers, assigned to office and administrative duties, are deprived of opportunities to keep physically fit. Lack of fighting missions and objectives, marching, field work, takes the toughening edge off military service.

Written compactly, "The Soldier in Our Time" is a publication of significance. Its message should be studied.

Rocketdyne Division of North American Aviation Plays Important Part in Our Outer Space Explorations

EXTENSION OF REMARKS
OF
HON. JOE HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. HOLT. Mr. Speaker, I am very proud that the Rocketdyne Division of North American Aviation, Inc., is located in the district that I represent in Congress.

The story of Rocketdyne is an example of American free enterprise and our Government working together to keep America strong militarily.

The folks who work at Rocketdyne are also hard working and good citizens of our community who contribute much to keep America strong on the homefront morally, spiritually, and economically.

At the end of World War II a small group of engineers at North American Aviation, Inc., were asked to study the propulsion system of a captured German V–2, the rocket which revolutionized warfare and which almost changed the outcome of the last war.

These studies have led to one of the Nation's most outstanding technical achievements.

In a very short time the North American engineers decided they could build a much more efficient engine, more powerful, and lighter. How well they succeeded is known throughout the world.

This small group became the Rocketdyne Division, headed by S. K. Hoffman. It now employs more than 12,000 people in its headquarters, Canoga Park, Calif., and its production plants at Neosho, Mo., and McGregor, Tex.

Rocketdyne engines are used in the Redstone, one of the most reliable missiles ever flown; in the Army's Jupiter, intermediate range ballistic missile; the Air Force Thor, an IRBM on defensive duty in England; in the Army Force's Atlas, the interconitnental ballistic missile which has had phenomenal accuracy in its test programs and which is now operational.

The first man to circle the earth in the awesome blackness of outer space will be put into orbit by a Rocketdyne engine. When man begins interplanetary flight it is most likely that he will be in a space vehicle powered again by Rocketdyne engines.

The division now is producing the clustered H–1 engines for the Saturn, which will have more than 1.5 million pounds of thrust for takeoff.

Rocketdyne is also developing a single-barreled engine with 1.5 million pounds of thrust which has been suggested as the power package for the Nova program and which would put Venus within reach of man.

Recently Rocketdyne was awarded a contract by NASA to develop a 200,000-pound rocket engine using liquid hydrogen which will have an efficiency approximately 1½ times that of any other engine of comparable size.

Because of the tremendous success of the Rocketdyne program, fortunately in time for this country, I would like to call to the attention of my colleagues the following articles from the Los Angeles Times:

TWENTY OF TWENTY-THREE SUCCESSFUL SPACE SHOTS LIFTED BY ROCKETDYNE—POWERED WEATHER SATELLITE

(By Marvin Miles)

Rocketdyne engines built in Canoga Park have boosted 20 of the 23 successful satellite and space probe vehicles launched to date by the United States and furnished power for 234 missile, satellite and space firings since August 1953.

This impressive record was noted yesterday in a recapitulation of the Nation's ballistic missile program that began almost 7 years ago with first flights of the Army's Redstone tactical weapon.

In the 234 launchings, which included Atlas, Thor, Jupiter, and Redstone missiles and 34 satellite and space probe vehicles, Rocketdyne engines achieved a satisfactory performance rating of 94.1 percent.

Outstanding among these is the record achieved by the Redstone missile—56 successful firings out of 59 attempts—while only 1 of the 3 unsuccessful launches was attributed to engine malfunction.

RECORD OF LAUNCHINGS

The company's engines have launched a series of the country's most spectacular vehicles.

It was an A-series Redstone engine that hurled America's first satellite, Explorer I, into orbit on January 31, 1958, followed by Explorer III and IV using the same booster.

In October 1958, the first of the Pioneer series boosted by Thor engines accomplished the first of two successive lunar probes, followed early in December by a 63,580-mile space probe with Pioneer III boosted by a third Rocketdyne engine, the S3D Jupiter powerplant.

The Nation's 1958 space achievements were climaxed just before the end of the year with the launching of Score, the talking earth satellite that carried President Eisenhower's Christmas peace message into orbit.

SUCCESSFUL SHOTS

Score was an Atlas intercontinental ballistic missile powered with a fourth (MA series) Rocketdyne engine.

The company's rockets boosted nine successful space probe and satellite vehicles in 1959, including six Discoverer polar orbit satellites with payloads ranging from 1,300 to 1,700 pounds and the Pioneer IV probe that put a 13.4-pound artificial planet into orbit around the sun.

So far this year Rocketdyne engines have boosted four successful space shots, the Pioneer V solar probe, the Tiros I meteorological satellite, the Transit 1B navigational satellite and the Discoverer XI satellite for reentry nose-cone recovery. The latter vehicle went into orbit, although no recovery was made of the payload.

The frequency of ballistic missile and space launchings has shown steady progress in the last 28 months. In 1958, Rocketdyne boosters launched 56 vehicles, an average of just under 5 per month. Last year the total was 96, an average of 8 per month. So far this year the average has been seven per month.

ONLY ONE IN 1953

By comparison, there was only one launching in 1953, a Redstone. In 1954 there were four Redstone launchings and in the following 2 years, six and nine, respectively. In 1957 all 4 of the Nation's ballistic missiles were launched—13 Redstones, 9 Thors, 7 Jupiters, and 3 Atlases.

America's space vehicles (the three not boosted by Rocketdyne engines were Vanguard satellites) have returned a great wealth of data to scientists, more information by far than that received from Russian space efforts.

Wide variation of high altitude densities with time of day, season and geographic position has been observed.

From radio signals, propagation characteristics of the ionosphere and electron density distribution have been obtained.

Very low frequency propagation data were obtained from Explorer VI and that satellite and Pioneer I provided additional data on the earth's magnetic field.

Cosmic ray count was obtained above the atmosphere with counters in Explorer satellites and Pioneer probes.

The first elementary communication satellite was achieved in the Score vehicle.

Explorer cosmic ray counts brought discovery of the Van Allen radiation belt, with later Explorer vehicles and Pioneer probes showing the belt to consist of at least two zones.

A fairly low count of micrometeors corresponding to a total influx of 1,000 to 10,000 tons of material per day was recorded from Explorer and Pioneer observations.

METEOR EROSION

Meteor erosion and puncture problems were shown in general to be not particularly serious.

Pioneer V, launched March 10 and now millions of miles from Earth on its way to a Venus-like orbit of the Sun, has achieved a major success in long-range communications and continues to transmit data to Earth.

U.S. satellites have shown that moderate temperatures can be achieved in orbiting vehicles and that radiological hazard to space crews traversing the radiation belt may be relatively low, but the hazard high to those in a satellite orbiting through the belt.

Low resolution pictures of cloud formations were obtained from Explorer VI while the Tiros I meteorological satellite is transmitting television cloud pictures of a much higher order.

LOOKING INTO FUTURE

Rocketdyne (a division of North American Aviation) will remain in the rocket-engine field for a long time to come, it appears.

Not only is the company developing the H-1 engine for the giant Saturn vehicle, a 1.5 million pound thrust powerplant clustering eight Thor-type engines.

It is also developing for the National Aeronautics and Space Administration a single chamber (F-1) engine of 1.5 million pounds that can be clustered for thrust up to 9 million pounds in the awesome Nova vehicle of the future.

Nor is the company confining itself to liquid propellant engines, for it is expected to make a major announcement on solid fuel development in the near future.

Eloy Alfaro Award

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. BARRY. Mr. Speaker, I have been asked to insert highlights of the proceedings of the Eloy Alfaro International Foundation, on the occasion of the decoration ceremony and luncheon, at the Carlyle Hotel, New York City, in honor of Dr. Herbert Holt. Dr. Herman A. Bayern, American provost of the foundation, bestowed the Eloy Alfaro grand cross and diploma on Dr. Holt in recognition of his many years of devoted public service and more especially his work in the domain of psychiatry and psychoanalytic research.

Col. Emanuel Targum, past commander of the New York Jewish War Veterans, read a message from the Honorable Olmedo Alfaro, secretary-general of the foundation, authorizing the ceremony and conveying his personal greetings to all those assembled.

In conferring the Eloy Alfaro grand cross and diploma Dr. Bayern said:

I am delighted to confer on you, by direction of the board of dignitaries of the Eloy Alfaro International Foundation, the Eloy Alfaro grand cross and diploma. This foundation recognizes your many contributions to the common good, both in war and peace, by awarding you its highest honor. Your unselfish services to mankind, especially your dynamic leadership in the domain of psychiatry and psychonanalytic research, surely merit the widest appreciation.

Dr. Holt replied:

I am deeply touched and very proud to be included among the distinguished personages who have received the Grand Cross and Diploma of the Eloy Alfaro International Foundation. As a physician who treats the ills of the body, mind, and soul of people, I have always tried to live up to the high principles of my professions. I have especially tried to extend the knowledge of psychiatry to fields beyond the treatment of mentally ill people, feeling that the knowledge of the workings of the mind have greater implication than the treatment of the emotionally ill.

Since I believed that truer knowledge about the personality of man would be useful in the field of religion I have, for the last 7 years, worked to help priests, ministers, and rabbis to gain deeper understanding of the minds and emotions of man. I also believed that psychoanalysis could make a contribution to the understanding of the psychology of managers and the decision-making process. I therefore have taught managerial psychology to executives and especially administrators on city and State levels.

I have never thought that I have done anything unusual—just living my life in this fashion, but I am deeply touched and happily surprised to find recognition and honor bestowed on me. Thank you, Dr. Bayern, and the board of dignitaries, for granting me the Eloy Alfaro Grand Cross.

The Eloy Alfaro International Foundation was organized to perpetuate and further the political and moral values of the Americas by General Alfaro, for whom the organization was named, and who, from 1895 to 1901 and from 1906 to 1911, was President of Ecuador. The philosophy of General Alfaro, known as the Lincoln of South America, was based principally on service to his fellow human beings and to the cause of international peace. The unselfish services of Dr. Holt to mankind by virtue of his leadership in the domain of psychistry and psychonalytic research comes within the framework of this kind of service to humanity.

Others who have been similarly honored in the past include President Eisenhower, former Presidents Herbert Hoover and Harry S. Truman, FBI Director J. Edgar Hoover, Generals MacArthur, Crittenberger, Devers, and Governors Harriman and Rockefeller.

Sharp Turns Ahead

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an address given by Mr. A. D. Davis, president of Winn-Dixie Stores, with headquarters in Jacksonville, Fla., to the 1960 graduating class at Stetson University, DeLand, Fla.

The address follows:

SPEED UP—SHARP TURNS AHEAD

When President Edmunds tapped J. E. Davis and me for these honors that have been bestowed upon us today, he also asked that one of us make a talk for commencement. J. E. pushed the talk part of the ceremony off on me. I immediately told President Edmunds that the exertion of receiving

a doctor's degree was about all I felt I could take in 1 day. Then he approached me in that "tears in his voice" persuasive way of his to which there is no such thing as saying no, and I ended up having to assume this responsibility. He assured me that I was the only person in the world who could make this talk and, of course, modestly I had to accept.

I assume this is the first time that you have graduated from college and listened to a commencement speech. Well, it's the first time I have made a commencement speech. Reminds me of the time we had a newcomer out at the ranch and he wanted to learn to ride horseback. He said he had never ridden a horse before. We told him that was just fine—that we had a horse that had never been ridden before so they should get along well learning together. The horse came out best.

You're hearing your first commencement talk and I am making the first one I ever made, so please be kind. Tonight I am like the boy riding his first horse—I may lose the bout.

It is surely a great day for you students, or ex-students as case may be. You have accomplished one of your most important objectives in life. You are privileged to attain this objective which many, many people never reach. You are fortunate. Your good health, your good intellect, your determination, and your good character has enabled you to finish college in a very great school. Stetson is not a big school, but it still has quality education which is very desirable. In some of our larger State schools students may have a feeeling they become numbers. I know of an engineering student who finished in 5 years without meeting the dean of his school. I am sure this doesn't happen at Stetson.

I would like to say something here tonight that would inspire you men and women to make a greater success of your future life. Let's catalog that word "success" now. I dont' say that success is measured in dollars and cents or in honors. It is happiness and contentment at the position in which you wish to find yourself that means the most. In whatever field of endeavor you may engage, if you are unhappy doing the task before you, then you are in the wrong field or in the wrong organization. Your niche in life may not be gold plated or studded with diamonds or encased in platinum, but if you are willing to forgo many of the easier and nicer things of life, to endure hardships and sacrifice in order to give just a little bit more of yourself and to carry the cross of hardship nobly, courageously, and faithfully, your life will have a warm place in the hearts of those who know you and that is the real measure of success.

I say to you, in building for success you have to make some plans, you have to find yourself, you have to decide which way you are going—and then tabulate the methods you are going to use, the person that you are—up to this stage of your life is pretty well going to set your character for the rest of your life. If you are industrious, ambitious, honest, reliable, sincere, and trustworthy now, you probably will be that way the rest of your life. If you are lacking in any of these departments, if you are lazy, unstable, insincere, dishonest, or undependable, you will have quite a job to change these fundamentals. Wherever you go and whatever line of endeavor you go into you will find that basically the seeds were sown in the past to influence your degree of success. A good mother and father have much to do with this. Looking back, I have found this to be so with myself.

Understand, I do think it's important for everyone to inventory their shortcomings—we all have them—and they can be improved greatly by determined efforts, but only by determined efforts.

I remember well something Bob Wodruff of Florida said in one of his talks to some football boosters. Bob was not an outstanding public speaker, but he said something that night that impressed me deeply. It was at the time that Haywood Sullivan was a big star on the Florida team and one of the country's greatest passers. Bob said, "Of course, Haywood Sullivan is one of the greatest passers in the country today, but I, Bob Woodruff, did not make him a great passer. He was a great passer when he was 11 years old in Dothan, Ala., playing sandlot football. We merely could take this basic ability and refine it and train him in improved timing and methods to make him even a greater passer. The ability had to be there—we only had a chance to bring it out."

In trying to find the field you want, inventory yourself honestly, What are you good at? What do you like to do? If you select something you have a natural ability for and something you like, the wind will be with you. You need to analyze the things you think about. If you study about business, corporations, stocks, etc., you probably will find your best ability in a business field. If you wonder about growing things, agriculture, animals, etc., you probably need to be in ranching or farming. If you study about how buildings are erected or bridges are constructed, you lean to engineering. If you dislike working for someone and if you handle your money well, maybe you should run your own business. Then you won't be working for someone, you'll be working for everybody. If you study about forcing people to make talks such as I am doing here tonight, you probably will make a college president.

I can't describe all of the various examples existing, but what I am trying to say is that you need to get into something that you like and something you like to think about and something that can consume you and possess you. There has never been a very big success made by anyone who didn't love their work, who didn't enjoy doing it, and whose job didn't grab them, hold them, and thrill them. If you can't find something like this, your success is apt to be mediocre, and this is pretty bad. To me, being mediocre as a businessman, a teacher, a lawyer, a mother, a truckdriver, a father, yes, even a politician, to me mediocrity is not success. Whatever you do, do well.

A man I admired greatly wrote a slogan that impressed me very much. It's on my desk now. It is called "Design for Success":

"I can say to any person, whether he is able or disabled, that if he expects to make a success in business through governmental paternalism, he is doomed to disappointment. First, the person must decide definitely and quickly what business he wishes to follow. Then, forgetting obstacles and ailments, he must apply his mind to learning every detail of that business, in and out, backward and forward. He must not let his love of golf or tennis, or card playing, or liquor, or gambling, or even his wife, take his eye from his objective. He must be devoted day and night to the task of finding out what makes his business tick, or what is needed to make it grow.

"In so applying himself, the person even with physical or mental handicaps will have no time for worrying or fretting about his lot. He will become so engrossed in his job that the handicaps will be forgotten. I have found it so, and I have been happy."

It's a great philosophy.

This was said by Elit Witt, who was almost an invalid with tuberculosis, yet he founded and built up the Hav-A-Tampa Cigar Co. with national distribution.

Opportunities today are very great. You don't have to be born to wealth. But you do have to learn how to handle money, how to deserve and use credit, and how to accumulate capital. Business today, both big and small, is paying more personal attention to the type of men or women who will represent that business. Business today recognizes that human relations are fundamental to all business, and that all men, regardless of their station in life, or the part they play in the business, are interdependent and are individually important. Business must have a personality of its own. This personality can only emanate from the people who operate that business.

I do want to say how much my own family appreciates the opportunities that exist in this great country under our system of free enterprise. Our own attainments, starting out with one little grocery store, is proof of oportunity. I am sure that there are other young fellows today in the same state of development as we were 35 years ago who will have as much or more success than we have had.

Florida and the South have been good to us, and I hope that we have demonstrated our worthiness. Everyone must keep in mind when they attain a degree of success that they are the stewards of some of worldly goods and that as stewards of these goods they have quite a responsibility to be good stewards.

Character is as important in any job as it is in your home life. What you do must inspire confidence and admiration and devotion from those with whom you come in contact. It is what people think of you that builds your reputation. It's the mistakes that you make—and correct—along the way that enable you, in time, to have what's known as good judgment.

A good personality helps. You must be cooperative and helpful and you must understand the weakness and strength of your fellow workers. No one wants a "yes" man around. You should have the courage to venture an opinion if you think you are right. If you develop these traits you will find them most helpful. Every successful businessman or professional man has more or less a different style of his own, as a great ballplayer may have a different stance at the plate. Remember, as you go down the pathway of life that every other person in life is equally important, whether the individual is above or below you in business or social life. Be human. Be a real person. Be mindful of the old Dutch saying, "the wooden shoes going up the hill often pass the patent leathers coming down." It is equally important that you remember the definition of a big man which is "a man who is big enough to be little enough to be big." And that tells a story in itself.

In closing my talk, let me ask a question that came out of Newsweek magazine:

"WHERE ARE THE YOUNG TURKS?

"Where is that traditional young American who takes the 'Boy Wanted' sign out of the window and says to the boss, "I'm your boy'? You know the lad I mean. The bellringer, up with the sun, last to leave, sweep the floors, learn the line, get to know the territories, up off the canvas, shoot for the moon, watch my dust. We've had our bellies full of the play-it-safe boys. Where is that enterprising youth who's willing to stick his skinny neck out and make decisions?

"The kind of man who parachutes into darkest Africa and opens a chain of supermarkets in 60 days. 'He only has to be right 51 percent of the time to be a success,' says Bruce Barton. America needs more young Turks. (And more old Turks who know how to recognize the young ones.)"

Well, I'm afraid I didn't quite fit the bill for the young Turk and perhaps you won't, but it is the right kind of positive thinking. It's an inspiration I wanted to pass along to you.

Now you're at a turning point.

You are on your own from here on out. Many people will help you. Many won't.

Regardless of that, you have to get along well with others. Competition is keen in everything. Select your course. Plan and chart your approach. Do every little step in your career the very best you can do it. Do it well, do it thoroughly and you will win.

Best of luck and God bless you.

H.R. 12311

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12311) to extend for 1 year the Sugar Act of 1948, as amended.

Mr. O'HARA of Illinois. Mr. Chairman, it is to me a matter of regret that both in Cuba and in our own country provocative words of anger that make no contribution to mutual respect and understanding have been too frequent. They do not add, whether spoken here in this Chamber or in the beautiful island so close to our shores and historically imbedded in our affection, to the spirit of hemispheric solidarity. Nor do they reflect the frienship that has existed in all the years of the past, that is evident today and that will endure forever between the people of the United States and the people of Cuba. That is a friendship I confess very dear to me because of the circumstances of my youth and my association with both American and Cuban soldiers in the common cause of freedom.

We are living in a world of change with peoples everywhere reaching for higher plateaus of dignity, human welfare, and spiritual contentment. These cannot be gained, and the higher plateaus once ascended thereafter held as the bases for ascent to still higher plateaus, unless there are orderly governments, sound and expanding economies and the working together in cooperation of nations of goodwill.

I hope and pray that in this world of change, even though sometimes accompanied with a violence we would not wish, something as eruptions of a volcano, our country will continue in tolerance, understanding, and true friendship to fulfill its mission as the exemplar of government under God and of, for, and by the people. It is not for us to interfere in the internal affairs of another nation. It is inevitable that we will lose good will even by the appearance of interference with that which is in the sole determination of the people of another nation. Good neighbors do not invade their neighbors' homes to set things right according to their concepts and their own standards. Rather they content themselves with setting a good example, knowing that one well-ordered and happy home can change the entire tone of a community far beyond the possibility of scoldings and angry words.

I would have wished that the matter of the sugar quotas, with their repercussions upon the economies of a number of countries, including Cuba as well as that of our own, but sugar areas, could have been marked out by the able Committee on Agriculture in a less emotional climate. I trust that the power the President has asked will be administered without punitive design and in sole consideration of what in his judgment is just, wise, and necessary for the nations of the American hemisphere, including our own.

Eugene, Oreg., One of the Nation's Top 100 Industrial Markets

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. PORTER. Mr. Speaker, my hometown, Eugene, Oreg., has been rated among the top 100 industrial markets in the Nation by a business-management publication of Dun & Bradstreet. As the Eugene Register-Guard aptly points out in a recent editorial:

> This indication of Eugene's economic importance, when coupled with metropolitan status achieved in the Federal census, makes growth predictions for our area seem even more realistic.
>
> The challenge for all of us, and, yes, the chamber [of commerce], too, will be to see that we plan properly for orderly development in the midst of industrial and commercial expansion which could engulf us if we choose to ignore it.

Under leave to extend my remarks in the RECORD, I include the full text of the editorial, "Among Top 100." I should like to add, too, that industries seeking area for expansion can well consider Oregon, a State where growth is a fact, not simply a promise.

The full text of the editorial follows:

AMONG TOP 100

People connected with the Eugene Chamber of Commerce, and particularly affable Fred Brenne, chamber manager, are elated. And they have a right to be.

Dun's Review, a business management publication of Dun & Bradstreet, lists Eugene among the top 100 industrial markets in the Nation. Eugene, says Dun's, is the central city of an industrial area that includes several surrounding counties.

The chamber people are excited because they feel that this recognition of the economic importance of this area will be a spur to further industrial expansion and growth. It probably will.

The publication, which will be perused by many top management people throughout the country, conducted a survey based on the U.S. Census of Manufacturers. The study comes up with the top 100 industrial markets based on the "value added by manufacturing," a term which is claimed to be the "best indicator of relative economic importance."

Eugene ranks 74th in the list, just behind Knoxville, Tenn., and just ahead of Omaha, Nebr. Of course, the main reason we appear in the select group is the lumber industry. It also reveals the relative importance of the lumber industry to the Nation's economy.

This indication of Eugene's economic importance when coupled with metropolitan status achieved in the Federal census makes growth predictions for our area seem even more realistic.

The challenge for all of us, and yes the chamber, too, will be to see that we plan properly for orderly development in the midst of industrial and commercial expansion which could engulf us if we choose to ignore it.

We'll need more expressways, arterials, parks and playgrounds, adequate power and water supplies and many other municipal projects if we are to retain the qualities of "good living" we enjoy now.

Captive Nations Week—July 17–23

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. RABAUT. Mr. Speaker, the great American tradition of freedom, democracy and fair play are well known throughout the whole world. From the Declaration of Independence to the Wilsonian self-determination of nations to the present-day encouragement and assistance of newly emerging free nations, this country has stood before the world as the beacon of personal freedom and the sovereign integrity of nations. Sadly enough, Mr. Speaker, all nations have not been as fortunate as the United States in enjoying this status or in preserving it. The world power designs of certain imperialistic nations or ideologies have led to the overwhelming, by force, intrigue and subversion, of many of the smaller and weaker nations of the world. These nations and their courageous peoples still love freedom—for freedom is an overriding right natural to all men. While nationalities, languages, dress, and habits differ throughout the world, the human spirit differs but little as between all men. Thus we free Americans are substantially one in spirit with our fellow men throughout the world who have had their freedom taken from them.

The proclamation of the Captive Nations Week by the President, in pursuance of a joint resolution enacted by Congress on July 17, 1959, is a clear reaffirmation of our wholehearted dedication to justice and freedom. Of course none of us are naive enough to expect the freeing of these nations merely by the observance in this country of the Captive Nations Week. But we do believe that this observance will serve notice to oppressors and tyrants, indicating that the downtrodden and the underprivileged have our full sympathy, and that they have not been forgotten in their struggle for freedom. It will also hearten those tens of millions who are captives of Communist totalitarianism behind the Iron Curtain, knowing that their cause is in our mind and that it has champions in this great Republic. We shall continue to observe the Captive Nations Week until these nations have regained their freedom, and I am glad,

indeed, to join in the observance of this annual event. The week of July 17 of this and of every year shall tender the sympathy and support of every American to the freedom loving, though temporarily captive peoples of the world. We can only look forward to the day, Mr. Speaker, when there will be no such thing as a captive nation, when all human beings—indeed, the whole world—may live without fear in the personal and national freedom to which everyone has an inherent right.

A Survey of Business Climate in South Carolina

EXTENSION OF REMARKS
OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. McMILLAN. Mr. Speaker, under unanimous consent, I include in the CONGRESSIONAL RECORD a copy of a survey of business climate in the State of South Carolina.

I hope every Member of Congress will take a few minutes of his valuable time to read this item which shows that South Carolina is on the march.

The survey follows:

A SURVEY OF BUSINESS CLIMATE IN SOUTH CAROLINA

(Based upon thoughtful opinions expressed by 285 executives of manufacturing firms in the State. Prepared by South Carolina State Chamber of Commerce, Columbia, July 1960)

FOREWORD

Taking stock: This survey by the State chamber was made among manufacturers in South Carolina in order to find out what they think about the State's business climate. Their answers to individual questions provide an appraisal of key factors which must be considered significant to our present and future economic progress.

Who replied: A 4-page questionnaire detailing 67 topics was mailed to 500 industrial firms—of various types and in all geographical areas of the State—employing 50 or more people. The response was most gratifying; a total of 285 usable replies was received, for a return of 57 percent.

Of the respondents, 47 said that they had been operating in their South Carolina location less than 5 years, 34 from 5 to 9 years, 41 from 10 to 14 years, and 156 for 15 years or longer. Half of them have manufacturing operations in other States, and half are purely domestic enterprises.

For their individual plants they reported the following number of employees:

83	under 100
78	100 to 249
52	250 to 499
39	500 to 999
26	1,000 or more

Their manufacturing operations are in these broad categories: 11 chemical and rubber products; 20 stone, clay, glass, and concrete; 20 machinery and metal products; 25 food and other edible products; 27 forest products and paper; 28 apparel and related products; 96 textile manufacturing; 58 miscellaneous.

Value of analysis: While replies reflected the opinions of the executives who were queried, and may not agree with the actual facts in some instances, it must be recognized that opinion has the full weight of fact in the minds of many individuals. It thus must be considered important.

The information received, due to the geographical dispersion of the respondents and the variety of their manufacturing operations, would seem to reflect fairly what long-established, as well as relatively new, industries think about South Carolina as a place to do business. In other words, this is their opinion of South Carolina's business climate.

Of not inconsequential significance are answers to questions about plant expansion by respondents' firms. This is the proof in South Carolina's good business climate "pudding." During the past 5 years 43 percent of them have substantially expanded their South Carolina manufacturing operations. Slight expansion is reported by 35 percent, no expansion by 22 percent.

Looking ahead, 22 percent say that their firms will expand substantially in South Carolina during the next 5 years, and 42 percent will expand to some extent. One percent of the respondents predict that their operations will contract to some extent, and 10 percent did not answer. The remaining 25 percent expect operations to remain at the present level.

The results and their use: Results of the survey indicate that South Carolina has a good economic climate in which to do business. Our strong points can be utilized in industrial development promotion, and individual communities can compare and analyze their own standings with how the State is rated generally.

On the other hand, there is a fairly obvious indication that certain weak points warrant correction—not only from the standpoint of attracting new enterprises, but also that of making more comfortable the businesses already established in our midst.

Now for a summary of answers to our questionnaire.

THE COMMUNITY

Utilities and transportation

From the viewpoint of one locating a new factory in their communities, these percentages of respondents gave the following ratings:

[In percent]

	Adequate	Rather inadequate	Very inadequate	No answer
Sewers	53	22	17	8
Water	78	11	8	3
Electricity	96	2	1	1
Gas	72	9	8	11
Railroads	84	9	4	3
Trucking	95	3	1	1
Air service	47	29	21	3
Roads	96	3	1	-------

(For their own company operations now, 79 percent of the respondents deemed the above services adequate, 21 percent inadequate. Most frequently mentioned as inadequate were air service, sewers, gas, and water.)

Social and commercial services

[In percent]

	Adequate	Rather inadequate	Very inadequate	No answer
Hospitals	70	22	7	1
Medical	82	15	2	1
Churches	98	1	-------	1
Schools	75	19	5	1
Recreation	52	40	6	2
Shopping	74	23	2	1
Banking	93	6	-------	1

General community ratings

[In percent]

	Excellent	Good	Fair	Poor	No answer
Long-range industrial development planning	22	39	21	11	7
Long-range overall community planning	15	39	26	12	8
General appearance	21	54	20	5	-------

(Local zoning regulations were rated by 53 percent as satisfactory, 12 percent as too liberal, 1 percent as too stringent; 16 percent said their communities had no zoning regulations.)

Local attitudes

Assuming the prospective location of a new plant in a community, these reactions are predicted:

[In percent]

	Good	Fair	Poor	Very poor	No answer
Acceptance by citizens in general	78	17	1	1	3
Cooperation by local government officials	72	17	7	1	3

Industries responding rate the general attitudes of local governments toward business as:

	Percent
Excellent	49
Good	38
Fair	9
Poor	3
No answer	1

RATING THE STATE GOVERNMENT

Those responding to the questionnaire had the following opinions in regard to various aspects of the government of the State of South Carolina:

[In percent]

	Excellent	Good	Poor	No answer
Its attitude toward industry generally	76	19	3	2
Its financial condition	55	33	3	9
Its efficiency (cost of operation, personnel practices, etc.)	28	49	9	14
Its planning for industrial development	34	58	1	7
Its promotion of industrial development	46	49	2	3

When asked the question, "How fairly do you think South Carolina State taxes are administered?" the replies were:

	Percent
Very fair	28
Reasonably fair	52
Somewhat unfair	3
Very unfair	4
No answer	13

THE GENERAL ASSEMBLY

The individuals responding rated the attitudes toward industry of their county delegates to the South Carolina General Assembly as:

[In percent]

	Friendly	Neutral	Unfriendly	No answer
Senators	85	5	3	7
Representatives	86	4	3	7

HOW LABOR IS VIEWED

Respondents consider the educational level of the local labor supply, in regard to adequacy required by their own type of industry, as follows:

	Percent
Adequate	72
Somewhat inadequate	27
Very inadequate	1

Industries rated the attitude of their workers toward their companies as follows:

	Percent
Loyal	94
Indifferent	5
Antagonistic	1

(Of the respondents, 12 percent have labor unions, 88 percent do not.)

Productivity of workers in plants was rated as:

	Percent
Very high	26
Fairly high	46
Average	26
Fairly low	2
Very low	---

The general attitude of local business people toward organized labor was rated as:

	Percent
Antagonistic	69
Indifferent	17
Friendly	9
No answer	5

EMPLOYEE SECURITY PROGRAMS

The South Carolina workmen's compensation law was given some thought. From industry's viewpoint, 13 percent of our respondents believe it is being administered in a very favorable manner, 39 percent see its administration as fairly favorable, 23 percent fairly unfavorable, 15 percent as very unfavorable, 10 percent had no opinion. Specifically, they see—

[In percent]

	Too high	About right	Too low	No answer
Claims allowed	43	45	1	11
Benefits provided by law	5	78	5	12
Medical costs	25	60	1	14
Disfigurement claims	33	43	1	23

Respondents indicated a better reaction toward the administration of the South Carolina unemployment compensation law. Nineteen percent view the administration of this law as very favorable to industry, 53 percent as fairly favorable; 17 percent think that the law's administration is fairly unfavorable to industry; 5 percent see it as very unfavorable; 6 percent did not answer. In particular, they stated:

[In percent]

	Too high	About right	Too low	No answer
Maximum benefit ($26 a week)	7	77	10	6
Maximum duration of payments (22 weeks)	22	70	2	6
Qualifying provisions to draw benefits	37	57	1	5

THE STATE CHAMBER'S CONCLUSIONS

In reviewing responses to the foregoing specific questions, it is obvious that certain factors can be capitalized upon in promoting South Carolina's industrial development.

Industrialists now operating in South Carolina believe that they enjoy an environment of healthy attitudes. They think well of our people and of our government. They generally describe as adequate our water, electricity, railroads, trucking, and highways. They give good ratings to our climate conditions, medical services, churches, and banking facilities, to the labor supply and the productivity as well as loyalty of workers.

On the other hand, the opinions expressed point to the need for certain improvements. A large percentage of the respondents notes some inadequacy in sewage and airplane services, in hospitals and public schools, in shopping and reacreational facilities, and in the administration of our workmen's compensation law.

Paraphrasing what was pointed out in the foreword to this report, business climate factors which fall into the approved area are those which can be utilized as selling tools in industrial development. Conversely, weaknesses which show up in the survey most certainly deserve attention by those who can do something about improving them.

(Results of the questionnaires were compiled, as a courtesy to the State chamber, by the School of Business Administration of the University of South Carolina, Columbia.)

Self-Employed Individuals' Retirement Act

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. KARTH. Mr. Speaker, the House may soon again consider a worthy bill to help millions of self-employed persons—the small businessmen, doctors, dentists, lawyers, and other professionals—provide for themselves a sound, convenient, and orderly plan for retirement income.

Late in the last Congress this bill was approved by the House but unfortunately it died at adjournment before it could be considered in the other House and included with the other small business legislation which the 85th Congress passed because of able and vigorous Democratic leadership. This series of measures, incidentally, if properly financed and sympathetically administered could well initiate the renaissance of American small business.

H.R. 10 when enacted will round out the basic structure in this system to help men and women who are gifted with ideas and energy but short of other resources to invigorate and put meaning and substance in the idea of free enterprise.

Our economy is in dire trouble because the giant corporations since World War II have through consolidation, purchase, or a variety of other dubious methods crushed out of existence much of their competition. Our country is now paying the terrible price for the monopolization of our economy with inflation, underproduction, and unemployment. Negative weapons of antimonopoly legislation have failed—the promising, positive program of encouraging small business is an inspired effort to keep the American economy democratic and dynamic. I am proud of the leading part that the Democratic Party, both nationally and in my State of Minnesota, has had in reinvigorating small business. Some considerable tribute has to be paid too to those fearless members of the minority party who have voted with the Democrats despite the formidable disapproval of the Republican administration and the big business elements who guide the GOP.

This administration has fought tooth and nail against any really effective program for small business and when it has been forced to accept, reluctantly, Democratic-sponsored measures it has practiced cold, deliberate sabotage against small business as our distinguished and venerable colleague WRIGHT PATMAN has revealed.

The administration has now grudgingly accepted H.R. 10 after considerable revision in the Senate Finance Committee. It has conceded the justice of giving the millions of self-employed persons a fraction of the tax consideration received by high-salaried corporation executives, those exalted employees with their bonuses in stock, stock options, company-contributed pensions, and other fancy emoluments—not including that ultimate in tax evasion devices, expense-account living.

Republicans in the administration have at long last stopped wrapping the flag of patriotism around them and saying that to enact H.R. 10 would throw the President's budget into deficit and would be doing Karl Marx's work of destroying capitalism.

I hope that H.R. 10 will be enacted into law and thus spur the millions of America's self-employed persons to do better democracy's work of invigorating free enterprise by helping themselves provide for their golden years.

I urge the passage of H.R. 10.

GOP Rewrites History

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the New Era, of Reading, Pa.:

GOP REWRITES HISTORY

Black is white.

Who said so?

Why the Republican propagandists who are trying to say that the summit collapse and the Japanese riots and the U-2 episode were really favorable master strokes of foreign policy inspired by a genius.

Now along comes a vice chairman of the Republican State committee who had to dig back into the mire almost 20 years to blame the Democrats for Pearl Harbor.

This GOP pseudo-historian addressed local Republicans last week and offered such witty comments as: "I don't care what happened to the summit conference, our skirts are clean."

She then proceeded to rehash the old wheeze that the Democrats provoked the Japanese attack on Pearl Harbor. Maybe a week from now she'll be trying to pin the Tokyo riots on Democrats on the grounds

they were fomented to embarrass Eisenhower.

Fortunately, the people are alert. They know that the Republican administration permitted the U–2 episode to occur simply by failing to take necessary precautions.

The people know that summitry has always been dangerous business and they recall that John Foster Dulles repeatedly engaged in brinkmanship diplomacy—pushing the country to the very brink of catastrophe.

The people are no fools. They are aware that our relations in the world have deteriorated greatly in the past 8 years—under the leadership of a wartime hero whose regime is turning out to be a flop.

Not only is the cold war colder, but we have lost friends in the Far East, lost ground in Latin America, permitted the Communists to set up a regime in neighboring Cuba, lost NATO friends by disclosure of bases from which the U–2 operated, lagged in the missile race, and generally failed to provide the leadership for free peoples the world over.

Now, as another presidential election approaches we are told that these things aren't really blots but are assets which will turn out to be good—if we just wait long enough.

Like we said, the brainwashers are trying to make out like black is white. But then, a man named Hitler once said if you tell one big enough it might be believed.

Address of Hon. John F. Shelley, Knights of Columbus Dinner, Hotel Claremont, May 29, 1960

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a splendid address made by our distinguished friend and colleague, the gentleman from California [Mr. SHELLEY], at a Knights of Columbus dinner held in Claremont, Calif., on May 29, 1960.

As our distinguished colleague well said:

On the international scene, there is challenge of the cold war, with its unpredictable twists and turns. The quick-change artists of the Kremlin juggle the hopes of peace and the threat of warlike oldtime vaudeville performers. We as Americans cannot afford to be taken in by any Communist trickery. We must not become the world's largest bouncing ball in the hands of Communist manipulators and jugglers.

As Congressman SHELLEY also well said:

But the cold war is, in fact, the grim contest between those who are dedicated to freedom—human freedom and its whole brilliant range—religious, political, personal—opposing those who seek to destroy it.

The splendid address of Congressman SHELLEY is appropriate to the world of today. His address should be as widely read as possible:

ADDRESS OF HON. JOHN F. SHELLEY, KNIGHTS OF COLUMBUS DINNER, HOTEL CLAREMONT, MAY 29, 1960

Mr. Toastmaster, right reverend monsignori, reverend fathers, past and present grand and worthy knights, sir knights, and your lovely ladies, no words of mine could adequately express the gratitude and the humility I feel for the signal honor you have conferred upon me today and this evening. We have been friends, most of us, for many years, and you will understand without my telling you, that this day will be for me an abiding source of gratitude and inspiration, and I say that on behalf of today's fourth-degree class.

I'm particularly happy to have this opportunity to speak with you as one American Catholic to another in this turbulent year of grace 1960.

If ever we, as Catholics, were called upon to demonstrate the qualities of good citizenship in our beloved country, that time is now.

On the international scene, there is challenge of the cold war, with its unpredictable twists and turns. The quick-change artists of the Kremlin juggle the hopes of peace and the threat of war like oldtime vaudeville performers. We as Americans cannot afford to be taken in by any Communist trickery. We must not become the world's largest bouncing ball in the hands of Communist manipulators and jugglers.

To the everlasting credit of the Catholic Church, she has never once taken her eyes from the central fact that communism is a religion: The religion of no God: The religion of an all-powerful tyranny from whose decisions there is no appeal, even in the moral order.

And remember this: When communism destroys the divinity of God, it destroys, at the same stroke the humanity of man. It makes of man nothing but a creature without a soul, totally dependent on the whim of the state.

If the sometimes smiling confidence men of the Kremlin have blurred that harsh fact for some of our fellow Americans, the Chinese Communists, with merciless determination, restored the image by their shattering of families, their relentless persecution of all religion; their implacable hostility to the United States.

We have the honor to be singled out as enemy No. 1—and, therefore, as the supreme objective of Communist scheming—not so much because of our power or wealth, but, I suspect, for another reason.

With all our faults—and we are not yet perfect, as a people—but with all our faults, we remain as a nation dedicated to this proposition: That free men can govern themselves with justice and dignity and honor. As Woodrow Wilson once phrased it: "Free-men need no guardians."

Within the very cornerstone of this Nation, there is written this eternal defiance of tyranny, Communist or other: "Governments derive their just powers from the consent of the governed." How could communism or any other tyranny stomach that principle?

If the cold war today were simply a matter of two differing forms of government at odds with each other, that would be one thing.

But the cold war is, in fact, the grim contest between those who are dedicated to freedom—human freedom and its whole brilliant range—religious, political, personal—opposing those who seek to destroy it.

You and I as mature Americans recognize how deep is the challenge to our convictions. The challenge to remain levelheaded through every twist and turn of the devious strategy of the Communists.

We know what an appalling catastrophe nuclear warfare would be. But we also know what an unspeakable disaster it would be for us to be either deceived or intimidated into surrendering our heritage of freedom.

Tomorrow, you and I joint with all our fellow Americans to pause for a moment and hear the high clear notes of "Taps" sounding out in living salute to American fighting men of every generation and race and faith who gave their lives to keep that heritage intact.

Memorial Day, I believe, speaks to us this year with greater urgency than ever before.

The Colonials who abandoned their plows and reached for their rifles to fight the bitter war of Independence knew perfectly well what they were up against. There they were, living practically at the ocean edge of a vast wilderness, defying the might of the British Empire. Washington knew, and Hamilton, and Thomas Jefferson and Benjamin Franklin and the other leaders, that their own lives were forfeit if this Revolution failed.

They knew the odds against them.

But they knew also that here in America men walked upright, self-reliant, refusing to be exploited by the absentee government.

It was freedom they fought for, from Lexington on through the cruel days and nights of Valley Forge to final victory at Yorktown.

Our infant Nation was scarcely out of its cradle when war struck again, and again Americans had to fight to preserve what they had won. Andrew Jackson's men at New Orleans included just about every kind of American imaginable, and maybe even a philosopher or two. They knew what they were fighting for—their own freedom; their own right to govern themselves as Americans, not as subjects of any crown or any imported bureaucracy.

As our Nation grew, as self-reliant pioneers thrust back the wilderness, so too did the confident heritage of freedom become stronger.

Under the heartbreaking tragedy of the Civil War, when brother fought against brother, and our Nation seemed on the verge of disruption, the resolute but deeply compassionate Abraham Lincoln held our country together.

Americans had their first call to oversea battle in the Spanish-American War.

Since that time, our sons have given their lives in battle on the continents of the earth; on the islands of all the seas, in the skies and oceans of the world.

Thanks to their heroism, their sacrifice, we gather here tonight as free men.

Think for a moment—how many nations are there now wherein a meeting like this would be impossible?

Tomorrow, as Catholics and as Americans, every one of us will pray for the eternal repose of the souls of those who died for us, whatever their generation, their race, their faith.

And as we remember with deep gratitude their sacrifice for us, I hope we shall ponder the meaning of their sacrifice.

For these honored dead must not have died in vain.

It remains, as Lincoln said, for us, the living, to advance their work.

The heritage of freedom is in our hands, new, enriched by their heroism.

The question remains: Do we appreciate, do we really understand what it means to be citizens in a democracy?

I often think of the words of Pope Pius XII, discussing the contract between dictatorship and democracy: "If the possibility of controlling and correcting the action of those in power had not been lacking, the world would not have been dragged into the hurricane of war."

And again, discussing the citizen in a democracy, Pius XII said: "To express his own opinion concerning the duties and sacrifices which are imposed on him; not to be forced to obey without having been listened to; there are two of the citizen's rights, which have their expression in democracy."

What happens, then, when a citizen ignores the great political questions of the day?

What happens when here in America, only a few sometimes bother even to vote?

We hear of voter apathy, voter indifference, and it reminds me of the cynical old saying that the grandfathers die on the barricades to win the rights that the grandsons don't even bother to exercise.

How many people like you and like me would give their right arm for the chance to vote in a free and open election? Think now of the people of China, of Hungary, of Poland, of East Germany, of Czechoslovakia, and the whole sad company of captive satellite nations.

Why else did Hungarian youth, in a glorious and unforgettable blaze of heroism, make their barehanded attack upon the armor of their Communist masters?

They and others like them were trying to win what we in America have: The right to control their own affairs; a voice in the shaping of their national policy.

It seems to be that of all people, we American Catholics should most appreciate the rights and privileges of our citizenship.

In this year, confronted as we are with the complex problems of the cold war, we have the solemn obligation of voting for a President.

It so happens that one of the candidates is a Catholic and thus, whether you and I like it or not, we become the objects of the critical scrutiny of our fellow Americans.

I firmly believe that no one should vote for a candidate because he is a Catholic.

The Catholic Church embraces Americans of both political parties, and Catholics have made significant contributions to both parties at every level.

I hope, as you do, that religious intolerance will not manifest itself in the months ahead.

And I most sincerely hope that Catholics will not lay themselves open to the charge of injecting the religious issue into the campaign.

We have come far, in this country, from the days when Catholics were a puzzle, a mystery, something to be feared, avoided or thrust aside.

I need not remind you tonight of the recent campaign on proposition 16.

Many regrettable things were said, many false charges were made, and a few attempts to arouse bigotry were undertaken.

But the great majority of Californians understood what the issue was and resisted, to a gratifying degree, the blandishments of bigotry.

I accept this as a compliment to Catholics generally.

I believe that as people not of our faith had a chance, over the years, to size us up, to rub elbows with us, to associate ever more closely with us, they realized that we are not a group apart.

We are accepted as other Americans and we are judged by the kind of people we show ourselves to be.

Are we good citizens?

Do we try to pull our oar in the boat, to do our part as good citizens in our community?

Do we give our time and effort to help worthwhile community projects?

Do we make it easy and comfortable for our fellows not of our faith to know us and associate with us?

We are not a special interest group in this country and I'd like to give you just one example of that from my own experience and personal knowledge.

When the Federal aid to education bill came before the Congress, the position of the church regarding parochial schools' inclusion in the bill was sent to various Members of Congress.

It was a reasonable position, and some felt that parochial schools should be included in the list of beneficiaries.

It became clear, however, that if such an attempt were made—that is, an attempt to include parochial schools—the whole Federal aid program would be defeated.

Catholic spokesmen pointed out that, rather than deprive any American youngster of the benefits of this program, the church would not press its own position in the matter.

This was mature, completely patriotic and generous action, whereby the church subordinated its own interest for the benefit of others.

As American Catholics, we have, I believe, a special contribution to make to our communities and our country.

First and foremost, of course, our position regarding communism is fixed. Regardless of what twists the party line may take, Catholics have had this evil and monstrous thing dissected for them time and again, and they know its evil.

I urge those of you who may not have done so recently to pick up and read again Pope Pius XI's letter on atheistic communism.

Read it carefully, read it thoughtfully, and you will observe certain prophetic aspects about the heartbreak and tragedy communism would bring into the world.

Catholics also have an enlightened sense of the need for helping the distressed of the world.

We, of all people, can never forget the plight of those across the world from us.

Where men and women and children are trapped in grinding and almost hopeless poverty, they may very easily, from their own despair, turn to the deceits of communism as a way out.

Technical assistance programs and programs of aid are not simply matters of good policy on the political level. They are an expression of the charity that lies deep in the heart of the American people.

Never forget this: While the enemies of our country ridicule and mock us as ignorant materialists, selfish exploiters, interested in nothing but money, the foreign aid programs brand such propaganda as a pack of contemptible lies.

In our thinking about the Communist threat and the plight of underprivileged nations, we must remember the story of Fatima.

The Russian people are the first captives, the first victims of the Communists, and in our thinking and our prayers, we must distinguish between the decent and good people of Russia and their ruthless masters.

The message of Fatima gives to Catholics throughout the world a new dimension and, indeed, a new weapon for combating this atheistic monstrosity: We see it not simply as a political or social or economic theory, but as a moral evil to be fought with the weapons of the spirit: prayer and meaningful penance.

In addition to our view of the world situation, I believe that our background as a sometimes unwelcome minority in certain areas gives us added insight into the problems of other minority groups.

Certainly we know what the denial of civil rights can mean to a people.

We knew once what it meant to be regarded as second class citizens.

Those days have come pretty much to an end, now.

But the task remains for us to see that such days are ended for all times for all Americans.

Most of us in this room have lived to see the sweep and tempo of American history speed up tremendously.

We have seen the concept of social justice expanded beyond anything one might have dreamed of 50 years ago.

We have seen legislation passed which, at the beginning of the century, would have seemed impossible.

While much remains to be done, let us not forget that much has already been done to make life better for all Americans.

We shall never create, here on earth, the conditions of Paradise.

But we have always before us the vision of an ever finer and greater nation; a people moving always forward, sometimes swiftly, sometimes slowly, but always forward to a realization of the American dream.

Progress is not achieved without the clash of judgment and opinion, and that is as it should be in a democratic society.

Let us hear every man's opinion, for no one has an exclusive monopoly on intelligence.

This year, above all, let us, as Catholics, conduct ourselves before the eyes of our countrymen with intelligence, self-respect, balance, and charity.

It is not for us to impute motives to those who may not agree with our position in one or another field of national interest now.

But it is our duty, and it devolves upon every one of us without exception, to remember that if the turn of the wheel touches off questions about the church and state; if at times we are made to answer questions about our faith, let us answer such questions from an informed mind and an understanding heart.

The Holy Father has said that in times like these it is permitted to no one to be mediocre.

For us, I believe, that means many a long and thoughtful meditation on the blessings God has given us in this blessed land of ours.

It means pondering deeply the silent but eloquent message of Memorial Day: that others had died for us—to give us the chance to make their sacrifice meaningful by our conduct as citizens of this great Nation.

Let nothing narrow or petty or mean emanate from us this year, even under the most exasperating provocation.

For our fellow Americans have a tremendous sense of fair play, and they will not mistake forbearance for timidity or cowardice.

There are members of both political parties in the ranks of our order.

In this year and the years to come, let us act according to our best intelligence and conscience as citizens, doing our utmost in however great or humble a way to make this blessed Nation an ever greater expression of freedom; a mighty beacon in the turbulent world showing forth clearly and steadily that free men indeed can govern themselves with dignity and justice and honor; that free men need no guardians; that, with God's blessing, government of the people, by the people, and for the people, shall not perish from the earth.

Captive Nations Week, 1960

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. ROBISON. Mr. Speaker, I wish to draw the attention of my colleagues to the fact that Captive Nations Week will be observed July 17–23, 1960.

During the 1st session of the 86th Congress, Public Law 86–90 was enacted expressing the sense of the Congress that the President should proclaim the third week in July as Captive Nations Week and that similar proclamation should be made each year until such time as freedom and independence from Communist imperialism shall have been achieved for all the captive nations of

the world. Therefore this year's observance will be the second Captive Nations Week.

Mr. Speaker, I know I reflect the opinion of my colleagues when I state that I hope the reason for observing Captive Nations Week will not exist for many more years. However, so long as these nations remain under the domination of international communism, we of the United States will remind them annually that our hearts are with them and our prayers as well.

I am proud to be an honorary member of the National Committee on Captive Nations Week and I commend the committee, its chairman, Dr. Dobriansky, its executive director, Mr. Connor, its secretary-treasurer, Mr. Skubik for their excellent activities in stimulating the formation of local committees throughout the Nation to organize proper ceremonies and observances of Captive Nations Week, 1960.

The Congressional Investigating Committee

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting article which appeared in the Suffolk Law Reporter:

THE CONGRESSIONAL INVESTIGATING COMMITTEE

(By Jordan L. Ring, 1960)

(Senior Jordan Ring, author of this article, is top student in the law school and plans to do graduate law work at Harvard next year, under scholarship.)

Power and the constitutional right to exercise a particular power are two distinct considerations in the philosophical concept of governmental scope and function. One endeavoring to categorize contemporary congressional investigatory practices in one of two categories can find persuasive arguments in mass for his favored position thereon. But it shall not be the purpose of this particular analysis to pursue the justification of either abstraction. Rather, the ultimate consideration herein focuses narrowly upon the jurisdiction aspect that confronts one who must deal defensively with an investigating committee's asserted authority on the plane of jurisdiction over the person and the matters closely related thereto.

Basic generalities of constitutional law have no little importance in this regard Fundamentally, our National Government, in dealing with the internal aspects of their particular functions, is one of delegated powers, which power is either specifically enumerated within the four corners of the Constitution or found to be a necessary and proper power implied therein. Therefore, every function of our Congress is directly dependent for its constitutional legality upon the adherence to the aforesaid principle. It is axiomatic that a Federal investigating committee has no greater authority over a person or persons than the sum total of its creators' authority—Congress. If, therefore, Congress has exceeded its authority in the establishment of a given committee, then we have an ultra vires body—a nullity. In a related sense, the jurisdiction of a particular committee to compel the appearance of an individual before it is directly dependent upon congressional authorization in the main, which congressional authorization is directly dependent by way of justification upon the Constitution. Hence, initially, at least, the basic and logical challenge of a committee's jurisdiction over a person can be leveled at its very right to constitutionally exist, although it may be submitted at the very outset that his fundamenal challenge is broader in theory than in practical application in the light of contemporary legislative and judicial liberalism in this particular field of thought.

The general power of Congress to create and vest a committee with capacity to compel obedience to its jurisdiction is a firmly established concept. *McGrain* v. *Daugherty*, 273 U.S. 135; 71 L. Ed. 580; 47 Sup. Ct. 319; 50 ALR 1. It is vitally important, however, to consider carefully the general authority of Congress in order to analyze whether in any particular instance a given committee is beyond the borders of constitutional concern. [Thus, the question to be carefully considered is where does the general authority come from and what are the reasons for its basic justification.]

McGrain v. *Daugherty*, supra, precisely points out that nowhere in the framework of the Constitution is there specifically enumerated authority giving to Congress the power to create legislative investigating committees. Nevertheless, from the standpoint both of English and colonial history and from the view of practicality, the Court held such authority to be a necessary and implied power of congressional function. Specifically, in order that any type of intelligent legislation may result from the sessions of Congress, there is an obvious need for specific information relating to any particular matter under consideration by either House. Obviously, it would be sheer fallacy to assume Congress, broad as it may be in membership, could possibly have within itself at all times such a fund of information as would permit it to judge the particular merits of every act, nor to understand the need for certain legislation in matters over which it must protect and regulate. Hence, the need for factual information from without. [Congress, in order to effectuate fruitful results, delegates to a relatively small group of its membership the authority it possesses as a whole to investigate. And from this reason found by the Court to necessitate the existence of such implied authority, we find therein the crux of the limitation of its power to investigate and therefrom the right to compel obedience to its jurisdiction.]

Because of the breadth of the congressional powers * * * (the power to legislate, to judge the qualifications of its Members, the obligation to maintain within the States a republican form of government, to provide for the common defense, to perpetuate its very existence, etc.), it may seem that it would be practically impossible for Congress to select a field for investigation which would not be related to some proper area of congressional concern. Actually, however, there has been one occasion when the Supreme Court failed to find such relevance. That was in the 1880 case of *Kilbourn* v. *Thompson* (103 U.S. 168; 26 L. ed. 377), testing the legitimacy of a House investigation into the bankrupt firm of Jay Cooke & Co. and its interest in a District of Columbia real estate pool. The Supreme Court ruled that this was not a subject on which Congress could legislate and therefore had no authority to investigate. This case represents the only restrictive decision upon the power to investigate. Mr. Justice Miller said, "We are sure that no person can be punished for contumacy as a witness before either House, unless his testimony is required in a matter into which that House has jurisdiction to inquire, and we feel equally sure that neither of these bodies possesses the general power of making inquiry into the private affairs of the citizen." The matter under investigation did not come within the range of congressional legislation. While the facts of this particular case are of a minimum of importance, since a similar inquiry today under the Supreme Court's broad concept of the congressional function would certainly be authorized, the principle expounded from that case, nevertheless, clearly sets forth the proposition that Congress has no authority to investigate per se. It cannot launch an investigation from the standpoint of constitutional power merely to expose for the sake of exposure or to delve into the private affairs of citizens merely to bring to light undesired, although legal, courses of conduct and pursuances over which it has no power to legislate or is prohibited by the Constitution to abridge. For an analysis of the Kilbourn case and the implications thereof see Congressional Investigation, 37 Cal. L. Rev. 556 (1949); 40 Hvd. L. R. 153 (1926). In order therefore for a congressional investigating committee to have authority over a person the purpose of the investigating committee is of a prime concern; for the purpose of the committee must have some connection with prospective legislation or congressional function or else have no jurisdiction over the person. But how close must the purpose be connected with prospective legislation? As will be hereinafter indicated, very little actual connection seems necessary.

All recent cases dealing with this subject matter have had some relation to security investigations, and while it can never be doubted that these security cases have to a large degree been pressured by the emotional complection of the Nation, nevertheless, they do outline the basis of judicial philosophy regarding the general topic under consideration. So far as the issue of the Un-American Investigating Committe is concerned, obviously no matter is of a greater importance to Congress than the internal security of the Nation and the protection of its independence and integrity against conspiratorial or subversive attacks. For these clearly proper congressional concerns it is scarcely necessary to cite such expressly stated legislative functions as to "provide for the common defense," "to raise and support armies," and the like. But this security committee seems to have dissipated somewhat the strong constitutional support by being so largely uninterested in making legislative recommendations to Congress. The mere fact that the House had stated in setting up the committee that it was for a "legislative purpose" was generally regarded as binding on the Court. Mr. Justice Clark dissenting in the case of *U.S.* v. *Josephson* (165 F. 2d 82, 333 U.S. 858), said that upholding the committee's power over the person on this basis made the congressional investigative power limitless for "the dram of good must always sanctify the dubious remainder." As a simply stated proposition, the language of the majority seems to lay down the rule that if Congress claims a particular investigation to be for a legislative purpose the Court will not say that that is not so.

There seems little reason to doubt that Clark's conclusion is actually the correct one to draw from these appellate court decisions, for all the grounds on which limits might have been based were rejected in the Josephson case. Justices Douglas and Black took essentially the same position in their concurring opinion in *U.S.* v. *Rumely* (73 S.C. at 547). "Inquiry into the personal and private affairs is precluded and so is any matter in respect to which no valid legislation could be had. Since Congress could not by law require of respondent what the House de-

manded, it may not take the first step in an inquiry ending in fine and imprisonment." In *Barsky* v. *U.S.* (167 F. 2d 241), it was said by the Court that the fact constitutional legislation might ensue from the information derived by an inquiry upon the subject described in the House resolution is sufficient to sustain the committee's jurisdiction. "The potentiality is the measure of the power of inquiry" and this be so even though the legislation that might ensue from such an investigation has a strong possibility of being found unconstitutional, and the mere fact that very little legislation has resulted from a given inquiry is immaterial in considering the committee's constitutional justification. But what if we discharge syllogisms and advance judgments and concentrate rather on the charge that the committee had actually and deliberately sought to get, by publicity and exposure, results which could not constitutionally be secured by legislation. Judge Edgerton in the Barsky case, supra, said that the committee had intentionally inflicted punishment on certain witnesses by bringing about their dismissal from employment and subjecting them to notorious publicity and held that this met the bill of attainder test in *U.S.* v. *Lovett* (328 U.S. 303). The majority felt otherwise and completely disregarded substance, looking merely to form. Justice Clark dissenting in the Josephson case, supra, concluded that the committee was merely investigating for exposure's sake, and this had been proved by the committee's questioning of the witnesses appearing before that body. But the majority of the Court rejected the Clark position by again looking solely to the purpose for which the committee was established and not into the objective mannerisms. Clark went beyond this point and contended the committee's persistent questioning of witnesses as to whether they were members of the Communist Party violated a right to privacy and to freedom from inquiry about political beliefs established by the first amendment and upon which Congress had no right to exact prohibitive legislation, let alone inquire. But both in the Josephson and Barsky cases the Court disposed of these points by reminding that Congress can curtail freedom if justified by the clear and present danger test and that Congress need not wait until there is a clear and present danger before it can inquire into these matters. All that is required is a possibility of a clear and present danger and that the Court cannot assume in advance that Congress will pass unconstitutional legislation. From what has been set forth above it may well be that legislative investigating committees will have an area of sanctioned inquiry as broad as Congress deems necessary by merely asserting within the enabling act of the committee that the purpose of the said committee is to inquire for proposed legislation and have some broad basis upon which to rest thereon. For it now appears that the Court will not look beyond this point. Thus the original concept of legislative investigation under our system of government appears to have become an obsolete limitation or at least a limitation in form only.

Now, assuming in any given instance the constitutionality of a committee, what is the immediate power over the person to compel compliance with its request to appear? For a contempt of Congress there is no doubt that either House has the inherent power to punish through its own processes outside of the courts. *Marshall* v. *Gorda* (243 U.S. 521); *Anderson* v. *Dunn* (6 U.S. 204). In *McGrain* v. *Daugherty*, supra, it was clearly stated that either House, through its own process has power to compel a private individual to appear before it or one of its committees and give testimony needed to enable it effectively to exercise the legislative function belonging to it under the Constitution. However, the power of Congress to punish for contempt of its own process is limited to imprisonment and the duration to the time of the adjournment of Congress. See 50 ALR 21. Not only may Congress itself punish for the failure to answer a proper question when appearing but in *Jurney* v. *MacCracken* (294 U.S. 125), the Supreme Court upheld the right of Congress to punish for a past and completed action. In this case the defendant had destroyed records which the committee requested to be brought before it. Thus the fact that the obstruction to the legislation function is removed or is impossible to be removed is completely immaterial in considering the authority to punish. Such a power to punish for past and completed obstructions was exerted by Congress as early as 1795 and is a well settled principle of legislative power. Today, by statute (2 U.S.C. sec. 192; F.C.A. 192) Congress has supplemented the inherent power to punish for contempt. It is to be noted that this statute does not exclude Congress from still rendering punishment through its own process. The constitutionality of this statute was upheld in *In Re Chapman* (166 U.S. 661). Section 192 makes it a misdemeanor for one properly summoned before a committee of either House as a witness to refuse to appear or to appear and refuse to answer or produce material papers or records. It now seems entirely possible, based upon the language in In Re Chapman, supra, that a party in contempt could be punished both under the statutory procedure and in addition by either House. Of course, a summary refusal of one duly called by a committee to appear before a committee could legally result in the physical removal of a witness to the situs of that committee. Therefore, any attack on a committee's jurisdiction, as a practical matter of concern, should be made at an appearance before the committee. The question of remedies is somewhat dubious and leaves in doubt the question of injunctive relief in a Federal court. However, one wrongfully taken into custody has a right of recourse against the officer but not against the membership of the committee, due, of course, to a congressional Members immunity under article 1, section 6, clause 1.

On the issue of what a witness before a committee must answer and what he need not reply to, both section 192, the fifth amendment and the committee's authority are the direct essentials to be considered. The most basic defense here is the fifth amendment—the right to refrain from answering a question amounting to compulsory self-incrimination. As to this particular civil right of the individual, the Court has been liberal in the application of it and conservative to narrow its boarders of protection. This amendment is one of such vast scope that it could not be adequately dealt with in this paper in total. But of interesting note here is the recent Supreme Court decision of *Blau* v. *United States* (340 U.S. 159), which stated in substance that one may refuse to testify if his testimony will "furnish a link in the chain of evidence against himself" and the answer need not be of such a nature as to amount to a crime itself. However, in order to invoke the privilege, the issue of statutory immunity must be considered. In the past Congress has from time to time provided for immunity or protective clauses thereby rendering testimony given before a committee as inadmissible in subsequent trials of a witness by either the Federal or State courts. Such a blanket of protection extended to a witness is binding upon the States as well as the Federal Government. *Adams* v. *Maryland* (347 U.S. 179). In *Ullmann* v. *United States* (350 U.S. 422), the Supreme Court held in dealing with an immunity clause passed by Congress, that once the reason for the privilege ceases, the privilege itself ceases. Thus the Court has laid down the proposition that one may not rightfully refuse to answer a material question without the danger of punishment if Congress has rendered testimony coming within the definition of the statute inadmissible in evidence against the witness at a subsequent trial by Federal or State authorities. For the individual is not then bearing witness against himself. However, it is now incumbent for the witness to determine whether or not he is within the statutes protection, for it is only when you come within the language of the statute that the immunity prevails.

Also a prime importance is the principle that one before a committee need not answer any and all questions directed to him by the committee. It is well established by both judicial decision and expressly set out in section 192 that a witness need answer only those questions pertinent to the question under inquiry by the committee. In order to judge whether a particular question directed by the committee to the witness is pertinent to the question under inquiry, the witness has a constitutional right to know the purpose under investigation. Either House in creating a particular committee must set forth with reasonable certainty the purposes that the committee is to inquire into. Hence, the uncertainty of the committee's scope may well be a ground of attack on the basis of unconstitutionality. The witness may also inquire as of right, from time to time, while before the committee of the relation that a particular question has to the purpose under inquiry by that committee. *U.S.* v. *Rumely* (345 U.S. 41). In the Rumely case the Supreme Court asserted that a committee may not ask a question outside the scope of the resolution creating that committee. There the committee created to investigate lobbying activities asked of the witness a question regarding the publication of books. The Court found no relevancy; thus the question was held to be improper and the conviction for failure to answer was overturned. And in 136 F. 2d 791, the Court said in substance that if the committee has no authority to ask the question because it is outside the scope of the committee's purpose, even if Congress subsequently tries to cure the defect by amendment, one who refused to answer a question before Congress amended the purpose of the committee would be guilty of nothing. If the scope is enlarged, the question must be asked again at another committee session. The crux—has the committee authority when the question is asked? In addition to the aforesaid, section 192 provides that the fact an answer to a committee question would tend to disgrace a witness or render him infamous is not a proper ground for the refusal to answer.

The preceding pages give some slight indication as to both the wide breath of congressional power and the heavy burden placed upon counsel for a witness before a committee. Counsel involved with an appearance before one of the many committees of our National Government must give careful and concise attention to the variety of matters discussed. Not only should he consider whether a committee has the constitutional right to exist but he must of necessity become extremely well versed in the scope and purpose of a committee, as well as any immunity clause that may be relevant or become relevant during an appearance before the committee. For if an individual's rights are to be protected against this vast authority of Congress no amount of consideration can be deemed too great. And while the philosophers of governmental authority may find valid criticism for this new form of national power, nevertheless, it does exist and must be dealt with in its existing form.

Barratt O'Hara's Answers to a Questionnaire

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. O'HARA of Illinois. Mr. Speaker, in little more than 4 months every Member of this body who has been nominated and is seeking reelection will have passed upon him the verdict of his constituents. It is the short 2-year term that keeps the House very close to the people, as it was intended by the wise men who made our Constitution.

In recent years there has been a growing advocacy of changing the term of tenure from 2 to 4 years. I hope that this change never will be accomplished. The short term is a personal hardship on the Members of the House, and the expense of even a modest campaign every 2 years is not inconsiderable tax on their resources. But this is no valid argument why there should be a gulf of 4 years between the people and their Representatives. I firmly believe that one of the great strengths of our Constitution is the provision that subjects all Members of the House every 2 years to the acid test of the ballot box. The observations and experiences of my 10 years in Congress have confirmed me in this conviction.

The interest of the electorate, always a healthy sign that our representative democracy is functioning through an enlightened citizenry that wishes to be informed, is reflected in the questionnaires Members of Congress and nominees of opposing parties now are receiving. I am extending my remarks to include the questions of the independent voters of Illinois and my answer thereto. The first five questions and answers I have omitted since they relate only to name, residence, and similar statistical matters:

QUESTION 6

(a) Do you agree with the general proposition that Federal income taxes, in addition to supplying the major part of Federal revenue, should be used as a positive instrument of economic policy? Explain.

(b) Would you give a tax-cut priority over expansion of Federal support for education, housing, health and welfare services at this time?

ANSWER

(a) The Federal income tax serves the double purpose of (1) raising needed money, and (2) by percentage increases graduated to higher incomes minimizes the danger inherent in the accumulation of a nation's wealth in a relatively few hands. Furthermore, as the income rises the large percentage taken by the Government is kept by current Federal spendings in circulation and thus contributes to the sustained buying power.

On revisions of the tax rate it is inevitable that there should be conflict between the two schools of economic planning. I am of the school that believes relief first should be given where it is most needed since I conceive national strength to be measured by the position of the lowest in the economic scale, not that of the highest. On the other hand, those who think contrarywise argue that more incentive and capital should be given to those on top to encourage more expansion, more industries. It seems the old question going back to the days of Jefferson and Hamilton of whether you build from the top or the bottom. I would say that the proper approach, in the pattern of democratic thinking that what is good for one segment is good for all, is that consideration should be given to the reasonable and realistic need of both top and bottom.

In a sense I presume you can consider Federal income taxes as an instrument of economic policy. Certainly in a broad way there is a relationship. But it is difficult to make a clear-cut "Yes" or "No" answer to your question. However, if by your question you are in effect asking "Should the income tax be used exclusively for revenue purposes with no attention to economic consequences?" My answer must be negative. On the other hand, there may be economic objectives which may seem desirable to some who would use the income tax as a tool for their accomplishment, to which I would not subscribe.

For example, I would not approve use of the income tax to establish complete equality of income or to work a redistribution of the wealth. Yet I do believe in a progressive income tax and taxation in accordance with ability to pay. In any event, rates should meet the test of providing incentives for economic growth.

I may cite at least two occasions when I have supported tax legislation designed to have effects whose purposes were primarily economic. The first of these was in 1958 during the recession when I sponsored a residential rehabilitation program. To make the program attractive, I proposed to allow property owners, in computing their taxable income, to deduct expenditures for residential rehabilitation that conformed with prescribed standards. This was a deliberate tax incentive. In that sense then, I did favor the use of the income tax to promote an economic objective.

During the present session, I have also supported legislation to promote the expansion of American business abroad. I have long been impressed with the importance of implementing President Truman's point 4 program. Related to this has been the effort to make it easier for American businessmen to compete abroad. Many of us felt that the tax laws impeded the full development of their efforts. I therefore spoke in favor of, and voted for, H.R. 5 which provides a measure of tax relief designed to encourage foreign business development. In that sense then, I favored the use of the income tax to promote economic objectives.

I have answered this question at some length because I know of no short answer that would cover what I think you have in mind. I would refer those further interested in the subject to the various papers in the Ways and Means "Tax Revision Compendium" (November 1959, pp. 107, 118, 169, 180, 181, 192), not necessarily as representing my views, but as a research source on a complex subject.

(b) Decidedly no.

QUESTION 7

Which, if any, of the following proposed revisions in the Federal tax structure do you support? Give reasons.

(a) Reduction of taxes on middle and lower income families?

(b) Repeal of preferential tax treatment of dividend income?

(c) Reduction of benefits in tax treatment of capital gains?

(d) Limitation of depletion and writeoff tax allowances for oil and mining industries?

(e) Reduction of corporate taxes?

(f) Reduction of excise taxes on other than luxury items?

ANSWER

I have a sense of impotency in replying to this question since in every Congress of which I have been a Member tax items have come out of the Ways and Means Committee in package bills, not open to amendment, and a sense of fiscal responsibility (raising money for worthy things for which I have voted) compels me to vote for them despite there are items in which I am not in agreement. This year I wrote several hundred constituents of my opposition to the excise tax on local telephone calls. I did manage to save some face by voting against the closed rule (barring amendments) but when the rule was adopted I could not be irresponsible enough to vote against the bill. Some Members did vote nay in a sort of protest, but I doubt if any Member would have done so if his were the determining vote.

In revision of the Federal tax structure I would give favorable consideration to your (d), (f), and (a) because they are in fields wherein I am informed to some extent. I could not honestly answer as to the other matters without the study and evaluation of complex tax problems which under the legislative situation in which I have found myself I have not undertaken.

The Ways and Means Committee has the hardest job in the Congress, that of raising money to meet the large and growing expenses of the Federal Government. Taxes never are popular with those upon whom they are saddled. The Ways and Means Committee holds months of public hearings, at which Members of Congress may and do appear as well as other witnesses representing varying views. The committee then studies the problem as a whole. The reason advanced for package bills is that otherwise there would be endless amendments and the consequences that come when important and complex legislation is written on the floor of the House. As it is, the House must take the bitter with the sweet, according to varying viewpoints and interests, and the Federal Government ends with getting the money necessary for its functioning.

QUESTION 8

(a) What kind of program—legislative or otherwise—do you support to provide assistance to workers and businesses in "distressed areas"?

(b) Do you consider that the Federal Government has a responsibility in the distressed area problem? Why?

ANSWER

I am combining your (a) and (b) questions, and first answering (b) because if the answer to (a) were "no" it would be illogical to suggest a legislative program where there was no responsibility.

(b) I do believe strongly that the Federal Government has a responsibility in the distressed area problem. I regard it as one of our most serious problems, and one of which there is not sufficient awareness. Depletion of natural resources, as coal, lessened demand for an old product supplanted by a superior product, removal of factories and automation are only a few of the factors that more and more will occasion the drying up of the employment to which the workers of a community have been accustomed. This happened in my young manhood when the old heating stove went the way of progress and the area around East St. Louis, which had been the center of the stove industry, went through a period of readjustment and resultant keen unemployment. In the fast-moving change and expansion of the present, and the expected freer exchange of goods by the nations of the world, and certainly as a logical result of automation, developments in this direction will be rapidly accelerated.

It is the responsibility of the Federal Government to encourage, to aid and in reason-

able measure to finance on a matching basis the job of industrial readjustment to the end that all sections and all communities of our common country may share in the benefits of progress and none be penalized. The same line of reasoning governs here as that which gives justification to our program of help to the less developed nations of the free world.

(a) My thinking on the kind of a legislative program was reflected in the Douglas bill, for which I worked and voted in the 86th Congress, and which passed the Senate and House only to be vetoed by the President. I do not believe the President's veto can or will be defended by anyone aware of the seriousness of the situation and its challenge to the national welfare. Nor do I think that the administration bill, cutting assistance to a gesture and ignoring the vital need of vocational education to prepare workers for new employment in which they have had no training, can be defended. This is a subject on which I feel strongly and on which my convictions have been reached after much study.

QUESTION 9

How would you vote on the question of Federal price regulation of natural gas as proposed in the Harris bill during the 85th Congress?

ANSWER

The Harris bill in the 85th Congress was reported out by the Rules Committee 7 to 5, but never reached the floor of the House. In previous Congresses I had voted against bills which I thought gave an unwarranted advantage to the oil interests at the expense of millions of dollars in increased prices to the consumers of Chicago.

QUESTION 10

Do you think the minimum wage should be increased and expanded to include more workers? Be specific.

ANSWER

In 1913 the first State minimum wage laws were enacted largely as the result of the conscience of the American stirred by the revelations brought out by a commission of which I was privileged to be chairman. Naturally, I have a deep interest in minimum wage. I always have thought that the humblest of the Nation's workers was entitled in return for his time and toil at least the means of subsistence. In the 81st Congress I participated in the debate and voted for an increase in the Federal minimum wage and an extension of the coverage. Its passage furnished one of my great thrills of the first Congress of which I was a Member. In the 86th Congress I voted for the bill raising the minimum wage, with some increases in coverage, after first voting in Committee of the Whole for the stronger bill and greater coverage reported by the Committee on Education and Labor.

QUESTION 11

Do you support the "partnership" theory of water resource development whereby private industry has the primary responsibility for river development with only supplemental non-revenue-producing participation by the Federal Government, or do you favor direct Federal responsibility for multipurpose development of water resources? Explain.

ANSWER

Our Constitution as interpreted by the Supreme Court wisely gives jurisdiction over navigable interstate rivers to the Federal Government to preserve them in the national interest and for the use of all the people. Certainly the Federal Government has the responsibility of developing the power generated by these rivers and for multipurposes, all of which contribute to the national welfare and the benefits of which should go to all the people.

QUESTION 12

Do you believe the Federal Government should establish yardstick operation for the development of atomic energy comparable to the TVA?

ANSWER

Yes.

QUESTION 13

What Federal legislation, if any, do you favor to provide effective civil and criminal penalties for depriving any citizens of his constitutional rights to vote, and to enjoy equal opportunities for employment?

ANSWER

I think the Civil Rights Act of 1960 marked decided progress. It has provisions, I think, will prove effective, but they need strengthening. I sponsored in the House the much stronger and more inclusive bill introduced in the Senate by Senator DOUGLAS, and I hope it will receive favorable consideration in the 87th Congress. In the event of my reelection this will be high on my agenda, as will legislation assuring equal opportunity for employment. In the 81st Congress I remained on the floor of the House all night aiding in fighting off a southern filibuster and seeking to pass a Fair Employment Act with teeth. A law without strong enforcement provisions and penalties, sufficiently severe to serve as deterrents, would be a meaningless gesture.

QUESTION 14

Numerous proposals for Federal aid to education have been made. Which, if any, do you support? Why?

ANSWER

In the 86th Congress I voted for the only Federal aid to education bill that reached the floor of the House. It was trimmed to include only construction. I hope that the elections in November will return a Congress more sensitive to the Nation's educational needs and adequate salaries for teachers. The plain fact is that, in the changed world of the present, and with an increasing number of migrating families, the old concept of popular education supported solely by local taxpayers is outmoded. The Federal Government cannot escape its responsibility. If our representative democracy is to continue functioning in the highly competitive period ahead every American child must have the advantage of a good school and a good teacher, paid on a scale comparable with that of other workers with similar professional preparation.

QUESTION 15

The Supreme Court has already held that the Federal Government employee security program is limited to security-sensitive jobs. Prior to this Court finding, the programs was applied to all Government employees. Would you support legislative proposals to set aside the Supreme Court decision and reapply the security program on an across-the-board basis?

ANSWER

No.

QUESTION 16

Do you think congressional committee investigations should be unlimited or restricted to the finding of facts for legislative purposes? Explain.

ANSWER

It is the province of the Congress to make the laws, not to administer or to enforce them. Its investigations, therefore, should be confined (1) to the subject matter of pending or proposed legislation, (2) to the operation of existent laws when there is a legislative purpose, as repeal, amendment or codification, and, (3) to a limited extent and always governed by a definite and immediate legislative objective, to the need for legislation and its nature and scope.

QUESTION 17

Are you in favor of any plan to limit nuclear testing? Under what conditions, if any?

ANSWER

Nuclear testing is attendant with risks, of which menace to health is not the least. I believe there should be such definite limitations as in the judgment of our scientists would minimize these risks to a negligible margin and in the judgment of those responsible for the national defense would not unreasonably jeopardize our security. I believe that Adlai E. Stevenson rendered a large service to his country and to mankind in focusing attention to the danger in nuclear testing in his last campaign, even though what he said largely went unheeded.

QUESTION 18

Are you in favor of any of the proposed plans for world disarmament? Explain.

ANSWER

I always have been fearful that history would repeat itself and the present race of armaments would end as did that of France and Germany in the period prior to World War I. I hope and fervently pray that before it is too late world disarmament will be accomplished. If there is sincere desire on both sides, this should not be difficult. I am not sure that even such a simple plan as periodical observations by U–2 planes, operated by the United Nations or in any event internationally manned, might have possibilities. But I doubt if I, or any other member of or candidate for Congress, would wish to take the responsibility of mapping the program for observation and inspection to assure complete compliance by all nations with the disarmament agreement. That is a task and a responsibility that must be left to others with greater and specified knowledge in the field and familiarity with all the factors, both personal and physical.

QUESTION 19

Explain your views on the present U.S. program of international assistance and development.

ANSWER

My approach to foreign policy in its economic relationship is: (1) On the world front, the foundation of permanent peace is in the worldwide elimination of poverty insofar as human effort under wise and cooperating democratic governments can accomplish that end; (2) on the domestic front, the opening of new foreign markets in countries now less developed for the products of our factories furnishes protection from the danger of wide domestic unemployment resulting from automation which increases output and decreases the number of jobs for workers.

QUESTION 20

Do you support congressional approval of U.S. participation in the Organization for Trade Cooperation, the international body to administer the General Agreement on Tariffs and Trade?

ANSWER

Yes.

QUESTION 21

Would you support legislation to assist workers, communities, and industries that may be directly injured by reduced tariffs?

ANSWER

Yes. I realize that some workers, communities, and industries have been injured by that which has brought benefit to the Nation as a whole. During the period of readjustment, and in their present distress, it is only fair and in the national interest that

they should be helped by reasonable subsidies and otherwise.

QUESTION 22

What is your attitude on continued U.S. participation in specialized agencies of the U.N., such as the International Labor Organization, the World Health Organization, UNESCO, and the Food and Agriculture Organization?

ANSWER

It would be the height of folly to terminate that participation. I think the entire membership of the House Committee on Foreign Affairs, which is closest to the situation, would agree. It is an index to my thinking that in the closing weeks of the recent session I gave strong support to the International Development Agency as an instrumentality in which the resources of many participating nations could be pooled in the common effort to help the less developed nations.

QUESTION 23

To what extent should the Federal Government be active in the field of housing?

ANSWER

I came to Congress in 1949, when the housing problem was desperate, and in three Congresses served on the Banking and Currency Committee, which has jurisdiction in housing. I always have thought that it was the responsibility of the Congress to assure a decent roof over every American family. That objective has not been attained, but until it is the challenge will be on the Congress to meet its responsibility. As long as my constituents return me to Congress I shall work toward that end.

QUESTION 24

What important legislative proposals, other than those referred to above, would you like to see enacted by Congress?

ANSWER

As chairman of the Subcommittee on Africa I am keenly conscious of the importance to us and to the free world of the establishment of lasting bonds of friendship, of understanding, and of cooperation with the nations of that continent. By the end of this year there will be a total of 24 sovereign nations in Africa, all of which it is expected will have votes in the United Nations. If I am returned to Congress, it is my hope that I can make some contribution in this field of challenge.

I also am the ranking majority member of the Subcommittee on Latin America anti a member of the Subcommittee on Foreign Economic Policy, and to these tasks I shall if reelected give my best effort, but with no cessation of my interest and activities in legislative approaches to the solution of our many domestic problems with which the experiences of the 10 years my constituents graciously have kept me in the Congress have given me familiarity.

U–2 and United States: A Look Backward So We May See More Clearly Ahead

EXTENSION OF REMARKS

OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. KEARNS. Mr. Speaker, I would like to insert in the RECORD an article by Henry Roemer, chairman of the executive committee of Sharon Steel Corp., entitled "U–2 and United States: A Look Backward So We May See More Clearly Ahead." This article appeared in the Sharonsteel Record of June 1960.

In my opinion, Mr. Roemer has given an excellent review of recent history and charted the proper course for our country to follow in these critical days.

The article follows:

U–2 AND UNITED STATES: A LOOK BACKWARD SO WE MAY SEE MORE CLEARLY AHEAD

(By Henry Roemer)

As this is written on June 6, it is the 16th anniversary of D-day and the historical landing on Normandy Beach, we the people of these United States find ourselves in a state of confusion.

The fact that a reconnaissance plane with the designation U–2 was grounded through engine failure, pilot blackout or for some other known or unknown reason and captured by the Russians seems to have started a hornets nest in national and international affairs. At this time and on this date we should be giving our respect, our support and paying high tribute to that great general who was in supreme command of the Allied armies on D-day. He directed one of the most remarkable military accomplishments in all of history.

This great general, now President of the United States, is the subject of criticism and is being annoyed by sniping politicians who, in an effort to promote their own selfish interests, have demanded that President Eisenhower apologize to Khrushchev for what has taken place in the U–2 incident and also as to what happened at the summit. This demand is not only ridiculous in itself, but would be a reflection on every American and a degrading influence in the international situation.

Dwight Eisenhower is a courageous man, one of deep religious conviction, thoroughly honest and one of the greatest men who ever occupied the Presidential chair in our National Capitol. He, being the head of our Government, the Commander in Chief of our Armed Forces and our accredited representative in every phase and feature of international affairs, deserves the unqualified, undivided support of the American people. President Eisenhower is not one to dodge responsibility or pass the buck to subordinates in a critical situation such as this. Those in this country who advise appeasement, urge the soft touch and a bow-the-head, bend-the-knee attitude to the despot and dictator of Russia and satellite countries are not really true Americans.

Is memory so short that we have forgotten Chamberlain with his umbrella in those pitiful attempts to appease and placate Adolph Hitler? We saw Hitler and his armies move quietly into Austria, then Czechoslovakia and later declare war and march boldly into Poland on September 1, 1939. Have we forgotten the many attempts of President Roosevelt and his advisers to deal with Stalin in their meetings at Teheran, Yalta, and later at Potsdam? Are there folks in this country who have forgotten the recall of our own troops back across the Elbe and the withholding of the Allied troops outside of Prague, in order to permit the Russians to move triumphantly into Berlin and Prague? Then, at the Treaty of Potsdam we acceded to the demands of the Reds and conceded the division of Germany and the partition of Berlin, leaving that great capital city entirely surrounded by the military forces of the Soviet Union. In each and every one of these cases it would seem that we were out-generaled, outmaneuvered, out-smarted, and out-traded by the Russians. Now, with all of this experience, why has there been or should there be a demand for summit conferences when the record proves so conclusively that we have gained nothing through such attempts in the past? Russia gave no help to the Allies during the war with Germany except perhaps at the battle of Stalingrad, which was fought entirely for their own safety and salvation.

It is a matter of record as to what happened to General Chennault, General Wedemeyer, and later Gen. Douglas MacArthur when Chiang Kai-shek was deposed and China, together with a large portion of Asia was turned over to the Reds.

As to the matter of spying—every informed person knows that this has been a practice throughout history from early biblical times. It is common knowledge that the Russians have been spying on this country long before—during and throughout World War II—and are still continuing those practices up to D-day 1960.

As I have written on other occasions—if France is beaten to her knees, the British Empire broken up and dismembered—we may see the Red hordes of Russia sweeping over a devastated Europe, to be followed later by waves of yellows and browns and a new civilization rolls westward, in which case the United States will find itself standing, facing, and fighting the rest of the world alone.

This is a time when we Americans should stand stanchly, steadfastely, and bravely behind our President in what may be one of the darkest and most dangerous periods of our existence as a nation—particularly in view of the Communists moving into Cuba and other Central and South American countries.

What We Believe

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include eight of the recommendations contained in the report of the board of world peace adopted by the northeast Ohio conference of the Methodist Church in its annual session held at Lakeside, Ohio, on June 21 through 26, 1960. The conference consisted of 517 ministers and 517 laymen, representing 250,000 Methodists. I heartily concur in the aims of these recommendations and am happy to place them in the RECORD for all to see. The resolutions were forwarded to me by the Reverend Charles M. Dailey, of Toronto, Ohio.

The recommendations follow:

WHAT WE BELIEVE

1. We believe that the United Nations is a working center of international cooperation which provides our most hopeful avenue leading to peace and world order. We believe that the United Nations, with its related agencies, should be sustained, upheld, undergirded, and strengthened by all informed and conscientious churchmen.

We support Senate Concurrent Resolution 52 and House Concurrent Resolution 208 for review and study of the United Nations Charter with a view of increasing its effectiveness as an instrument for world peace.

2. We believe in greater use of the International Court of Justice and urge the United States to lead the way in removing restrictions which impair the Court's effectiveness.

We support passage and adoption of U.S. Senate Resolution 94 (designed solely to remove so-called Connally reservation from U.S. declaration), thereby enabling the United States to participate more effectively in the International Court of Justice.

3. We believe that all nuclear tests by all nuclear powers, present and future, should cease in order that present and future generations may be protected from the dangers of nuclear radiation and that the nuclear arms race might end.

4. We believe that only complete disarmament, involving both nuclear and conventional weapons, down to the levels required for internal policing must be our goal. We are aware that this is no simple or easy goal, but its difficulty is exceeded only by necessity and urgency.

We repudiate all ideas of mass retaliation, the development of the means of chemical, biological, and radiological warfare. The preparation and stockpiling of nerve gases, the production of living organisms or their toxic products to cause death or disability to man, his domestic animals or crops, or any plan for the use of radioactive dust or death rays—these are unspeakably horrible to contemplate. It is time that dedicated Christians rethink prayerfully their dependence on such instruments in human relations.

5. We believe that one of the most Christian and most useful services that our country can render to the underprivileged nations of the world lies in economic aid. This can be of two kinds. On the one hand we can share our vast surpluses with nations where hunger is an ever-present reality, and on the other hand a long-range program of aid must necessarily be based on the principle of helping the distressed nation to help itself. Here is where specialized aid is important. Specialists in farming, industrial development, community betterment, community health, along with the tools to achieve these ends, will go a long way toward the development of these nations about to take their place among the family of nations.

We believe that the recognition of human equality must accompany economic aid if a world of peace and justice is to be achieved.

6. We believe that the United States should ratify the convention banning genocide. The United States has signed this treaty but has not yet ratified it. It is a conservative measure, constitutionally sound, recognizing in international law the right of life on the grounds of race, religion, nationality, or ethnic origin.

7. We believe that serious study should be made on the part of churches and Government on the problem of recognition or nonrecognition of the Chinese People's Republic (Communist China).

8. We believe that the United States should participate in the Atlantic Convention to draft an Atlantic Community constitution improving NATO beyond a military alliance to a representative federation of people and governments for strengthening democracy and the foundations of peace in the Atlantic Community. Such future development of NATO should be consistent with increasing the effectiveness of the United Nations as an instrument for world peace.

Strong Opposition Shown in Transfer of the Regional Operations Office of the Post Office Department From Portland, Oreg., to Seattle, Wash.

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mrs. GREEN of Oregon. Mr. Speaker, on June 30 the Postmaster General announced his decision to transfer the Regional Operations Office of the Post Office Department from Portland, Oreg., to Seattle, Wash. At that time, I inserted in the RECORD a number of telegrams from persons who shared my deep concern and my strong opposition. Since then, my office has continued to receive mail on this subject. The mail, without a single exception, is critical of the Postmaster General's unwarranted and arbitrary decision. These letters point to the disruption of service, to the high costs of this unnecessary move; they speak volumes in regard to the unfortunate effect this transfer will have on the lives of the 180 career employees who will be faced with the choice of selling their homes in Portland or giving up their jobs with the Department.

One of these letters—written, incidentally by a good Republican—sums up the arguments against this transfer masterfully. Under unanimous consent I insert the letter at this point in my remarks:

PORTLAND, OREG.,
June 30, 1960.

Hon. RICHARD E. NIXON,
Vice President of the United States,
Washington, D.C.

DEAR MR. VICE PRESIDENT: Portland is rife with rumors concerning the reason for the order signed by Postmaster General Summerfield. The fact that post office operations will be improved is never considered as the real issue; it couldn't have been the premise on which the order was signed.

Even if Seattle and Portland offered equal opportunities for successful management, the order is ridiculous. Why move at tremendous cost from a proven location? To play politics with families and homes would seem too great a price for election to any office. In fact, Washington isn't the only State that will hold elections.

I ask that you as Postmaster General Summerfield's superior exercise your authority in the name of commonsense and stop this order.

If, by chance, the order to move is not rescinded, I hope at a future date some hopeful candidate asks for a full accounting of the whole cost of this transfer (abandonment of quarters furnished especially for Post Office Department operations here; cost of moving employees' belongings; per diem paid, perhaps for weeks, to commuters; and per diem paid to employees who cannot move but are detailed to Seattle to help set up the office; also the tremendous cost of moving equipment) and then compare that figure to the insinuated operational savings by headquartering the region in Seattle ("insinuated savings"—no facts—the real reason couldn't be given for publication). Interesting reading for the already hard-pressed taxpayer.

I write this as a Republican, not as a citizen who grabs at any issue to embarrass the administration.

Sincerely,

AGATHA SPINT.

Though the career employees of the regional office have, of course, protested this arbitrary decision, they have not been alone in their objections. Portland businessmen have also indicated their opposition in no uncertain terms. The following letters are samples of that opposition:

DEAR MRS. GREEN: I am writing to protest the announced removal of the regional post office from Portland to Seattle. It would appear as though this certainly was not in the best interests of our community nor the Nation.

As I understand the situation, the present quarters occupied by the regional post office are rent free and custodial free. If the office is moved to Seattle, it would probably cost the Government about $4 per square foot or an additional rent of about $150,000 per year.

Besides this, the office would lose probably 50 percent of their trained people which in any event is tremendously expensive for the Government.

As far as the arguments that operations would be more efficiently handled, this is certainly not true. Portland has been proved over many years as the most logical distribution point for the Pacific Northwest. The operations would be less efficient rather than more efficient.

On top of all of this, it would probably cost several hundred thousand dollars to move the office from Portland to Seattle.

It would be my earnest hope that you could strenuously object to this move and would be successful in having the decision rescinded.

Yours very truly,

BRUCE-EMMETT CO.,
T. Y. EMMETT.

Hon. EDITH GREEN,
U.S. Congress,
Washington, D.C.

DEAR CONGRESSWOMAN: Please use your best effort to retain the regional post office in Portland.

Thanking you for this courtesy, I am,

Very truly yours,

J. V. RICH.

The city of Portland has spoken out, both through the voice of Mayor Schrunk, and through a city council resolution. These read as follows:

PORTLAND, OREG.,
June 29, 1960.

Representative EDITH GREEN,
House Office Building,
Washington, D.C.:

Information concerning the proposed shift of the Pacific Northwest regional post office from Portland to Seattle, and how this information was released, most disconcerting. Please explore fully by committee hearings if necessary how this alleged proposal for movement came about and especially the bare facts concerning the actual need for such a shift. On the surface it would appear that Portland's continued importance as a distribution center for the entire Northwest certainly would negate any reason for the change in the office location.

TERRY D. SCHRUNK,
Mayor of Portland, Oreg.

CITY OF PORTLAND, OREG.,
June 30, 1960.

Hon. EDITH GREEN,
House of Representatives,
Washington, D.C.

DEAR MRS. GREEN: I am enclosing herewith a certified copy of Resolution No. 28349, duly adopted by the Portland City Council on June 30, 1960, protesting the removal of the Pacific Northwest Regional Office of the Post Office Department from Portland, Oreg., to Seattle, Wash.

Your immediate consideration of this matter would be sincerely appreciated.

Very truly yours,

RAY SMITH,
Auditor of the City of Portland.

RESOLUTION NO. 28349

Whereas the Postmaster General of the United States, the Honorable Arthur E. Summerfield, has announced that the Post Office Department proposes to move the Pacific Northwest Regional Post Office from Portland, Oreg., where it was established in

1954 and since efficiently operated, to the city of Seattle, Wash.; and

Whereas it is the opinion of the council of the city of Portland that such a move is not in the public interest, as the city of Portland is the economic and geographical center from which the services of the regional office in administering post offices and postal services in the five Pacific Northwest States of Oregon, Washington, Idaho, Montana, and Alaska, have been, and can continue to be most efficiently administered; and

Whereas the contemplated move envisages a waste of public moneys in that facilities in the city of Portland are presently available without additional rent or other costs to the Federal Government, whereas space in Seattle is not available and would have to be rented at an estimated annual cost to the taxpayers of some $90,000, and the move of facilities and personnel would be an additional expense to the taxpayers estimated at $500,000; and

Whereas more than 170 employees affected by the move would suffer unwarranted expense, as well as an unjustified disruption of their personal lives and affairs; and

Whereas the Post Office Department, by its recently authorized construction of additional facilities in the city of Portland, has recognized this city as the natural center for regional postal services: Now, therefore, be it

Resolved, That the council of the city of Portland, in regular session assembled this 30th day of June, 1960, does by this resolution voice a most vigorous protest to the proposed move as announced by the Postmaster General, and calls upon the Oregon delegation in the Congress of the United States, the Governor of the State of Oregon, civic and community leaders and organizations to join in this protest by direct appeal to the Postmaster General, and particularly requests that no further action be taken upon the proposal until a public hearing has been had, at which there can be a full disclosure of the geographical and economic advantages to maintaining the regional office in the city of Portland, Oreg.; and be it further

Resolved, That the auditor of the city of Portland forward certified copies of this resolution to all Members of the Oregon Delegation in the Congress of the United States, the Honorable Arthur E. Summerfield, the Postmaster General; and to the Deputy Postmaster General, the Honorable Edson O. Sessions; and the Honorable John M. McKibbin, Assistant Postmaster General for Operations; and the Honorable Rollin D. Barnard, Assistant Postmaster General for Facilities; the Honorable Olin D. Johnston, chairman, and the Honorable A. S. Mike Monroney, the Honorable Ralph W. Yarborough, the Honorable Joseph S. Clark, Jr., the Honorable B. Everett Jordan, the Honorable Jennings Randolph, the Honorable Frank Carlson, the Honorable Hiram L. Fong, the Honorable C. Norman Brunsdale, members, and the Honorable H. W. Brawley, executive director, of the Senate Standing Committee on Post Office and Civil Service; and the Honorable Tom Murray, chairman, and the Honorable James H. Morrison, the Honorable James C. Davis, the Honorable John Lesinski, the Honorable Chet Holifield, the Honorable Kathryn E. Granahan, the Honorable Charles O. Porter, the Honorable Ralph J. Scott, the Honorable Thaddeus J. Dulski, the Honorable Stanley A. Prokop, the Honorable John R. Foley, the Honorable Donald J. Irwin, the Honorable Randall S. Harmon, the Honorable Dale Alford, the Honorable James C. Oliver, the Honorable Jacob H. Gilbert, the Honorable Edward H. Rees, the Honorable Robert J. Corbett, the Honorable H. R. Gross, the Honorable Joel T. Broyhill, the Honorable August E. Johansen, the Honorable Glenn Cunningham, the Honorable George M. Wallhauser, the Honorable Robert R. Barry, and the Honorable Katharine St. George, members of the House of Representatives Standing Committee on Post Office and Civil Service, and the Honorable Frederick C. Belen, chief counsel and staff director of said committee; to the Honorable Mark O. Hatfield, Governor of the State of Oregon, the Washington, D.C., office of the Portland Chamber of Commerce, Harold Say, manager, and such other persons or organization as the council may direct.

Adopted by the council, June 30, 1960.

RAY SMITH,
Auditor of the City of Portland.

Other letters from interested residents of Oregon make a compelling case against the transfer. I ask that they be printed below:

PORTLAND, OREG., *June 28, 1960.*

Mrs. EDITH GREEN,
Washington, D.C.

DEAR MRS. GREEN: Today the sudden news broke in Portland—the regional office of the U.S. Post Office in Portland, is to be moved to Seattle, Wash.

This is a great shock to all of Oregon and especially to Portland, that has already suffered great losses to various moves in different fields. Over 170 families will be suddenly ordered to sell their homes and find new quarters in Seattle.

This will greatly affect Portland economically with so many leaving at once and think of the additional tax money that will be spent moving this many families.

I, as the mother of one of these employees, implore you to exert your influence and do all in your power to have this unreasonable order retracted. We do need this office right here in Portland.

Yours in all sincerity,

ELLA TRINKLEIN.

OSWEGO, OREG., *July 1, 1960.*

The VICE PRESIDENT,
Washington, D.C.

MY DEAR MR. VICE PRESIDENT: As you know the proposal has been made to relocate the regional office of the Post Office Department from Portland, Oreg., to Seattle, Wash. This proposal was made under the guise of an economic move. I know the economics of this situation very well, and I assure you that this claim is completely unjustified.

Relocation of the regional office is unjustified because Portland is the transportation center region. The five States in the region may be served more effectively by common transportation routes from this point.

Presently the regional office is adequately housed in Government-owned building. If the offices were moved to Seattle expensive commercial space would have to be rented. Currently 32 regional transportation employees work in Seattle. There is no justification for moving four floors of office equipment, electronic computers, electric accounting equipment and imposing hardships on the 180 employees and families for no good reason. It would be far more simple to relocate the 32 employees to Portland.

After examining the facts I am sure you will agree that this action is completely unjustified. I urge you to do all you can to "stop" the relocation of the Portland regional office.

Sincerely,

GEORGE H. TAFT, P.E.

PORTLAND, OREG., *June 28, 1960.*

Hon. EDITH S. GREEN,
U.S. Representative,
Washington, D.C.

DEAR MRS. GREEN: I am writing to request you to use every influence at your command to (1) rescind the recent order issued by Postmaster General Arthur Summerfield to move the regional post office from Portland, Oreg., to Seattle, Wash., and (2) to override President Eisenhower's veto of the postal salary increase should he veto it.

I protest moving the regional post office out of Oregon both as a regional postal employee and as a taxpayer. I cannot see any advantage to the Government in doing this, but on the contrary, it would cost considerably to move approximately 200 regional employees and their household goods, saying nothing of the inconvenience it would cause.

Such a move would result in considerable loss to the economy of the State of Oregon by moving this payroll to Washington.

Also, our pending salary increase is urgently needed.

Thanks for your support in the past and trusting that I can count on you in behalf of the above-mentioned requests.

Very truly yours,

ARTHUR K. SMITH.

PORTLAND, OREG., *June 28, 1960.*

Hon. EDITH GREEN,
House of Representatives,
Washington, D.C.

MY DEAR MRS. GREEN: We strongly protest the removal of the regional post office of Portland, Oreg., to Seattle, Wash.

Why spend a vast sum of money for the moving of special equipment plus the rental of a new building to house this equipment when present location is satisfactory?

Why should Seattle, Wash., have this million-dollar payroll? We urge you use your powers to prevent this move.

Very truly yours,

AGATHA MOORE.
DONNA COFER.

JUNE 30, 1960.

DEAR MADAM: Please do everything in your power to stop the shift of the Pacific Northwest regional post office from Portland to Seattle. The cost to the taxpayers of the United States for rental space alone in Seattle is so unnecessary. Also the uprooting of 170 families of these employees from their church, home, and community would be most detrimental to all concerned.

This seems to be a strictly selfish political move, and in the interest of all taxpayers, should be stopped immediately.

Yours truly,

ELIZABETH FRANKLIN.

PORTLAND, OREG., *June 30, 1960.*

Hon. EDITH GREEN,
U.S. House Office Building,
Washington, D.C.

HONORABLE MADAM: I wish to add my voice in protest of the movement of our regional headquarters, Post Office Department, from Portland, Oreg., to Seattle, Wash., as recently announced in the newspapers.

This will displace a hundred or more Oregon families with the accompanying hardships. This move appears to be a slap in the face to the progress of Portland and should be opposed in every possible way. Whatever the reasons for the movement, which appear on the face to be political, a thorough investigation should be made to be certain that the move is economically and operationally sound.

I urge you in your loyalty to Oregon's progress to apply all possible pressure to thwart this apparently unnecessary move.

Very truly yours,

F. S. BARLOW, Jr.

These letters, Mr. Speaker, make a better case than I possibly could. I again reiterate my urgent plea that the Post Office reconsider this extravagant, unjustified decision.

First 25 Public Laws of Second Session

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. O'HARA of Illinois. Mr. Speaker, since I have been in the Congress I regularly have reported to my constituents in the Second District of Illinois new public laws as they were enacted. Necessarily, in the digesting of the new laws I have had to put in many hours of night work, since attention to my legislative duties afforded no time during the hours of the day. I have felt, however, that the effort was well worth while since, by the inclusion of relatively minor legislation as well as that of major importance, the reports gave to my constituents at home a better understanding of their Congress and the nature and scope of its work. Furthermore, the reports served to give notice to my constituents of new laws affecting them and which otherwise might be unknown to them for a long time. Often reports of new laws were mailed my constituents within minutes after their official numbering.

For the convenience of my colleagues, and others, who wish to have for reference a digest of the laws of the 2d session of the 86th Congress, I am extending my remarks to include Public Laws 384 to 408, the first 25 public laws of the 2d session of the 86th Congress. In the 1st session of the 86th Congress there were 383 public laws enacted; hence the numbering for the 2d session starts with 384.

The digest of laws follows:

PUBLIC LAW 384

S. 2231, protection of childhood

Public Law 384 authorizes an appropriation of $100,000 for fiscal 1961 and 1962 to meet the obligation of the United States as a member of the Inter-American Children's Institute. Our country pays 40 percent of the expenses of the Institute, other countries on the American hemisphere a total of 60 percent. The organization, formerly known as the American International Institute for the Protection of Childhood (a name pretty hard to handle in these busy days, even when initialed AIIPC), appears to have done a good job during the years in a joint hemispheric undertaking. Its most recent achievement was a comparative study of family laws and the problem of abandoned children in the American countries, also a study of correctional systems in Latin America and a translation into Spanish of much helpful material previously available only in English.

As all peoples share a common interest in the welfare of children our cooperation with our American neighbors in this work probably pays richer dividends than much larger investments in winning their hearts and minds. Anyway, I do not see how we abruptly could draw out of the joint program for the welfare of all children of the hemisphere without unfriendly repercussions.

PUBLIC LAW 385

S. 623, veterans and wheat

Veterans of World Wars I and II, homesteading in the Tulelake area in California, find that Durum wheat is one of the few crops that can be grown successfully. Public Law 385 increases their acreage for crop years 1960 and 1961 provided the additional acres are planted with Durum wheat, which is in large demand by manufacturers of macaroni and spaghetti and in limited supply because it is grown in only five States.

PUBLIC LAW 386

S. 2379, Nez Perce Indians

In 1909 the United States paid $562 for 11 acres of land in Idaho as a site for a day school for the Nez Perce Tribe of Indians. Now other arrangements have been made for educating the Indians, and the land is surplus. Public Law 386 donates it to the tribe, which expects to make some money for tribal welfare from tourists. Reason: The final link of a historic highway following the route of the Lewis and Clark Expedition from St. Louis to Oregon will be completed in 1961 and the former school property will be a main tourist attraction because the Lewis and Clark Expedition spent an entire winter there. Perhaps someday when you take the family touring along this historic highway you'll contribute your bit to the welfare of the Nez Perce Indians and get the thrill of standing where the hardy pioneers spent that hard winter when the history of the Northwest was in the making.

PUBLIC LAW 387

S. 713, Zion National Park in Utah

Public Law 387 adds some 3,420 acres to the Zion National Park in Utah which the Department of the Interior describes as containing "a grandeur of colorful canyons and mesa scenery that ranks high among the superlative scenic areas of the world." The additional land will serve to preserve a notable terraced lava field and provide more grounds for campers.

Your Representative consistently has voted for legislation that makes the great out of doors available to the people and for national parks and historic shrines that dramatize for visiting tourists the story of our country and its development. He is cosponsor in the House of Senator DOUGLAS' bill to enclose the priceless scenic and geological treasures of the dunes within a national park. Although opposition is formidable, hope has not been abandoned.

PUBLIC LAW 388

H.R. 8171, San Francisco-Oakland Bridge

Public Law 388 permits the use of tolls collected on the San Francisco-Oakland Bay Bridge for the construction and operation of a rail transit crossing across the Bay of San Francisco. Original plans contemplated use of the bridge both as a rail transit crossing and a highway crossing. But highway traffic has grown so tremendously it now needs all the space. So under the new plan the rails will go underground, crossing the bay by tunnel and leaving the bridge entirely to highway traffic. No Federal funds are involved, and the bridge will be toll free when the cost of the combined project (bridge plus tunnel) has been paid off.

PUBLIC LAW 389

H.R. 9664, stabilizing tobacco prices

Tobacco growing is the chief source of income for 800,000 American farm families. The industry has been adversely affected in competitive foreign markets by an excessive price established under the price control formula. So the growers began by voluntarily reducing their plantings, then petitioned Congress for exemption from the operation of a parity formula that would force tobacco prices more and more into an unrealistic and noncompetitive position. Public Law 389 is intended to serve this end. It stabilizes support levels against disruptive fluctuations, keeps the support level for 1960 at the same level as 1959 and thereafter ties the parity price of tobacco directly to the parity index (the cost of things farmers buy) rather than to the 10-year moving average of farm prices.

From our standpoint as urban dwellers, where much tobacco is consumed but none grown, interest in Public Law 389 is that it will keep tobacco prices stabilized and (very important to all taxpayers) substantially reduce the drain on the Commodity Credit Corporation, the high cost of which is a matter of concern.

PUBLIC LAW 390

S. 2033, placer mining

When the mining law of 1872 was enacted placer mining was a simple operation of washing gravel and separating gold. That romantic era long has passed into the story books. Today mining of gold in the United States is a lost art. Placer mining now is concerned with the production of nonmetallic minerals (gypsum, limestone, quartziti and related clay minerals and building materials) for industrial use.

Instead of the simple washbasin with which the placer miner worked in the old gold days, there is need of extensive building, complex machinery and storage facilities that run into the millions of dollars. These require space. So Public Law 390 provides for the inclusion of 5 acres of nonmineral land (adjacent to the site of the actual mining) in patents to placer claims, same as permitted in patents to lode claims. How the world has moved since 1872.

PUBLIC LAW 391

S. 2061, hunt for phosphate in public domain

At the present time there are 73 leases for phosphate in lands belonging to the United States, covering a total of 48,418 acres. The phosphate found in some of the land is of a low grade, and there is the difficult problem of getting economical electric power. Public law 391 is intended to improve the picture by encouraging prospecting for new locations of phosphate deposits.

It provides for permits to prospect and explore for phosphate in up to 2,560 acres of the public domain with the inducement that if phosphate is discovered within 2 years the permittee shall have the preferential right to a lease of the land. The 2-year period may be extended to 6 years on a proper showing of diligence and need of further exploration.

PUBLIC LAW 392

S. 2268, giving land back to Indians

In 1877 the Fort Apache Military Post in Arizona was established on 7,579 acres of land of the White Mountain Apache Indian Reservation. In 1922 the military post was abandoned and the land turned over to the Theodore Roosevelt Indian School. Today only 410 of the 7,579 acres are being used for school purposes. Public Law 392 turns back the remainder to the Indians.

PUBLIC LAW 393

S. 2431, Kansas centennial

Kansas will be 100 years old on January 29, 1961, and Public Law 393 anticipates the happy event by authorizing the Federal mint to strike out suitable medals and sell them to the Kansas Centennial Commission for not less than cost, including overhead and everything.

History of Kansas really goes back to 1541 when Francisco Vasquez de Coronado led Spanish adventurers in a hunt for gold in the fabled cities of Cibola. Lewis and Clark, Fremont, Kit Carson, passed through Kansas. In Medicine Lodge in Kansas a famous Indian treaty was signed and from Medicine Lodge later came Carry A. Nation, a lady who made her hatchet more famous than the tomahawk. Her hatchet smashed right and left at demon rum in the fight for prohibition and at least once a week made the first pages of the Nation's newspapers.

Also from Kansas came "Sockless Jerry" Simpson, a colorful Member of the Congress, Lewellan, literally taken from the plow to become Governor in the era of the Populist Party, smiling Charles Curtis who became Vice President of the United States, and Al Landon, who tried for the White House but fell by the roadside under the magic of F.D.R.

The finishing touch to the greatness of Kansas was painted by Senator SCHOEPPEL, in his day an all-American football great, in this language:

"Gunslingers and marshals known throughout the world—Wyatt Earp, Wild Bill Hickock, and Matt Dillon—tangled in the cowboy capitals of Dodge City, Abilene, and Wichita." Abilene was the boyhood home of President Dwight D. Eisenhower.

Kansas is a great and a proud State, and I am sure we all will join heartily in 1961 in celebration of her centennial. Looking back over the last century of the history of our country gives us confidence in facing the challenges of the next century.

PUBLIC LAW 394

S. 2454, pony express

Public Law 394 authorizes the mint to strike 500,000 medals for sale at cost to the National Pony Express Centennial Commission, which is cooperating with the Federal Government and eight States of the Union in commemorating the 100th anniversary of the founding of the pony express.

I found the story of the pony express, as related to us, intensely interesting. It was described as one of the most colorful episodes in the history of our country and of far greater significance than merely a life of glorious adventure to some 80 young men so often depicted in western films. It served to bind the country together, proved the superiority of the central (rather than the southern) route across the continent, and paved the way for the first railroad to span the continent 9 years later.

The pony express only existed 19 months, from April 3, 1860, when the first buckskin pouch left St. Joseph, Mo., to the completion of the first telegraph system across the Nation November 20, 1861, when the last delivery left Sacramento, Calif., eastward bound. Buchanan's farewell address and Lincoln's first inaugural address were carried by the pony express, from Missouri to California in 8 days. Usually, however, the 1,966-mile journey took much longer.

Here is how it was done:

1. There were some 80 riders, average age 20, some including the famous Buffalo Bill, barely 15; they were carefully selected, from youths of slender build weighing not over 130 pounds (one exception weighed 160) and trained for constant vigilance against Indians and bandits; risks and salaries were equally great, the riders receiving $50 to $150 a month, fabulous amounts 100 years ago.

2. Relay stations, totaling 190, were spaced 10 miles apart. Here the riders stopped a maximum of 2 minutes to change to fresh mounts and were off again with the wind. The men rode in relays, changing horses at each station. The usual day's stint was 75 miles.

3. Russell, Majors & Waddell, a private company in the express and freight business, poured into the venture an enormous outlay of men, horses, and equipment. It was reimbursed by the Government, somewhat as air companies are now, for service in carrying the mails.

This coming summer there will be a reenactment of the pony express run from St. Joseph to Sacramento. It will follow the original route through Missouri, Kansas, Nebraska, Colorado, Wyoming, Utah, Nevada, and California. I thought you would like to have this briefing in advance.

PUBLIC LAW 395

Senate Joint Resolution 115, Pan American Health Organization

Pan American Health Organization, with headquarters in Washington since 1902, when it was formed, is the oldest continuing international health organization in the world. It now is the regional office of the World Health Organization. Public Law 395 authorizes the purchase of land in Washington (estimated cost, $875,000) as the site for a new $4-million building the organization plans to erect with its own funds. This assures PAHO headquarters remaining in the United States despite attractive inducements to relocate in Mexico, Panama, and Peru.

In the 58 years of its existence PAHO has made a notable record (1) in combating disease, especially yellow fever and malaria, (2) in strengthening friendly relations between the United States and her sister Republics, and (3) in furthering the concept of hemispheric solidarity.

Money for use in conquering disease plagues and in protecting the health of people is the wisest investment we make in promoting real friendship with the peoples of the world. I am sure you will agree.

PUBLIC LAW 396

S. 1712, Motor Boat Act

In 1958 Congress strengthen the Motor Boat Act to assure greater safety in the operation of small motor boats, the number of which has multiplied many times. The law applied to "the United States, its Territories and the District of Columbia." That by inadvertance left the Virgin Islands, Guam, and the Commonwealth of Puerto Rico without the protection of required life preservers and fire extinguishing apparatus since they are neither States nor territories. Public Law 396 extends the act to include them.

You will be interested to know that the correct legislative language to include all the United States is: "The United States, its territories and possessions, the Commonwealth of Puerto Rico and the District of Columbia."

As I mentioned in an earlier report, we have now run out of territories, but we do have Guam and the Virgin Islands, which are classified as unincorporated territories, in reality possessions. I am supporting legislation to give Guam and the Virgin Islands nonvoting representation in the House and also the proposal of House representation for the District of Columbia. That I think is in the tradition of our country.

PUBLIC LAW 397

S. 2483, Weather Bureau in the Arctic

Public Law 397 takes yesterday's administrative handcuffs from the Coast and Geodetic Survey and the Weather Bureau in the world of today by authorizing the Secretary of Commerce to fix the rate of pay for extra compensation for such jobs as going into the Arctic region to conduct meteorological investigations for the Weather Bureau or going to sea as bombers and fathometer readers for the Coast and Geodetic Survey. An old statute fixed a ceiling for certain work of $1 a day. Trouble was where to find qualified $1-a-day personnel.

PUBLIC LAW 398

S. 2185, Saga of the "Meredith Victory"

Public Law 398 authorizes a Gallant Ship Unit Citation and plaque to the steamship *Meredith Victory* and a citation ribbon bar to each member of her crew participating in the saga of December of 1950.

This is an heroic story of the sea that will live forever in the history of the American merchant marine. When the *Meredith Victory* reached the harbor of Hungnam in Korea on December 21, 1950, the city was under enemy gunfire, surrounded by Communist troops with the word out that all persons in the city when captured would be beheaded.

The captain of the SS *Meredith Victory* instructed the crew to load evacuees until no more could be taken aboard. The vessel was small, a 7,600-ton cargo ship with accommodations for only 12 passengers. In all, over 1,400 Korean civilians were packed aboard, goodness knows how. There was no doctor, no interpreter, very little food, very little water. The vessel sailed 3 days, part of the time over a minefield, with the ever-present danger of being blown into bits. During the trip no one died, but five babies were born. Thus when it docked at Pusan on Christmas eve it discharged five more passengers than it had taken on at Hungnam.

I was impressed by the language of Vice Admiral Will, commander of the Military Sea Transportation Service, in recommending passage of the measure:

"Few epics of the sea captured the imagination as did the saga of the *Meredith Victory*. She not only saved the actual lives of 1,400 persons on a single voyage, but even more than that, she and her gallant crew became symbols of the American attitude that human lives are more precious than ideologies."

PUBLIC LAW 399

S. 601, Bardwell Reservoir in Texas

Storms and floods in the Trinity River Basin in northeast Texas occasion an average $500,000 annual loss. Public Law 399 authorizes the construction of the $7 million Bardwell Reservoir on Waxahachie Creek in the river basin, local interests contributing some $2 million. The legislation was recommended by the Army Engineers, upon whom we depend for guidance in matters of flood control.

PUBLIC LAW 400

S. 1159, slum clearance in District

Public Law 400 repeals the provision that the District of Columbia Housing Authority cannot purchase land for slum clearance at private sale at a price exceeding 30 percent of assessed value, which is about half of market value. Reason: few owners would sell by negotiation at a price 15 percent of market value and the Authority was forced into costly and time-consuming condemnation proceedings.

PUBLIC LAW 401

H.R. 24, Indian land in Nevada

This gives back to the Fort McDermitt Paiute and Shoshone Indian Tribe in Nevada 160 acres of land used from 1905 to 1956 as the site of an Indian boarding school. The school now is closed.

PUBLIC LAW 402

This permits the entry duty free of all ground, powdered or granulated seaweed on the same basis as seaweed kelp. Principally affected is seaweed of the Irish moss variety, used by American processors in the production of a powdered extractive for jellying and thickening foods.

PUBLIC LAW 403

In 1860 the surveyor of the lands of the Lac du Flambeau Indian Reservation in Wisconsin by error omitted some 45 acres from his plat. A century later the Congress of the United States had the job of quieting title to the land the surveyor overlooked. Public Law 403 permits the tribe to sell the land to the present occupants at fair market value.

PUBLIC LAW 404

In 1951 the construction of the Platoro Dam and Reservoir in Colorado was completed, but unprecedented droughts prevented its utilization for irrigation. Hence the Conejos Water Conservancy District was unable to meet the first of its 40 annual re-

payments to the Government on the cost of the construction. Public Law 404 extends the repayment periods for 5 years. It is expected that with this help and improved conditions the debt eventually will be paid in full.

PUBLIC LAW 405

H.R. 7456, casein

Public Law 405 extends for 3 years the suspension of import duty on casein. Edible casein is made from skim milk, and since 1952 the milk price support program has discouraged the conversion of skim milk into casein. Industrial casein, which is almost entirely imported, is used in the manufacture of coated paper, coldwater paints, and mucilage.

PUBLIC LAW 406

H.R. 4483, lands for Geological Survey

I was interested to learn the Geological Survey maintains an invaluable record of ground water conditions by measuring the fluctuations of water levels in some 12,000 wells throughout the country.

Unfortunately, most of the wells are privately owned and can be closed to use by the Geological Survey at will of their owners. When this happens the Survey's work is badly jammed up. Public Law 406 sensibly authorizes the Survey to purchase the sites of the wells so that its good work can go on uninterrupted.

PUBLIC LAW 407

H.R. 5270, returning gift to the giver

In 1949 the Metropolitan Water District of Salt Lake City, Utah, gave some 8 acres of land to the Federal Government for a proposed project that never materialized. Public Law 407 returns the land to the giver.

PUBLIC LAW 408

H.R. 7889, rice-marketing quotas

Public Law 408 provides for rice-marketing quotas when the supply is normal instead of 110 percent of normal. Marketing quotas are designed to result in a normal supply, and quotas based upon a normal supply plus 10 percent in any year can result in excessive plantings and an abnormal supply the next year.

To us in urban areas the good news in Public Law 408 is that it will reduce the cost to the Commodity Credit Corporation and thus lighten the taxpayers' burden.

Foreign Policy Association

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. DAVIS of Georgia. Mr. Speaker, on May 5 the North Side News of Atlanta, Ga., carried an editorial regarding an investigation made by the March–April grand jury of Fulton Superior Court and a presentment based upon that investigation.

This investigation and presentment dealt with a study course of the Foreign Policy Association. The North Side News editorial was as follows:

WHAT THE GRAND JURY SAID

For 3 days last weekend, both downtown daily newspapers in news stories and editorials lambasted the March-April grand jury for coming up with a presentment critical of the Foreign Policy Association.

The grand jury was said to have been critical of a Foreign Policy Association study course which has been slipped into classroom work of Atlanta and Georgia schools, and which, the jurors said, was designed by groups not too favorably known for healthy Americanism.

Nowhere in their columns did either newspaper print what the grand jury said. So the reader can better understand, the News prints here the complete text of the grand jury presentment:

"SUBVERSIVE MATERIALS IN SCHOOLS

"An extensive investigation has been made by the jury into the Foreign Policy Association of New York City and its 'great decision program,' which it is sponsoring in our area. This program includes such controversial items as (1) Communist timetable for 1960; (2) divided Europe, cooperation or crisis; (3) Red China on the march; (4) Cuba's revolution; and similar subjects.

"This matter was brought to our attention by the Americanism Committee of the Waldo M. Slaton Post, No. 140, American Legion, and several other local patriotic groups. We were informed that the 'great decision program' was being taught in our public high schools and by various well-meaning civic and religious groups who were not aware of the past records of the leaders of the Foreign Policy Association, nor of the authors of the textbooks prescribed for this 'great decision program.' Evidence was presented to us showing that some of these leaders and authors had a long record, dating back many years, in which they either belonged to or actively supported leftwing or subversive organizations.

"We further found that invitations to participate in these study groups were being mailed throughout our county under the name of one of our local universities as its 1960 sponsor. We learned that the prescribed booklets were available upon request in our local public libraries. It is this jury's opinion that these activities have been participated in by our local people in their utmost sincerity. This so-called course of study has been embraced without any knowledge of the past history and records of its leaders and authors of its texts.

"We are grateful for the cooperation of the department heads of our schools and to the officers of our local civic groups who have assisted us in this matter. All have pledged that appropriate actions will be taken to see that all education for students and adults shall be safeguarded against the subversive propaganda tactics of any organization.

"The range of the activity by this organization has reached alarming proportions in the schools and civic groups in certain other areas in Georgia. Its spread is a matter of deep concern to this jury, and we, therefore, call upon all school officials throughout the State to be particularly alert to this insidious and subversive material. We further recommend that all textbook committee members, city, county, and State, recognize the undesirable features of this material and take action to remove it from our schools.

"Finally, we urge that all grand juries throughout the State of Georgia give matters of this nature their serious consideration. Information and assistance is available to those educators, public officials, and other grand juries when needed."

On May 9, Waldo M. Slaton Post No. 140 of the American Legion adopted a resolution which recites that that post of the American Legion laid before the Fulton County grand jury certain material circulated by the Foreign Policy Association, and commended the March-April grand jury for its presentment regarding this material.

The resolution of the Waldo M. Slaton Post is as follows:

RESOLUTION OF WALDO M. SLATON POST, NO. 140, THE AMERICAN LEGION

Resolution petitioning Senators RICHARD RUSSELL and HERMAN TALMADGE and Congressman JAMES C. DAVIS to arrange for insertion in the CONGRESSIONAL RECORD presentment of the grand jury (March–April) 1960 term in respect to the great decisions program of the Foreign Policy Association and also the newspaper advertisement of the Americanism committee and the editorial and the news story published in defense of the grand jury

Whereas the grand jury (March–April 1960 term) of Fulton County, Ga., had the insight and the courage to take public note of the undesirable situation in respect to indoctrination of the school children of Atlanta and Fulton County by certain material being offered to them in the great decisions program of the Foreign Policy Association, said material having been laid before the grand jury by the Americanism committee of Waldo M. Slaton Post No. 140 of the American Legion; and

Whereas the Americanism committee of this post, in defending the grand jury from attacks made by the Foreign Policy Association did insert in the North Side News an advertisement in which it documented certain of the charges it had laid before the grand jury; and

Whereas the Americanism committee believes it to be in the public interest to give this documentation wider circulation: Be it therefore

Resolved, That the Waldo M. Slaton Post No. 140 of the American Legion hereby request that Senators RICHARD B. RUSSELL and HERMAN TALMADGE and Congressman JAMES C. DAVIS use their offices to arrange for publication of the grand jury presentment, the aforesaid advertisement, editorial, and news story in the CONGRESSIONAL RECORD.

The advertisement referred to in the above resolution was carried in the North Side News on May 5, 1960, and was as follows:

U.S. RECORDS PROVE OUR GRAND JURY HAD OFFICIAL FACTS ON THE FOREIGN POLICY ASSOCIATION

MAY 1, 1960.

Mr. DAVE WARNER,
Foreign Policy Association,
Atlanta, Ga.

DEAR MR. WARNER: In regard to your characterization of the grand jury's presentment as "cowardly," in advance of the publication of the presentment—an action which we think is ethically dubious—we would like you to give an explicit and categorical answer to each of the following questions which are not based on rumor but on U.S. Government documents, all published and available to everybody.

1. Do you deny that there was a close working relationship and, in fact, an interorganizational coordination between the Foreign Policy Association, the Institute of Pacific Relations, and the Carnegie Endowment for International Peace during the incumbency of Alger Hiss, as it was brought out by the subcommittee of the Senate Committee on the Judiciary, January–February 1952; pages 2817–2819, Institute of Pacific Relations?

2. Do you deny that Alger Hiss endorsed the Foreign Policy Association in the Carnegie Endowment for International Peace, 1947 Yearbook, and that due note of this was taken in the hearings of the Special Committee To Investigate Tax-Exempt Foundations and Comparable Organizations, House Resolution 217, 83d Congress, 2d session, page 9217

3. Do you deny that the Reece committee report No. 2681 contains the following citation of Vera Micheles Dean, research director and editor of the Foreign Policy Association's bulletin:

"Mrs. Dean belonged among those who in 1937 signed their names in the Golden Book of American-Soviet Friendship, a memorial which appeared in the Communist front magazine Soviet Russia Today, of November 1937. According to the testimony of Walter S. Steele, before the House Un-American Activities Committee, on July 21, 1947, Mrs. Dean's writings figured in Communist propaganda kit for teachers of the National Council of American-Soviet Friendship.

"Mrs. Dean cooperated with the world's toughest Communist agents, such as Tsola N. Dragiocheva, of Bulgaria, and Madame Madeleine Braun, the French Communist deputy, in helping set up the Congress of American Women, a Communist front so important in its worldwide ramifications that the House Un-American Activities Committee devoted a 114-page pamphlet to it (H.R. 2681, 83d Cong., 2d sess.)

4. Will you deny that without a single warning as to its nature, the book "The United States and China," by John K. Fairbank is offered great decisions discussion groups, as "a comprehensive treatment of United States-Chinese relations," when, as a matter of fact, John K. Fairbank has been exposed by the McCarran committee of 1952 in its official report on the Institute of Pacific Relations, as follows:

Fairbank, John K., trustee (p. 3742): Identified as a member of the Communist Party by one or more duly sworn witnesses. Denied.

Affiliated with Amerasia (exhibit 1335); American Committee in Aid of Chinese Industrial Cooperatives, also known as Indusco, Inc. (p. 3794); China Aid Council (p. 1513).

5. Will you deny that the Foreign Policy Association has placed this book, "The United States and China," by the above-cited John Fairbank, within the reach of high school children taking part in its great decisions without a single warning that within its pages are suggested, one after the other, the following authors, also cited in the McCarran report with their activities:

1. Page 324: Olga Lang, writer, who is listed in the McCarran report, page 155:

"Olga Lang, writer (p. 270), identified as a member of the Communist Party by one or more duly sworn witnesses. Made one or more trips to Communist territory. Writer for official publications of the Communist Party or the Communist International or for a Communist government or for pro-Communist press services. Out of country or otherwise unavailable for subpena. Affiliated with Amerasia (exhibit 1335); American Committee in Aid of Chinese Industrial Cooperatives also known as Indusco, Inc. (p. 2793). (See McCarran report, p. 155)."

2. Page 327: Owen Lattimore, who is cited as follows in the McCarran report, page 155:

"Lattimore, Owen, editor, Pacific Affairs (exhibit 801); trustee (p. 568); executive committee (p. 1313).

"Identified as a member of the Communist Party by one or more duly sworn witnesses. Denied.

"Collaborated with agents of the Soviet intelligence apparatus as shown by sworn testimony. Denied.

"Made one or more trips to Communist territory.

"Affiliated with Amerasia (p. 35)."

We also direct your attention to page 224 of the same Government document, in which you will find the following entry:

"Owen Lattimore was, from some time beginning in the 1930's, a conscious articulate instrument of the Soviet conspiracy."

Now we return to the enumeration of writers recommended by John K. Fairbank in "The United States and China," which is, in turn, recommended by the Foreign Policy Association and its great decisions discussions: page 334:

3. Edgar Snow, who is cited as follows in the McCarran report, page 157:

"Snow, Edgar, member and writer (p. 73, exhibit 1334):

"Made one or more trips to Communist territory.

"Affiliated with Amerasia (exhibit 1355); China Aid Council (p. 1514); Committee for a Democratic Far Eastern Policy (p. 2789)."

4. Page 334: Nym Wales, who is Mrs. Edgar Snow, and listed as follows in the McCarran report, page 157:

"Snow, Mrs. Edgar (Nym Wales), member and writer (exhibit 1334).

"Identified as a member of the Communist Party by one or more duly sworn witnesses.

"Made one or more trips to Communist territory.

"Writer for official publications of the Communist Party or the Communist International or for a Communist government or for pro-Communist press services.

"Affiliated with American Committee in Aid of Chinese Industrial Cooperatives, also known as Indusco, Inc. (p. 3793); Committee for a Democratic Far Eastern Policy (pp. 4610–4611); Friends of Chinese Democracy (p. 622)."

5. Page 334: Agnes Smedley, who is identified by the McCarran report on page 157, as follows:

"Agnes Smedley, member (p. 73).

"Identified as a member of the Communist Party by one or more duly sworn witnesses.

"Collaborated with agents of the Soviet Intelligence apparatus as shown by sworn testimony.

"Made one or more trips to Communist territory.

"Affiliated with Amerasia (exhibit 1355); Committee for a Democratic Far Eastern Policy (p. 2789). Deceased."

6. Page 335: Philip Jaffe, identified in the McCarran report on page 154:

"Jaffe, Philip R. (James W. Philips), conference participant (exhibit 1334); financial contributor (p. 71, exhibit 1383).

"Identified as a member of the Communist Party by one or more duly sworn witnesses.

"Made one or more trips into Communist territory.

"Writer for official publications of the Communist Party or the Communist International or for a Communist government or pro-Communist press services.

"Subject of action by agency of American Government or a foreign non-Communist government on grounds involving loyalty or national security.

"Affiliated with: Amerasia (p. 35); American Committee in Aid of Chinese Industrial Cooperatives, also known as Indusco, Inc. (p. 3794); American Friends of the Chinese People, official organ; China Today (p. 4170); American Russian Institute (p. 686); China Aid Council (p. 410); Committee for a Democratic Far Eastern Policy (p. 2789).

"Signer of a statement attacking the United States for 'suppressing the Chinese masses and fomenting civil wars among them.'"

7. Page 335: T. A. Bisson (Frederick Spencer): associate editor, Pacific Affairs (p. 4188); research associate (exhibit 801):

"Identified as a member of the Communist Party by one or more duly sworn witnesses.

"Made one or more trips to Communist territory.

"Subject of action by agency of American Government or a foreign non-Communist government on grounds involving loyalty or national security.

"Affiliated with: Amerasia (p. 35); Friends of Chinese Democracy (p. 622); American Committee in Aid of Chinese Industrial Cooperatives also known as Indusco, Inc. (p. 3793); American Friends of the Chinese People, official organ: China Today (p. 4272); Committee for a Democratic Far Eastern Policy (p. 2789).

"Signer of a statement attacking the United States for 'suppressing the Chinese masses and fomenting civil wars among them.'"

8. Page 335: Lawrence K. Rosinger, identified by the McCarran report on page 157:

"Rosinger, Lawrence K., research associate (exhibit 801).

"Identified as a member of the Communist Party by one or more duly sworn witnesses.

"Refused to answer on the ground of self-incrimination.

"Affiliated with: Amerasia (exhibit 1355); China Aid Council (p. 1513)."

10. Page 339: Dorothy Borg, listed in the McCarran report, page 152:

"Borg, Dorothy, staff member (p. 996); education secretary IPR (exhibit 801).

"Writer for pro-Communist press services.

"Affiliated with: Amerasia (exhibit 1355); Federated Press (p. 2634)."

6. Mr. Nason, the Foreign Policy Association's president, has made, according to the Atlanta Journal and Constitution of Sunday, May 1, 1960—also in advance of the grand jury's publication of its presentment—a statement involving the following charges:

(a) That the grand jury's allegations were made "without basis whatsoever."

(b) That no proof was offered by the grand jury, which "apparently was misled by rumor, hearsay, and actual misrepresentation of fact."

(c) That the "ultimate purpose" of this organization of the FPA is to aid in guaranteeing the security of the United States and the well-being of the American people.

Question. Is it the opinion of the Foreign Policy Association's president, Mr. Nason, or its local chairman, Mr. Warner, that it is a sound way to guarantee the security of the United States and the welfare of the American people by exposing them in widespread discussion groups to the unlabeled propaganda of those: (1) Who have been identified under oath as members of the Communist conspiracy, and/or (2) who have been identified under oath as collaborators with agents of the Soviet Intelligence, and/or (3) who have been the subjects of action by an agency of the American Government or a foreign non-Communist government, on grounds involving loyalty or national security, and/or (4) have been involved with the disgraceful Amerasia scandal?

Question. Was Mr. Nason the president of Swarthmore College? Was Swarthmore College among the institutions of higher learning that refused to permit students seeking U.S. Government funds the liberty and right to pledge allegiance to the American flag—under which public funds were offered toward their education?

Question. Does Mr. Nason think that the way to guarantee the security of the United States is to teach college students—particularly those seeking financial help from the U.S. Government—that they owe nothing—not even a simple pledge of loyalty to their flag?

7. Was your testimony before the Fulton County grand jury made under oath?

8. Will you offer to appear before the next grand jury and answer each allegation in the Church League of America's attack on the Foreign Policy Association under oath, either denying or affirming the Communist front record of Emil Lengyel, along with the other charges, which have been brought by the Church League of America's researcher, in regard to the FPA?

9. You have announced that you hold many endorsements from public figures. Beginning alphabetically, will you produce the endorsement of Senator GEORGE D. AIKEN, of Vermont?

10. In order that you may be delivered from the imputation of resorting to innuendo—a technique with which you have

charged your Atlanta critics—will you identify the man and his organization out of Wheaton, Ill., who started the hate-mongering movement against the Foreign Policy Association, and who has a long record of smearing any study of international affairs?

11. In your retort of March 21, 1960, to the charges made in News and Views by Maj. Edgar Bundy, you brought into the record an attack on Major Bundy made by the Reverend Dr. Eugene Carson Blake. Here are your exact words:

"A word should be said about our present accuser, Captain Bundy (Edgar C. Bundy), the editor of News and Views. Having recently inserted himself into the Air Force manual hassle, Captain Bundy drew the following comment from the Reverend Dr. Eugene Carson Blake, a former president of the National Council of Churches and at present, chief administrative officer of the United Presbyterian Church: 'despite the injuries done to Protestant churches by this type of attack, aided and abetted by persons such as Captain Bundy and other discredited superpatriots it is not the desire of Protestant Church leaders that their freedom of expression should be choked off."

Question: Is this the same National Council of the Churches of Christ that admits to the publication of the Negro American which offers 260 titles of books which the pamphlet says "are safe to recommend for children"? The Negro American lists 202 authors, among them being Langston Hughes who wrote poems entitled, "One More S in the U.S.A." (the S stands for Soviet), and "Goodby Christ", a poem which should be read in its entirety by those who wish to see how abusive and insulting Hughes can be to Christ, but which can be gaged by a few lines:

Goodby, Christ Jesus, Lord, God Jehovah,
Beat it away from here now.
Make way for a new guy with no
Religion at all—
A real guy named
Marx Communist, Lenin Peasant,
Stalin Worker, me—
I said, me!

Question: Is this the same National Council of Churches of Christ that has constituted itself a lobby for Red China, claiming the support of 39 million Protestants, despite the protests of outstanding Protestant leaders and their groups, such as Edgar Bundy, Carl McIntyre, Daniel Poling, and even Atlanta's own Methodist bishop, Arthur J. Moore, who expressed his support of Chiang Kai-shek in the Atlanta Journal on March 19, 1959?

Question: Is it in collaboration with the National Council of Churches of Christ that the Foreign Policy Association, despite its claim of "taking no position on national issues," and despite its claim of "objectivity," manages to have an array of appeals for the recognition of Red China made by those whose names are closely associated with the name, Foreign Policy Association—even though they maintain that they do not speak for the Foreign Policy Association? Have any members of the Board or the editorial staff or other figures prominently associated with the organization spoken strongly against the recognition of Red China to counterbalance the appeal made by Eustace Seligman, who was the chairman of the Foreign Policy Association, when he was reported as endorsing the recognition of Red China on September 17, 1958; or the statement made by Henry Steele Commager on January 26, 1955, that we must "reexamine the assumptions of our foreign policy—even of our present China policy." Not to mention the suggestive wording of the remark by Vera Micheles Dean, herself, in the Foreign Policy Bulletin of March 15, 1959, expressed in her customary eventoned, "calm and measured" language:

"And a question, as yet unanswered, hovers over the conference: Can any control and inspection system be established without the cooperation of Communist China, whose government is not recognized by the United States and has not been admitted to the United Nations."

12. In your attack on the Fulton County Grand Jury which appeared in Sunday's Constitution and Journal, (p. 13-D), you claim the endorsement of Senator RICHARD RUSSELL and Senator HERMAN TALMADGE. The American Legion is prepared to publish letters from both of these Senators explicity disclaiming endorsement of the Foreign Policy Association. These letters are being submitted for inspection to the editorial department of the newspapers in the metropolitan area of Atlanta.

THE AMERICANISM COMMITTEE OF WALDO M. SLATON POST NO. 140, THE AMERICAN LEGION.

Pursuant to the resolution of the Waldo M. Slaton American Legion Post, I had arranged to insert the resolution and material referred to in the CONGRESSIONAL RECORD immediately after the adoption of the resolution. However, a request was made of me that the insertion be withheld pending a further investigation by the May–June grand jury. That grand jury did give consideration to the subject, and when its final presentments were returned on June 30, they contained the following statement regarding the material circulated by the Foreign Policy Association:

FOREIGN POLICY ASSOCIATION

It is our understanding that the Foreign Policy Association's "great decision" program, criticized by the March–April grand jury, Fulton County, has been removed from the Atlanta and Fulton County schools.

The merits of this program and its contents is more suitable to mature minds.

Numerous letters from all over the United States have been received by this grand jury, from individuals and associations, commending the presentment of the previous grand jury on the Foreign Policy Association. Not a single letter has been received by us criticizing these presentments.

We have investigated this program as thoroughly as the limited time would afford and feel that the subversive angle to this program, if there is one, should be subject to a thorough investigation by a National or Federal agency.

I have a wide personal acquaintance with the members of Waldo M. Slaton Post of the American Legion. The membership of this post is made up of outstanding business and civic leaders. I am glad to comply with the resolution adopted by the post to insert the material carried in these remarks. Under unanimous consent previously granted, I commend this material to the membership of the House.

Gen. Joseph Haller

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. GARMATZ. Mr. Speaker, I have had the honor and pleasure for many years to join with the members of General Haller Post 95, American Legion, Department of Maryland, at the various patriotic ceremonies and observances this organization sponsored. The members of this post, whom I am proud to have as constituents, were deeply saddened by the death of the great Polish patriot and "iron brigade" commander, Gen. Joseph Haller, whose illustrious name they chose for their outstanding Legion post.

In tribute to the memory of this eminent military leader who, like Pulaski and Kosciuszko, will always be remembered for their contributions to the cause of freedom, the General Haller Post held a memorial service on June 17, 1960, and I include the following article from the Baltimore Guide of Thursday, June 30, 1960, which reports the memorial exercises:

GENERAL HALLER POST 95 HOLDS MEMORIAL TRIBUTE

Gen. Joseph Haller Post 95, American Legion, Department of Maryland, on Friday, June 17 held at the post home, 1746 Fleet Street, a memorial service for the late Gen. Joseph Haller, who passed away in London, England, on June 4 and was buried on June 11.

The Haller Post 95, American Legion, had special permission from the late general to use his name for its post, the oldest Legion post in southeast Baltimore, now over 40 years old.

The American and Polish people of the area remember Gen. Joseph Haller who was at the front in France in 1918, and was commander of the "iron brigade" in the war Poland had with Russia in 1920.

General Haller was in America to further the cause of freedom in 1940, during World War II, while stationed in France.

His last visit to this country was to New York, in a parade to honor Count Casimir Pulaski, the Polish patriot who fought and died for this country during the American Revolution in the siege of Savannah, Ga.

General Haller at the time of his death was 86 years old. The general's wife, whom he married in 1906, Miss Aleksandre Sala, died in 1925.

Land of Shining Mountains

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. METCALF. Mr. Speaker, every day people are discovering the wonders of Montana's wilderness. Many are surprised to find that in this natural wilderness there is no corresponding wilderness of educational opportunity. En route to the Governors' conference at Glacier National Park, writer William H. Stringer of the Christian Science Monitor met Montana.

In a June 30, 1960, article, he described the beauties of unspoiled nature, and the remarkable record of Montana's colleges and universities. He found that 79 to 80 percent of parents in the Mountain States expect their children to go to college, compared to 60 to 65 percent in New England. He learned, too, of Montana's participation in U.S. techni-

cal assistance programs overseas. He found that this mountainous State in the midst of our Nation was young training men and women in an International Cooperation Center at Montana State College. He heard of Montanans abroad, and of foreign students in Montana. His story of Montana's natural beauty and educational achievements follows:

LAND OF THE SHINING MOUNTAINS

(By William H. Stringer)

BOZEMAN.—The tenderfoot from the east coast States who heads westward, airport by airport—Denver to Cheyenne to Billings—into the Mountain States and the Zane Grey country and the true "West," is fairly sophisticated about what he expects to find.

He knows that the Indians are now on the reservations and not on the warpath, that this is likely to be mining and grazing country, and he is not surprised when posters in the downtown stores of some town announce an intercollegiate rodeo. But he is not prepared for everything he is likely to discover.

Maybe he should have been forewarned by that Ford Foundation report which recently showed that, whereas in New England some 60 to 65 percent of parents expect to have their children go to college, in the Mountain States the percentage runs 79 to 80, quite a sprint above the national average of 69 percent.

But suppose he comes over Bozeman Pass, the plane just skimming the high evergreens, to land in Montana's wide Gallatin Valley, where the city of Bozeman sits beside the three forks which constitute the headwaters of the Missouri, and where the framework of high ranges circling all about—the Madisons, the Tobacco Roots, the Gallatins—earn for Montana State College there the title "Land-grant college of the Land of the Shining Mountains."

This is sparkling, lovely country in June. The mountains are majestic, and snow from their caps melts and runs icy-cold down canyon streams to flood the irrigation ditches with rushing, singing water. Every last forage-growing acre of this valley must be irrigated, and water rights here are more precious than most material possessions.

Handsome pheasants stalk across the country roads, gophers burrow in the fields, magpies sway on the barbed-wire fences, and in the rushing streams—well, they tell you that this is the best trout fishing in the land. And in the winter months herds of elk wander down from the high plateaus of Yellowstone Park.

But I meant to talk about 20th-century activity here in Montana. One thing I hadn't realized was how extensively these Mountain State universities are participating in the U.S. technical training programs abroad.

When President Roland Renne, of Montana State College, was on Government assignment in Ethiopia—on leaves of absence he has also served the International Cooperation Administration in the Philippines and Peru—he met up with 15 Americans who hailed from Montana. Other professors have been working in Iran, in Kenya, in Nepal. Montana State has been invited to accept a contract to develop a college of agriculture in Paraguay.

There is a new international cooperation center at Montana State which, like the school at Syracuse University, is training graduates in "overseasmanship"—how really to live and behave abroad, how to make one's mission a success. Graduates already equipped in engineering, sociology, geography learn the "practical" business of how to persuade an oversea farmer to use a better brand of wheat, or how to go about building a house or school in a native village. Some students spend months in Mexican villages or work on Indian reservations to get their "practical" training.

The Mountain State colleges are also host to many a foreign student. The present Ambassador from Iran was a few short years ago a college student at the University of Utah. At Montana State 140 students are from overseas.

One sees the exchange pattern at many colleges all over the United States. But the universities in a State like mountainous, scant-rainfall Montana are especially equipped to handle problems of irrigation, soil reclamation, mining, woolgrowing, and forage crops—the identical concerns of many a recipient of U.S. foreign aid situated in the higher and drier portions of the globe.

There's a special zest in the academic life hereabout. In one week at Montana State the college was host to the American Legion, "Girls State" (high school girls acting out State government), a session of the agricultural stabilization committeemen from all the Montana counties, and a meeting of the School for the Blind. A university here is the cultural center for the State.

But the professors, I am also glad to report, take time out to go fishing, to photograph the high canyons, and to attend barbecues and rodeos.

National Purpose Hullabaloo

EXTENSION OF REMARKS

OF

HON. JESSICA McC. WEIS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mrs. WEIS. Mr. Speaker, there appeared in the Rochester, N.Y., Democrat and Chronicle of July 2 an article which deserves reading by the Members of Congress and by every thinking American.

The article was written by Sol M. Linowitz, one of the genuinely outstanding members of the Rochester community, and it deals with the subject of "National Purpose," which has been widely discussed in recent months.

The theme of Mr. Linowitz' article is that America's national purpose is, to borrow from Thomas Jefferson:

Self-evident—that all men are created equal and are endowed by their Creator with certain inalienable rights—life, liberty, and the pursuit of happiness.

It is his contention that what America needs today is not a redefinition of this basic purpose but rather a rededication to its fulfillment.

This is the finest article of its kind which I have read, and I commend it to the attention of every Member of this body. Under previous consent I include it in the Appendix of the RECORD:

NATIONAL PURPOSE HULLABALOO

(Publicist, lawyer, past president of the Rochester Chamber of Commerce, monitor of his own television show on WHEC–TV, and president of the New York State Association for United Nations, Sol M. Linowitz feels that the Fourth of July should be looked upon as something more than the third day of a long weekend.)

From one end of the country to the other these days we seem to be swept up in a search to define and identify our national purpose. The effort has been variously labeled a "crusade," a "historic search," a "great debate," and even a "dedicated mission." Thoughtful people everywhere are being implored by magazines, newspapers, television and radio to do their own soul searching and to evolve their own definitions of "national purpose."

This is the right time, I think, to ask what all the shouting is about and whether we really need such a high-decibel campaign in order to clarify what our national purpose is and ought to be. We should really ask whether it is necessary to mobilize so much brainpower, voicepower and penpower on the issue.

I have nothing against this kind of absorption in a national search for self-identification. But I do not understand why so many people are so passionately asserting that we are embarked on an undefined mission toward an unclear objective guided by imperceptible landmarks.

It is one thing to say that we are not as imbued as we should be these days with a sense of urgency. No one has ever put it better than Michael Shipkov who was captured by the Communists several years ago, subjected to prolonged and painful questioning, then recaptured. In describing his captors he said:

"They are disciples and fervent followers of the dogma. Not much imagination, nor quick brains, nor much intelligence, nor sensitivity—but undeviating loyalty to their creed, and, above all, fanatic belief in their own cause."

We simply do not have that kind of a fanatic belief in our cause. But the reason is not because we do not have a cause. It is rather because we seem to have forgotten what the cause is and what, as a nation, we are for.

The need, in other words, is not for a redefinition of national purpose, but a recollection of national purpose. What we require is not a further articulation of the things for which we should stand, but an earnest effort to begin to stand for the things for which we have always said we do stand.

It is worth looking back to see what we are all about.

We are the kind of Nation we are because we have on our side the accumulated benefit of many centuries of groping for ways to make human rights and freedoms secure. More than anything else, this is what distinguishes us from the Russians. For measured against our own past, the Soviet Union stands coarse and naked and empty. It has never known an awakening from darkness; it has never experienced the mellowing of history; it has never achieved the unity of purpose which comes only when free men join—as they did here 184 years ago—in mutual trust and freedom to pledge to one another their lives, their fortunes, and their sacred honor.

It is hardly three lifetimes since this group of brave, determined men came together in this country to say certain things in which they believed. They borrowed ideas from men like Aristotle, John Locke, and Thomas Hobbes and shaped them and set them afire. They said what they had to say "out of a decent respect to the opinions of mankind." And at a time when we were but a loose group of weak and scattered colonies with less than 3 million people, they lit up the western sky with a great basic idea: That a free society must have as its fundamental, overriding purpose the preservation of human rights.

This country has known many black hours since then.

The Nation grew strong before it was struck down by civil war. We have survived two world wars, each claiming a generation of American dead. And the great idea of human freedom has been the concept which has been our greatest mark of distinction as a people. It has been and always must be our real national purpose.

There are two simple phrases which, I think, sum up this purpose. One is that "all men are created equal"; the other is Lincoln's assertion that here we have a government "of the people, by the people, and for the people." The question is not whether these are, in fact, the core of our national purpose. The real problem is how to make them part of our national practice.

When we, for example, cite the Declaration of Independence and practice Little Rock, who is fooling whom? When we use the right words while we do the wrong things, who is being misled? Is it really possible to make our concept of freedom a rallying cry if millions of colored people about the world feel that we have open mouths but closed hearts—that we are apt to be more concerned with a man's skin than with his face? In short, must we not understand—and make sure that the people of the world understand—that what made sense to the pigs in George Orwell's "Animal Farm" just does not make sense to free Americans: That here we cannot announce that all are created equal and then in practice tack on the phrase "but some are created more equal than others"?

Or take Lincoln's reminder that our Government must be one "of the people, by the people, for the people." What do we do in practice to make it that kind of a government? Do we really understand that such a government "of and by the people" cannot be achieved merely through quadrennial spasms at a time of national elections; that it requires tending to—conscientiously, thoughtfully, reverently—by all of the people, and not just by politicians and office seekers?

Anyone who travels abroad appreciates the intense interest other people have in our way of life and in what we are doing with the greatest democratic experiment in history. They watch in dismay when we ignore our responsibilities as citizens and fail to exercise the precious right to vote in freedom. Or when we complain loudly about governmental waste and abuse and at the same time demand special or favored treatment for a pet project. Or when we rely upon prejudice, tubthumping or breastbeating rather than on calm and thoughtful analysis of vital issues. Or when we try to meet challenges to our Nation as world leader by assuming the posture of the ostrich.

We have a great responsibility at one of the decisive hours of world history. We shall discharge that responsibility not by building larger sputniks or faster and more destructive missiles—or even by framing new stirring statements of national purpose. We can only do it by trying to live up to the things which since July 4, 1776, have always been our national purpose: By living and acting the way freemen must live and act who truly understand the meaning of human freedom.

SOL M. LINOWITZ.

Public Laws 409–449

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include a digest of Public Laws 409 to and including 449 of the 2d session of the 86th Congress as reported by me to my constituents in the Second District of Illinois:

PUBLIC LAW 409

S. 2482, exploring the oceans

Public Law 409 is important. In its projection into the future it may prove as vital to our survival and welfare as any legislation of the 86th Congress. It removes territorial limitations on the activities of the Coast and Geodetic Survey, which heretofore could conduct its scientific researches and explorations only in the United States, its territories and possessions. Now the whole world of outer space, the frozen wastes of the Arctics and the bottoms of the seas are opened to it. It is expected to play a leading part in the expanded research operations which experts in the scientific field declare to be essential in our race to overtake Russia.

National Academy of Science, the National Research Council and the Committee on Oceanography all are concerned over our Nation's deficiency in studies of the oceans. Research, explorations and studies in oceanography now getting started may open up amazing new sources of food and mineral supplies, a vast new world of riches at the bottom of the seas, as well as means of defense outmoding the missile, the battleship and the aerial bomber.

Whatever is ahead for us in the future no one knows, but most of us feel that our survival, militarily and economically, is for the present in the hands of our scientists. I hope you approve of my casting of your vote to unshackle the Geodetic Survey.

PUBLIC LAW 410

This is an old friend, a perennial in these reports. It is the annual permit for Canadian vessels to carry passengers and cargo to and from Hyder in Alaska and other American ports. Law is that only American vessels can do business between American ports. No American vessels, however, are available at Hyder. Each year Congress passes a 1-year exemption, vainly hoping that come another year Hyder will have American bottoms at her beck and call.

PUBLIC LAW 411

Public Law 411 extends to 2 years (instead of 1 year) the time in which claims can be filed against the United States for damages arising from noncombat activities of our Armed Forces in foreign countries. Naturally, accidents do happen in countries where we have troops stationed just as they happen at home, such as a distressed airplane inflicting damage on civilian persons or property, and the prompt and equitable settlement of resultant claims, when justified, makes for a friendly climate. Nothing is more helpful to us in winning hearts and minds than an image of Uncle Sam as always being fair and honorable.

PUBLIC LAW 412

H.R. 10233, District of Columbia appropriations

Public Law 412 appropriates $239,470,433 for fiscal 1961 for the District of Columbia, a decrease of $1,818,643 on the fiscal 1960 appropriations and a cut of $2,932,567 under the President's budget.

Washington was a city of 840,000 on July 1, 1959, with the same requirement for urban services and the same municipal problems as Chicago. Public Law 412 is comparable to the annual budget passed by the city council of Chicago. Municipal revenues come from much the same sources as in Chicago, and to these Uncle Sam adds a $25 million contribution for the reason that so much of the real estate here is occupied by the Federal Government.

Washington is the shrine of our country, to which millions come on patriotic pilgrimage, and we would wish it always to be kept clean and beautiful.

PUBLIC LAW 413

Public Law 413 repeals the 10-percent excise tax on aromatic cachous. If you don't know, as assuredly your Representative did not until this legislation reached the floor of the House, aromatic cachous are pellets, such as Sen Sen, that are chewed to sweeten the breath. Heretofore they were classified as toilet preparations (most of which are externally applied and subject to the excise tax). Usually they are sold at small candy stores, which do not handle toilet preparations, and the main reason for Public Law 413 was to relieve small candy merchants of the burden of collecting and keeping books on negligible amounts of tax.

PUBLIC LAW 414

If you were in the Navy after April 20, 1949, and prior to April 17, 1954, and temporarily stored your furniture under an erroneous order from the Department of the Navy, Public Law 414 is the aspirin for your headache. It relieves Navy personnel, present or retired, who in good faith acted under the erroneous order from reimbursing the Government.

PUBLIC LAW 415

S. 2220, Public Health Service

In 1798 Congress established the Marine Hospital Service, which in 162 years has grown into the Public Health Service of today, with a personnel of 25,350 persons, including 3,350 doctors, scientists, and nurses, who by direction of the Surgeon General and on an hour's notice are prepared to fly to a quarantine station in Burma, a disease ridden spot in Panama, or an isolated Indian reservation in the United States. They go wherever the Nation's health demands their presence.

Public Law 415 strengthens the commissioned corps by (1) providing improved retirement benefits, and (2) increasing the number of annual appointments to higher grades. This it is hoped will attract to and hold the required additional physicians, dentists, sanitary engineers, and other professional health personnel.

PUBLIC LAW 416

On original stock issues of corporations there is a documentary stamp tax of 10 cents per $100 of actual value while in the case of stock transfers the tax is 4 cents per $100 of actual value. Public Law 416 places the issuance tax of regulated investment companies on the 4 cent, instead of 10 cent basis, as such companies redeem stock put up for sale with issue of new securities.

PUBLIC LAW 417

There is no monument in Washington to James Madison, who was a large figure in the formulation and adoption of our Constitution, was Secretary of State under Jefferson and the fourth President of the United States. Public Law 417 creates a Commission to plan a James Madison memorial. It is probable that the historic columns recently removed from the east front of the Capitol will be part of the memorial.

PUBLIC LAW 418

Public Law 418 exempts bicycle tires and tubes from the manufacturers' excise tax. Reason: tires and tubes on new imported bicycles are not subject to such tax, hence Public Law 418 puts domestic manufacturers on a fairer competitive basis. Note: of about 3 million bicycles sold annually in the United States, 27 percent are imported.

PUBLIC LAW 419

This corrects an inadvertent omission in the wheat legislation of 1958. It prevents the loss of wheat acreage history when the farm exceeds its acreage allotment but does not produce a marketing excess.

PUBLIC LAW 420

Public Law 420 authorizes participation by the United States in parliamentary conferences with Mexico similar to those held with the legislators of Canada.

PUBLIC LAW 421

Public Law 421 conveys to the Navajo Tribe of Indians 81 acres of land, valued at $810, at Crownpoint, N. Mex., as site for a community center.

PUBLIC LAW 422

Public Law 422 reduces the excise tax on roof gardens, cabarets and similar establishments from 20 to 10 percent. The 20 percent excise tax on cabarets (twice the tax on theatres) caused a drop of 56 percent in employment of musicians.

PUBLIC LAW 423

Farm lands are taken over by the Federal Government by eminent domain, or negotiation, just as city properties are acquired for urban renewal, highways and other public developments. Public Law 423 protects the former owners in their acreage allotments during the period between acquisition by the Government and actual commencement of work on the proposed development.

PUBLIC LAW 424

H.R. 10743, 2d Supplementary Appropriations Act

Public Law 424 carries $955,300,003 in supplemental appropriations for fiscal 1960. This is a cut of $53,098,261 under the President's budget. Supplemental appropriations really are deficiency appropriations to cover current expenses (to keep things running to the end of the fiscal year on June 30) in excess of those provided in the regular appropriations acts passed the previous year. They are occasioned by the inability accurately to calculate in advance and unexpected situations that arise.

Among the larger items: $675 million for Commodity Credit Corp. to restore capital impairment; $17,500,000 additional for slum clearance and urban renewal; $1,500,000 additional for administering the public debt, due to increased interest rates; $9,700,000 additional for student loan funds under the Defense Educational Act.

PUBLIC LAW 425

House Joint Resolution 621, NASA supplemental appropriations

NASA stands for National Aeronautics and Space Administration, the newest instrumentality of the Federal Government. It carries an additional $23 million for the Project Mercury, the tracking and data collection network, and the Atlantic Missile Range for advanced launch vehicles. NASA employs over 16,000 persons, including 260 scientists in supergrade positions.

PUBLIC LAW 426

This reduces the annual number of paydays for Senate employees from 24 to 23. Senate secretaries will be paid on the 5th and 20th of each month instead of the 1st and 15th. Reason: increased time necessary to process payrolls because of deductions for health benefits. There are 40 optional plans, hence no uniform standard for deductions.

PUBLIC LAW 427

Public Law 427 extends for 3 years the exemption from import tax of certain tanning extracts, including extracts of hemlock and eucalyptus. A blight virtually wiping out the chestnut trees in the Appalachian Range played havoc with the domestic supply.

PUBLIC LAW 428

Four nonprofit corporations serve their own mutual bank or building and loan association members substantially as the Federal Deposit Insurance Corporation serves the banks of the Nation. Three, organized prior to 1951, enjoy the same income tax exemption as FDIC. Public Law 428 includes under the exemption the one corporation that was formed in 1957.

PUBLIC LAW 429

H.R. 529, Narcotics Manufacturers Act of 1960

Public Law 429 is major legislation in a field of vital need. It strengthens the public's fight against habit-forming drugs by establishing a system of licensing and control over the manufacture of narcotics. Since 1940 there has been a rapid development of synthetic substitutes, used as pain relievers but with the same habit-forming attributes as natural analgesic drugs in the morphine class. Public Law 429 covers the field, includes all classes of narcotics, both natural and synthetic.

PUBLIC LAW 430

This will interest members of the Veterans of Foreign Wars. It grants tax exemption to the building and property occupied by VFW in the District of Columbia.

PUBLIC LAW 431

Public Law 431 regulates the finance charges for retail installment sales of automobiles in the District of Columbia. This is expected to put an end to the practice of some finance companies of charging from 30 to 50 percent of the selling price of the car.

PUBLIC LAW 432

Coconut oil is used chiefly in the manufacture of soap, palm-kernel oil in edible products such as crackers and candy, and palm oil in the tin-plate industry to prevent oxidation in plating baths. Public Law 432 continues for 3 years the suspension of the processing tax.

PUBLIC LAW 433

Public Law 433 permits the sale to the State of Nevada, at fair market value, of some 15,000 acres of the public domain 90 miles southeast of Las Vegas. The State will develop the land for agriculture, homesite, and recreational purposes. Its topography ranges from mountainous to plains bordering the Colorado River. It now is undeveloped and uninhabited.

PUBLIC LAW 434

H.R. 725, Wilson's Creek battlefield

Public Law 434 establishes the Wilson's Creek Battlefield National Park near Springfield in Missouri on the site of the battle on August 10, 1861, the second major engagement of the Civil War. The Confederates, victorious at Wilson's Creek, took over a large part of Missouri, but Union reinforcements finally forcing their retreat into Arkansas, the Confederates were decisively defeated in the battle of Pea Ridge in March of 1862. In 1956 Congress authorized the Pea Ridge National Military Park. There now will be two battlefield parks commemorating the campaign that saved Missouri for the Union. U.S. Highway 60 runs near the Wilson's Creek battlefield.

PUBLIC LAW 435

Public Law 435 excludes for income tax purposes copyright royalties from the definition of personal holding companies (1) if they are at least 50 percent of gross income, and (2) if the business expense deductions incident to promotion are 50 percent or more of gross income. This reflects the change in the music publishing business, which formerly existed by sale of sheet music, now derives its principal income from sale of royalties to radio, TV, phonograph records, night club performers and others.

PUBLIC LAW 436

This eliminates the requirement that trustees of insurance companies in the District of Columbia be residents of the District. Reason: in Washington as in Chicago there is a residential trend to the suburbs. Many of the suburbs here are in Maryland and Virginia, outside the District.

PUBLIC LAW 437

Public Law 437 excludes from income tax the pension annuities paid to nonresident aliens. These mainly are persons who worked years in United States embassies and other offices of our Foreign Service. The Republic of the Philippines was among the nations protesting the imposition of the tax. State Department, therefore, joined in recommending Public Law 437 for the sake of amity.

PUBLIC LAW 438

H.R. 1805, Antietam battlefield

More men were killed at Antietam, or Sharpsburg, on September 17, 1862, than in any other battle in the Civil War. The Union lost 15.4 percent of those engaged, the Confederates 26.1 percent. Historians seem agreed that a decisive victory for Lee at Antietam might have foreshadowed the final independence of the Confederacy. When he turned back into Virginia the chance of intervention by Great Britain vanished.

Antietam National Battlefield Site was established by act of Congress in 1890. Public Law 438 authorizes the acquisition of 600 additional acres to restore the area to substantially the same condition as in 1862 and to give the oncoming generations a full and unimpeded view of the entire battlefield.

PUBLIC LAW 439

Public Law 439 authorizes the sale at market value of two acres of land to the city of Tillamook in Oregon for a marine park. For many years the land has been occupied by squatters, without consent of or payment of rent to the Federal Government.

PUBLIC LAW 440

This provides a tax of 1 cent a pound on the sale of laminated tires instead of the 8 cents a pound tax on tires used on highway vehicles and 5 cents a pound on other tires. Reason is that laminated tires are made of scraprubber tires, and because of their very great weight are under a tax disadvantage (based on poundage) with the much lighter tires.

PUBLIC LAW 441

Public Law 441 extends for 2 years the suspension of duty on alumina, bauxite, and calcined bauxite, the domestic supply of which is limited.

PUBLIC LAW 442

This is of interest to Federal civilian employees. It repeals section 1505 of the Social Security Act to put them on exactly the same footing as workers in private industry in the matter of eligibility for unemployment compensation. Accrued annual leave will be treated under State law.

PUBLIC LAW 443

In 1927 Congress established the Stones River National Military Park on the site of the battle of Bragg's Confederate Army of the Tennessee with Rosecran's Union Army of the Cumberland. Public Law 443 changes the name to Stones River National Battlefield (much more descriptive, I would say) and adds six acres (cost of $1,500) to include a view of Stones River itself, the stream for which the battle is named.

PUBLIC LAW 444

S. 2434, historic Fort Laramie

Fort Laramie in Wyoming, built in 1834, and used as a fur-trading post, then as an Army post in the era of the Pony Express riders, the overland stages, the gold rush travelers, the campaigns against the Northern Plains Indians, probably is the best preserved of the trading posts and forts when adventure was in the air and exploration and settlement of the West were the trend.

Public Law 444 changes the name of Fort Laramie National Monument to Fort Lara-

mie National Historic Site (which is more descriptive) and adds some 350 acres. A woman in Denver, who spent her girlhood in old Fort Laramie, is donating $100,000 to provide the historic old buildings with authentic furnishings of the times.

PUBLIC LAW 445

This gives to the Keweenaw Bay Indian Tribe in Michigan a third of an acre of land that the Federal Government purchased in 1935 for $1 for an Indian CCC camp. This assuredly is not major legislation, but it highlights the range of the work of the Congress. The President signed this $1 bill with the same pen he signed the authorization for $170 million for milk for schoolchildren, which follows.

PUBLIC LAW 446

H.R. 9331, school milk program

Public Law 446 authorizes additional CCC funds for the school milk program, a total of $85 million for fiscal 1960 and $95 million for fiscal 1961. Beginning in 1961 CCC will be reimbursed from the Treasury.

Some 83,300 schools and institutions, including summer camps, settlement houses, and child-care homes, are participating in the program in 1960. During the year they will use 2,380 million half pints of milk. Your vote has supported the school milk program since its inception.

PUBLIC LAW 447

Muckleshoot Indian tribe in the State of Washington showed little interest in its land consolidation program, and tribal council was hard put to scare up a quorum. So Public Law 447 authorizes the tribe to reconvey the land to individual tribal members.

PUBLIC LAW 448

This permits the continued delivery of water during 1960 and 1961 for irrigation in the Riverton project in Wyoming, pending execution of repayment contract.

PUBLIC LAW 449

H.R. 8601, Civil Rights Act of 1960

Public Law 449 is the legislation by which this session of the Congress will be remembered in history. It is not as strong as the measure introduced by your representative, as cosponsor with other members of the Senate and House, but it marks real progress in the long, hard fight to protect all American citizens in the exercise of their voting rights. The House passed the bill, 311 to 109. I cast your vote for the bill, against recommital (which was defeated 118 to 304), and against all crippling and weakening amendments.

The long and bitter filibuster in the Senate and the equally long and bitter fight with the Rules Committee in the House were highlights of the first half of the session.

I shall begin my next report with a digest, in simple language, of just what is in Public Law 449.

Nixon Over Kennedy for Presidency Says WIU Pollster

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. MICHEL. Mr. Speaker, according to the word from Western Illinois University where Dr. Victor Hicken, professor of Illinois and American history, has conducted a poll, NIXON will be the Republican nominee and KENNEDY will be the Democratic nominee—and NIXON will be elected in November.

About 71 percent of the total sample picked NIXON to win the November election—with about 59 percent saying he is most qualified. JOHNSON was scarcely in the running.

Professor Hicken said:

In 1954 I conducted a similar poll and hit the outcome of the race between Meek and DOUGLAS for Senator on the nose. By using a WIU sample—which draws students from the solid Democrat and the solid Republican section of the State—I have always gotten extremely accurate results with polls. There's a good economic representation here too.

During the past year WIU drew students from 75 counties. Ninety-seven percent are residents of Illinois. He polled students in his history classes—including graduate students, senior, junior, sophomore, and freshman students.

Eighty-two percent picked KENNEDY as the Los Angeles nominee of the Democrats. Yet about 7 percent said KENNEDY is the most qualified. Exactly 25 percent said Stevenson is most qualified to be President. One in forty-four said JOHNSON is most qualified to be President of the United States.

Students in the poll represent 13 Illinois counties: McDonough County, Knox, Sangamon, Morgan, Fulton, Cook, Whiteside, Woodford, Carroll, Montgomery, Iroquois, Hancock, and McLean. Some students were less specific, indicating middle Illinois, central Illinois, west Illinois, north central Illinois, and midwestern Illinois.

The group—while not asked to give their names—was asked about the family background: 13 claimed a farming background; 7 said labor—and the vote was 4 to 3 in picking the Democrats to win. The white-collar families voted 8 to 3 for the Republicans to win in November.

With respect to the latter category, one family has a teaching background—and two more listed farming and teaching. Seven said middle class, two self-employed, one retired. And as to economic background of the family, one jotted down one word: Republican.

Bureau of Senior Citizens: An Immediate Necessity

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. RODINO. Mr. Speaker, in the past months we have seen national attention focused on the problem of medical care for the aged. An issue which has been too long neglected has finally received the emphasis it deserves. The scope of the problem has been thoroughly investigated, the need for a solution has been firmly established, and a number of divergent plans have been proposed and explored.

The degree of attention which this problem has received leaves us every expectation that the problem will be solved when Congress returns in August. I am personally hopeful that the legislative solution will be an effective and adequate one, which is fully cognizant of the medical needs of the senior citizen and which is soundly based in a workable financial framework.

The impending solution to this problem, however, does not permit us to ignore the complex of other problems which our elder citizens presently face. Adequate health insurance is only the first step. Financial security, housing, employment opportunities and psychological adjustment are all areas which still require direct and vigorous action.

These are problems which concern every single indvidual in the United States. Not only the 16 million people who are now over 65, but the rapidly increasing number of people who approach retirement age, as well as the increasing number of families who support and care for aging parents, are deeply and poignantly affected.

How we choose to meet the problems thus created is a primary challenge of present-day America. These problems can no longer be ignored or pushed aside.

I do not see how anyone, for example, can fail to be stirred by the following plea from a typical senior citizen who, having completed almost a half century of gainful employment, has now reached the age of 70. This individual writes:

Has the State or Federal Government any aid for indigent or about to become indigent folks, without too much embarrassment?

I would like to use myself as an example. On July 1, 1950, the General Electric Co. retired me because I became 65 years of age too soon. The Federal social security allowed me at that time has worked itself up to where I get $91.30 and my wife's allowance is $45.20. In addition to that I receive a General Electric pension of $49.80 which brings the three payments to a total sum of $186.30.

The above amount is hardly enough to pay the present rent, food, clothing, gas, electricity, telephone bills, medical care, dental and optical costs and personal tax.

The different governments have failed to take care of their old taxpayers and the rise of cost of living has been the same to them as those who are young enough to be employed and receive increase in their earnings.

One of the greatest difficulties, in my opinion, is the fact that the elder population has no official spokesman to represent them and their needs. There is at present no executive department or office which focuses full-time attention on our senior citizens. The absence of such a central agency may well be partially responsible for the fact that the problems of the elderly are still so far from solution. It may be, indeed, that the medical care situation might have resolved itself before this, had we had a permanent agency with the responsibility for stimulating interest and for undertaking positive action on a national scale.

It is for this reason that I have introduced a bill to establish a Bureau of Senior Citizens. This Bureau is to function solely with regard to the problems of the senior citizen, and with the interrelationships of their needs. It will

serve as a central clearinghouse for studies, programs and projects relating to the senior population. In addition, the Bureau shall be required to bring the needs of senior citizens to national attention, as well as to make specific recommendations by way of solution.

The primary responsibility for caring for our senior population must, of necessity, remain with the States. For this reason, my bill provides that one of the major functions of the Bureau will be to work closely with States and local communities, make available informational and technical assistance, and stimulate the development of local programs. The Bureau will also administer Federal grants, provided for in this bill, to assist the States in the planning and operation of their projects.

The return of Congress gives us an excellent opportunity to take concrete action during this session. I should like to see this bill enacted prior to the White House Conference on the Aging, which will be held in January of 1961. The studies and recommendations of the conference can provide the Bureau with an immediate base of information from which to proceed, and at the same time will insure that the results of the conference will have some measure of continuity.

The enactment of a bill to establish a central bureau of senior citizens should not, of course, preclude us from taking steps to solve those problems to which we can now supply ready solutions.

We know, for example, that the financial means of many of our senior citizens are pitifully inadequate, and that the answer lies in liberalizing the social security program. We know, too, that housing facilities to meet the economic, physical, and social requirements of elderly people are in most instances unavailable, and that the answer lies in an expanded public and private housing effort on a national scale.

As we meet these specific problems, let us at the same time give thought to the establishment of a full-time agency which will concentrate upon the "Geshtalt." We need an authoritative office which will speak out on behalf of those 16 million people who are over 65, and those 49 million over 45, whose interrelated problems cry out for prompt attention and solution.

Westmoreland Takes Helm at West Point

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. METCALF. Mr. Speaker, a recent issue of the Christian Science Monitor contained a story about Maj. Gen. William C. Westmoreland, new Superintendent of the U.S. Military Academy.

I am proud that I served on General Westmoreland's staff when he was with the 60th Regiment of the 9th Infantry Division during World War II. Even then I looked upon him as one of the outstanding officers in the European theater.

The article follows:

WESTMORELAND TAKES HELM AT WEST POINT

(By R. Stafford Derby)

WEST POINT, N.Y.—Lean, long-legged Maj. Gen. William C. "Westy" Westmoreland has taken over the superintendency of the U.S. Military Academy here with vigor. His first "duty" day coincided with the arrival of the 803 youngsters who make up the class of 1964.

But it was more than a mere calendar coincidence. For General Westmoreland arrived fresh from the command of the 101st "Screaming Eagle" Airborne Division at Fort Campbell, Ky. This is a combat-ready outfit, an elite Army unit with battle honors to spare and a capacity to defend through offense.

He strode with ground-eating pace through the barrack areas where the plebes were starting their first of 6 "beast barracks" weeks.

The "awkward squad" of reporters and photographers were hard put to keep up with this paratrooper's tempo. But when the quick tour was over, luncheon enjoyed in the cadet mess, and the general seated comfortably in his office—the grave portraits of former Superintendents on the wall as silent but important witnesses—an inkling was given of what new things lay ahead.

RECORD UNROLLED

General Westmoreland's record bespeaks the man himself. A graduate of the class of 1936 (cadet first captain and regimental commander) his Army career runs the gamut from service with a horse-drawn 75 millimeter artillery battery through the bitter fighting of World War II in Africa and Europe as artillery and infantry commander, training as a parachute and airborne soldier (he has 115 jumps), and into Korea as commander of the 187th Airborne Regimental Combat Team in 1952–53.

His decorations are visual recognition of the bravery of himself, the determination of his command decisions and his accomplishments as a staff and field officer. In addition, however, General Westmoreland has served as Deputy Chief of Staff for Manpower and, in 1954, attended the advanced management course of the Harvard Business School.

Such was the man who looked out under heavy eyebrows with clear brown eyes, tanned countenance, a firm mouth and chin, and tried to pierce the future in terms of challenges and means of meeting them.

NINETEEN HUNDRED AND SIXTY-FOUR YEAR TO WATCH

The class of 1964 he pointed out, would be the first to enjoy the full 4-year program of the changed curriculum produced under the superintendency of his immediate predecessor, Lt. Gen. Garrison H. Davidson, now in command of the U.S. 7th Army in Germany.

He will lean heavily on this academic change. Although it is a complex subject, its main purpose is to allow more flexibility in the usual rigid curriculum of the Academy, allowing the individual greater exercise of his full capacities, and introducing a greater amount of liberal art and humanities education.

The general paused. Above his head on the wall hung the portrait of Capt. Sylvanus Thayer, Corps of Engineers, Superintendent of the Academy from 1817 to 1833. The basic principles introduced by Captain Thayer, which have stamped the West Point brand on its graduates, will be retained. These are: integrity of character, self-discipline, and education.

CHANGE KEENLY FELT

General Westmoreland, however, is keenly aware of the changing world as seen by the eyes of a Regular Army officer. "When I was a cadet," he pointed out, "we had forces in the Philippines and the Canal Zone. Now we have commitments all over the world, along the Bamboo and Iron Curtains."

West Point graduates will be serving in all these farflung places dealing with other nationalities, leading troops who will be armed with weapons of new and different design of which the present electronic control and missile character are but signposts. Thus the academic training must be based on a projection of what the qualifications should be in a time frame extending to 1975-85.

And what human material does the class of 1964 present for this first full run of the liberalized and enriched academic program?

"I'm much interested in this class—it is 'my class' coming in as I become superintendent. I hope to create an affinity between the class of 1964 and myself."

The general is the second youngest superintendent to take office at the Academy. A South Carolinian, his birthday is March 26 and his natal year 1914. Thus, at 46 his only rival to youth at time of appointment is General of the Armies Douglas MacArthur, who was 39 when he sat in the same office that "Westy" now enjoys.

The Day They Dropped the Bomb

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. PORTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following review of "No High Ground." The book tells the story of the atomic bomb. It is written by Fletcher Knebel and Charles W. Bailey II. Factual, informative, and readable, it has a startling lesson for today. Under leave to extend my remarks in the RECORD I include the following review by Hal Burton which appeared in Newsday June 4, 1960:

THE DAY THEY DROPPED THE BOMB

("No High Ground," by Fletcher Knebel and Charles W. Bailey II; review by Hal Burton)

The horror of Hiroshima was explored effectively and with such finality by John Hersey that no one ever need retell the story. Yet the events that led up to the atomic bombing of Hiroshima and the surrender of Japan have not previously been told with such freshness and in such detail as in this careful and dramatic study. Perhaps we all needed time to comprehend what happened. The world has now lurched forward into the missile age, and what happened at Hiroshima has now tragically enough become almost ancient history.

This is really a three-part story. The first is a scientific-cum spy thriller, the search for a means to split the atom, the construction of a plant to build it at Oak Ridge, Tenn., and then the decision to use it, so thoroughly anchored by Franklin Roosevelt and Winston Churchill that F.D.R.'s successor, Harry S. Truman, had virtually no choice other than the one he made. The second is, of course, the bombing of Hiroshima; the third, the anguish and soul searching of the Western

World when the true extent of the devastation became apparent.

"Wars cannot be won by destroying women and children," growled Adm. William D. Leahy, the President's military adviser. Many agreed with him, among them most of the scientists who brought the bomb into being.

But what is perhaps more appalling is the fact that, 15 years later, the world has passed from debate about fission bombs into an acceptance of the notion that they are as commonplace as big artillery shells; that of course the big powers must have them. A few voices cry out against all such weapons, and warn that the end result will be total ruin, but too many people—perhaps stunned again, this time by the magnitude of the missile race—are apathetic or at least silent.

This book, which illustrates that technology has no bounds, also suggests that the vision of humanity has somehow shifted from limited to limitless war, and that perhaps it is almost too late for us to turn back. It is, moral attitudes aside, an exciting and a tense book, excellently done, and first-class popular history.

Taxation of Real Estate Investment Trusts

SPEECH
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 29, 1960

Mr. KEOGH. Mr. Speaker, I urge the enactment of H.R. 12559, which I have introduced, to provide a special method of taxation of real estate investment trusts. Similar legislation was introduced by my colleagues on the Ways and Means Committee, Representative CURTIS of Missouri and the late Representative Simpson, of Pennsylvania.

The bill was approved by the unanimous vote of the Ways and Means Committee, and the Treasury Department has no objection to its enactment. The primary reasons for this legislation are, first, to remedy an inequity in existing law, by extending to real estate investment trusts, having at least 90 percent of their gross income from purely passive investment, the same tax treatment that has been extended since 1936 to the mutual funds which receive and distribute corporate dividends and bond interest. This equality of tax treatment is accomplished by providing that if the real estate investment trust distributes 90 percent or more of its taxable income—other than capital gains—to its shareholders the trust will not be subjected to a tax on such distributed income. As the committee's report states, not only is it desirable to have equality of tax treatment of these two forms of pooling funds for passive investment, but it is also desirable to remove taxation to the extent possible as a factor in determining the relative size of investments in stocks and securities, on the one hand, and real estate equities and mortgages on the other. This bill will furnish a medium for the small investor to put his savings into rental real estate and real estate mortgages, by pooling his funds with those of many other investors, as he may do if he desires to invest in corporate stocks and bonds through the medium of buying shares in the mutual funds. Such a method of real estate investment is not open to the small investor today, except at the unattractive return caused by the levying of a corporate tax on the income of the real estate investment trust, which cuts the net return in half.

Another cogent reason for enactment of this legislation, closely allied with the first, is to alleviate the shortage of private capital and mortgage money for individual homes, apartment houses, office buildings, and hotels. The result of existing law is to keep the savings of these small investors out of investments of this type. Opening up a new source of such funds should be of inestimable value in the urban renewal program and in assistance to economically depressed areas.

The bill has been carefully drawn to prevent its use by speculators or by those who might try to use it to get this "pass-through" treatment for income from active business operations, as contrasted with passive investment income. The statutory safeguards in this respect have been given careful study by the Treasury Department which, as I have said, indicates that it has no objection to the enactment of the bill in the form reported by our committee.

Public Laws 449–493

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include a digest of Public Laws 449 to and including 493, as given in my reports to my constituents in the Second District of Illinois:

PUBLIC LAW 449

H.R. 8601, Civil Rights Act of 1960

Public Law 449 (1) prescribes criminal penalties for obstructing the execution of school desegregation orders, (2) makes it a Federal crime, punishable by imprisonment up to 5 years, to flee across State lines to avoid prosecution for "hate bombings" of schools, churches, synagogues, (3) implements Federal investigations of denial of voting rights by requiring local election officials to retain voting records for 22 months after any Federal election and to surrender them to the Attorney General on demand, (4) strengthens the power of the Civil Rights Commission to administer oaths and take statements from witnesses, (5) permits the U.S. Commissioner of Education to provide schools for armed services children in areas where public schools have been closed to avoid compliance with desegregation orders, and (6) provides Federal machinery affirmatively to assist persons who have been denied the right to vote because of their race or color.

This is how title VI will work:

(a) Where in any area, with a large Negro population, few, if any, nonwhites are registered and participating voters, there is a presumption of "a practice pattern" of voting discrimination, accomplished by intimidation, arbitrary and discriminatory tests or by downright refusal to accept registrations. The court first must find that such "practice or pattern" exists.

(b) After the judicial finding that there is such "practice or pattern" any person of the race discriminated against may obtain on proper showing a court order permitting him to vote. Any election official then refusing to permit him to vote shall be punished for contempt of court.

(c) The court is empowered to appoint one or more persons as "voting referees" to accept the applications and determine the qualifications of Negro citizens who have been denied registration. The voting referees will receive testimony, ex parte, from any person denied the right to vote, and the applicant's statement under oath, "shall be prima facie evidence as to age, residence, and his prior efforts to register or otherwise qualify to vote."

(d) The findings of the voting referees will be reviewed by the Federal courts and voting certificates issued to qualified applicants.

Important: One of the strong provisions is that literacy "and understanding of other subjects" shall be determined solely on the basis of answers included in the report of the voting referee. This should go a long way in protecting against rigged examinations.

PUBLIC LAW 450

This gives 7 acres of land ($285 value) to the Shoshone and Arapahoe Indians in Wyoming for an extension agency.

PUBLIC LAW 451

H.R. 10234, Department of Commerce appropriation

Public Law 451 carries $645,922,375 in appropriations for the Department of Commerce and $83,702,000 for related agencies for fiscal 1961. This is a cut of $70 million under the budget.

An additional $50 million is given the revolving fund for Small Business. With the carryover this means $174 million will be available (mostly for small business loans) in fiscal 1961.

PUBLIC LAW 452

This extends to June 30, 1960, the life of the Lincoln Sesquicentennial Commission in order to complete volume III of "Abraham Lincoln: A Chronology, 1809–65."

PUBLIC LAW 453

Public Law 453 suspends for 2 years import duty on amorphous graphite or plumbago, valued at $50 a ton or less.

PUBLIC LAW 454

Bureau of Ships has the job of construction and repair of the ships of the Navy. It spends a billion or more dollars annually. Public Law 454 repeals an outmoded requirement that the Chief of the Bureau shall be an engineering expert, the Deputy Chief an architectural specialist, or visa versa. Now any qualified officer of the Navy can be assigned.

PUBLIC LAW 455

H.R. 10401, Interior appropriations

Public Law 455 appropriates $557,667,600 for the Department of the Interior for fiscal 1961. Our public lands and forests produce over $500 million in Federal revenues annually. Public Law 455 provides funds for more intensified management, also for increased research programs in forestry, fisheries and wildlife, and mine safety. It also gives the Geological Survey more money for water resources investigation. The appropriations total some $7 million over the budget.

PUBLIC LAW 456

This continues until September 1963, the suspension of duty on istle or Tampico fiber, used chiefly in the manufacture of brushes.

PUBLIC LAW 457

H.R. 11713, Atomic Energy Commission

Public Law 457 authorizes $211.4 million for fiscal 1961 for the Atomic Energy Commission, including $13 million for power reactor plants for the Antarctic and $5 million for stepped-up biomedical research into effects of radiation and radioactive fallout.

The Joint Committee disappointingly reports the failure of the Euratom program (of which so much was expected) to come up with a single project.

PUBLIC LAW 458

This is an aftermath of WPA. It disclaims any interest of the United States in land in Orange County, Calif., donated in 1936 by the American Legion for a WPA project, to give jobs to the unemployed.

PUBLIC LAW 459

Public Law 459 is especially interesting to automobile, real estate, and other dealers, and to finance companies that buy their installment notes. It provides transitional provisions for income tax treatment of dealer reserve income.

PUBLIC LAW 460

Public Law 460 designates two blocks in the District of Columbia as "Plaza of the Americas." In this area are the magnificent Pan American Union Building, statues to Simon Bolivar (South American liberator), and Jose Artegas (national hero of Uruguay), and other monuments to inter-American friendship and cooperation. A good gesture of hemispheric solidarity.

PUBLIC LAW 461

In its half century of existence the Commission of Fine Arts has enlisted the services, free of charge, of 64 noted architects, 8 painters, and 11 sculptors. Its members serve without pay, but the annual operating expenses now slightly exceed $35,00. Public Law 461 removes the authorization limitation.

PUBLIC LAW 462

Public Law 462 honors the memory of William Horatio McAlpine, dean of the civilian engineers employed by the Corps of Engineers, by giving his name to the lock and dam on the Ohio River at Louisville.

PUBLIC LAW 463

S. 1052, bank mergers

Public Law 463 is major legislation in the field of banking. It requires Federal bank mergers to have the approval of the Federal Reserve Board, the Comptroller of the Currency or the Federal Deposit Insurance Corporation. Purpose is to assure against monopoly and resultant absence of competition in a banking system serving the industry and commerce of an area. There has been a strong trend toward mergers in recent years. (I was interestingly reminded in the debate that the largest bank in the Nation is in California, the next four in New York, and the 8th and 10th in Chicago. Of the 50 largest banks 13 are in New York, four in Chicago.

PUBLIC LAW 464

H.R. 10550, Export Control Act

Public Law 464 extends for 2 years to June 30, 1962, the authority of the President to control exports of strategic and critical materials. The authority now, however, is little used except for security reasons with the Sino-Soviet bloc.

PUBLIC LAW 465

Public Law 465 will interest officers of the Coast and Geodetic Survey who were specially commended for gallantry in actual combat. Hereafter they can on retirement be advanced one grade the same as officers of the Navy and Marine Corps. The naval service calls these "tombstone promotions."

PUBLIC LAW 466

Living conditions of our agents enforcing the customs and immigration laws on the Mexican and Canadian borders are rugged. Public Law 466 raises to $80,000 the maximum allowance for construction of buildings on the border for combined office and living quarters.

PUBLIC LAW 467

Somebody misplaced until too late a bill of $765 rendered by a water district in Nassau County in New York for service to the Federal civil defense. So Congress enacted Public Law 467 to authorize the payment and keep Uncle Sam's honor unsullied.

PUBLIC LAW 468

Public Law 468 extends loan provisions of Watershed Protection and Flood Prevention Act to other soil conservation projects. This is expected to hasten completion of 11 major watersheds, work on which started some 12 years ago.

PUBLIC LAW 469

Library of Congress is one of the top research libraries of the world. At present it is housed in a main building and an annex, but with its tremendous content of books, sheet maps, phonograph records, newspapers, microfilm, and other formats it is bursting at the seams. Public Law 469 provides for preliminary plans for an additional building.

PUBLIC LAW 470

H.R. 9660, medical expenses of aged parents

Many persons past 65 either live with or are entirely provided for by their children. Because of the age factor the medical bills frequently are considerable. Public Law 470 permits a personal income tax deduction of all such medical expenses. If your or your spouse's father or mother are dependent upon you and are past 65, you can now charge off all their medical expenses (not covered by insurance) as a deduction. I know you will approve of my casting of your vote for this good legislation.

PUBLIC LAW 471

H.R. 10474, new naval craft

You will be interested in the program of our Navy to meet the challenge of the Soviet Navy, with its 450 high-powered submarines and rapidly increasing number of cruisers and destroyers. In fiscal 1961 we will construct or modernize a total of 35 ships and 22 craft, already authorized. Public Law 471 adds authorization for (1) one amphibious transport and dock which will carry 900 troops with transport helicopters and landing craft; (2) two escort vessels for locating and destroying enemy submarines, and (3) one fast combat support ship to provide continuous replenishment of fuel, ammunition, and food.

PUBLIC LAW 472

H.R. 11510, Mutual Security Act of 1960

Public Law 472 extends the Mutual Security Act for 1 year and authorizes $1.3 billion for economic assistance, technical cooperation, and special programs. This is in addition to $2 billion for military assistance and $700 million for the development loan fund already authorized. It is $136 million under the President's request, $42 million less than last year.

The act, drawn up by the Committee on Foreign Affairs after months of intensive study, tightens up the program and provides for closer supervision. It continues aid to Israel on the same measure and authorizes a special $20 million program to assist the newly emerging nations of Africa to meet the responsibilities of sovereignty. This is the program recommended by the Subcommittee on Africa, of which your Representative is chairman and Congressman WILLIAM MURPHY a member.

I was happy to be one of the sponsors in our committee of a statement of policy that puts our country squarely on record against Egypt's denial to the ships of Israel of passage through the Suez Canal. It states that "the purposes of this act are negated and the peace of the world is endangered" when nations helped by us wage economic warfare against other nations friendly to us "by boycotts, blockades, and restrictions of the use of international waterways."

Happily, this statement, originating in the committee of which your representative is a member, survived a drive by Senator FULBRIGHT to eliminate it in the Senate. Senator PAUL DOUGLAS led the successful fight to head in Senator FULBRIGHT.

The House passed the bill 243 to 130. Your vote was "aye."

PUBLIC LAW 473

H.R. 8042, ships for China

In 1948 the Republic of China purchased four cargo-passenger vessels from the United States for $4,400,000. It made a downpayment of $1,100,000, installment payments of $188,000 and spent another $1 million in American shipyards reconditioning the vessels. But before the vessels ever left the American coast for the China trade the Republic of China, driven from the mainland, was unable to meet payments and the ships were repossessed. Public Law 473 does the fair thing by permitting the payments previously made to apply on 2 of the 4 vessels. The vessels are 17 years old and at present are in mothballs.

PUBLIC LAW 474

H.R. 9449, Coast Guard

Coast Guard, as we in the Second District well know, performs a necessary and useful service in protection of lives. Its workload has been greatly increased by the rapid increase in the number of small motorboats and the enactment of the Federal Boating Act of 1958.

Public Law 474 (1) increases the limitation on enlistment from 4 to 6 years, (2) raises the number of commissioned officers from 3,000 to 3,500, (3) improves the civilian teaching staff at the Coast Guard Academy, and (4) elevates the rank of Commandant from vice admiral to admiral.

PUBLIC LAW 475

Our country has the finest transportation system in the world. Public Law 475 sets aside the third week in May every year as "National Transportation Week" as a tribute to the men and women who move goods and people throughout the United States.

PUBLIC LAW 476

Explosion and crash of an Air Force jet near Little Rock, Ark., on March 31, 1960, killed or injured many civilians, damaged 123 homes and 12 automobiles. Damage will exceed $500,000. Public Law 476 removes $5,000 limitation on settlements as some of the claims will be over that amount.

PUBLIC LAW 477

The International Brotherhood of Carpenters and Joiners of America is erecting a $5 million building on land worth $2 million bordering the Capitol grounds in Washington. Public Law 477 permits the contractor to move his materials over adjacent Capitol grounds during construction. Any use of the grounds of the Capitol requires congressional approval.

PUBLIC LAW 478

Public Law 478 amends special excise taxes in the Internal Revenue Code on short-barreled firearms and machineguns. It is expected to serve the good purpose of making it more difficult for gangsters to get the types of weapons they like best. A tax of $200 is imposed on the sale of each "gangster

weapon" and both buyer and seller are made liable.

PUBLIC LAW 479

This extends to June 30, 1963, the suspension of duty on crude chicory and reduction of duty on ground chicory. Since 1954 no chicory has been grown in the United States.

PUBLIC LAW 480

Public Law 480 authorizes the sale at market value to the State of Florida of 500 acres of land in Sumter County as site for a prison. Uncle Sam bought the land for $5 to $6 an acre, will get for it an estimated $54 an acre.

PUBLIC LAW 481

H.R. 10809, aeronautics and space

Public Law 481 authorizes $970 million for the National Aeronautics and Space Administration for fiscal 1961, itemized $170,760,000 for salaries and expenses, $621,453,000 for research and development, and $122,787,000 for construction and equipment.

It increases the number of positions paying up to $21,000 a year to 13, of $19,000-a-year positions to 290. These positions are filled by scientists and other professional and technical personnel. My understanding is that they as yet have not all been filled or committed.

House report No. 1333 is an interesting and factual recital in 55 printed pages, of progress and plans in our race with the Soviet to conquer space.

PUBLIC LAW 482

Public Law 482 extends for another 5 years the loan of a small destroyer to the Republic of China. It also authorizes the loan of a submarine to Canada for training a cadre of personnel to operate Canadian submarines when they are built. At present the Canadian Navy, equipped for antisubmarine warfare, has no subs of its own.

PUBLIC LAW 483

September 13, 1960, is the 100th birthday of Gen. John J. Pershing, who symbolizes the men of the AEF who fought under him in World War I. Public Law 483 authorizes the Army and Federal agencies to join with patriotic organizations in observance of the day.

PUBLIC LAW 484

House Joint Resolution 502, Mary McLeod Bethune

Mary McLeod Bethune (1875–1955) was a prominent Negro educator (founder of Bethune-Cookman College for Negroes at Daytona Beach, Fla.), and one of the remarkable women of her times. Public Law 484 authorizes the National Council of Negro Women to erect on public grounds in the District of Columbia a memorial honoring Mary McLeod Bethune and commemorating the 100th anniversary of the signing of the Emancipation Proclamation. The council will raise the money for the memorial by popular subscription.

When I cast your vote for this resolution I remembered a tremendously moving article by the talented Ethel Payne on Mary McLeod Bethune that I had read in the Chicago Defender of May 25, 1957, and had put in the CONGRESSIONAL RECORD of May 27, 1957, page A4082. You might find it in the public library.

It will interest you to know that this will be the second monument in Washington commemorating the signing of the historic proclamation. The first was dedicated on April 14, 1876, the 11th anniversary of the assassination of Abraham Lincoln. It cost $18,000, every cent of which was contributed by persons emancipated by the proclamation. It is a statue of Lincoln, his right hand holding the proclamation, his left hand held over a kneeling Negro who has been released from the shackles of slavery.

PUBLIC LAW 485

House Joint Resolution 546, flag of our country

Hawaii, as you know, is the 50th State of the Union. Public Law 485, a nice sentiment, presents to Hawaii for preservation the first 50-star flag flown over the Capitol.

Illinois was the 21st State. Question: When was the 21-star flag first flown and is it now existent? Answer: It was first flown on July 4, 1819, and I have checked here in Washington with the National Museum and Smithsonian Institute, neither of which has a 21-star flag. I am continuing my search. You can help by checking with the Chicago Historical Society.

The 21-star flag was the official flag of our country for only 1 year, from July 4, 1819, to July 4, 1820. In a sense it is Illinois' very own. It is doubtful that there was a 22-star flag, the Library of Congress informing me that the records were not too well kept. Alabama was admitted in December of 1819 and Maine in March of 1820. So it is likely that the official flag replacing Illinois' 21 stars had 23 stars.

PUBLIC LAW 486

S. 2130, money for Japanese

In view of recent events in Japan this is of timely interest. It was signed by the President only a few days before he started on his trip to the Orient.

The Bonin Islands lie 700 miles south of Tokyo. During the war its 7,000 civilians were evacuated to the Japanese home islands. They have not been permitted to return to their old homes for security reasons as the Bonin Islands now are part of the defense system of the United States. Unfortunately, many have not been integrated into the Japanese economy and are in need.

Public Law 486 authorizes a payment of $6 million in full settlement of the claims of Japanese nationals who cannot return to their farms and old employments because we have taken over the Bonins. It follows the pattern at home where farmer owners are compensated when property is taken over for public use.

I am happy to report that Shig Wakamatsu, national president of the Japanese American Citizens League, and one of our esteemed neighbors in the great Second District, came to Washington to confer with Congressman MURPHY and your representative when this measure was before the Foreign Affairs Committee. He made a large contribution to the enactment of equitable legislation removing an irritant and advancing the cause of friendship with the Japanese people.

PUBLIC LAW 487

S. 1833, Bent's Old Fort

Public Law 487 establishes a national historic site at Bent's Old Fort near La Junta, Colo., as part of our rich and rewarding system of national parks. The land acquisition will run less than $50,000.

Bent's Old Fort, on the Santa Fe Trail, was considered one of the great outposts of civilization in the vast plains area. It was erected about 1833, a trapezoid adobe building with protective walls 2 feet in thickness, a fortress against the Indians, a hostelry, a trading post, a rendezevous for trappers, a stopping place for caravans. In 1845 John Fremont made it his base of operations for his third expedition. In 1846 General Kearny and his army stopped there. It did service in the war with Mexico as military storehouse and hospital.

All the romantic past in the conquest and settlement of the West is dramatized for the present generation in the restoration and preservation of such historic spots as Bent's Old Fort. They keep afresh the spirit of our pioneers and imbed the traditions of our country.

PUBLIC LAW 488

S. 44, San Luis water supply project

Public Law 488 authorizes $500 million construction of San Luis unit of Central Valley water supply project in California. It provides for a cooperative partnership of the Federal Government and the State of California in the development of California's waterpower for irrigation, industrial and all-inclusive purposes. There was little, if any controversy, on the soundness of the project and the working together of State and Federal Governments, and the House passed the measure by voice.

But first an amendment was adopted on rollcall, 214 to 181, to delete a section that would have removed the 160-acre limitation in the basic reclamation laws. Your vote was aye. I think you will agree with me that the benefits of public works should be widely spread.

I also voted for an amendment, which carried to prohibit the delivering of water to newly irrigated lands in years when the supply of farm products was in excess of normal. Some 500,000 acres will get water for irrigation, probably to grow crops not under the support program. Nevertheless I thought it prudent to guard against the possibility of further swelling of costly CCC surpluses.

PUBLIC LAW 489

Nebraska and Kansas divide the waters of the Big Blue River and its tributaries. Public Law 489 grants the consent of Congress (required by the Constitution) to a compact of the two States to arrange an equitable apportionment.

PUBLIC LAW 490

Public Law 490 gives a break to veterans who are awarded additional compensation for dependents, based upon 50 percent or more disability rating. The additional compensation will start on the date of the increased percentage allowance instead of waiting for receipt of basic proof.

PUBLIC LAW 491

Also of interest to veterans' Public Law 491 makes uniform the marriage date requirement for service-connected death benefits to widows. Widows, otherwise eligible, who were married for 5 or more years or the mothers of children, will not be affected.

PUBLIC LAW 492

Formula for fixing the compensation of widows in service-connected cases is $112 plus 12 percent of base pay of veteran. Public Law 492 provides that the base pay may be that of the highest rank held for at least 6 months in service. This among others will benefit widows of persons who prior to June of 1948 reverted to lower ranks in order to retire from the service.

PUBLIC LAW 493

H.R. 8238, exhausts of motor vehicles

Public Law 493 directs the Surgeon General to conduct a 2-year study of the effects on the public health of exhausts from motor vehicles. With some 50 million cars on the streets and highways (by 1970 it will be 90 million) the Department of Health, Education, and Welfare is genuinely alarmed. Emissions from automobiles are carbon monoxide, oxides of nitrogen and organic substances.

What Congress Should Do About the Renegotiation Mess

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. BOW. Mr. Speaker, the magazine Missiles and Rockets has made a significant contribution to the subject of renegotiation of defense contracts by publishing an article prepared by Jacob Friedman which I include with my remarks:

WHAT CONGRESS SHOULD DO ABOUT THE RENEGOTIATION MESS

(A special House Armed Services Procurement Subcommittee has recommended that the present Renegotiation Act be enacted into permanent law. The subcommittee also has rapped Defense Department reliance on negotiated contracts and incentive contracting—holding any savings to be a fallacy. The House has urged passage of H.R. 12572 to impose new restrictions on incentive contracts. In the following critique, Mr. Jacob Friedman takes a hard look at the issues involved in renegotiation and proposes specific solutions to the dispute. Mr. Friedman is a registered professional engineer and Washington business-engineer consultant. He formerly was a Navy facilities contract negotiator and, in 1951, a Deputy Director of the National Production Authority's tax amortization division.)

(By Jacob Friedman)

Renegotiation today is the harshest word in the defense industry's vocabulary.

Scratch a missile contractor and he'll tell you the Renegotiation Board is nothing more than a band of pirates who grab hard-earned profits year after year.

But scratch almost any Congressman and he'll praise the Board as a group of sainted heroes who each year justifiably recover millions of dollars in excessive profits.

Both these viewpoints are extreme. While they portray the focal point of the dispute that has raged almost since the inception of the Renegotiation Act in 1951, neither gets down to the real issue—the law itself.

Criticism of the Renegotiation Board, insofar as the defense industry is concerned, is so much wasted motion. The Board is merely the instrument of the law.

If inequities in Renegotiation Board actions are to be corrected, then the law must be corrected. That the whole renegotiation process today stands in need of drastic correction, there can be little question. For the law—notwithstanding its objective to recapture excessive profits—is having some profoundly adverse effects on the defense industry at a critical period in the Nation's history.

To obtain the proper remedies, objective concessions are needed from both sides.

No argument is being advanced here to forget all about renegotiation and let extra profits become a form of subsidy. On the contrary, renegotiation fulfills a necessary function. It is needed particularly in the area of fixed price negotiated contracts where there are unknown factors affecting costs and profits. But renegotiation must be made to function under firmer ground rules.

Consider the case of Boeing Airplane Co. A regional renegotiation board determined that no excessive profits had been made by the company during fiscal year 1952. However, the National Board overruled this decision and made a finding of almost $10 million in excessive profits. Boeing appealed and—a full 8 years later—the case is still awaiting a final determination by the U.S. Tax Court.

Without attempting to pass on the merits, we can readily see that this case at least indicates a lack of consistency in interpreting the statutory factors.

Double standard: Much of the strife over renegotiation presently lies in conflicting values established by the Defense Department under armed services procurement regulations for certain fixed factors and those established by the Renegotiation Board in accordance with the law.

These factors—character of business, amount of Government-owned facilities, range of subcontracting, pricing risk, etc.—are known and agreed to in contract negotiations. But, when the Renegotiation Board looks over a contractor's total renegotiable business for a given year, these fixed factors may be assigned a different value—in effect overruling the Defense Department.

Testimony before the House Ways and Means Committee in April 1959, pointed up this conflict in a 1954 case involving Lockheed Aircraft. The National Board told Lockheed in a letter introduced in the record:

"Notwithstanding the decrease in sales and profits from the prior year and the contractor's acknowledged efficiency and lowered costs, the Board has concluded that the contractor's renegotiable profits, accompanied as they were by substantial Government assistance and subcontracting as well as the minimal risks to which the contractor was exposed by reason of 94.9 percent of its production being either CPFF or fixed price incentive, are greater than can be considered reasonable."

It is significant that each of these factors—on which excessive profits in the amount of $6 million was determined—may have been fixed factors considered as a basis for the contractual agreement and not affected by conditions thereafter.

The profit incentive: Primarily, Congress should concern itself with reduction of overall costs in defense buying. But there is a large question whether the Renegotiation Act obtains this objective.

Profits from incentive contracts, while a small portion of total defense costs, represent the bulk of those considered excessive by the Board. In theory, the incentive contract holds out the promise of more profits as a reward for reducing overall costs. This, in turn, is intended to establish patterns for lower production costs in the future.

However, contractors frequently complain that they are not being treated fairly in the case of price reductions on incentive contracts resulting from their efficiency of operation. This introduces the question whether or not the contractor reduced costs through efficiencies not normally expected.

The Board, however, considers that jobs done for less than the target cost do not necessarily represent savings at all, since the yardstick for determining the target cost may be inaccurate. Other factors having no bearing on the contractor's efficiency also may arise.

The incentive to industry is profit. To take away any part of the target profit when the actual cost does not exceed the target cost is shortsighted. It defeats the purpose of the incentive contract. For unless the contractor can feel that the lower his costs are, the more his profit, then incentive contracts are "incentive" in name only.

Renegotiation of incentive savings depends on differences of amounts—rather than magnitude of the amounts—of actual costs and renegotiated target costs. Thus, in order to maintain the incentive for lower overall costs, the Board should tend to become more liberal in renegotiating target costs as actual costs reach lower levels. This would take coordination with the procuring agency to obtain pertinent information regarding the original negotiations. In turn, the Armed Service Procurement Act should provide for penalties when contractor withholds from contract negotiator information affecting target costs.

The actual elimination of any profits would depend upon the profit determinations relative to the remainder of the contractor's renegotiable business. However, under pending legislation (H.R. 12299) wherein contractors must prove that incentive savings are due entirely to skill, efficiency or ingenuity as a condition precedent to retention under each contract, a portion of such profits will be eliminated before consideration by the Board on an overall basis. Such a proposed law not only appears questionable as to practicality and intended purpose of an incentive contract; it also appears unfair in that losses on other renegotiable contracts will not offset such eliminated profits.

(This proposed provision has been dropped in accordance with the recent proposed provision in H.R. 12572, which calls for adjustment in target cost or price to exclude any sum found after audit resulting from inaccurate, incomplete or noncurrent data.)

It is noted that higher profits are realized on incentive contracts through lower overall costs—in contrast to higher profits through higher overall costs on cost plus percentage contracts, which are now illegal. Nevertheless, public policy dictates that excessive profits by a contractor should not be made on Government contracts. On this basis, a strong justification that the renegotiation function on a backwardlook basis should continue is a high volume of contract work accomplished under fixed price incentive contracts. When industry concedes this point it will be in a more constructive position to receive cooperation from Government that will lead to objective results.

Adm. John S. McCain, Jr.

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. SAYLOR. Mr. Speaker, it is with mixed emotions that I have just learned that Adm. John S. McCain, Jr., is leaving his assignment as Chief of Legislative Affairs for the Navy. The admiral is moving to duty as Commander Amphibious Group II in Norfolk. We on Capitol Hill are all sorry to see him go, and want to take this opportunity to wish him happiness and success in his new assignment. Members of Congress have come to know Admiral McCain as an able and enthusiastic friend and he has been a great aid to them in conducting their legislative duties. He has never been too busy to lend assistance at any time on matters pertaining to the Navy.

Admiral McCain has an outstanding war record as commanding officer of submarines during World War II, during which time he won the silver star medal and the bronze star medal and two letters of commendation for meritorious duty in both the Atlantic and Pacific. Admiral McCain has always upheld the finest traditions of the Navy as exemplified by his father who is remembered by

many as an outstanding carrier task force commander of World War II. As he leaves this assignment, we all wish him farewell and Godspeed.

Tributes Paid at the Memorial Meeting for the Late Prince Aly Khan Held at Pakistan House, May 23, 1960

EXTENSION OF REMARKS
OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including the tributes paid to the late Prince Aly Khan, permanent representative of Pakistan to the United Nations, an accomplished diplomat whose distinguished career was cut short by his death in a recent automobile accident in France.

At the 14th General Assembly session of the United Nations last year, the Prince, Aly, and I became good personal friends, shared many mutual problems, and, rather remarkably, had the same general approach to many of these problems. His death on May 13, 1960, near Paris was a deep shock to his many American friends, as well as his friends all over the world.

The memorial tributes follow:

TRIBUTES PAID AT THE MEMORIAL MEETING FOR THE LATE PRINCE ALY KHAN HELD AT PAKISTAN HOUSE, MAY 23, 1960

MR. AGHA SHAHI, ACTING PERMANENT REPRESENTATIVE OF PAKISTAN

"This world is but a moment," so said his holy ancestor, the Prophet Muhammad. Death is a natural and necessary phenomenon. But it has never appeared so unnatural and arbitrary as in the tragic and untimely death of Aly Khan. Why it had to be thus and not otherwise will never be divined by us. The great master, Jalaluddin Rumi, the mystic poet, declares:

"Sometimes the action of God appears like this, sometimes the contrary: (true) religion is nothing but bewilderment."

We are gathered today to pay our last loving tribute to our friend and comrade, Aly Khan.

It is my saddest duty, on behalf of my Government and the Pakistan Mission to the United Nations, to thank you, Mr. Secretary General, your excellencies, and you ladies and gentlemen, the grieving friends of my late chief and comrade, for the deeply moving messages of sympathy that you have sent to us on his death. May I also express, at this memorial meeting, our profound gratitude for the demonstration of your love and reverence to his memory. In particular, I would like to thank you, Mr. Hammarskjold, and the distinguished speakers for taking time off from your preoccupations with the grave and pressing issues of peace and war to pay homage to the memory of your valiant fellow fighter in the cause of peace.

The loss to Pakistan in the death of the Prince can hardly be exaggerated. The president of Pakistan, Field Marshal Ayub Khan, has said in a message:

"While Pakistan has lost a diplomat of the highest caliber and value, it is also a great personal loss to me. His sportsmanship, his friendliness, and his personal charm will be remembered by thousands of his friends and admirers all over the world."

The Prince was linked to the Arab world, to Iran and Pakistan and the Moslem world and to India by ties of race and religion. He was also linked to Europe and the Americas by bonds of blood and culture. Therefore, while he served Pakistan in the United Nations, he was also the servant of causes which transcended the national and territorial divisions of mankind. In the best and deepest meaning of the term, he was a citizen of the world, of the one world toward which, we, the members of the United Nations, must endeavor to move if the human race is to survive.

MR. DAG HAMMARSKJOLD, SECRETARY GENERAL OF THE UNITED NATIONS

A few days ago the world was shocked and grieved to learn about the passing of Prince Aly Khan, a man so well liked by all and, as it seemed, so favored by destiny, at an age when he still had before him broad possibilities for continued service in the great cause to which, in recent years, he had devoted his energies.

Prince Aly was not with us at the United Nations as permanent representative of Pakistan for a long time, but in that period he had won many sincere friends and the respect of those who, never enjoying close personal contact with him, witnessed his contribution as a spokesman for his country. With seriousness and idealism he approached the problems with which he had to deal. He spoke of them with dignity and a deep sense of personal responsibility. A friend of many everywhere, he was also a friend of mankind. Generous and spontaneous, he infused also his actions as a diplomat with the warmth of his engaging personality.

He brought to his work in the field of international relations a rich and noble heritage from the world of thought of which his family for generations had been the spiritual leaders. He brought to his work also fine traditions in the field of international diplomacy in which his father had had such a distinguished role.

Prince Aly Kahn will be missed by his colleagues in the United Nations and by all of us of the Secretariat. On behalf of the organization, I express its deep regret at his untimely death and extend to all those who stood close to him our sincere condolences.

M. MONGI SLIM, AMBASSADOR OF TUNISIA TO THE UNITED NATIONS TRANSLATION

It is a very sad honor indeed to evoke today the memory of our dear colleague and friend that fate, blind and cruel, has taken away from our midst, in the prime of his life, at a time during which we were able to appreciate the full measure of his capacities and talents which were devoted to the service of his country and all humanity.

The Prince Aly Khan ardently strived here among us in the multitudinous ways toward the triumph of the high principles of liberty, justice, and peace among men. He was prepared by a childhood during which he lived in several European countries and which enabled him to derive the best of each individual culture to know, understand, and love his fellow man, The many personal friendships which he nurtured throughout the world aided him in the role of moderation and conciliation, and in this way to combat through reason the evils of tyranny, injustice, and racial discrimination. His desire to better serve his fellow man compelled him to accept great responsibilities in the United Nations, where he battled against other tyrannies, injustices, and racial discriminations. This earned him the high esteem of all his colleagues and especially among the Afro-Asian group, as well as the confidence and satisfaction of his Government, which was preparing to increase the weight of his responsibilities. Unfortunately, destiny took another turn. Aly Khan will have no more missions to accomplish. It is indeed a great loss for us all. May his example inspire similar other noble and generous vocations.

In the name of the Afro-Asian group, I defer to the memory of this great departed soul and address my sympathies and condolences to his family, to his people, and to his Government.

MR. HENRY CABOT LODGE, U.S. AMBASSADOR TO THE UNITED NATIONS

The tragic and untimely death of Prince Aly Khan deeply moves many persons in many countries in many walks of life and of many races and creeds.

But I venture the opinion that in no country was there deeper feeling and shock than among us here in the United States, where he had so many friends.

Americans can be happy at the thought that Aly Khan had many ties with our country and it was my good fortune to be with him when he began his close association with the United States by means of service with the U.S. Army.

He joined us in southern France on September 16, 1944 and stayed with us until the end of hostilities. I could tell you a great deal about his excellent qualities as a soldier, but I would rather have the record speak for itself and that record is found in a citation issued on March 24, 1945 at the time that Lt. Col. Aly Khan, as he was then known, was awarded the Bronze Star Medal. I will read the citation because it was something that Aly Khan had earned and which was officially bestowed on him by the U.S. Army:

"Aly Khan, 157,269, lieutenant colonel, British Army, for meritorious service in connection with military operations as assistant liaison officer, 6th Army Group from September 15 to December 10, 1944 in France. Lieutenant Colonel Khan showed tireless energy, marked industry, and constant willingness to undertake any task, regardless either of its hazards or of its irksomeness. His knowledge of France and of the French language; his tactfulness and diplomatic sense; his willingness to undertake frequent all-night trips in the combat zone; and the imagination and initiative which he displayed in meeting unexpected tactical emergencies contributed materially to good understanding between the U.S. Army and the French Army, and won for him the loyal cooperation of those who served under him."

That is a citation of which any man can be proud.

He often told me in later life that he never was happier than during his service in the U.S. Army—and this reflected great credit on him because no more intimate system of human association has ever been devised than that which exists in the Army. There is no way of life which strips away the pretense and the sham more rudely than does the military life. And the fact, therefore, that Aly Khan was happy in the U.S. Army, shows how truly democratic he was and how much he enjoyed his fellow human beings regardless of what their walk in life might be.

His familiarity with the United States led to his brother and his two sons being educated at Harvard University and it resulted in many trips over here in the years after the war.

Therefore, we in the U.S. Government deeply grieve at his death and feel that we have lost a true friend.

Then, perhaps I can say a word as a representative of one of the member states of the United Nations, because naturally when Aly Khan arrived in New York to become the representative of Pakistan, I saw a great deal of him and in common with many of my

colleagues, I can vouch for the high quality of his work here, and for the serious way in which he discharged all of his new duties. He loved Pakistan and he was determined to make a serious contribution to Pakistan and to the world. In this he succeeded.

And so I conclude these brief remarks. I have spoken as a representative of the U.S. Government and as a member of the United Nations.

I will now close by speaking as an individual—and in this capacity Aly Khan's death strikes me with deep sorrow. I grieve with all my heart. Not only has the world lost a warm and considerate man; I have lost one of my best and dearest friends. His death takes something gay and delightful and generous and loyal out of my life which cannot be replaced.

A few years ago, accompanied by a Moslem friend, I visited the British military cemetery at Tobruk in Libya, in the desert, where men whom I knew and with whom I served are buried. In this cemetery both Christians and Moslems are buried side by side. On the Moslem tombstones I noticed a saying written in the beautiful Arab script which, alas, I cannot read. I asked my friend what the words meant and he replied:

"He has gone back to God from whence he came."

What a beautiful sentiment.

It is thus, it seems to me, on this sad occasion that we must think of Aly Khan.

AMBASSADOR MARIO AMADEO OF ARGENTINA TO THE UNITED NATIONS

It is my sad privilege to express today the sorrow of the Latin American group, of the Argentine Government, and of myself for the passing away of His Excellency Prince Aly Khan, permanent representative of Pakistan to the United Nations.

For all of us, Latin American representatives, Prince Aly Khan was a never-failing friend. He loved our countries, many of which he knew well; he understood their national character; he helped us with his wholehearted support each time this support was needed, even before it was asked.

For my country, where he was a familiar figure and where in these very days he was going to represent Pakistan, this loss has been felt as our own. Much indeed was to be expected of his action toward the establishment of closer links between two nations far apart in geographical distance but very near in their international aspirations.

As for myself, allow me to say that Prince Aly Khan's premature death has meant a hard blow in my feelings. A warm friendship grew in a short time between us, and I had full opportunity to evaluate the qualities other colleagues have just stressed. Among them, we cannot avoid referring to the gift we all, of course, have experienced; his magnetic charm. He had a way of saying "mon cher ami" which made us feel to be really his lifetime friends.

Prince Aly Khan's greatest contribution to this Organization of the United Nations rests mainly, we think, in his endeavors for harmony and understanding between the peoples of European origin and those of the Asian and African Continents. For this task, he was specially qualified. He belonged to the East by origin, by creed and by rank; he was very close to the West by education and by friendly ties.

He was essentially a man of peace. He used his manorial tact and his vast and inherited knowledge of international affairs to shorten distances, to soothe differences. In his hospitable house, the most opposite variety of people did not look incongruous. He was always able to impress his cordial style to every gathering where he was the host.

Now this fair Prince is gone from the world he decorated with his golden legend; he has tragically departed from this life which he loved and where he was loved so much. His country, his children, his spiritual brothers, the international organization whose aims he loyally served, his countless friends throughout the world will mourn him. They will remember that he was always for the good and positive things of life. His absence has dimmed a little the lights under which we must go on with our task.

AMBASSADOR ARMAND BERARD OF FRANCE TO THE UNITED NATIONS

For all of us who have gathered here to bid him a last farewell, Prince Aly Khan was not merely a colleague; he was truly a friend. There is not one among us who, when stunned by the shocking and dreadfully sudden news, did not feel as though he had lost someone very close to him, so great was the place that Aly Khan had held among us.

When he became head of the Pakistani mission, 18 months ago, he was taking his first steps in the diplomatic field and in the life of our Organization. With astonishing rapidity, he came to play one of the foremost roles, one of the most effective, one of the most useful, not only for his country but for the United Nations. If he absented himself from New York on one of the numerous trips demanded of him by his very active life, it seemed that something was missing from our U.N. circle. When he returned, he brought back with him gaity, optimism, the joy of action and enterprise.

To Pakistan, his country, Prince Aly Khan rendered outstanding service here. He gave Pakistan an influence that went far beyond the framework of his mission. He won for it not only an esteem, but a sympathy, that were unanimous. Thus he occupied, in our debates, in our activities, a place in the front rank.

Indeed he brought to his mission, an unrivaled experience of the world and of men; to this he added a simplicity which meant that, no matter to whom he spoke, he put the person on an equal footing with himself and knew how to draw his friendship. With a lively intelligence, he combined an equal amount of intuition, an equal talent for awakening immediately a confidence that no one ever placed in him in vain. He possessed to the highest degree that spirit of conciliation which ought to be the prime quality in our Organization. A feeling of good will, a feeling of brotherhood inspired him. He considered himself the brother of all men, and he treated them all as equals.

Perhaps his long sojourns in France from the time of his childhood, when he attended the local school at Deauville, helped to develop these tendencies. Not only did he speak our language as can only one of our compatriots, but he was also filled with French thought, which was also his own.

It was in the French army that he enlisted during the war, in order to defend the principles that are basic to our democracies and that inspire the United Nations. In this France which does not know discrimination of nationality, of race or of religion, he felt himself to be at home. Of all his residences, the Chateau de l'Horizon was doubtless the most dear to him. He was happy each time that he was able to aid my country, and France wholeheartedly reciprocated. Few men have been given such a welcome and such affection by my countrymen. And it so happens that a cruel fate has willed it to be in that very France that he came to so premature, so ruthless, so cruel an end.

May this spirit of comprehension, of conciliation and understanding, this liberalism, this feeling of brotherhood that were his prevail in our relations, in the solution of the problems which are submitted to us and in the life of our Organization. It is in this way that we shall honor him and that we can best make his memory live. Thus, the French soil which temporarily received him, and later the soil of the East, where he will rest under the same sun, will be particularly kind to him.

SIR PIERSON DIXON, AMBASSADOR OF THE UNITED KINGDOM TO THE UNITED NATIONS

When we heard the news of Prince Aly Khan's sudden and tragic death, all of us knew that we had lost more than an honored and wise colleague: we had lost a friend.

It is not often that such a wide variety of talents are blended in so balanced and attractive a personality as they were in Aly Khan. Prince, soldier, sportsman, statesman, diplomat—he excelled as all of these, but he was much more than merely the sum of them, and those of us who knew him have been enriched by his presence among us. He represented his country in the United Nations with devotion, distinction, and wisdom. Though rightly jealous of Pakistan's interests, he never took a narrowly national or sectional view. Indeed, I would say that his exceptionally varied international background and experience made him uniquely suitable to represent, in this place dedicated to international peace and understanding, a country whose own influence has been used to further those very aims.

In that other association of peace-loving free nations, the Commonwealth, we knew Prince Aly Khan as a wise counselor and as one who conspicuously practiced that civilized international intercourse which is the special mark of the Commonwealth relationship.

And so it is, for me, a sad but honorable duty to add my word to these last tributes to a very dear friend and colleague, for whose loss we and the world are the poorer; and on behalf of myself and the United Kingdom Mission, to offer my sincerest sympathy to his colleagues in the Pakistan mission, the Government of Pakistan and the Aga Khan (IV).

Bastille Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. MULTER. Mr. Speaker, on July 14, 171 years ago in Paris, an outraged citizenry stormed the citadel called the Bastille, the dread prison that for them represented the denial of basic human rights by the regime under which they lived.

The anniversary of that occasion has since been celebrated by the French nation as the symbol of its dedication to the principles of liberty, justice, and equality for all.

It is most fitting for us to join the people of France in recognition of this anniversary. And it is fitting that the key to the bastille should today hang in Mount Vernon. For the charter of our liberties, the Declaration of Independence, owes much of its essence to France. The enlightened French philosophers of the 18th century largely fathered the concept of society as one in which individuals have rights and do not exist merely as objects for the whims of arbitrary rulers. The American Revolution was the earliest concrete expression of that concept. And from it the French people perhaps drew renewed inspiration for their struggle to establish a demo-

cratic society. Much of the history of the world since that time has been the history of peoples throughout the world inspired by the ideals of the French and American revolutions and struggling to realize them.

Today when new and more insidious forms of tyranny than monarchic despotism threaten to overwhelm the world, it is more than ever important to pay tribute to a people whose devotion to individual liberties has long been paramount, and to join with them in rededicating ourselves to renewed efforts to maintain them.

Public Laws 553 to and Including 591

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. O'HARA of Illinois. Mr. Speaker, I am extending my remarks to include Public Laws 553 to and including 591, as reported by me to my constituents in the Second District of Illinois. My reports have covered all legislation enacted at the 2d session of the 86th Congress with the exception of a few awaiting the President's signature. I hope that this digest of the laws of the second session will prove of interest to my colleagues, and others, at least as a source of convenient reference and reminder. I do not know of the availability to the general public elsewhere of a digest of all the laws of the session.

The digest follows:

PUBLIC LAW 553

This is of no interest to the second district, where we grow no cotton. But it is of interest in the Cotton Belt. Sometimes the Government makes mistakes in measurement of acreage in regard to allotments. Public Law 553 places the cost of remeasurement in cotton lands on the same basis as that in lands producing wheat and and other farm products.

PUBLIC LAW 554

Public Law 554 changes the title of the second in command of the Coast and Geodetic Survey from "Assistant Director" to "Deputy Director." I do not believe much in titles, but if a public servant thinks he can do a better job with more dignity in appelation it is all right with me. Whatever you call him, anyone paid by the taxpayers to do a public job is a public servant.

PUBLIC LAW 555

St. Lawrence Seaway has greatly complicated vessels safety problems on the Great Lakes. In 1959 there were 1,033 foreign commercial vessels making round voyages in the lakes in addition to the 2,206 United States and Canadian vessels regularly in the Great Lakes trade. Public Law 555 requires that vessels entering the five lakes through the Seaway shall during passage in the lakes have pilots, experienced with the area, and drawn from a United States-Canadian pool. I, with other members of the Illinois delegation, objected to the bill as first drawn, withdrew our objections later when the bill was amended to the satisfaction of the Chicago shipping interests and pilots.

PUBLIC LAW 556

Public Law 556 authorizes a payment to the Government of Israel of $16,616 for two of its nationals injured in an automobile accident in Paris and of $3,340 to the Government of France for one of its nationals injured in another automobile accident in Paris. Reason: inquiry showed that in each instance the driver of an American Embassy car, on official business, was to blame.

PUBLIC LAW 557

Public Law 557 (1) makes permanent the suspension of import duties on coarse wools imported under bond for use in the manufacture of rugs and carpets, and (2) adds papermakers' felts to the list of wool products covered. Purpose is to place American carpet manufacturers on even footing with foreign competitors.

PUBLIC LAW 558

Officers in the naval service, please take note. Public Law 558 corrects the bull the Navy admittedly made in urging the definition of "total commissioned service" in the hump law. The Navy intended solely to protect Marine Corps majors from mandatory retirement because by promotions over the heads of their superiors in rank they had picked up too much total commissioned service time. But it turned out the hump definition would force the retirement unintentionally and prematurely of 7 worthy but passed over lieutenant commanders, 154 commanders, and 31 lieutenant colonels. Congress rights matters by restoring the old definition of total commissioned service.

PUBLIC LAW 559

H.R. 8186, Reserve commissioned officers

Public Law 559 amends the Reserve Officer Personnel Act of 1954 to equalize promotion opportunity in the various branches of the Armed Forces. The law (19 printed pages) affects and is of interest to all Reserve officers, a fact pointed up when the document room informed me that it was completely out of House Report No. 681 (120 pp.) and the Armed Services Committee loaned me its copy on my solemn promise to return it within 24 hours. Note to Reserve nurses: You now can aspire to becoming a full colonel. Former top rank for Reserve nurse or Army medical specialist was lieutenant colonel.

PUBLIC LAW 560

Public Law 560 extends to June 30, 1962, the President's authority to allocate and fix priorities for strategic materials, grant loans and subsidies under the Defense Production Act to expand industrial capacity. We were told the control powers are necessary to maintain production schedules on missiles and other defense contracts.

PUBLIC LAW 561

H.R. 10569, Treasury and Post Office appropriations

Public Law 561 carries $4,007,500,000 in appropriations for fiscal 1961 for the Post Office Department ($522.5 million under the budget), $832,849,000 for the Treasury Department, and $1,565,000 for the U.S. Tax Court.

Not included in the above amount for the Treasury is $9.6 billion permanent and indefinite appropriations for debt service, tax refunds and payment to the unemployed trust fund. Most of this goes to paying interest on the national debt, a reminder of the future price we pay when we spend borrowed money.

PUBLIC LAW 562

This continues until August 7, 1962, the suspension of duty on copying lathes used in making shoe lasts. Purpose is to make available to American manufacturers specialized lathes obtainable only from foreign sources. It also extends suspension of duty on casein.

PUBLIC LAW 563

Public Law 563 extends for 2 years the exemption from duty on personal and household effects brought into the United States by persons returning from governmental service abroad.

PUBLIC LAW 564

H.R. 12381, Excise taxes and debt limit

Public Law 564 (1) provides for a temporary limit of $293 billion on the national debt for 1 year to June 30, 1961, (2) extends to July 1, 1961, the 52 percent corporate income tax rate, and (3) continues another year the excise taxes on alcoholic beverages, cigarettes, automobiles and parts, transportation of persons, and telephone calls.

All of this was packaged in one bill, which the Rules Committee reported out under a closed rule. A closed rule means that you take it all as is, or leave it, since no amendments are in order. Your representative, opposed to an excise tax on local telephone calls, voted against the adoption of the closed rule. The closed rule, however, was adopted, 204 to 181, and the bill passed, 223 to 174. Your vote was aye. It could not have been otherwise with a proper sense of fiscal responsibility. I doubt if any Member of the House would have voted nay if his were the decisive vote.

PUBLIC LAW 565

H.R. 11001, International Development Association

Public Law 565 authorizes the United States to participate with 17 larger and 51 smaller nations in the International Development Association to help provide assistance to undeveloped countries. IDA, affiliated with the World Bank, is an international cooperative venture, furnishing financing on flexible terms but on the same sound banking principles as those of the World Bank. It will have resources of $1 billion, of which the United States will contribute about a third. The House passed the bill, 249 to 158. Your vote was aye. I believe the burden and responsibility of world rebuilding should be shared by all free nations, each contributing in increasing proportion as its own economy improves. That makes commonsense. You will find my remarks on pages 13714 and 13728 of the CONGRESSIONAL RECORD of June 28, 1960.

PUBLIC LAW 566

United States produces less than half the long staple cotton it consumes. Public Law 566 prevents 50 percent reduction in acreage by establishing the same marketing quota for the 1961 crop as for the 1960 crop.

PUBLIC LAW 567

This extends for 2 years, to June 30, 1962, the authority of the Federal Reserve Board to buy securities directly from the Treasury.

PUBLIC LAW 568

H.R. 9883, Federal employees pay raise

Public Law 568 is part of the history of the 86th Congress. It raises by 8.4 percent pay of postal workers, 7.5 percent pay of classified and other Federal employees. Mainly it affects the humble Federal workers, most of whom had a hard time making both ends meet in a period of rising living costs.

But it had to go the hard way to clear the hurdles. A discharge petition, signed by 219 Members, brought it from the Rules Committee, where it was bottled up. Your Representative was the fifth Member to sign the petition, held the floor for an hour on the deadline day and until the required 219th signature (that of Congressman O'KONSKI, of Wisconsin) was affixed to the petition. (Discharge petitions can be signed only when the House is in session.)

The bill passed the House, 378 to 40, the Senate, 62 to 17. Then came the President's veto. It required a two-thirds vote in both bodies to pass over the veto. The House vote came first, 345 to 69. Later in the day came the Senate vote, 74 to 24.

Public Law 568 had cleared all the hurdles.

PUBLIC LAW 569

July 1 was the beginning of fiscal year 1961. As some of the 1961 apropriations had not been voted, Public Law 569 provided temporary appropriations on the basis of fiscal 1960, pending later enactments. It is the usual resolution on such occasions. Otherwise the Federal departments affected would have to shut down at midnight of June 30.

PUBLIC LAW 570

Public Law 570 directs the transfer by the Postmaster General and General Services of needed books and personal property to State and county agencies engaged in cooperative agricultural extension work.

PUBLIC LAW 571

Impoverished Americans becoming insane while in foreign countries are cared for and their return to the United States arranged. Public Law 571 provides for their hospitalization after their arrival in America and while en route to the State of residence.

PUBLIC LAW 572

Demand for warm-water fish to stock ponds, lakes, dams and wildlife refuges in the Southeast is growing. Public Law 572 authorizes a fish hatchery in Orangeburg County in South Carolina.

PUBLIC LAW 573

This gives owners of five lots on the Indian River in Florida another year to perfect their claims jeopardized by a surveyor's error. The error all added up to more work for the Congress.

PUBLIC LAW 574

When a country school at Stella, Mo., burned down, the Army met the emergency with the loan of a former officers' quarters at Fort Crowder, unneeded and no longer in use. Public Law 574 permits its continued use without payment of rent. Just another proof that Uncle Sam is the kind of person we like.

PUBLIC LAW 575

Public Law 575 helps out unsubsidized operators of American vessels in the coastwise and foreign tramp trade. It permits them to trade in their old vessels as part payment for benefit ships from the Government's reserve fleet.

PUBLIC LAW 576

United States owns 2.6 million acres in Texas for which it paid $151 million. Public Law 576 would permit exploration for and development of oil and gas deposits.

PUBLIC LAW 577

Public Law 577 makes mortgage insurance on fishing vessels more effective, puts it on the same footing as that on ship construction.

PUBLIC LAW 578

This provides housing for essential civilian employees of the National Aeronautics and Space Administration.

PUBLIC LAW 579

Washington is the headquarters of many trade and other associations. Public Law 579 amends the District of Columbia Life Insurance Act to permit writing of group life insurance to cover their employees.

PUBLIC LAW 580

Castillo de San Marcos, now a national monument in Florida, was built by the Spanish in 1672, was the outpost of the Spanish Caribbean empire in defense against the English and French, in the 1800's served as a military prison. It was visited by over 450,000 tourists in 1959. Public Law 580 authorizes addition to the monument of land containing part of the historic moat still in evidence.

PUBLIC LAW 581

This gives back to the Cheyenne River Sioux Indian tribe in South Dakota, 16 acres of land for which the Government has no further use.

PUBLIC LAW 582

Here is good news for service personnel who were awarded decorations, such as the Distinguished Service Cross or medal, and never received them, due to inadvertence or loss of the recommendations. Public Law 582 in such cases permits their delivery despite the time limitation has run.

PUBLIC LAW 583

Vessels of foreign construction are not permitted to operate in the coastwise trade of the United States. Public Law 583 closes a loophole by requiring that when American vessels in the trade are rebuilt the work all must be done in the United States.

PUBLIC LAW 584

Public Law 584 relates only to the District of Columbia. It adopts for the District the uniform law of many States for the transfer of securities to and by fiduciaries.

PUBLIC LAW 585

Public Law 585 gives return rights to career civilian employees of the Defense Department assigned to oversea posts. On return they will get their old jobs back with no reduction in seniority, status or tenure. Purpose is to encourags rotation between positions overseas and positions at home.

PUBLIC LAW 586

Enlisted men on 85 vessels of the Coast Guard, small patrol boats, were overpaid from January of 1955 to April of 1956, according to the belated finding of the Comptroller General. Congress properly saved the enlisted men from digging up the money erroneously paid them 5 years ago. Public Law 586 validates the payments as made.

PUBLIC LAW 587

Public Law 587 broadens the coverage of existing law relative to payment of travel and transportation costs to attract needed scientists and engineers to the Federal service.

PUBLIC LAW 588

Most cotton grown in the United States is classed under the Smith-Doxey Act. Public Law 588 prohibits improper practices in cotton sampling and provides penalties.

PUBLIC LAW 589

Public Law 589 authorizes judge advocates, adjutants, and commanding officers of the Armed Forces in foreign service to act as notaries and administer oaths to civilian employees and dependents as well as to those in the services. This protects absentee ballots from the danger of being thrown out.

PUBLIC LAW 590

Public Law 590 allows reimbursement for ferry fares, bridge, road, and tunnel tolls (in addition to 5 cents a mile travel allowance) to VA beneficiaries and their attendants. Commonsense. I never heard of a nickel toll.

PUBLIC LAW 591

Small business especially is interested in having products tested to determine whether they meet Government requirements. Public Law 591 authorizes the General Services Administration to accept funds for such testing.

European Economic Integration

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. BOSCH. Mr. Speaker, the following article sent to me by Mr. Curtis J. Hoxter, of New York City, on the subject of European economic integration is inserted for my colleagues' consideration:

Europe, formerly the leading continent in the world without which America would not have become what she is today, has for many years been in danger of seeing her former strength change to weakness and being overrun politically and economically by the rising forces of young nations. However, Europe is now about to make a new beginning, to overcome her divisions, and to become conscious of her unity. Successes have been achieved, but much remains to be done. It would appear that Europe will first have to discard antiquated notions which may have suited the idyllic conditions of the 18th century, but which are no foundation for the reconstruction of the Europe of tomorrow.

Let us have a closer look at what is happening in Europe today. After 1945 Europe realized that new impulses were necessary to increase production, productivity, consumption and the standard of living in peaceful competition with the other large economic areas. The United States became the great teacher who not only subsidized the devastated continent to the tune of billions of dollars, but who above all was the shining example of the forces which a large market can develop. This example was all the more convincing as Europe with 166 million consumers presents practically the same conditions for the establishment of a Common Market as the United States with a population of 175 million. As to labor potential, free Europe with 74 million usefully employed persons is even superior to the United States with 71 million. No less important for Europe than the dollars was the recognition of the "law of increasing returns" and the realization that the law cannot apply to an area which is divided every hundred miles, but that it presupposes a large market.

The first step on this road was inaugurated by Robert Schuman's idea to create a common market for the German and French coal and steel industries. Belgium, the Netherlands, Luxembourg, and Italy followed suit and declared their willingness to join the combination. In 1953 the national frontiers were abolished between these six European countries for the important basic commodities, coal, iron ore, scrap, iron, and steel. Since then the flow of these commodities is no longer hampered by customs duties and import quotas.

As a second step, the six countries decided to extend the Common Market to all other sectors of the economy. The European Economic Community, which became effective on January 1, 1958, and which has been supplemented by the European Atomic Community, is intended to be a further step on the road to a united Europe. For the time being, this is only a "little Europe," but the eventual aim is to include in that Community, by some kind of association, all other free countries of the old continent and thus to bring about a common market of 320 million consumers. The present differences of opinion between the European Economic Community and the "Seven" of the European Free Trade Area may be regarded as the labor pains of such a greater Europe.

As far as the treaty establishing the European Coal and Steel Community is concerned, it is its declared purpose to guarantee all consumers within the Community free and equal access to production and to offer the enterprises a stimulant to produce more, better, and cheaper, contributing thereby to the improvement of the general standard of living.

The Common European Coal and Steel Market was started in the period of a worldwide economic boom. Since that time substantial rates of increase of production and trade have been recorded within the Coal and Steel Community. From 1953 to 1959

the crude steel production of the Community rose by 60 percent, exports and imports between the member countries of the Community increased even by 80 percent, steel consumption by 35 percent.

However, as compared with the United States, Europe still lags far behind in all important sectors affecting the national wealth. All production statistics still show considerable disparities between the European Community and the United States. Here Europe is confronted with a task which may be decisive for the future of the free world. The question is what use the governing supranational bodies in Europe which are supposed to promote forced economic expansion will make of the instruments which have been placed in their hands. On the interpretation, broad or narrow, of certain treaty provisions—in other words, on the spirit of interpretation, it will depend whether further progress can be made or whether the European treaties will eventually prove merely to be the means of perfectionist "administration of poverty" inspired by traditional sentiments and resentments. There is no doubt that the governing bodies of the communities will have to grow in their task, but it seems as though even supranational bodies and agencies are at times afraid of their own courage. A prime example of this attitude is furnished by the European disputes—hardly understandable to Americans—on the "permissible" size of steel enterprises. It is a commonplace to say that the "economies of scale," or the advantages of mass production, will only make themselves felt if works and enterprises reach a certain size. Europe will have to adapt its production potential to this economic law if she is to reap the fruits of her endeavors. What is required are efficient and crisisproof industrial concerns.

As to the size of its works and enterprises the European steel industry lags far behind the United States. From 1953 to 1959 it invested about $4 billion, the major part of which went into the expansion and modernization of existing plants. Mergers and other concentrations have frequently occurred during the last years by which two enterprises harmonized their production and achieved more favorable cost relationships. This has resulted in the formation of groups of coal and steel enterprises with annual capacities of 3 to 6 million tons of crude steel, which do not measure up with the size of non-European steel enterprises, but which are more in line with the new market requirements.

The treaty rules governing competition within the coal and steel community, taken literally, meet these requirements of a developing economy. The very important provision contained in article 66(2) of the treaty allows the merger or concentration of enterprises, provided they do not attain thereby a size which enables them "in an important part of the market of their products to determine prices, to control or restrict production or distribution, or to restrain true competition." The high authority insures the observance of these provisions by approving or disapproving concentration plans which must be submitted for approval before execution. Without approval, no merger or concentration. Of late, the high authority even asserts the right to judge and forecast, one might say by crystal gazing, the development of the competitive position in which an enterprise and its competitors will find themselves in future years.

In that respect the law governing the European Coal and Steel Community differs fundamentally from the American antitrust law as well as from the law of the European Economic Community. Neither the Clayton Act nor the Rome Treaty subjects mergers and other forms of concentration to approval and lengthy approval proceedings.

It goes without saying that the mere necessity to obtain approval as prescribed by the law of the Coal and Steel Community constitutes a serious handicap for the initiative of free enterprise which may easily lead to severe economic disadvantages. Moreover, the high authority has recently shown the tendency in proceedings of concentration approval to go beyond the specific language of the treaty by usurping the right, contrary to the treaty, to make its approval of mergers and other concentrations of enterprises over and above a certain size dependent on the acceptance by such enterprises of a control of their future investments. The combination of two German steel enterprises has only recently been frustrated for the very reason that they declared themselves unable as a matter of principle to accept such control. Although no objection was raised to the size of the group of enterprises in question, the high authority was influenced by the fear that the group might in future achieve a dominant position in the market by further investments. It may be legitimate to ask whether Europe is already afraid of her own future growth.

The competitive situation in the European steel industry certainly does not justify any apprehension of excessive concentration. As shown in the following table, the degree of concentration in the Coal and Steel Community is far below that in the United States. In the community approximately 80 percent of the total crude steel production is distributed among 21 enterprises while this percentage is represented in the United States by 9 enterprises. As to the scale of competition within the member countries of the Coal and Steel Community, the figures demonstrate that competition is keenest in Germany.

Degree of concentration of steel enterprises

	Number of crude steel producers	Percentage of crude steel production
United States	9	80.7
Coal and Steel Community	21	79.6
Federal Republic of Germany	12	80.0
France	6	75.2
Belgium	3	79.5
Luxembourg	2	89.5
Italy	3	70.0
Netherlands	1	85.0

The most recent development in Europe clearly shows the obstacles which result if the will to overcome outmoded economic forms is put in the strait-jacket of superperfectionist paragraphs. It also shows that the overlapping of different principles of law, such as govern the Coal and Steel Community on the one hand and the European Economic Community on the other, cannot but obstruct economic development. For that reason, harmonization of the European Communities is the essential concern of the hour. If Europe wants to achieve its aim of overcoming her past weakness and of becoming the equal of the great economic powers in West and East, she must jettison the ballast of the past and adapt her imaginative powers to the new realities.

Dry Times—Southwest Needs Water Conference

EXTENSION OF REMARKS

OF

HON. JOHN A. CARROLL

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. CARROLL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Denver Post, July 1, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DRY TIMES—SOUTHWEST NEEDS WATER CONFERENCE

(By Roscoe Fleming)

The missing ingredients in the southwestern water picture so far are, first, to think as big as the problem, and, second, to learn to act unitedly on the basis of what we think.

This is as to the program for national water development recently reported in the Post as outlined by Edward A. Ackerman and other technical specialists, for Senator ROBERT S. KERR's special Senate committee.

The Ackerman group suggests that the American Southwest, including Colorado, could well be turned into one huge laboratory for finding ways to develop every possible drop of water and use it without waste.

They suggest hammering out an effective national water-supply program, by proving what will work in this most water-short of all regions.

This is vital as to progress or stagnation for the Southwest, facing a doubling of population in 40 years—if the sheer lack of water doesn't bring its material progress to a grinding, dusty halt.

Ackerman and associates say that the technical means already exist—and that others may be discovered—to enhance the effective water supply once we are forced to do it.

But the water history of the Southwest is one long process of isolated expedients devised in the face of imperative need, of communities grabbing for the supply like children grabbing for the highest piled plate at supper, of jealousy and mistrust.

Even our most famous attempt at development and equitable division, the Colorado Basin compact, merely became a sort of set of rules for quarreling. Ditto with the many other smaller compacts that dot the region. Instead of acting like sensible neighbors confronted by a common problem, we have staged a sort of slow cold war based on the assumption that if each State, or region within States, doesn't keep its legal shootin' irons ready, its future is likely to be massacred at any time.

The inevitable step, as the Ackerman group suggests, is that in some way a regional body must be created to work for the common cause of enhancing everyone's water supply by all the devices of modern technology.

In 60 years, the United States has actually spent about $15 billion on Federal water development and control, or one-third of 1 year's spending on defense.

If you think we're going to get by with a national water program for any such sum, or even for the $40 billion projected for highways, there's another think coming.

Secondly, we ought to start thinking now. Concretely Governor McNichols might well get the southwestern Governors together and talk over joint plans. If he doesn't, someone else will.

If all the June commencement addresses were laid end to end, they'd reach half across the Atlantic. And maybe a good thing too.

For the theme of about 99 percent is that America both needs and demands rugged individualists who "like insecurity and will take chances"; who will wear no man's (or corporation's) collar; who will refuse to conform, who won't follow the crowd but will stand on their own feet, etc. etc.

The ironies are first, that the speakers are usually organization men who got sufficiently prominent to be invited to make commencement addresses by, to put it delicately, not following their own advice.

Secondly, no speakers added, as they ought:

"But if you take our advice, prepare to get clobbered; for on this matter as in so many

others, America is suffering from a national schizophrenia of saying one thing while doing another."

There's the youngster on Long Island—perhaps inspired by a commencement address advising him to be ruggedly individualistic and never to be pushed into conformity—who suddenly interrupted the exercises to refuse an award from the local American Legion post, because he "doesn't respect Legion policies."

Did he get clobbered.

The school officials immediately apologized to the Americanism chairman of the Legion post, who sternly declared the boy had "made a mistake that would haunt him the rest of his life"; i.e., a sort of threat of eternal excommunication from decent society.

You go around being ruggedly independent and wearing no man's collar, and you're going to be guilty of poor taste and bad manners many times, in the eyes of the majority.

To my mind the treatment of the youth was worse taste and worse manners than his. Especially as it was by people three or four times his age of 17.

Hon. James E. Murray, of Montana

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. HENNINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a statement by me on the retirement from the Senate of the Honorable JAMES E. MURRAY, of Montana.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HENNINGS ON THE RETIREMENT OF HON. JAMES E. MURRAY, OF MONTANA

Many of our colleagues have expressed their regrets over the decision by JIM MURRAY not to run for reelection but to retire from the Senate at the end of this Congress. Each one who spoke undertook a most difficult task for it is impossible to put into words what it means to serve in the Senate with a man of JIM MURRAY'S stature. Each of us has learned to look to JIM time and time again for direction.

I have been most fortunate to serve with him on the Democratic policy committee where his wise counsel and experience has been invaluable to us all. In the remaining days of this Congress we will all be looking to JIM MURRAY for continued leadership.

I should like to say a few words about my own firsthand knowledge and experience in working closely with JIM MURRAY—an experience which I shall always cherish. Within a very few months after I became a Member of the Senate, a devastating flood swept over the land in the Missouri River Basin. I urged President Harry S. Truman to establish a commission to survey the basin with respect to the preservation and development of its water and land resources. The President established the Missouri Basin Survey Commission consisting of three Members of the Senate, three Members of the House of Representatives, and six lay members. JIM MURRAY was asked to serve on the Commission and even though at that time he was older in years than most Members of the Senate, he never hesitated one instant to give up the many months of the recess period which as we know is normally at the disposition of a Senator to use as he may, to take part in this survey.

The Commission with its headquarters at Lincoln, Nebr., held 60 public and executive sessions. The public hearings were held all along the Missouri River. JIM MURRAY'S service to the Commission was indefatigable and faithful as we worked to solve the problems of water and land resources for one-sixth of our Nation.

During those days together on the Commission, I came to know him not only as a warm and friendly man of highest character and devotion to public service but also a man of keen intellect who very quickly grasp the many technical and difficult agricultural, economic, and engineering problems with which the Commission had to deal. Since that time I have always felt very close to JIM MURRAY.

We will miss JIM MURRAY, but we will never forget him nor will the American people. In his 25 years in the Senate, he has left us a rich legacy of accomplishment. His name is a hallmark in the legislative annals, in the fields of health, of education, of labor, of conservation, and of natural resource development. In fact, I cannot think of a field in which over the years JIM MURRAY'S vision and dedication has not guided and enriched us.

I want to wish JIM MURRAY Godspeed and many years ahead of health and happiness which he so richly deserves in his retirement from public life.

Exit Summitry at Last

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Memphis Press-Scimitar of June 23, 1960. Perhaps President Eisenhower made one mistake on the summit matter: He tried to get along with Communist enemies abroad and political opponents and critics at home instead of following his own judgment and that of most of his best advisers by refusing to get into an exposed position where the enemies then turn on him for doing what they urged him to do.

The editorial follows:

EXIT PERSONAL DIPLOMACY

Secretary of State Herter says there should be a return to traditional channels and procedures of international contact—meaning no more personal diplomacy, so far as the United States is concerned.

He went further—in a Senate subcommittee session—saying President Eisenhower plans no more good-will trips to foreign countries during his remaining half year in office. Back of the decision is the rude treatment Ike got at Paris and the riots in Tokyo.

At the moment, President Eisenhower is bearing the brunt of a lot of second-guessing on his foreign trips.

That is not fair, because the clear implication is that it was Ike's idea in the first place to make the five trips he has made within the past 10 months. It wasn't.

The pressures on him to carry out this program of pageantry and personal talks were many. A pattern had been set up by Soviet Premier Khrushchev, and he was getting apparent results. From our allies came persuasive invitations and pleas that a show of the President was even better than a show of the flag for increasing solidarity.

But most of all there was implicit and uttered pressure from the political opposition within our own country—Democratic leaders and spokesmen who all along have cherished the idea that all the East-West tensions could be eased if Ike and Khrushchev would only get together.

Adlai Stevenson, among them, was sure that the Khrushchev visit here was a hopeful omen for peace and he continually advocated informal talks between the two heads of state. And only a few months back, Senator J. WILLIAM FULBRIGHT, Senate Foreign Relations Committee head, was warmly approving of President Eisenhower's prospective visit to the Far East, saying:

"This meeting of people is one of the things the President does best. I think he should stop in as many countries of the Far East as he can."

The Democratic hind-sighters are at it now, hot and heavy. They seem to take into consideration less the circumstances that brought about the Tokyo debacle than the perfectly good intentions and abilities of Ike—and the undoubted good effects of his visits to Italy, Turkey, Pakistan, India, South America, and the Philippines. Overlooked is their own urging of the past that the President make every use of the personal diplomacy idea.

We think a little more perspective is called for, rather than a quick effort to make political hay out of an unhappy development that confronts all of us.

Public Opinion Poll, 10th District of North Carolina

EXTENSION OF REMARKS
OF
HON. CHARLES RAPER JONAS
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. JONAS. Mr. Speaker, earlier in the year I distributed 45,000 questionnaires among the residents of my district. Approximately three-fifths were sent to rural boxholders because many people in the district work in town but receive their mail on rural routes, and the remainder went to residents of the towns and cities in the district.

The response to this questionnaire was gratifying—a 10-percent return—and came from every urban and rural community in the district—from farmers, laborers, executives, storekeepers, clerks, teachers, housewives, and professional men and women.

Perhaps half of those who returned the questionnaires extended their yes or no answers by adding explanatory comments. Many others took the trouble to elaborate at length on their answers and some discussed issues not even listed on the questionnaire.

I have personally read all of these supplementary comments and appreciate the willingness of so many of my constituents to share their views with me on important issues. Although the final responsibility for votes I cast in Congress must necessarily be my own, and

is always based upon a careful consideration of all the pro and con arguments on a given bill, I believe the people of the district should have an opportunity to express their views and to know that they will receive careful consideration by me. The use of such a questionnaire is the easiest way I know to give them that opportunity and I am pleased that so many took advantage of it.

Following are the questions with answers indicated on a percentage basis:

[In percent]

	Yes	No	No opinion
(1) In the recent steel strike, almost the entire steelmaking capacity of this country was closed down. In view of the impact of such a strike on our national security and economy:			
(a) Do you believe the Federal Government should be given more power to arbitrate and enforce agreements between labor and management in such cases?	67	26	7
(b) Do you favor a legal ban on industrywide bargaining?	56	29	15
(c) Do you believe unions that represent all workers in an industry should be made subject to the antitrust laws?	83	8	9
(d) Do you favor compulsory arbitration of labor-management disputes when an entire industry is affected?	72	18	10
(2) The present Federal minimum wage is $1 per hour. The North Carolina minimum wage is 75 cents per hour: (a) Do you favor increasing the Federal minimum wage above $1 per hour?	34	60	6
(3) The Forand bill provides hospital, surgical and nursing home care for social security retirees, surviving widows and children. Persons presently retired will be eligible without contribution. The program will be financed by an increase in social security taxes on employers, employees, and the self-employed: (a) Do you favor the Forand bill?	35	59	6
(4) Under present law, if a person drawing social security earns in excess of $1,200 annually he is penalized by having his social security payments reduced:			
(a) Do you favor increasing this limitation on earnings?	69	24	7
(b) Do you favor eliminating the limitation altogether?	36	52	12
(5) The 1961 Federal budget provides $565,000,000 for various aid to education programs. Several proposals are pending in Congress to increase substantially this Federal support of education. The bills range in cost from $300,000,000 to $1,100,000,000 per year:			
(a) Do you favor Federal aid to education in addition to that already being provided?	32	61	7
(b) If so, would you restrict the use of the funds to school construction or would you include teachers' salaries?	21	13	66
(c) Would you prefer a plan providing that the Federal Government should return to each State a small percentage of the income taxes collected from individuals within that State for use by the State in support of public education?	66	23	11
(6) Legislation is pending to grant a pension of $100 a month to every World War I veteran:			
(a) Do you favor this proposal?	18	79	3
(b) If your answer was "No," would you favor such pensions if they are restricted to veterans with small incomes?	40	40	20
(7) A bill is pending in Congress to inaugurate a GI educational benefits program for peacetime veterans. This bill is estimated to cost $600,000,000 a year. Do you favor such a bill?	19	75	6

	Increase	Decrease	No opinion
(8) Do you favor increasing or decreasing spending in the following areas:			
(a) Defense	41	37	22
(b) Farm subsidies	11	79	10
(c) Mutual security	27	47	26
(d) Public works, such as dredging harbors, building dams, flood control, reclamation, etc.	39	45	16
(e) Public housing, urban renewal, slum clearance, etc.	36	52	12
(f) Federal grants to States and local communities for public works such as sewage disposal works	27	60	13

	Yes	No	No opinion
(9) If you favor increased spending, where would you propose getting the money?			
(a) Increasing existing taxes?	16	46	38
(b) Deficit financing (borrowing)?	5	42	53
(c) New taxes, such as a manufacturers' sales tax?	27	25	48
(10) Interest on the national debt is now $9,600,000,000 a year. It takes 11 cents out of every tax dollar just to pay this interest bill. If we go on as we have been, in just about 30 years we will have paid out, in interest alone, an amount equal to the national debt ($290,000,000,000) but will still owe every cent of the principal. In an effort to force the Federal Government to begin reducing the national debt, I have introduced a bill providing that at least 1 percent shall be paid on it each year. Do you favor this proposal?	93	3	4
(11) Do you favor taxing cooperatives on the same basis as private enterprises?	83	9	8
(12) Do you favor a national fair trade law?	29	55	16
(13) Do you agree with the administration that disarmament must be accompanied by a foolproof inspection system?	89	5	6
(14) Do you believe that the exchange of visits by heads of state is in the interest of world peace?	78	12	10
(15) Do you favor continuing our current missile and space programs on about the present level or do you favor a "crash" program to speed them up regardless of the additional cost?			
(a) Continue on present level?	70	9	21
(b) Starting a "crash" program?	17	36	47

The Story Behind Hiroshima

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. PORTER. Mr. Speaker, nuclear physicist, Dr. Ralph E. Lapp, is a knowledgeable, readable expert in his field. His review of the recently written "No High Ground" by Fletcher Knebel and Charles W. Bailey II, notes "'No High Ground' should produce a shock wave impacting upon our conscience." Under leave to extend my remarks in the RECORD, I include the following review of the book by Dr. Lapp which appeared in the Washington Post and Times Herald, June 5, 1960:

THE STORY BEHIND HIROSHIMA

("No High Ground," by Fletcher Knebel and Charles W. Bailey II; reviewed by Ralph E. Lapp, a nuclear physicist who was assigned to the Manhattan project in 1943–45 and whose books about atomic energy include the recent "Roads to Discovery")

"Repose ye in peace, for the error shall never be repeated."

These are the words inscribed on a stone chest in Hiroshima. Most Americans do not believe that it was a mistake to drop the bomb. They have been led to believe that the use of the bomb saved the lives of a multitude of our fighting men. They are in for a real shock when they read "No High Ground."

The authors—two experienced newsmen—have dug assiduously into the past and have uncovered plenty of evidence that Japan was on its last legs in the early summer of 1945. Denied access to the files of the Manhattan A-Bomb Project (Gen. Leslie Groves refused to unlock them), the authors tunneled into other records. They have done a resourceful job of reconstructing events of 15 years ago. As a result, their book is flooded with a wealth of detail and previously undisclosed information.

To be sure, old ground is covered, but it is done in such a lively way, with such a

crispness of language and local color, that the book takes on a throbbing character.

In quick succession, the authors trace the events leading up to the decision to use the bomb. U.S. air intelligence and code cracking showed that Japan was on her knees in the cataclysmic summer of 1945. Yet this vital information fails to percolate through to the decisionmakers.

Scientists called in as top advisers quite obviously do not learn of Japan's supine posture. They seem to accept rather docilely the necessity for a November invasion of Japan—come hell or high water. Unless—the A-bomb ended the war that summer.

In their first critical interaction with public policy, the scientists played the role of technical experts advising on weapons effects. Some scientists argued against the use of the bomb and recommended a "demonstration" of the bomb's might—a proposal quickly overruled on military grounds.

We see in fine detail the hectic chain of events connecting the shipment of bomb material from Oak Ridge and its final insertion in the 10,000-pound bomb at Tinian in the far Pacific. A general is allowed to hold the vital bomb parts and is mystified by their gentle warmth. The bomb—nicknamed "Little Boy"—is readied for its entry into history.

The bomb was dropped on an unsuspecting and unwarned Hiroshima. Told of the successful bombing, President Truman is reported to have said to an aide: "Captain Graham, this is the greatest thing in history."

Admiral Leahy was bitter about the bomb, maintaining: "The use of this barbarous weapon at Hiroshima and Nagasaki was of no material assistance in our war against Japan. The Japanese were already defeated and ready to surrender."

The world is again on the brink of a great decision—an agreement to end nuclear tests.

"No High Ground" should produce a shock wave impacting upon our conscience. There is an acute parallel between Hiroshima-1945 and Geneva-1960, but there is also a great and good difference. Then the decisionmakers were few and insulated by secrecy; now the issue is in the open and we are all decisionmakers.

Public Laws 494–552

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent I am extending my remarks to include my report to my constituents in the Second District of Illinois on Public Laws 494 to and including 552 of the 2d session of the 86th Congress:

PUBLIC LAW 494

Public Law 494 grants gratuitous national service life insurance up to $10,000 to enlisted personnel who died in aviation accidents while undergoing flight training in Army or Navy from October 7, 1940, to August 4, 1942. This puts them on the same basis as those serving in capacity of aviation cadets, which seems to me only fair. Money will be paid in monthly installments only to (1) widow or widower, (2) children, or otherwise (3) to parents.

PUBLIC LAW 495

Public Law 495 is aimed at halting a windfall when a widow of one veteran marries another veteran and on his death collects for her children twice the benefits, such as compensation or pension. It prohibits duplicate benefits. Most extreme case was that of a widow who married three times, each husband a veteran, and her children drew three allowances, based upon the deaths of three individuals.

PUBLIC LAW 496

Public Law 496 revises the method for treatment of railroad corporation income resulting from discharge of indebtedness in receivership or bankruptcy.

PUBLIC LAW 497

Public Law 497 waives payment of premiums on national life insurance policies for veterans who become totally disabled in line of duty after applying for insurance and prior to its effective date. It applies only to World War II and Korean veterans.

PUBLIC LAW 498

This extends for 2 years payments in lieu of taxes on real property transferred by the Reconstruction Finance Corporation to other Government departments.

PUBLIC LAW 499

Veterans with total (service-connected) disabilities get additional compensation for one to three children. Public Law 499 grants additional compensation of $12 monthly for each child of totally disabled veteran in excess of three and of partially disabled veteran in lesser amount. Some 1,275,000 veterans will be benefited at estimated annual cost of $12 million. VA said no, Congress with one voice said yes.

PUBLIC LAW 500

H.R. 10777, military construction

Public Law 500 authorizes $1.1 billion of construction projects for fiscal 1961 at Army, Navy and Air Force installations in this country and abroad. Fifth Army (headquarters of which are in our district) gets $13,977,000, the greater part for housing and facilities at Fort Leonard Wood in Missouri. Authorization of over a billion dollars in 1 year for military construction alone emphasizes the high cost of defense.

PUBLIC LAW 501

H.R. 113, veterans

Public Law 501, urged by all veteran organizations, prohibits the severance after January 1, 1962 of a service-connected disability which has been in effect for 10 or more years, except when based on fraud. Since 1954 VA has been conducting a comprehensive review of all service-connected cases, has severed 21,500, increased ratings in 9,551 cases, decreased in 71,125 instances. Review will be completed next year. After that Public Law 501 takes over and if veteran has gone 10 years and there is no fraud he is permanently set.

PUBLIC LAW 502

S. 2611, Small Business Investment Act

In 1958 Congress passed the Small Business Investment Act to bring equity-type capital and long-term credit within easier reach of small businesses through the formation of small business investment companies. Since that time 95 of such investment companies, including 2 in Metropolitan Chicago, have been licensed. Public Law 502 advisedly amends the act to remove obstacles that have prevented the formation of many more companies. Anything to strengthen the credit position of small business in its tough fight to survive is in the public interest, I think you will agree.

PUBLIC LAW 503

S. 2977, Central Bank for Cooperatives

Public Law 503 increases from 7 to 13 the directors of the Central Bank for Cooperatives. This will give representation each of the 12 regional banks, the 13th director being appointed by the Governor of the Farm Credit Administration with the approval of the Federal Farm Credit Board.

PUBLIC LAW 504

Inflation has hit even bankruptcy. Public Law 504 increases the closing fee of a trustee in bankruptcy from $5 to $10 and the cost of filing a reorganization petition from $100 to $120.

PUBLIC LAW 505

Navajo and Hopi Indian tribes in Arizona seem to be riding on the crest. Public Law 505 gives consent to the tribes for sale of 100,000 acres, recently acquired, and to make 99-year leases, looking forward to a $7-million sawmill, a $150-million powerplant, byproducts industries, and home construction project.

PUBLIC LAW 506

Public Law 506 authorizes the lease of lands in the Colorado River Indian Reservation in Arizona pending a judicial determination of just what tribes own the land.

PUBLIC LAW 507

H.R. 10996, certified mail

Some 3,600,000 pieces of Government mail annually are sent by registered mail. Public Law 507 gives Federal Departments option of using either registered mail or certified mail, which costs about 36 percent less. Annual saving of $774,000 is anticipated.

PUBLIC LAW 508

West Virginia, which the Civil War brought into the Union, is planning a whooping centennial celebration in 1963. Public Law 508 directs the cooperation of the Federal Government.

PUBLIC LAW 509

H.R. 7681, Hoover reorganization plan

Public Law 509, fathered by Congressman DAWSON, embodies the substance of Reorganization Plan No. 1 of 1959 of the Hoover Commission on economy and efficiency in Government. It transfers certain duties relative to forest land mineral rights from the Secretary of the Interior to the Secretary of Agriculture.

PUBLIC LAW 510

This amends an old law, enacted in 1876, to permit streets in the Palace of Fine Arts area in San Francisco to be used for park, recreational, and cultural purposes. Time brings changes and when Uncle Sam is concerned the demand for another public law.

PUBLIC LAW 511

Public Law 511 gives the Secretary of the Navy the same authority exercised by the Secretary of the Army and the Secretary of the Air Force in meritorious cases to cancel an enlisted member's indebtedness to the United States on his honorable discharge. Fair enough. Sailors should have the same treatment as soldiers and flyers, they all serve in the Armed Forces.

PUBLIC LAW 512

Surveyors made a mistake in mapping major highways in Alaska, so Congress had to pass Public Law 512 to right things. Strips of land totaling 14 or 15 acres are all that is involved.

PUBLIC LAW 513

Public Law 513 requires publishers of magazines enjoying second-class mail privileges to file sworn statements of average number of copies going to paid subscribers. This always has been required of publishers of newspapers.

PUBLIC LAW 514

This authorizes the sale of 22 acres of land to Port Hueneme in California to help out in its harbor development program. Uncle Sam acquired the entire waterfront in World War II.

PUBLIC LAW 515

Water pollution in the historic Potomac River here in Washington is, as elsewhere,

a hazard and a problem. Public Law 515 authorizes a sanitary sewer from Dulles International Airport to District of Columbia system.

PUBLIC LAW 516

New England fishing industry is in dire straits due to imports of frozen fish and aged trawlers needing replacement. Public Law 516 provides a $2.5 million program, part in subsidies to meet foreign ocmpetition, part in loans for construction of new and modern trawlers.

PUBLIC LAW 517

Our national forests are a valuable asset. Public Law 517 directs an administration of them on the basis of multiple use (recreation, range, timber, watershed, wildlife, and fish) so that they best will meet the needs of all the American people. It also provides for sustained yield of products.

PUBLIC LAW 518

H.R. 10646, $2.5 billion in new ships

American merchant marine has started on a replacement program calling for construction of 275 new vessels at cost of $2.5 billion under operating-differential subsidy contracts. Public Law 518 increases life expectancy of vessels from 20 to 25 years. Reason: increased costs and depressed freight rates (due to worldwide excess of ocean tonnage over demand) make amortization of construction loans under 25 years all but impossible.

PUBLIC LAW 519

Public Law 519(1) eliminates the requirement that bankruptcy claims be filed under oath, and (2) makes a false claim not under oath a crime.

PUBLIC LAW 520

This relates only to insurance companies operating in the District of Columbia. It regulates the issuance of variable annuity contracts, a recent insurance innovation.

PUBLIC LAW 521

Headquarters of Mount Rainier National Park is at Longmire, Wash., where average snow depth is 53 inches. Public Law 521 changes the location to Ashford, near the Nisqually entrance. Reason: less snow, Ashford seldom having as much as 4 inches.

PUBLIC LAW 522

Alien employees of international organizations are exempt from paying Federal income tax. In New York, headquarters of the United Nations, they are exempt from paying State income tax by a State law. Public Law 522 extends the immunity (from the District of Columbia income tax) to alien employees of the Organization of American States, and other international organizations, resident in Washington.

PUBLIC LAW 523

Public Law 523 reflects a growing public awareness to the loss of important prehistoric sites in the construction of dams and other large public works. It provides for the salvage of historical and archeological data in advance of construction in order to preserve the Nation's heritage.

PUBLIC LAW 524

Registration of births in the District of Columbia is pretty much a mess, as it was in Chicago until the Bureau of Vital Statistics of Cook County bent to it. Public Law 524 gives parents in the District 3 months in which to report name of newborn child for official recording.

PUBLIC LAWS 525, 526, 527, 528

These (as Public Law 524) apply only to the District of Columbia. Congress, as you know, serves Washington and the District both as city council and State legislature.

PUBLIC LAW 529

Public Law 529 authorizes the construction of a reservoir on Little River near Norman in Oklahoma to furnish water for municipal, domestic, and industrial purposes. Fourth of the population of Oklahoma lives within 50 miles of reservoir site and Tinker Air Force Base is in the area. Plans for the project include fish, wildlife, and recreational benefits.

PUBLIC LAW 530

Public Law 530 relates only to the District of Columbia and is another illustration of how the Congress serves the District of Columbia as a State legislature. It (1) provides for use of modern tables of mortality in connection with life insurance, and (2) allows policies on females to make allowances for the 3-year greater life expectancy. Many State legislatures already have similarly adopted recommendations of the National Association of Insurance Commissioners.

PUBLIC LAW 531

This establishes a Legal Aid Agency (annual cost $75,000) to provide lawyers for indigents in the courts of the District of Columbia. With 7,500 poor persons annually without adequate representation, situation was so bad House Report No. 1372 termed it "intolerable." Cook County for many years has had a public defender and staff.

PUBLIC LAW 532

H.R. 12117, Department of Agriculture appropriations

Public Law 532 carries the appropriations for fiscal 1961 for the Department of Agriculture. The appropriations total $1,323,963,600, $17,557,590 less than the budget.

This is for the regular activities of the Department only. The act also carries $1,226,500,000 capital funds for the Commodity Credit Corporation, and $1,443,634,000 for reimbursement for its special activities, including about $107 million for famine relief to friendly peoples and $881 million for sale of surplus products for foreign currencies. Thus the total appropriations for fiscal 1961 for agriculture are $3,994,075,600, some $141 million under the budget.

PUBLIC LAW 533

Public Law 533 saves Uncle Sam some money by eliminating 40 or 50 annual reports various departments of the Federal Government were required to make to Congress but which no longer served any useful purpose and often were duplications. They took time, personnel, and money to prepare. A good job of housecleaning, I would say.

PUBLIC LAW 534

Public Law 534 designates September of 1960 as "National Wool Month." Wool is grown in every State of the Union, including Alaska and Hawaii. The American wool industry, we were told, represents $5 billion a year measured by retail value of its products.

PUBLIC LAW 535

Public Law 535 makes a supplemental appropriation of $6 million for unemployment compensation for veterans and Federal employees for fiscal 1960. The demand was greater than anticipated—not a healthy economic sign.

PUBLIC LAW 536

In 1880 Congress authorized a harbor at Waukegan, 38 miles from Chicago. With the advent of the St. Lawrence Waterway the Waukegan Port Authority has ambitious plans for further development. Public Law 536 helps out. It permits Federal land conditionally ceded to the city to be transferred to the authority.

PUBLIC LAW 537

Pesticide chemicals are widely used on fresh fruits and vegetables to cut down staggering losses due to decay in marketing. Public Law 537 requires the shipping container to declare the presence of pesticide chemicals, but removes the requirement that the declaration shall be posted when the fruit and vegetables are out of the container and on display for retail sale. Food and Drug Administration, tried and true guardian of the public health, approved.

PUBLIC LAW 538

In 1897 Ford City in Pennsylvania built a sewer system into the Allegheny River. In 1928 a Federal dam on the Allegheny all but put the sewer system out of business. Public Law 538 waives the statute of limitations and permits Ford City to sue.

PUBLIC LAW 539

In 1958 Congress awarded members of the Lower Brule Sioux Indians $977,000 for 8,000 acres of tribal lands, taken for construction of a dam. Public Law 539 protects individual Indians from liens for money owed the Government when such would result in hardships.

PUBLIC LAW 540

This relieves minor members of the Otoe and Missouria Indian Tribes of having legal guardians appointed so that they can share in the million dollar judgment against the United States. Per capita share is only $581. Cost of guardian appointment is $250.

PUBLIC LAW 541

Highland Falls in New York needs a new cemetery to bury its dead. Public Law 541 accommodates by permitting sale to the village of 8 acres of land of the Military Academy at West Point and across the street from the tank firing range used by the cadets.

PUBLIC LAW 542

This is stopgap legislation extending for another year the operation of steamship conferences with dual-rate exclusive patronage contracts, pending the completion of exhaustive inquiries by two committees of the House.

PUBLIC LAW 543

In 1958 the Standing Rock Sioux Indian Tribe was awarded $5,252,000 for land taken over for a dam. Public Law 543 protects needy individual Indians from liens for money owing the Government. Similar to Public Law 539.

PUBLIC LAW 544

This relates to the Crow Creek Sioux Tribe, which received $1,395,800 for land taken for dam construction, and is similar to Public Laws 539 and 543.

PUBLIC LAW 545

Crowded court dockets are delaying Federal watershed projects for months and sometimes years. Public Law 545 permits work to start on issue of court's order without waiting for final adjudication and transfer of property.

PUBLIC LAW 546

Public Law 546 brings the judicial review provisions of the Federal Aviation Act of 1958 and the Food Additives Amendment of 1958 under the uniform provisions of Public Law 85–791 relating to the record on review of agency orders.

PUBLIC LAW 547

Public Law 547 extends from June 30, 1960, to August 1960, the effective date of the Humane Slaughter Act. Reason: delay in delivery of needed equipment ordered by packinghouses.

PUBLIC LAW 548

This authorizes the Kickapoo Indians of Oklahoma to use some $1,600 to their credit with the Government to rebuild their tribal community house.

PUBLIC LAW 549

Public Law 549 gives to the Zia and Jemez Pueblo Indians, in trust, 640 acres of land no longer needed by the Government to add to their 78,371 acres in New Mexico for cattle operations.

PUBLIC LAW 550

I think this will be of interest to you, as it was to me. Inhabitants of the territory of

American Samoa are the only Americans who are not citizens. They are legally classified as American nationals. Hence they were not eligible for the scholarships and graduate fellowships of the National Science Foundation. Public Law 550 amends the Science Foundation Act to read: "Persons shall be selected for such scholarships and fellowships from among citizens or nationals of the United States."

PUBLIC LAW 551

In 1958 Congress directed the Administrator of General Services to sell to Wisconsin the property at La Crosse formerly used as a rifle range. But Wisconsin doesn't want to buy. So Public Law 551 repeals what Congress did in 1958. The property now probably will be sold to the higher bidder.

PUBLIC LAW 552

Public Law 552 extends for 3 years the time for holders of desert land entries on public lands in the Lower Palo Verde Mesa in California to complete reclamation and cultivation as required by the Desert Land Act.

Vast Southwest Water Plan Recommended by U.S. Experts

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. CARROLL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article from the Denver Post of June 26, 1960, entitled "Vast Southwest Water Plan Recommended by U.S. Experts."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VAST SOUTHWEST WATER PLAN RECOMMENDED BY U.S. EXPERTS

(By Roscoe Fleming)

Why not constitute the entire Southwest, the dryest corner of the Nation, as a sort of gigantic national laboratory to try out every means of increasing and of saving its water supply for its oncoming rush of people and general development?

The suggestion has been made by experts retained by the Senate Committee on National Water Resources headed by Senator ROBERT S. KERR, of Oklahoma.

Heading the group is Edward A. Ackerman, who with George O. G. Lof, of Denver, wrote the valuable book, "Technology in American Water Development."

Tomorrow's water shortages will be upon us before we know it, and it's time to start really massive preparations to overcome them.

The Southwest needs water worst and first, beginning now. What can be learned there, will help both in building a great Southwestern future, and in providing invaluable experience and guides for the rest of the Nation, so this group says.

By the year 2000—only 40 years from now—the United States must find water to supply twice as many people as now, people living on a scale that will demand much more than twice as much water.

And water is the one indispensable resource to support such a civilization. Where is ours to come from?

The authors say that the Southwest, as conceived by them, will in 40 years have a fourth of the Nation's population in about 38 percent of the area of the 48 original States; but that its basic water supply is only 14 percent of the national supply.

If its hopes of development are to be realized, it's got to find more somewhere, or explore every way to save this priceless resource, perhaps both.

Their Southwest consists of nine States from California on the west to Texas, Oklahoma, and Kansas on the east. It includes the Colorado Basin States, save for Wyoming.

By the 1960 census this group has 34.6 million people or 19 percent of the national total. In 40 years it will have perhaps 80 million. Where is the water to come from?

The writers say that the national task of supplying and saving water will constitute the most complex and gigantic task of internal improvement that the Nation has ever faced.

It will dwarf such undertakings as the present $40 billion national highway program.

And incidentally, they point out that water development is at least as vital as road development, although it has received much less national attention.

Providing water for the long future will require such an immense body of advance planning and programing, that we ought to get started now.

One big job will be to determine what we want water to do, and what are the national and regional priorities as between uses?

In other words, we need the national water policy which everyone has declared imperative for years, but which we've never even approached, because "we never miss the water until the well runs dry."

One early goal ought to be to determine what land we shall need now for future reservoirs, and to set it aside now so that when we need it, it won't be covered with billions of dollars worth of improvements, and so out of reach.

All this comes under the head of planning. Next will come development, which the authors don't see as a Federal task alone.

They see the Federal Government as a coordinator and catalyzer, but not as the sole builder. They suggest participation by regional and local people, public and private; and think the Federal Government might well induce action by offering loans and grants-in-aid for federally approved projects.

They point to the present antipollution program as a model, by which Federal grants are given communities to build sewage works.

Every local sewage facility helps purify the water supply of a whole basin, they note; and every local supply project would help with the water supply of a region.

Finally, when it comes to operation, they envisage computer-operated control systems to see that every drop of water goes where most needed.

This would be like the water-control systems inaugurated in the TVA, but so complex that any present system would be a baby beside them.

If the Southwest with its pressing water needs were to be chosen as the first area for such complete water development and control, the first step would be to ask the States to set up water models of their prospective need right up to A.D. 2000.

Second, "prognostic hydrology" would be put to work to ascertain the total possible supply from all sources.

These patterns would then be matched and from the matching could be planned further development such as the design of new facilities, and future construction big enough to provide "scale economy."

One vital suggestion is that the program be authorized far enough in advance, with Federal and State appropriations, so that work could proceed by decades rather than years.

In managing water, the authors say we must come to the "three-dimensional concept" in which all water in the atmosphere, on the surface or in the ground is to be treated as one whole supply.

We are, to put it mildly, far from this today. Irrigation experts concede that much waste is unavoidable in present Western priority systems; and there's little uniform legal treatment of groundwater and atmospheric water.

Specifically the southwestern program would:

Estimate future water supply by better long-range forecasting based on powerful new methods now just developing, such as satellite observation.

Locate ground waters, which in many areas total more than all surface supplies.

Seed the clouds consistently and region-wide. The authors figure this might possibly increase Western precipitation by 40 million acre-feet yearly, runoff by 15 millions.

Other means of enhancing supply would include:

Forest planning to keep more snow on the ground.

Desalting brackish water.

Averting pollution.

Cleansing and reusing polluted water.

Suppressing waste, as by recycling, cutting down evaporation—which alone costs the Southwest 10 million acre-feet yearly—by eliminating water-wasting weeds, by lining canals against seepage, by thriftier irrigation practice, and by applying water to its highest uses.

Dr. Donald Patton, who aided in this study, suggests that atomic energy can play a part in rapid and cheap development of water facilities as yet undreamed of, such as digging reservoirs with one gigantic blast, fracturing underground strata to form artificial acquifiers for storage; and even blowing the silt out of silted-up reservoirs, making them useful for many more years.

"My True Security—The American Way"—Essay by Miss Sunny Ustrich

EXTENSION OF REMARKS
OF
HON. JOE HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. HOLT. Mr. Speaker, I am very proud of the achievements of a 17-year-old girl, Miss Sunny Ustrich from Hollywood High School of Hollywood, Calif., who was awarded second place in a nationwide essay contest sponsored by the U.S. Junior Chamber of Commerce and the Mutual Benefit Life Insurance Co.

Her essay on "My True Security—The American Way" was selected as first-place winner in the State of California, thereby entitling her to enter the national competition. As one of the three national winners, Miss Ustrich received a scholarship to the college of her choice.

I wish to call to the attention of my colleagues this prize-winning and timely essay, as I know it will be a rewarding experience for them to share the sober thoughts of this outstanding young citizen.

Accordingly, Mr. Speaker, under unanimous consent, I include this excellent essay which Miss Ustrich has written in the Appendix of the RECORD.

MY TRUE SECURITY—THE AMERICAN WAY

(By Sunny Ustrich)

As Mr. Average American looks about the dinner table, he smiles with satisfaction. He is proud that he can provide his lovely wife and rosy children with nourishing food and can shelter them in a comfortable home. The satisfaction that he derives is from the security that he feels. This material wealth is not the root of his security but a mere symbol of it. If tomorrow Mr. A. American were to lose his job, he might lose all those possessions. Yet his security stems from the fact that as long as he uses his own initiative, he has the chance to regain all he has lost and more. Failure simply means that he must try harder, not that his life is at an end because of one misfortune.

In this country, and in many others, the state attempts to aid people whom misfortune has robbed of security. Yet, no one is secure who depends on others. True security lies not in the hands of a national government but in the hands of the individual himself. In a nation governed under a Communist system, people need not worry what jobs they will hold, where they will live, what way of life they will lead. Everything is planned for them by their government. This is termed "security." Yet the moment that government is weakened, their so-called security is weakened also. They are a flock of sheep without a shepherd; their lives are without meaning, purpose, or direction. They search for guidance in others, for they have never had occasion to make their own decisions. If no leader is found, existing order crumbles, and chaos reigns. Was this group ever really secure?

In this land of freedom, man is taught to look for guidance and counsel in our Government, but never to be dependent upon it. The function of the Government is to formulate rules and maintain order to protect man from his neighbors in his legitimate search for fulfillment of his aspirations. Ours is a government by the people; therefore the people, not the Government provide their own security. One's job, one's home, one's way of life are his own to choose. Our system of economics, capitalism, provides the incentive, but man himself must provide the initiative. Opportunity is offered to all those willing to take advantage of it. If our Government were destroyed, man could rebuild it, for he knows how to work, to get ahead, to live. He has developed a faith in himself. He knows that dependency upon others is the opposite of security. The key to security is self-reliance.

Numerous wars have been fought to preserve man's freedoms—his right to be independent, to make decisions for himself, to be able to take advantage of opportunities. Would people now lose their integrity for this false security which would make them dependents and slaves of another's whims? Security would then mean submission. Man must continue to strive for better things, or this world will become a beehive with a queen who rules a mass of workers, who are born, perform their functions, and die. There is more to life than that. No matter how kindly the shepherd, man is not a sheep to be herded from pasture to pasture, but an individual in whom burns the spirit of adventure. His destiny must be his own. As was stated by William Hazlitt, the early 19th century English essayist and critic, "Even in common affairs of life, in love, friendship, and marriage, how little security have we when we trust our happiness in the hands of others?" You alone can provide your security, for your true security is yourself.

Hon. Joseph C. O'Mahoney, of Wyoming

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. HENNINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a statement by me on the retirement from the Senate of the Honorable JOSEPH C. O'MAHONEY, of Wyoming.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HENNINGS ON THE RETIREMENT OF HON. JOSEPH O'MAHONEY, OF WYOMING

I wish to join the great number of friends of Senator O'MAHONEY in expressing sentiments of regret that he is leaving the Senate. As one of its ablest members, his rugged individualism, initiative, and perseverance have made him outstanding. Outspoken in his dedication to the Constitution, in his alinement with proponents of economic freedom, and devotion to the development of the West, he is most highly respected by his fellow Senators. His eloquence and great independence in all fields from antitrust to military affairs, from matters effecting the Department of Interior to atomic energy have added to his prestige.

JOE O'MAHONEY is a leader, advocate, and originator. He is a realist.

The distinguished Senator from Wyoming made an indelible impression on me in early 1937 when I, as a Member of the House, would come to the Senate to listen to the debate on the Supreme Court "packing" plan. He was a bulwark of strength and principle in the great fight to maintain our Court as an independent judicial body.

It is through our common interest in the field of constitutional law and antitrust legislation that I have gotten to know Mr. O'MAHONEY very well. It has been a privilege to be with him on the Judiciary Committee. During our close association on that committee, I have observed his keen insight into constitutional problems, his dauntless courage and determination to prevent any threat to constitutional rights, and his courage of conviction. His opposition to the drafting of labor in World War II, and assertion of the constitutional principles at stake in the Strauss nomination are indications of his deep conviction and courageous vigor in defense of the Constitution.

Guided by patriotism and welfare of the country, he has done all in his power to protect the American system. He believes in fairplay and competition. He has been forceful in attacking monopolies and concentrations of economic power. He has been outspoken against the power of monopoly in controlling the economic lives of working people, white-collar people, and small business people. He has been an ardent supporter of antitrust legislation.

He has been industrious in his endeavors to help the West. He has been successful in his battle for the development of the West's natural resources. In conservation he has worked to aid mining, water development, and land reclamation.

Although he comes from a State with a small population, through his talent, integrity, and keen intelligence, his reputation has spread beyond the boundaries of his State, beyond the boundaries of the West, and over the entire country. His grasp of national problems and relentless efforts to solve them have made America a stronger and better place to live.

I regret to see him leave the Senate. I realize, though, that he is taking the right road. He knows in his own heart what is best or he would not have made the decision. As a great students of history, he himself will now go down in history as one of the outstanding Senators of our time. I wish for him and for his loved ones many more years of good health, great happiness, and success.

Governor Rockefeller Suggests Means To Promote Freedom at Home and Abroad

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Saturday, July 2, 1960

Mr. KEATING. Mr. President, I should like to commend to the attention of every thoughtful American citizen a recent address by Gov. Nelson A. Rockefeller, of New York. He is deeply concerned over the present state and strength of freedom in the world and has made a number of specific proposals in this field.

To increase the efficiency of our own Government, Governor Rockefeller recommends a thought-provoking scheme of government and military reorganization. To strengthen the forces and resources of the whole free world, Governor Rockefeller suggests regional confederations that can multiply national potentialities.

The Governor of New York State is, as he points out himself, "an elected official responsible for the safety and well-being of more than 16.5 million citizens of the greatest State in the Union." He has served the Federal Government under Democratic and Republican administrations, in Washington and abroad. As Chairman of President Eisenhower's Committee on Government Organization, he has had unrivaled opportunity to observe any weaknesses in U.S. policy-making. I believe that his bold, imaginative, and far-sighted proposals merit serious consideration all over the country. I therefore ask unanimous consent that the text of his address before the Rotary Club of Binghamton, N.Y., be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD as follows:

TEXT OF AN ADDRESS BY GOVERNOR ROCKEFELLER PREPARED FOR DELIVERY AT LUNCHEON SPONSORED BY BINGHAMTON ROTARY CLUB, ARLINGTON HOTEL, BINGHAMTON, N.Y., TUESDAY, JUNE 21, 1960

I thank you warmly for the privilege of this occasion. I wish to try to repay your kindness and hospitality with more than casual acknowledgment. And I hope to do so by speaking to you of some of the things most seriously upon my mind in these most serious times—in the Nation, through the world, and for the future.

I am deeply disturbed by the present state and strength of freedom in the world, as well as the security of our own country. I know these matters and their true appraisal must

concern you, as individual citizens and thoughtful Americans, and as members of a great international organization dedicated to fostering world understanding in no less than 116 nations. I personally feel this deep concern as a father and a grandfather who cares, like each of you, about the kind of world our children and their children will inherit and inhabit. I also happen to be an elected official responsible for the safety and well-being of more than 16.5 million citizens of the greatest State of the Union. My concern, therefore, is official as well as personal.

The facts before us permit no one to be either serene or complacent. For the fate of our freedom—yours and mine and America's—is decisively affected by the fate of freedom in the world at large.

Everywhere we look across this world in which we live, the forces of freedom are under siege and in danger.

It is so in Cuba, just 90 miles from the American mainland—and it is so in Japan, on the far side of the globe. It is so in those divided nations whose internal borders are among the most cruel scars of the cold war: Germany, Korea, Vietnam. It is so with a country whose whole conduct can bend before Communist pressure—as with Japan; or with a city whose very life must suffer Soviet threat—as with Berlin.

The forces of freedom, in short, are in historic trouble.

We, as Americans, cannot waste time merely lamenting this fact. Nor must time be wasted in confusing or exploiting the fact for partisan purposes in domestic politics. The great question is: What can we do about it?

I say that there is a great deal that we Americans can do about it—and we can do it with greatness.

We can make freedom a dynamic and irresistible force throughout the world.

Before we talk about "we," the Nation, let us talk specifically about "we," the individual citizens, such as you and I. We individual Americans are not helplessly remote from the arenas where great problems and great perils must be met. I can demonstrate this simply and concretely to you.

Only 4 days ago, the controlling majority in the U.S. House of Representatives attacked the mutual security appropriation as if wielding an ax. By the time the ax had finished its indelicate surgery, the money available in fiscal 1961 for strengthening our allies, along all the frontiers of freedom, had been slashed by $590 million.

I am pleased and proud that an even more drastic cut was prevented by the leadership of an upstate New York Congressman, JOHN TABER, at the head of a coalition largely of Republicans. We can thank him and them.

But we cannot afford the damage that was done. The mutual security appropriation is now before the Senate. I strongly urge you to wire or write your Senators immediately to support vigorously the restoration by the Senate of the House cuts—to restore the full amount requested by President Eisenhower. The restoration of these cuts is vital to the strengthening of the forces of freedom. This is a vital task in which each one of you can help.

Action in this area, however, is essentially a holding action. If freedom is really to become a dynamic and irresistible force in the world, free men and free nations must join together in a truly great design—a design to assure that our deepest spiritual and political values shall live and thrive.

Where do we begin on this great design? Very simply, it seems to me that we have to start with the problem of organization. This means political organization in the most full and creative sense. It means organization of our own Government. And it means organization of a host of free nations.

Two great and explicit challenges and needs are involved:

First, we must give to the Government of the United States a structure so cohesive, so efficient, so strong that it can both inspire and execute the policies and programs necessary in a world of revolutionary change.

Second, we must lead and encourage the free nations to develop and deepen their bonds with one another so that regional alliances can grow into working confederations.

I am speaking now of historic steps, of giant strides to be made both within our own Government and among the governments of all freedom-loving peoples. They are realistic and practical steps.

Let us look at both areas of action. There is nothing new about efforts to improve the organization of the Federal Government. Two Hoover Commissions studied aspects of this need at length, and they achieved important reforms during the Truman and Eisenhower administrations.

I was intimately concerned with the subject for 5 years as chairman of President Eisenhower's Committee on Government Organization. In addition, I participated in the last two reorganizations of the Defense Department.

Spurred by ever-changing world conditions, a Senate subcommittee under Senator JACKSON, of Washington, is now investigating the policymaking machinery of our National Government.

The significant fact today is the growing public awareness of the urgency of getting major improvements made—and made fast—in this area. For we have lately faced plain and serious evidence of the inadequacy of our Government machinery. We have seen this with the unfortunate U–2 incident. We have seen this with the unhappy fate of the President's plans to visit Japan. Both occurrences have warned us that there is something seriously wrong with the working of the decisionmaking processes of our Government.

Deeply as we may regret these facts, we can and must welcome the quickened public concern that they have provoked. This concern encourages me to believe that important reform can now be achieved—and I am confident that a great deal of such reform will have the full support of the President.

I feel deeply, therefore, that the Congress should make necessary Government reorganization its first order of business in the next session. For the blunt truth is that the present structure of the Federal Government is simply not properly geared to support the President in developing and executing policy, thoughtfully and purposefully, in the complex areas of national security and foreign affairs.

This governmental structure moves slowly, even sluggishly, to meet a world of swift-moving change. It tends to be stiff and static when it should be quick, alert, and creative.

If any citizen imagines, for example, that our Department of State exercises sole and supreme authority in the operation of our foreign policy, this citizen is very much mistaken. The defining and operating of such policy involves almost a legion of governmental departments and agencies—State, Defense, CIA, ICA, USIA, and very often Treasury, Commerce, Labor, Agriculture, along with innumerable interdepartmental agencies. To reconcile and coordinate their policies and actions, a host of committees, including the National Security Council, has been established.

The weaknesses of such a way of operating are becoming obvious. It verges on a system of government by committee. Committees, by their very nature, tend to reach the least bold or imaginative position. The result is the lowest common denominator among several varying positions, in the name of agreement.

How do we make sure that, in the making of important national decisions, the controlling consideration is the supreme interest of the United States—and not the rival interests of competing agencies?

I strongly urge that two important and practical steps be taken immediately: (1) The post of First Secretary of the Government should be created to assist the President in the exercise of his authority in the whole area of national security and international affairs. This official, with status above the level of Cabinet officers, would derive his authority from the President and act on his behalf. He would have statutory designation as Executive Chairman of the National Security Council. He would be empowered to represent the President, in international matters, on the prime ministerial level. He would be supported by a staff of his own. He would be empowered to reorganize and use the whole interdepartmental planning machinery of the Government in this area, including programs for controlled disarmament.

While the Secretary of State continued in charge of the day-to-day conduct of diplomacy (and represented the Government on the foreign ministerial level), the First Secretary would, under the President, inspire and direct the defining of long-range purposes, the policies working toward them, and the coordinated action needed to execute these policies.

2. A similar clarification of authority in the area of defense planning and organization is especially necessary. The most effective and efficient defense organization is indispensable to the whole defense of freedom. I recommend the following: (a) The Chairman of the Joint Chiefs of Staff should be designated principal adviser to the Secretary of Defense and the President, and be responsible for the development of overall strategic doctrine. (b) The staff of the Joint Chiefs should be organized on a unified basis under the direct authority of the Chairman. (c) All officers above the rank of brigadier general or the equivalent should receive any promotions from the Department of Defense and be officers of the Armed Forces of the United States—not the individual service of their earlier careers. (d) The Secretary of Defense should be given full authority over all military research, development, and procurement.

Why are such organizational steps so urgently necessary?

It is not any marginal matter of simply making governmental machinery a little more efficient, a little more coherent, as all of us would like. It is the most critical matter of making this machinery able to cope with problems and challenges emerging with swiftness upon all sides—in an age of the deadliest of weapons, on an earth deeply divided against itself.

And only as our own Government is sensibly put in order can we proceed to the greater task of applying to the world of the free nations the same modern principles and practices that alone can give strength to the forces of freedom everywhere. This is the way to start building the kind of world we want.

Let us now look at the challenge of building this larger world—and of helping bring to it, too, purpose and organization.

I have spoken of developing confederations out of regional alliances. This is

neither a dream nor an abstraction. It simply suggests the logical and inevitable next step in the history of free nations.

We must face the fact that we have reached a point in history at which the Nation-State, standing alone, is becoming as obsolete as the city-state of ancient Greece or medieval Europe. No nation today, large or small, can meet the needs of its people or insure their security from within its own borders alone. We have already seen the peril of allowing Communist imperialism to pick off, one by one, the free nations standing in its path of aggression. We can see that the pattern of relationship between America and these other free nations must be something deeper and broader than a series of military alliances and bilateral treaties. There must be more lasting and rational political structure to these relationships.

Furthermore, we know in the economic realm that we cannot indefinitely treat or support the many needy free nations as dependents upon America. Rather must we help them to evolve political and economic structures that sustain their own unity, cooperation, prosperity and strength.

Our great task, then, is to help build these structures, so that the forces of democracy throughout the world can be strong and purposeful, dynamic and confident. We must be concerned primarily with political associations. As the political structures are sound—and only thus— the strength needed for common effort and common defense will follow.

We are not and cannot be striving merely to meet crises on a sporadic basis—but striving to serve the needs and aspirations of free peoples everywhere on a continuing basis. We are not trying merely to baffle enemies of freedom. We are trying to build freedom itself—by building the structures in which it can live and thrive. These are the ideas and purposes beneath the regional concept of confederation.

The outlines of confederation are already present throughout the world. They exist in the Organization of American States, in the North Atlantic Treaty Organization, in the Inner Six and Outer Seven of European trade, and other like associations. These can be starting points for the work ahead of us.

This work of moving toward confederation does not involve any superstates. Nor does it subtract from or conflict with the authority of the United Nations. Quite the contrary: Article 51 of the United Nations Charter specifically makes provision for regional associations, and the growth of these associations, would, in fact, add immeasurably to the strength of the United Nations.

The whole spirit and concept of confederation would be gradual and evolutionary. It provides occasion for firmer bonds between nations, joined in common effort on any level of national life—whether it be social, economic, or monetary; juridical, cultural, or military. Thus the principles of confederation can be applied at whatever level the parties agree to be in their mutual interest.

Let me try to put the idea of confederation into clear focus by proposing specific confederations and the great tasks they would accomplish:

(1) A North Atlantic Confederation. What would this confederation actually do? It would strive to tighten all political, economic, military, and cultural bonds linking Great Britain, Western Europe, and North America. It would offer in the economic arena a larger framework within which to work toward resolving present conflict between the Inner Six and the Outer Seven.

It would be dedicated to the ultimate achievement of free competition and free trade throughout its area. It would work toward greater unity of armed forces—a unity that, as it grew, America could recognize by placing nuclear weapons under the command of NATO.

It would share among the prosperous Western nations the burden now falling largely upon America to bring economic assistance and technical training to underdeveloped areas—and it would inspire this essential help to be given as a joint undertaking.

It would work toward a single Western plan for enforcible programs of disarmament to be negotiated with the Soviet Union—rather than allow the Soviets to confront and exploit a variety of divergent Western programs as they do today.

Finally, it would be a confederation so strong and so confident as to be ever ready to enlarge its numbers to include any of the Soviet-controlled satellites wanting to break away from the Soviet system and to join a union of free nations clearly capable of defending themselves.

(2) A Western Hemisphere Confederation. What would this confederation do? It would give hope and help to the peoples of Latin America who today are the world's most rapidly growing population. It would make possible a kind of Marshall plan for Latin America that would work toward long-range industrial development and a hemisphere free-trade area, allowing a free flow of men and goods and money from Point Barrow to Tierra del Fuego. In my opinion, only action of this scope can check antidemocratic forces, spurred on by Communist influences from abroad, as are so evident in Cuba today.

It would join efforts everywhere to make the land serve the people, by supporting land reform wherever necessary and by fostering so great a joint project as an East Andes Development Authority. Such an authority could open up the fertile soils and abundant power along this great frontier reaching from Caribbean shores 3,000 miles southward through the heart of the continent.

It would inspire progressive social action on a broad front. It would quicken the growth of universities. It would encourage scientific research and development. And it would tackle such urgent social problems as the need to finance, through a hemispheric credit mechanism akin to FHA, a massive program of low-cost housing in the fast-growing metropolitan centers of the hemisphere.

(3) An African Confederation. What would this conference actually do? To begin with, it would respect and echo the spirit of African unity already voiced by African leaders who are themselves impatient with old forms of nationalism that have no real roots in Africa.

With the cooperation of the North Atlantic Confederation, it would then begin with the most urgent task before the newly free African peoples, that of providing skills and training to millions just learning to govern themselves and to direct their own economies.

It would establish specific institutes of training in these subjects, from civil administration and auditing to telephone communication and roadbuilding. These institutes could largely be financed by the combined resources from public and private sources.

These, then, are some concrete examples of work to be done. The challenges are no less great in the Middle East and the Far East. Here, too, the rewards of working confederations can be enormous—for the cause of freedom. Ultimately, effective confederation can mean the proving that freedom can work—and that the needs and aspirations of free peoples everywhere can be met by bold and imaginative leadership of the free world.

This is a cause to challenge the greatness of America—to stir its people—to inspire its leaders.

This is a time in history when the skeptics and the cynics must not be allowed to make us shy from great endeavor, boldly conceived and bravely executed. Nor can we be turned aside by oversimplified warnings in terms of costs and expenses—warnings that, while seeming to be realistic, take little account of the facts.

We must remember the basic truth that only as the free nations of the world share in growth and strength can they share cost. Only as world productivity expands can the free peoples find a more sound and just source of help than the income of the individual American taxpayer. Only as the American economy grows in size and strength can it fulfill the opportunities of freedom and meet the challenge of communism. And this growth of ours can come only in a world whose productivity is speeding and whose economy is expanding.

The practical and the ideal are thus not at odds with one another. They are one and the same. And they must join to do what is more than desirable—they must do what is utterly and vitally necessary for the survival of freedom. We can hope to do this only with political structures in the world that can give both form and force to the principles of human dignity and individual worth.

What must be proven is that free citizens and free nations have the will and the wisdom to be as creative in this 20th century as our own American Founding Fathers were in the 18th century. Then freedom on this continent was at stake. Today it is freedom throughout the world. And the size of our designs and our purposes must match the size of the perils that challenge us.

I am confident that we can—as we must—build on this scale of greatness. I deeply believe in particular that the youth of America are ready and eager for the great adventure that can lie ahead. Let us begin this adventure by building those political structures throughout the world which will enable free peoples to live in peace and know justice. Let us begin it with the zeal and courage of our forefathers.

We have nothing to lose but our fears. We have the future of freedom to win.

Captive Nations Week

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. OSTERTAG. Mr. Speaker, a year ago the Congress adopted a resolution calling upon the President to proclaim "Captive Nations Weeks." This was done and the proclamation has been renewed this year. In the week of July 17, 1960, we will again observe Captive Nations Week.

The Soviet Union, whose fondness for branding other nations as imperialists represents the depths of hypocrisy and deceit, has forcibly thrust its evil Communist doctrine upon more than 20 nations throughout the world. It has subjugated these nations by force and subversion and created a Communist empire of nations which are, in truth, captives. We think of the fate of Hungary, Poland, East Germany, Czechoslovakia, the Baltic States, Bulgaria, and many more.

If these captive nations could choose, they would choose independence and

freedom rather than Communist subjugation. For no nation has ever freely chosen communism. Who would prefer bondage to freedom? This evil system has gained power only by violence, subversion, deceit, and force.

We in the United States are well aware of the sentiments of these captive peoples. We understand and support their aspirations for liberty and independence. We know that so long as any nation is oppressed and subjugated, no nations can be entirely free.

The captive nations resolution last year caused great consternation in the Soviet Union for it struck an area which the Communists anxiously desire to keep submerged. They know the captive nations represent a major weakness in the Communist system. Instead of the great monolithic system which the Communists pretend exists, the Communist empire is held together by chains.

We have faith that the desire for freedom and independence will not remain suppressed indefinitely by brute force. The United States supports the cause of freedom everywhere and the right of self-determination for all peoples. We look forward with hope to the day when these noble principles will again prevail in the captive nations of the world.

Captive Nations Week

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. RODINO. Mr. Speaker, by resolution of this Congress, and by proclamation of the President, July 17–23 is Captive Nations Week.

This solemn occasion is a truly historic one. The value and impact of the resolution was clearly demonstrated last July, when, as we recall, its passage evoked an explosive and vituperative reaction from Nikita Khrushchev.

The forthcoming observance will poignantly portray to the Nation as well as to the world, the plight of the nations who live in Soviet captivity. These nations, let us recall, do not just exist outside of the Soviet Union, where the heavy hand of Russia systematically exploits the resources and relentlessly treads upon the liberties of the valiant peoples of central Europe. The U.S.S.R. itself is built upon the captivity of 100 million non-Russian people who endure, in secret rebellion, the excesses of the Soviet Empire.

Let us remember that, despite the tactics of the police state, and despite merciless attempts at russification, these peoples also struggle to retain the vestiges of their national identity. Brute force, which has achieved a surface unity, has at the same time only strengthened the will of the people for self-determination and freedom.

The depth of the desire for liberty was tragically demonstrated by the revolts in Poland and the bloodbath of Hungary. The people of the captive nations have never accepted the Soviet tyranny, nor have they forgotten the priceless freedom that once, however briefly, was theirs.

I anticipate that the week of July 17 will bring demonstrations, rallies, and parades throughout the Nation. By these observances Americans will give heart and courage to the peoples in captivity and will remind the world, as well as their oppressors, that we have forgotten their suffering no more than they have forgotten their precious dream of freedom.

When President Eisenhower issued the captive nations proclamation, he stated that such observances shall take place each year "until such time as freedom and independence shall have been achieved for all the captive nations of the world." Let us hope and pray that, with God's help, we shall soon see the day when the need for a Captive Nations Week exists no more.

Our Region Needs Debate on Water Problems, Too

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. CARROLL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article from the Denver Post of June 26, 1960, entitled "Our Region Needs Debate on Water Problems, Too."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR REGION NEEDS DEBATE ON WATER PROBLEMS, TOO

The Senate Select Committee on National Water Resources has not completely sifted the millions of words of expert and amateur testimony it has taken this past year.

But one fact has already become apparent, as the adjoining article indicates.

What the committee calls the "Southwest" water region of the country, which includes Colorado and the vast area served by the Colorado River, is on its way to becoming the "water crisis" area of the Nation in the next 40 years.

Here are the challenging figures:

Today this nine-State region (Arizona, California, Colorado, Kansas, Nevada, New Mexico, Oklahoma, Texas, and Utah) has a population of roughly 30 million. Its water use, including farm irrigation, averages out to about 2,475 gallons per person per day.

This current level of water use is supplied primarily from surface runoff water in our rivers and streams. The region has less of such runoff than any other in the country.

For the area as a whole this supply can be estimated at anywhere from 196 down to 120 million acre-feet per year, depending on whether you look at the best years or the poorest. The average has been as low as 120 million acre-feet in drought periods.

Now, taking the Bureau of the Census high-range population projections for the same region, we can expect about 89 million people by the year 2000. California and southern Arizona are expected to be one of the great urban areas of the Nation.

This is substantially more than our "best years" average supply, and almsot twice the average for the driest 10-year period in the region's history.

Suppose we allow a 1,600-gallon-a-day average use figure in the great Southwest of 40 years from now (and that's only two-thirds of present per capita use).

Even so, the Senate has been told, the region will have to almost double its water storage capacity at very high costs and engage intensively in every known and hoped-for method of water conservation and development to achieve that lower per capita use supply. Some of the possibilities are listed in the adjoining article.

These water figures must force the leaders of our area to ask themselves hard questions, many of them going against the grain of regional tradition and sentiment.

For example, is the day already here when we can no longer afford the use of an acre-foot of water for farm irrigation because growing cities and industries need it more, and will yield more over-all economic growth to the region?

Can we ever again afford to use a good reservoir site for a one-purpose development, say power alone, or city water supply alone?

Can western water law, based on the first-come, first-served principle of ownership, continue to be the framework for our water development when, as a region, we can see shortages that will affect great communities so clearly ahead?

Can any force except the Federal Government coordinate and push the comprehensive and extremely expensive programs of development that the experts tell us will be not just desirable but essential?

These are only a few of the tough questions beginning to emerge at meetings of regional water experts.

But they must become interesting questions to the layman, too, for 40 years is not a long time. It's probably within your lifetime and certainly within that of your children.

If we now need a great national debate on foreign policy and purpose, as our best thinkers are urging, clearly, too, within our region we must embark on serious and organized public discussion of resources problems, especially regarding water.

Otherwise our regional contribution to the great national purpose, whatever it may turn out to be, is in danger of becoming increasingly ineffective.

Hon. Tom Martin, of Iowa

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. HENNINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a statement by me on the retirement from the Senate of the Honorable THOS. E. MARTIN, of Iowa.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HENNINGS ON THE RETIREMENT OF HON. TOM MARTIN, OF IOWA

I wish to join with my colleagues in the Senate and House of Representatives in expressing regret that my friend, TOM MARTIN,

is retiring from the Senate this year. Specializing in matters dealing with taxation, agriculture, and national defense, he has made many steady, significant, and lasting contributions in these areas.

He is a man of courage, integrity, and understanding. A good and solid citizen with human sympathy, he has served exceedingly well the people of America and his constituents in Iowa. The people of Iowa whom he has represented for 22 years, as well as his fellow Members of Congress, will miss his honorable and constructive service.

TOM MARTIN has left an indelible imprint on the destiny of the Nation. Modest, firm, and skillful, he has been faithful in his devotion to Congress. He typifies the public servant who comes to Congress and diligently attends to business without seeking publicity or headlines. He has worked untiringly to protect the liberties of our Nation.

As he retires to private life, he carries with him the continuing admiration and affection of his colleagues on both sides of the aisle. I fully understand and respect his desire to return to private life after so many years of dedicated public service. He has earned the best of everything. I wish for him and for his loved ones many more years of good health, great happiness and success.

Open Land for Metropolitan Areas

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mrs. DWYER. Mr. Speaker, the preliminary results of the 1960 national census indicate that about 80 percent of our Nation's population growth is concentrated in metropolitan areas. And, already, nearly two-thirds of our people reside in these huge and spreading urban-suburban complexes.

Moreover, all the evidence points to an increased trend in this direction—bringing all of us inevitably closer to the day when we shall be overwhelmed by the multitude of unsolved problems arising from metropolitan living, unless immediate and well-coordinated action is taken.

Mass transportation, slum clearance, urban renewal, highways, water resources, and air pollution—these are among the better known challenges facing the governing bodies at local, county, State, and Federal levels with jurisdiction over metropolitan areas.

There is another problem, however—directly related to all the others—which is rapidly reaching the critical stage. This is the need to preserve and develop what remains of the open land in metropolitan regions, in order that present and future needs for the economic, recreational and social resources of open space may be met.

The Regional Plan Association, a private and nonprofit group which has worked effectively to alert the New York-New Jersey-Connecticut metropolitan area to the need for cooperative planning and action in many of these fields, recently published a report on the need to save our open land.

Under leave to extend my remarks in the RECORD, I include a news story from the New York Times which describes the association's report and recommendations together with an editorial from the Newark Evening News which clearly and forcefully points up the issues at stake.

The article and editorial follow:

[From the New York Times, June 30, 1960]

REGION GETS PLEA FOR UNUSED LAND—PLAN GROUP BIDS COUNTIES SAVE 220 SQUARE MILES

(By John C. Devlin)

Conservationists, alarmed by the increasing roar of bulldozers, pleaded yesterday for a campaign to set aside 220 square miles of open land in the New York metropolitan area for the good of this generation and future ones.

A report by the Regional Plan Association supported by leading conservation groups, said "unbridled metropolitan expansion" was the crux of the problem.

The report, which included 140 photographs of existing natural assets, said that proper planning and land acquisition was needed not only for the economic and emotional health of the area, but also as an aid to flood control and the protection of water resources necessary to meet the demands of an exploding population.

The specific locations of the tracts recommended for acquisition were not identified in order to prevent speculators from buying them.

However, included are 30 tracts of less than 100 acres and three with more than 5,000 acres. Most of them—104—fall in the 100-to-299-acre category. It was recommended that 20,000 more acres outside the New York region also be acquired.

The report—the third or fourth to be made by the association—is only a survey. Recommendation to municipalities, counties, the three States affected and the Federal Government, will be contained in a final report to be published later.

The survey, entitled "Nature in the Metropolis," was prepared by Dr. William A. Niering, an ecologist and associate professor of botany at Connecticut College, New London.

It was released by Griffith B. Harris, First Selectman of Greenwich, Conn., and Otto L. Nelson, vice president of the Regional Plan Association, and cochairman of its park, recreation, and open space project, which is sponsoring the series.

The association is nonprofit. Thirty years has provided leadership in the coordination of the development of the region and in the encouragement of county and municipal planning. It works in cooperation with the metropolitan regional council, an informal voluntary forum of the chief executives of the region's counties, cities, and towns.

POPULATION CREATES PROBLEM

Mr. Harris said the essence of the problem was that the 7,000 square miles in the region was only 25 percent developed today but that it faced "unprecedented" developments as the population rose. The tri-State metropolitan region, while now having a population of 16 million people, is expected to encompass 8 million more persons within the next 25 years.

This region extends roughly 50 miles from New York City and embraces 22 counties, principally in North Jersey and in the lower Hudson Valley area. It also includes Fairfield County in southwestern Connecticut.

Dr. Niering reported that "nature is more varied in the New York region than in any other metropolitan area of the country." He described it as "a natural bounty" with "fast dwindling resources."

But, he added, "Participation in such natural area activities as hiking, bird-watching, hunting, fishing, camping, and boating is outstripping population gains by far.

"This fact is borne out by the steady increases in attendance records, equipment sales, licenses issued, and by mere observation. There is a great trek to the woods, waters and wetlands because nature provides the best setting for relief from urban living."

Furthermore, he said, "these areas provide an invaluable teaching facility which is vitally needed by the region's schools, colleges, and universities."

"As outdoor laboratories," he said, "they add a true element of life and dynamism to the science curriculum and make studies really meaningful."

As an example of an economic asset, Dr. Niering cited the commercial fishing industry. More than 600 million pounds of fish and shellfish worth in excess of $20 million have been taken from the coastal waters of New York and New Jersey, he said.

"It is now well established biologically that these resources are dependent upon and are intricately associated with tidal marshes as well as the estuaries and surrounding bays," he said.

Dr. Niering's survey backs up a recent proposal of Governor Rockefeller to spend $75 million on parks and recreation. Next November the voters will have an opportunity to vote on a bond issue needed to finance this program.

"Green areas for parks and recreation purposes in our State are disappearing so rapidly that it is frightening," the Governor said.

The report also comes in the wake of recent census figures that indicate showing a growing exodus of urban people to the suburbs.

Conservation, Dr. Niering said, "is not often associated with the built-up portions of our Nation."

"Yet in this era of unbridled metropolitan expansion it has become a critical urban problem," he declared. "Conservation, after all, is for people, and in the tri-State metropolitan region—the largest concentration of people in the United States—the need to conserve open land has become a matter of urgency," he said.

The 64-page report is divided into these sections:

A description of the region's natural features, with photographs and text devoted to the shoreline, the Atlantic Ocean, beaches, and dunes, salt marshes, bays and ponds, and uplands with their woodlands, farmlands, and wetlands.

A report on the need for conservation, with sections on recreation, wildlife study, the protection of commercial fishing resources, the need to combat floods, water shortages, and air pollution.

A study of conservation practices and areas that have already been established in the region by public and private interests.

A report on the amount of land needed for conservation.

Photographs, many of them dramatic, show typical flora and fauna of the region.

Copies are available at the Regional Plan Association offices at 230 West 41st Street. The price is $3.

[From the Newark (N.J.) Evening News, July 1, 1960]

OPEN LAND

The Regional Plan Association is addressing itself to one of the great public needs of our time—the preservation of open space. All of us hope to leave something to our children and grandchildren and work hard to do so. But at the same time we are making little effort to conserve their natural heritage. If we go on letting factories, real estate developments, highways, and airports cover every inch of the metropolitan area, our descendants are going to suffer a deprivation for which they will not forgive us.

In the metropolitan area embacing New Jersey, New York, and Connecticut much

natural beauty in beaches and dunes, marshes, woodlands, and farmlands remains. But, as a Regional Plan Association report shows, they are fast being obliterated. The report urges immediate action to save 220 square miles of undeveloped land so the teeming populations of the future will have breathing space, places for recreation and contemplation, refuges from noise, polluted air and an excess of neighbors.

A half century ago municipalities and counties then experiencing rapid growth showed foresight largely lacking in today's new population centers. The magnificent Essex County park system is an example.

The regional plan report shows that Morris County leads the metropolitan area in the amount of priceless and irreplaceable land left for conservation. Although Morris recently set up a county park commission, it has made only limited progress. The threat of a jetport in the Great Swamp area has appalled the county, but Morris has not invoked the remedy of acquiring the swamp as a county park.

Preservation of open space for public use involves a costly investment, especially when land acquisition is delayed until values begin to soar. But it is an investment which will return rich dividends in public health and happiness.

Advisory Commission on Intergovernmental Relations

SPEECH
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 30, 1960

The House had under consideration the conference report on the bill (H.R. 11389) making appropriations for the Executive Office of the President and sundry general Government agencies, for the fiscal year ending June 30, 1961, and for other purposes.

Mrs. DWYER. Mr. Speaker, I want to join with the distinguished gentleman from North Carolina [Mr. FOUNTAIN], in expressing regrets that the conferees have recommended a reduction from $175,000 to $115,000 in the administration request for the Advisory Commission on Intergovernmental Relations.

It is especially disturbing because I know of no item in the entire budget where the return per dollar in terms of research and recommendations in major areas of Federal-State-local relations is so high. As a nonpaid member of the Commission, I can testify to the fact that its budget was prepared on the most conservative possible basis. If the reduction is permitted to go into effect, the work of the Commission will be seriously handicapped.

Unfortunately, Mr. Speaker, neither the House Appropriations Committee nor the whole House has had an opportunity to consider this budget item. For this reason, I hope the committee will agree to consider a supplemental request for restoration of the $60,000.

The House has found, year after year, plenty of cases of budgetary extravagance. I cannot imagine, however, any item less extravagant than this one. This Commission is now in a position, I believe, to make a major contribution to improved intergovernmental procedures. The cost to taxpayers is remarkably small.

Area Redevelopment

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. RABAUT. Mr. Speaker, on May 4 of this year the House of Representatives once again passed an Area Redevelopment Act. Two days later the Senate passed the same bill and sent it to the White House for Presidential signature. Seven days after that the efforts of Congress to assist the depressed areas of this country were rewarded with a Presidential veto of this important legislation. It is perhaps significant that this veto came on Friday the 13th because it was certainly bad news for the unemployed persons throughout the country and for those many areas where unemployment and underemployment have become a chronic tragedy. Nor was this the first time that such a bill had been vetoed. You will recall that an area redevolpment bill was passed by Congress in 1958 only to be thwarted by Presidential veto. I wonder if you also recall this 1958 veto came at a time when the unemployment in Detroit had reached 18 percent of the work force. Think of it—18 percent. When you consider that unemployment at the end of April of this year was 8.1 percent of the labor force, you must remember that depressed area legislation was more than twice as significant when it was first vetoed.

To me, one of the most significant aspects of the passage of the Area Redevelopment Act of this year is that Congress has spoken once again and has once again made clear its feeling and intent on this question. The passage this year represents favorable action on this type of legislation in three consecutive sessions of Congress. A bill was passed in 1958, the Senate passed another bill last year, the House passed this Senate bill with some changes this year, and the Senate agreed to the changes and passed the House version within 2 days. The congressional action of this year has but reechoed the previous sentiments of Congress on this matter for all the Nation to hear. Considering that Congress expresses the will of the people of these United States, I ask you how, in good conscience, can the leaders of this Nation ignore or reject this will when it has been so clearly expressed and so consistently repeated?

One of the more frequent phrases used in describing the workings of the Congress is the phrase: "the legislative process." This phrase, however, has a cold and impersonal sound to it and makes the operations of the Congress sound something like the mechanical motions of automatic machinery. This, of course, is not how Congress works. A piece of legislation can be a personal thing with the Congressman who introduces it. This is the case with respect to area redevelopment legislation as far as I am concerned. As much as any bill that I have sponsored in my 24 years in Congress, the area redevelopment bills that I have sponsored in the past several Congresses are a personal thing with me. I was born in Detroit. I have lived here all my life. This is my city, just as it is your city. I have seen it grow. I know its people. I know its problems. And when it is afflicted with problems that only Congress can do something about, it is then that I feel the greatest pride in being the elected representative of the people of my district. This is the case with the conditions of chronic unemployment and underemployment that have come to be termed "depressed areas." Detroit is one of these areas and this is a problem that only Congress can solve. This is the reason that I have introduced and reintroduced area redevelopment bills. This is the reason I have testified again and again before various committees of the Congress and spoken on the floor of the House of Representatives in support of this legislation. I recall the last time I spoke in Congress on this subject. It was on May 4, this year—the same day that the House passed the Area Redevelopment Act. I said at that time that it is always gratifying to have one's efforts in behalf of needed legislation culminate in successful passage. But I said also that this is a type of gratification that goes far beyond personal satisfaction. Allow me, if you will, to repeat myself by quoting a few of my own sentences on that occasion because they will best explain the basic point I wish to make today:

It reaches to the fundamental realization that in passing this bill we have extended the hand of assistance to millions of our fellow citizens so direly in need of help. This is the American way. We have always helped the fellow who is down. And at a time when we are doing so much to help such people in all parts of the world, there is certainly no reason why we should not help our own fellow citizens in this, their time of great need. This is the gratification of which I speak: the gratification that the American way has prevailed; that we have refused to turn our backs on the plight of our own countrymen; that we have decided to continue our great tradition of helping the down guy, instead of putting dollars above human values.

Area redevelopment legislation, as previously conceived and passed, is good legislation that answers a crying need in a sensible and realistic fashion. The Congress, in its time-tested wisdom, has recognized this fact. This recognition will take the form of action once again in the next Congress. I shall continue, in fact, I shall increase, my personal efforts in behalf of my own area redevelopment bill or any other area redevelopment bill that answers the problem in a direct and concrete manner. This is my determination and I think I can safely say that it is the determination of the Congress. The will of the people, as expressed through the Congress, cannot be ignored or discounted. We cannot, and we shall not, sacrifice the needs of millions of our fellow citizens on the altar of the balanced budget.

Good Homes for All Americans

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Saturday, July 2, 1960

Mr. CARROLL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech made by Lee F. Johnson before the Denver Monday Forum.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH BY LEE F. JOHNSON BEFORE THE DENVER MONDAY FORUM, DENVER, COLO., JUNE 13, 1960

It is a pleasure and privilege to meet with the Denver Monday Forum and discuss "Good Homes for All Americans." I am talking about all Americans, regardless of income, race, creed, or color. I had hoped that this group would someday devote a few minutes to this subject, and that I might be permitted my 2-cents worth. I have been back in Denver for only 2 years, endeavoring to help administer the activities of the Denver Housing Authority, which owns and operates more than 3,200 homes, in which more than 13,000 of our fellow citizens live, of whom 8,500 are children. We have 600 apartments devoted to our senior citizens. The only difference between the people living with us, and the rest of the community is that our residents have more often than not been dogged by hard luck, have previously lived under intolerable housing conditions, and continue to have incomes that are so low that it is impossible for them to achieve decent shelter provided through normal channels of private enterprise. I will return to this subject a little later on.

It was just 29 years ago this month that I joined the staff of the greatest American I have ever known, the late Senator Edward P. Costigan. Throughout his term in the Senate it was my privilege to serve as his secretary, the job that is now dignified by the title "Administrative Assistant." The depression was on in full force. The Federal Government was paralyzed. I can never forget the shock of driving up Pennsylvania Avenue to the Senate Office Building for the first time, and passing a breadline of homeless men and some women, winding its way to a soup kitchen at the foot of Capitol Hill. It was six blocks long. I passed that line twice each day, until the wheels of Government started turning once again from the very hour that Franklin Roosevelt issued his clarion call that all we have to fear is fear itself.

Those were crucial days when democracy was sorely tried. It was Costigan of Colorado who introduced the first relief measure with Bob LaFollette of Wisconsin, while President Hoover was practically barricaded in the White House. It was then that the bonus army marched on Washington, and I was one of those who witnessed the brave army of the Potomac drive these desperate men and women from Washington at bayonet point, after burning and bombing their makeshift quarters on Pennsylvania Avenue and on Anacostia Flats. Gen. Douglas MacArthur led the attack from his white charger. I know, I was there, and spent weeks trying to bring families together, families from Colorado, who had been separated by MacArthur's charge. One of the abandoned babies found in the smoking ruins of Pennsylvania Avenue was identified as belonging to a Colorado family. Its mother was driven north, its father south. They were finally united through the magnificent efforts of private relief agencies.

In 1933 the American Government struck back. Basic relief legislation was passed, banking laws were revised, work programs instituted, agricultural relief became a reality, the Social Security Act was passed, the Security and Exchange Commission was created, the concept of a decent home for every American family was first conceived, the home loan bank was created, the TVA became a reality, and a base was built under the economy of the United States that is just as firm today as it was during those sectic hours and years when it was put together. On every front that I have mentioned, Costigan of Colorado was one of the leaders. His was the great mind to whom everyone turned, including the President of the United States. The Costigan Sugar Act, creating parity payments for the first time, which saved the sugar beet growers and processors alike, was the forerunner of other basic agricultural reforms. For his pains he was vilified by part of the Colorado press, and characterized as Senor Costigan, agent of Cuba. He was the author of the first antilynching bill which was the forerunner of later civil rights legislation, and was characterized by a local cartoon as Senor Costigan, about to be lynched should he return to Colorado for having betrayed local sugar interests. Many of you will remember these attacks. Never a well man, the pressures from Colorado killed our greatest Senator. I was with him when he collapsed. When it was known that he could never recover, Mabel Costigan, the Senator's equal partner through triumphs and adversity asked me to advise the press months before his term expired, that he would not be a candidate for reelection.

I would be the last person to say that grave mistakes were not made during those years. Basic acts have had to be amended time and again to update them. But they were days of action, achievement, dynamic leadership, and a display of guts that won the admiration of the entire world. America came of age in the 1930's, and now in 1960 we are faced with a series of problems, critical to the core on the international front, and equally critical on the domestic front. I would not turn the clock back for one instant except to offer one prayer from one small individual for a return to the kind of dynamic leadership, vision, courage, and dedication that saved our country in the thirties, and must be brought to bear to save the world and humanity in the 1960's. We in Colorado have a great heritage for national and international leadership. I am confident that we will measure up in the years ahead.

With that preface, which has been very much on my heart, let's return to the subject of housing and its many component parts. This week in Washington the full Committees on Banking and Currency in both the House and the Senate will report out omnibus housing bills. Practically all of the provisions in both the proposed House and Senate bills have been vigorously opposed by the administration as being inflationary. Why do Senators SPARKMAN, CLARK, DOUGLAS, CARROLL, HUMPHREY, and many others including JAVITS, of New York, and COOPER, of Kentucky, on the Republican side, and Representative ALBERT RAINS and a majority of his colleagues on the House Banking Committee as well as the leadership of both Houses insist on the importance of housing, urban renewal, and related subjects?

All of us recognize that on the international front we are in the midst of the most awesome crisis of all time. Man has learned to control the elements before he has learned to control himself. Our very substance is being consumed in the development of weapons capable of destroying the human race, and we live in fear that some slaphappy idiot may press the button. In addition, lethargy, disinterest, and intellectual laziness are permitting a cancerous disease of bad housing and expanding slum environments to eat at the vitals of our body politic that can be just as fatal some day, as an atomic or hydrogen bomb.

The unwillingness of most of our fellow Americans to face up to the basic social demands of our exploding population is frightening. Today, more than 60 percent of the American people live in approximately 170 urban centers, of which Denver is one. The U.S. Census Bureau has recently raised its forecasts for the future population of the United States. By 1980, the population is expected to be 260 to 270 million, an increase of 85 to 100 million. Since census forecasts have generally been below the actual growth, we may conclude that our population will grow by 100 million within the next 20 to 25 years. We may expect at least 90 percent of this gigantic population increase to land in our expanding urban centers. I need not tell you what is happening in Denver. In addition, and much to the shame of this democracy there are today more than 9 million occupied substandard homes in the cities where our friends have chosen to congregate. That number is constantly increasing, in spite of all of our efforts for urban renewal, conservation, and rehabilitation. Denver has more than its share and is doing less than most of our great cities to correct the situation.

Good housing for all Americans is not the cure for all of our domestic social ills, disease, crime, juvenile delinquency, and countless other maladjustments. It does, however, mark an excellent point from which to start. Working as I am today with people who have few of this world's goods, I realize that every facility for community service must be brought to bear, to help in the rehabilitation of families that have been oppressed by slum living for so long that they have become slum minded. Such families, however, are the exception, not the rule. And let us remember that slum-minded people are not limited to the poorer areas of our cities. We can find them in every part of our community. For those, however, forced by financial circumstances to live in wornout shelter, huddled together under physical conditions that defy description, the will to fight their way out is finally destroyed.

The cancer of slums is growing in almost every American city, although the disease was diagnosed in the midthirties as one requiring national action. If you think that is not true in Denver, just visit the 26-Club and look in any direction, particularly to the north and east. You can see creeping blight in all directions, even if you can't smell it. No city and no State has the financial resources to cope with it. We have written a series of national laws into the statute books such as the U.S. Housing Act of 1937, as amended in 1949 and 1954, calling for slum clearance, low-rent housing and urban renewal. Forty-six States, the District of Columbia, Puerto Rico, and the Virgin Islands have adopted enabling legislation. We have the machinery with which to do the greatest reclamation project in history, the reclamation of our cities and towns, but our performance leaves something to be desired.

Some few American cities are doing a magnificent job in measuring up to their responsibilities to the full extent of their financial ability, in their efforts to destroy blight and to build sound communities for decent living. In every instance where progress is being made, the captains of industry, not their lieutenants, top officials of labor, and fighting city governments have joined forces with the support of an informed public opinion, because they have made sure that the public was informed, to rebuild their cities, to destroy slums, and to produce good homes for all of their citizens. Pittsburgh is a prime example, where a fighting mayor,

Dave Lawrence (now Governor), Richard Mellon, the president of United States Steel, the president of Alcoa, the president of Pittsburgh Plate Glass, the president of the Steel Workers, Dave MacDonald, and others of equal stature sat down together and made plans and invested the seed capital to save their city. The same is true in New Haven, Norfolk, St. Louis, and a dozen more cities. Top management, top labor, top citizen support have been mobilized in the terms of fighting crusades. Scores of small communities are doing a fine job, but put them all together they represent but a drop in the bucket, if our Nation is not to become a maze of broken-down core cities, surrounded by ill-planned suburban chaos.

In 1954, under the direction of Dr. William L. C. Wheaton, director of urban studies at the University of Pennsylvania, the National Housing Conference conducted a study of the Nation's housing needs. His conclusions have never been challenged by a competent authority. The 1960 census will doubtless prove that they are more true and more tragic today than 6 years ago. He demonstrated a need for 2 million new homes a year for at least 20 years, if we are to keep abreast of population growth, and provide decent shelter for families now living under substandard housing conditions, and care for those people displaced through public action such as urban renewal, highway construction, and code enforcement.

This need is broken down into 1,300,000 new homes annually, built through FHA and conventional financing; 300,000 new homes for the forgotten families of moderate income provided again through private enterprise but with special financing assistance with low interest rates and long periods of amortization, which would initially necessitate direct Federal loans; 200,000 new farm and rural nonfarm homes, and 200,000 low-rent public housing units. The latter for a period of at least 10 years. In addition, Dr. Wheaton concluded that we must rehabilitate at least 400,000 existing homes a year. Even if all of that were accomplished, there will still be some 5 million families in 1975 living in shelter that was substandard in 1950.

What is more important in our national values than wiping slum blight from our national life and replacing it with good housing in sound neighborhoods for all Americans? What is more important to our economic life than building a strong home construction industry? Few people pause to realize that with its countless ramifications, a major slump in homebuilding could bring on a major economic recession. Think of the related industries for which homebuilding is their most important customer: steel, aluminum, lumber, copper, plastics, and countless others. Where would General Motors, General Electric, or United States Steel be without their vast homebuilding market. We need far greater programs than are in existence today to give a firm foundation for the production of homes, and one small, but vitally important part of that economic and social picture is low-rent public housing.

These are but some of the reasons that some of our great congressional leaders will not back away from their fight for better housing. When Senators Wagner, Ellender, and Taft led the fight for passage of the Housing Act of 1949, a fight that they began in 1945, they had written into the law a declaration of national policy stating in effect that it is the responsibility of the Federal Government to help insure a decent home in a decent living environment for every American family. While major leadership has always come from the Democratic side of the aisle, the Housing Act of 1949 would never have been adopted had it not been for Bob Taft's fighting support. While Vice President NIXON helped lead the attack on that act, JACK KENNEDY made his first major speech in Congress in behalf of housing. As Governor of New York, Nelson Rockefeller has expanded and improved the great housing program of that State, which was begun under former Governor and later Senator Herbert Lehman.

The fight for better housing, for the rebuilding of our cities through urban renewal, conservation, and rehabilitation will be carried on until the job is done, and it will not be done until we bring our housing plant up to standard, and keep it there. All of us agree that our cities should be rebuilt, and that urban renewal is a great thing. What many fail to realize is that we are dealing with a gigantic problem of human beings. When we tear out an area we're displacing human beings. Before we come in with the bulldozer we have to make certain that families living in the road to progress are able to secure decent, safe, and sanitary homes. About half of them constitute a market for low-rent public housing. If we have no low-rent housing units available to them, I say to you, categorically, that urban renewal will fall flat on its face.

Having said that I would like to spend a few moments describing the program of the Denver Housing Authority. Basically, I suppose, that is my reason for being here, and my other comments have been strictly gratuitous. I opened my remarks by giving you some idea of the size of our low-rent housing program in Denver.

Just what is public housing? It was created under the U.S. Housing Act of 1937. Basically, the program has changed little since its inception. In order for a community to participate, State enabling legislation is required. The Colorado law was passed in 1938. A local housing authority is created as a separate public corporation through action by the governing body of the city or county under the provisions of State and National law. Under the Colorado law a local housing authority composed of five commissioners is appointed by the mayor for terms of 5 years with the term of one member expiring each year. Commissioners serve without pay. They name the executive director, and he and the staff are responsible to them. Our present commissioners are J. J. "Lou" Carey, chairman; Tom McCormick, vice chairman; Joe Cohen, Willard Karcher, and Msgr. John R. Mulroy, who is the only remaining member of the original commission.

Low-rent housing is financed initially by loans from the Federal Government to the local housing authority, after it has obtained a cooperation agreement approving a specific number of units, in which the city agrees to provide normal services and the local authority agrees to pay 10 percent of shelter rent in lieu of taxes. Federal loans are used for preliminary planning. Just as soon as an authority reaches the construction stage, it sells short-term notes through private channels, repays the Federal Government's preliminary loan, and through the sale of its notes provides funds for construction purposes. Borrowings of the local housing authority are tax exempt, just as municipal bonds are tax exempt, and favorable interest rates are obtained. Permanent financing is not reached until after the initial occupancy period when the authority sells its bonds on the open market. If the bond market is excessive, the projects are held in temporary financing.

This kind of financing is made possible by a guarantee from the Federal Government of an annual contribution equal to the interest and equity payments on the capital cost of the project. Bonds are sold with a 40-year maturity. The local housing authority must pay all operating expenses from operating income, including a payment to the city of payments in lieu of taxes. Any excess income is returned to the Federal Government to reduce the annual contribution payment. In 1959, for example, the Denver Authority paid the city $108,000 in lieu of taxes, and returned $129,178 to the Federal Government after increasing our operating reserves by $83,312. Our total operating receipts from rents amounted to $1,500,000 plus. When persons charge that tenants in low-rent housing pay none of their way, and that we the taxpayers pay our neighbors' rents, they are either misinformed, or are willfully misleading. To be sure, you and I contribute something through our Federal income tax to the maintenance of low-rent housing. The average taxpayer kicks in about 50 cents a year on the present program, the cost of a shot of cheap bar whiskey. And that goes not only for housing in Denver, but for families living in programs in more than 1,000 other communities. We would pay just as much, if we had no program at all in Denver.

Our program is typical of most cities. All of our residents came to us from substandard shelter, from dangerously overcrowded conditions, or were without shelter. The average family has three or more children and exists on an earned income of $2,300. We have many with from 8 to 13 children. Under the Colorado law we charge a rent of 20 percent of net family income, which includes all utilities. Maximum incomes for initial and continued occupancy are based on family size. For the smallest family they are $2,800 at admission and $3,400 for continued occupancy. For the larger families (five or more persons) income at admission cannot exceed $3,600 and $4,350 for continued occupancy. Thirty percent of our families are on some form of public assistance, and pay a flat rent based on the apartment size. Local contributions to public housing are in the form of tax exemption and services. However, our payment in lieu of taxes return to the city approximately five times what the slum areas returned prior to our developments. Were we to be taxed on the $29-million value of our projects, we would be out of business. The cost of fire, police and health services have been substantially reduced by the creation of decent neighborhoods, a statement that I am sure will be verified by the city departments involved, and by the courts. However, the city's contribution is very real in making the low-rent housing program possible, although it represents no out-of-pocket moneys or appropriated funds.

One word about the families living in our housing projects. I have often heard them described as deadbeats, criminals, prostitutes, and bums. Nothing makes me more furious. Nothing could be further from the truth. Among more than 3,000 families we have problems, but the vast majority are fine people and good neighbors. We have self-governing tenant councils in eight projects. If you want a genuine lift you should attend one of their meetings. You would be thrilled by the countless activities that are underway for people of all ages. From Cub Scouts to senior citizens' clubs, you will find groups that would do credit to any part of our city. We may not have the best baseball league in the city, but with teams representing every project, we have one of the most enthusiastic. We have families of all races living in nonsegregated communities as good neighbors, establishing a pattern that some of the rest of us could well afford to emulate.

Families living in projects of the Denver Housing Authority take pride in their homes and their environments. Our yards and grounds are tenant maintained. I invite you to visit them. A person's yard and garden is a window to the housekeeping within. Come see for yourselves.

As to an additional low-rent public housing program in Denver, let me say that for more than 3 years we have had a reservation from the Public Housing Administration in Washington of 1,500 additional units. For

the last 2 years the authority has been engaged in a major housekeeping job. There were major areas in the development of policies covering all phases of management from maintenance, personnel, fiscal, tenant relations, and general community participation that needed immediate attention. I believe that we have a vastly improved operation, which has been achieved by a competent, dedicated staff. I also believe that we have reached the point where an additional program is imperative to the progress of Denver. The urban renewal program is just beginning to be flat in Denver. If the Supreme Court declares the State law constitutional, the urban renewal authority is prepared to move ahead rapidly.

A joint meeting has been held between the housing and urban renewal authorities. The size of the housing program to be recommended by Denver rests with the Denver Housing Authority when it requests a cooperation agreement from the city council. Under our existing program we cannot hope, through normal turnover, to care for more families than those dislocated by the Avondale project. I cannot anticipate the commissioners' decision as to the number of units they will request, but I know that they will cooperate with all agencies of the city in seeing that progress is made.

I am confident also that a new program of the Denver Housing Authority will be developed under an entirely new concept. Most people complain about the institutionalized appearance of low-rent public housing. We don't have to build massive projects, of high density, where the impact on all facilities of the larger community is sometimes intolerable. When we bring several hundred families with a thousand or more children into a restricted area of a few square blocks the impact on schools, shopping centers, community facilities, everything is enormous.

In developing a future program you will find every effort being made to rehabilitate existing homes and neighborhoods for low-rent housing use, to build new homes in existing communities on vacant sites, in conjunction with urban renewal and code enforcement programs. They may be free standing homes, duplexes, courts or small garden apartments. In that way we can help rehabilitate entire neighborhoods, and make use of but not overtax existing facilities. It is our hope, and I am confident that it will come to pass, to develop some homes that residents can buy as their economic conditions improve, and such homes can then go back on the tax rolls. As it is now we are oftentimes forced to evict the family for overincome that has worked to improve its economic stature in the community before that family's income is sufficient to permit the purchase of an adequate house on the normal private market.

Such a program has never been tried in a large city on an extensive scale. Few cities adapt themselves so well to this approach as does Denver. We are convinced that we can make it work, and that instead of following the pack, we can bring new leadership and pioneering to the entire concept of low-rent public housing. I know that it can be done with your support and that of other community leaders who are basically interested in the development of a greater Denver. One thing I promise you—there won't be any surprises. Our plans will be presented to council and to community groups so that everyone may have his say. It's the difficult way to go at it, but we think the right way.

By outlining a different concept for a new public housing program in Denver, be very sure I am not condemning what we already have. It is working, and working well. We have no apologies to make, however, we can profit from mistakes, and some dandies have been made. We will doubtless contribute to more in the future. But in this great country we can meet and conquer the enemy from within, with the same vigor that we gird ourselves for defense against real and fancied enemies from without. The slums and the ghettoes in American cities and towns represent our most killing enemies from within. I know that we can continue to count on the fighting leadership of the Democratic Party to destroy the greatest shame of our Nation, the American slum, and to counter with feasible plans that will result eventually in the provision of good homes or decent housing for all Americans.

Harold "Robbie" Robinson Tells Problems of Southwest Redevelopment

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by Mr. Harold R. Robinson, chairman of Marine Equipment Dealers & Marina Proprietors whose property is located in the southwest redevelopment area, before the Senate District Committee, concerning S. 3648. The subject bill would empower the Commissioners of the District of Columbia to transfer to the District of Columbia Redevelopment Land Agency the waterfront property on Maine Avenue, SW.

The statement follows:

A STATEMENT BY HAROLD R. ROBINSON, CHAIRMAN OF A COMMITTEE OF BOATOWNERS, MARINE EQUIPMENT DEALERS, AND MARINA PROPRIETORS

Gentlemen, our reasons for objecting to the subject bill which empowers the Commissioners of the District of Columbia to transfer to the District of Columbia Redevelopment Land Agency the waterfront property on Maine Avenue SW., are as follows:

Objection No. 1: No effort has been made to provide, during reconstruction, other berthing facilities for the boats owned, operated, and berthed or stored in the area described in the subject bill.

Objection No. 2: The giving of this land to the Redevelopment Land Agency without any compensation to the District of Columbia, instead of selling these valuable rights and land to the operators of marinas, repair yards, and dealers in boat sales and marine equipment, would not be profitable to the District of Columbia; and, the money that could be derived from the sale of this land to owners of small businesses could certainly enhance the depleted treasury of the District of Columbia.

Objection No. 3: The closing of marinas, boat supply stores, and repair yards on Maine Avenue would affect the income of the District of Columbia since this would deplete the gross income of businesses that amounts to millions of dollars, and thus this money would probably be expended in the States of Virginia, Maryland, and elsewhere instead of in the District of Columbia. This would entail a loss to the District of Columbia treasury of sales taxes, gasoline tax, personal property tax, and other sundry taxes that would be applicable to the marine business. All this would be a total loss to the District.

The publicity that has been given to the turning over of waterfront property for demolition by the Redevelopment Land Agency and to be used in the future for the building of restaurants, theaters, and a wax museum, has brought on a recession in the sales of boats and boating equipment. Potential buyers are reluctant to invest their money in recreation equipment they may not be able to use because there may be no water facilities available in this area. Lack of berthing and storage space for their boats is going to cause many a boatowner to try to sell, but there'll be no market for boats, new or used, in Washington, D.C.

For many years the Washington Channel has been a joy to Washingtonians, rich and poor alike, who have found healthy recreation and relaxation in boating, and the river has always been a public domain and a source of pleasure for all. The facilities as discussed at an informal meeting with representatives of the Redevelopment Land Agency will be constructed at an estimated cost of $15 million, if completed, and this project would of course have to be financed by some multimillion-dollar foreign concern which would no doubt request a loan from a Government agency for this purpose.

The cost of such a project would necessitate the paying of prohibitive rents by operators of marinas and dealers in boats and marine equipment, and there is no question that, with such a great capital outlay, it would be impossible for a boatowner to rent berth space for less than a minimum of $2 per foot per month, this in comparison to the present 40 to 50 cents per month which allows those in the lower income group to enjoy the water as a source of recreation. The greatest number of boatowners are in this lower- or middle-income group; and, with a rate of $2 per foot per month, a man with a 16-foot rowboat that probably cost him a hundred dollars would have to pay $32 a month to keep his boat at Maine Avenue. It would not be worth it; he couldn't afford it, and he would be deprived of a pleasure he is entitled to as a taxpayer in this city.

The Redevelopment Land Agency have already demonstrated that they are not concerned with the individual boatowner, or the small businessman. They will deal only with big business, and they have a free hand in this. They appear to have no set plan for the redevelopment of the waterfront area for the benefit of small marine businesses, nor for the boatowners in the middle- or low-income groups. Little or no planning has been made for temporary location or relocation of facilities or businesses now in the waterfront area. A good example of their having no firm project in view is the vacant land in the Southwest area that has stood idle for years, some with buildings either in demolished or semi-demolished condition. In this connection, your attention is invited to the bill introduced by Senator LOUIS C. RABAUT, of Michigan, which it is understood would prevent excessive demolition until more rebuilding is done.

The sole responsibility for the condition of the waterfront on Maine Avenue is due to the fact that the leases under which we all operate have a 30 days' notice clause which absolutely prohibits anyone from investing a lot of money in major improvements. This term of lease also prohibits the financing of major improvements by a loan from any bank or loan agency.

The Washington Channel waterfront is the only logical and suitable location in the Metropolitan Washington area for boating facilities and services. The boating public benefits from the facilities and services made available at reastonable cost; the small businesses provide a means of livelihood for many, and the District of Columbia benefits from the resultant taxes. There is no objection to a well planned and realistic redevelopment of the waterfront; however, the

present proposed method involving transfer of the property to the Redevelopment Land Agency for action in the manner outlined herein is not in the best interests of the public, the Government, or the small businessman.

Medical Care for the Aged

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. RABAUT. Mr. Speaker, as we are all aware the question of medical care for the aged citizens of our country has become one of the most controversial issues of the day. And rightly so. The position in which our elder citizens find themselves when the necessity arises to meet the cost of any sizable medical expenses is truly tragic. In the vast majority of cases they simply cannot meet such expenses. What is more, a representative cross-sampling of this above-65 group has shown that not only can these people not meet the cost but would either have to borrow the money or flatly state that they do not know where they would get it. This is a sorry situation, indeed, for our retired workers to find themselves facing. There are roughly 15 million retired people in this country. Of this 15 million just about 11 million are now drawing social security pensions. Only about 1 million of these are also covered by private pension plans. With respect to those on social security, it should be noted that the maximum Federal benefit for a retired couple is $180 per month; but the average amount actually received is close to $114. It is, of course, obvious that these figures leave no margin for heavy medical expenses, particularly when you consider that medical expenses have zoomed up higher and faster than any other single item in our economy.

The consequence of this situation is that it creates a singularly peculiar paradox within the traditional American system of employment and retirement. The traditional goal and the fond dream of the American workingman and his family has always been eventual retirement to a life of ease and complete freedom. However—and here is the paradox—this traditional goal is becoming more and more difficult—even impossible—of attainment for the retired and retiring members of our society because their continuing reliance on a set, stabilized income in the form of pensions and so forth has failed to be given due consideration as the price of living has continued to spiral. Thus these people who are required to get along on the same amount of money each month have seen their ability to do so decline progressively as the purchasing power of the few dollars they receive has grown less and less. This general principle, while it is true of all living necessities such as food and rent, is particularly and acutely true with respect to medical expenses incurred by these older citizens. For if their fixed incomes are increasingly inadequate to buy the daily needed loaf of bread, how then are they to meet unforeseen medical expenses of greatly larger proportions The answer is simple—they cannot.

But it is not enough to know this answer. It remains to seek the remedy. For what are we to do, refuse these people needed medical care because they cannot afford it? Certainly not. Here, then, is the central point on which everyone concerned is in agreement; that the need exists and that something must be done about it. Even the budget-minded administration recognizes this point. But here, also, is where the general agreement ends and the controversy begins. For here is where the question arises of how to approach the problem; of how to go about the solution.

By this time there have developed several differing approaches, all distinct in one respect or other from the original and well-known Forand bill. I do not intend to go into a detailed discussion or comparison of the different bills involved. There are now six different major bills dealing with the question of providing health care for our aged. The main differences between them lie in the manner of financing the program and in the categories of coverage to be provided. The basic alternative methods of paying for this medical care are first, through an extension of the present social security system; second, out of the general revenue funds; third, through State and Federal Government matching funds; fourth, through subscription fees to be paid by the recipients; or fifth, through some combination of these methods. For my part, I have supported the Forand bill from the very beginning and I am in favor of paying for the needed medical care through the present social security system. This would be done by increasing the present social security taxes one-fourth of 1 percent. This would mean that an individual would pay into the Social Security Fund a maximum of $12 per year more than he is paying now. This program would amount to a prepaid health care package on which today's workers can fall back when they retire. Figures from the Census Bureau show that 60 percent of retired people—60 percent of people over 65 years of age do not have as much as $1,000 income per year. This means about $20 a week for food, clothing, shelter and everything else people need to live. How are they to pay for needed medical care?

The elderly people of this country are the people who need medical care the most. More than any other segment of our population these people need this care—which, in a tragically large number of cases, they cannot afford. This older group of persons get sick more often and stay sick longer than any other population group. Further, many of them are in need of continuing care. That is they require nursing home care or medical attention on a regular basis—be it weekly, biweekly, or monthly—or they are required to take medicines regularly, often daily and often comprising not one but several different medicines—all of which are expensive these days. All of these things are necessary and they are also considerably beyond the means of most of our senior citizens. This situation has been called a "pressing social problem." I prefer to call it a "crying human need" and I pledge that I shall fight to see that something is done about it.

Captive Nations Week, 1960

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mrs. DWYER. Mr. Speaker, a look at any map of the world through the eyes of political freedom will reveal an area extending eastward from East Germany, through Eastern Europe, European Russia, across the vastness of Asia, down into southeast Asia as far as North Vietnam, and across the China Sea to North Korea—a huge area of many countries and cultures and peoples.

These are the captive nations, and their many hundreds of millions of people are the captive peoples.

In the colors of political freedom, this large sector of the map is painted red—red for the color of international communism, red for the color of the blood shed in defense of lost freedoms.

Since 1917, Mr. Speaker, the process of Communist subjugation has gone on. One by one, nations have fallen to the twin weapons of communism: internal subversion and external force. In exchange for national independence, Moscow and Peiping have brought the most ruthless tyranny in history. Slavery and death have been the rewards of those who fought to preserve their freedom.

It is a grim and disheartening picture, Mr. Speaker. But it is a picture from which we must not look away. The lessons taught in the Ukraine, in Poland and Hungary, in China, Korea, and Tibet must be learned well and never forgotten.

This is the purpose of Captive Nations Week. This is the reason why the Congress authorized the designation of the third week in July as "Captive Nations Week," and why the President—acting under that authority—has proclaimed it so.

We owe it to ourselves and to our own freedom, and to our brothers who have lost their freedom, to rededicate ourselves at this time to the cause of freedom and justice throughout the world. Only by understanding what they are, how they can be lost and what can be done to strengthen them, can we be worthy of the cause.

The whole world looks to us for the leadership and the sense of direction which can bring our cause alive and rekindle in the hearts of people everywhere the hope and assurance of freedom and justice and true peace.

This is the moral of Captive Nations Week. This is the issue of our time.

Summary of Veterans' Legislation, 86th Congress

EXTENSION OF REMARKS
OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. TEAGUE of Texas. Mr. Speaker, the Committee on Veterans' Affairs, of which I am chairman, has received many inquiries from Members of Congress with respect to legislation affecting veterans which has been enacted during the 86th Congress. In order that this material may be readily available, I insert material showing the status of veterans' legislation as of July 15, along with certain general information relative to the various veterans' programs which I believe will be helpful to Members:

COMMITTEE ON VETERANS' AFFAIRS, HOUSE OF REPRESENTATIVES, OLIN E. TEAGUE, CHAIRMAN—SUMMARY OF VETERANS' LEGISLATION REPORTED, 86TH CONGRESS

LAWS ENACTED

Public Law 86–73 (H.R. 2256): Makes $100 million available to the Administrator of Veterans' Affairs, upon his request, for immediate use in the direct-loan program for for the purpose of reducing existing waiting lists. Provides that the interest rate on guaranteed and direct loans may be set at a rate not to exceed 5¼ percent per annum and repeals provision of law requiring that VA interest rate be not less than one-half of 1 percent below FHA rate. Makes certified agents of Federal Housing Administrator eligible to make VA automatic loans if approved by the Veterans' Administration. Authorizes the Administrator of Veterans' Affairs to refuse to appraise homes for builders and lenders suspended by FHA. (Approved August 11, 1959.)

Public Law 86–103 (H.R. 5447): Extends for a period of 10 years, to June 30, 1970, the existing authority of the Administrator of Veterans' Affairs to maintain offices in the Republic of the Philippines. (Approved August 25, 1959.)

Public Law 86–109 (H.R. 5446): Requires that Veterans Canteen Service pay reasonable charges for the use of space, buildings, and structures furnished by the Veterans' Administration, the amount of charges to be determined by the Administrator of Veterans' Affairs. (Approved August 25, 1959.)

Public Law 86–113 (H.R. 3269): Liberalizes statutory bar to benefits available to a veteran discharged during a period of hostilities on his own application or solicitation as an alien by presuming that he was not so discharged in the absence of affirmative evidence establishing the fact. (Approved August 25, 1959.)

Public Law 86–116 (H.R. 269): Grants to employees of the Manila, Republic of the Philippines, office of the Veterans' Administration, who are U.S. citizens, certain allowances and benefits similar to those enjoyed by Foreign Service personnel—transportation, home leave, etc. (Approved August 29, 1959.)

Public Law 86–146 (H.R. 6319): Restricts payment, upon death of an incompetent veteran, of gratuitous veterans' benefits deposited in the "personal funds of patients' trust fund" to wife, child, and dependent parent rather than paying to personal representative. Provides that an incompetent veteran receiving hospital care at public expense and having neither wife nor child shall have any gratuitous VA payments stopped when his estate reaches $1,500 and such payments shall not be resumed until the estate is reduced to $500. Payments may be made for the needs of a dependent parents or parents. Where State institutions charge for the care of a veteran patient, payment out of the benefit is permitted. (Approved September 1, 1959.)

Public Law 86–150 (S. 906): Provides that, for veterans of the Korean conflict, receiving education or training under the "Korean GI bill," a change from the pursuit of one program to the pursuit of another will not be considered a change of program if the first program is prerequisite to, or generally required for, entrance into pursuit of the second. As an example, where a veteran may have declared his educational objective to the attainment of a master's degree and he later decides that he wishes to attain a doctor's degree, this change of objective would not be considered a change of program. (Approved September 1, 1959.)

Public Law 86–152 (S. 1694): Extends authority of the Veterans' Administration to provide hospital and medical care abroad to include U.S. citizens temporarily residing abroad who require hospital care and medical treatment for peacetime service-incurred disabilities. (Approved August 11, 1959.)

Public Law 86–187 (H.R. 267): Increases the presumptive period for service connection for the disease of multiple sclerosis from the present 2-year period to 3 years. (Approved August 25, 1959.)

Public Law 86–188 (H.R. 271): Provides that Hansen's disease (leprosy) developing to a degree of 10 percent within 3 years from the date of a veteran's separation from the service shall be considered to be service-connected. (Approved August 25, 1959.)

Public Law 86–195 (H.R. 2405): Includes as a "child" for purposes of laws administered by the Veterans' Administration (except those relating to insurance and the disposition of personal property of a decedent left upon the premises of a VA facility), one who was a member of the veteran's household at the time of his death and who was adopted by the veteran's spouse within 2 years after the death, unless at the time of the veteran's death the child was receiving regular contributions toward his support from some individual other than the veteran or his spouse, or from any public or private welfare organization furnishing services or assistance to children. (Approved August 25, 1959.)

Public Law 86–211 (H.R. 7650): Modifies the pension programs for veterans of World War I, World War II, and the Korean conflict, and their widows and children.

1. Provides a sliding scale of pensions based on the income and dependency status of the recipient. Such scale of pension rates applies to veterans, and to widows and children, as indicated below:

Veteran, no dependents

Annual income		Monthly pension
More than—	But equal to or less than—	
	$600	$85
$600	1,200	70
1,200	1,800	40

Veteran with dependents

Annual income		Monthly pension		
More than—	But equal to or less than—	Veteran and 1 dependent	Veteran and 2 dependents	Veteran and 3 or more dependents
	$1,000	$90	$95	$100
$1,000	2,000	75	75	75
2,000	3,000	45	45	45

Above rates increased by $70 when veteran needs regular aid and attendance. In addition, for this group the Administrator may furnish an invalid lift. (Invalid lift benefit applies to all wars.)

Widows and children

WIDOW, NO CHILD

Annual income		Monthly pension
More than—	But equal to or less than—	
	$600	$60
$600	1,200	45
1,200	1,800	25

WIDOW, 1 CHILD [1]

Annual income		Monthly pension
More than—	But equal to or less than—	
	$1,000	$75
$1,000	2,000	60
2,000	3,000	40

[1] Plus $15 for each additional child.

NO WIDOW, 1 OR MORE CHILDREN

Annual income equal to or less than (earned income excluded)—	Monthly pension
$1,800	$35 for 1 child and $15 for each additional child.

2. All income, regardless of source, counts except:

(a) payments of the 6 months' death gratuity;

(b) donations from public or private relief or welfare organizations;

(c) payments by VA of pension, compensation, and dependency and indemnity compensation;

(d) payments under policies of U.S. Government life insurance or national service life insurance, and payments of servicemen's indemnity;

(e) lump sum social security death payments;

(f) payments to an individual under public or private retirement, annuity, endowment, or similar plans or programs equal to his contributions thereto;

(g) amounts equal to amounts paid by a widow or child of a deceased veteran for—

(1) his just debts,

(2) the expenses of his last illness, and

(3) the expenses of his burial to the extent such expenses are not reimbursed by VA;

(h) proceeds of fire insurance policies.

3. The income of the spouse (if not estranged) may count as the veterans' income. In determining annual income, where a veteran is living with his spouse, all income of the spouse which is reasonably available to or for the veteran, except $1,200 of such income, shall be considered as the income of the veteran, unless in the judgment of the Administrator to do so would work a hardship upon the veteran.

4. All waived income counts.

5. Discretionary authority granted VA for a finding on the net worth of the veteran or the widow or child which could lead to a determination that the applicant is not eligible for pension because of net worth.

6. Places World War II and Korean conflict widows and children on same basis as widows and children of World War I for purposes of pension eligibility.

7. The pension of a veteran being furnished hospital or domiciliary care by the Veterans' Administration will be reduced to $30 a month after the expiration of 2 full

months but the Administrator may apportion to the wife or children the balance of the pension.

8. Under the savings provision, the amendments to title 38, United States Code, will not apply to pensioners on the rolls on the day before the effective date unless they seek and are granted pension under the amended title 38. Thus, no person on the pension rolls on the day before the effective date shall have his pension reduced or shall be removed from the pension rolls because of the enactment. All persons on the pension rolls on the day before the effective date will be permitted election to the higher rates if they qualify under the new program or may elect to remain on the rolls under the old law.

The rate under the old law, which may be continued if the veteran chooses, is $66.15 per month, except that where the veteran shall have been rated permanently and totally disabled and has been in receipt of pension for a continuous period of 10 years or reaches the age of 65 years and is permanently and totally disabled, the rate is $78.75 per month. A rate of $135.45 per month is authorized in the case of an otherwise eligible veteran who is helpless or blind or so nearly helpless or blind as to need or require the regular aid and attendance of another person. Such pension is not payable to any unmarried person whose annual income exceed $1,400 or to any married person or any person with minor children whose annual income exceeds $2,700.

In the case of widows and children, the rates under the old law are as follows:

Widow	Widow, 1 child	Each additional child	No widow, 1 child	No widow, 2 children	No widow, 3 children	Each additional child
$50.40	$63	$7.56	$27.30	$40.95	$54.60	$7.56

(Subject to income limitations of $1,400 per year if widow has no child and $2,700 if she does; $1,400 for each child if there is no widow.)

9. Effective July 1, 1960.

Of all single veterans now receiving pension, 278,000 or 78 percent will receive more money. Sixty percent or 262,000 of the veterans with dependents receive more while 70 percent or a total of 298,000 widows and orphans benefit by passage of this law. Eighty-seven percent of veterans receiving aid and attendance will be increased.

Of all pensioners, married and single veterans, widows and orphans, almost 70 percent, or 838,000 cases, will get a raise; 72,000 cases would be added to the rolls because of the higher income limits; 206,000 cases would be added to the rolls because of equalization of death pension eligibility. The total cases helped would be 1,116,000.

Estimate of cost of Public Law 86–211

[In thousands of dollars]

Year	Total with equalization	Equalization	Total living and deceased veterans	Living veterans	Deceased veterans
1st	$309,076	$154,268	$154,808	$104,730	$50,078
2d	294,323	162,085	132,238	85,333	46,905
3d	265,599	177,719	87,880	47,320	40,560
4th	222,512	201,169	21,343	[1]9,699	31,042
5th	165,014	232,476	[1]67,372	[1]85,722	18,350
5-year total	1,256,614	927,717	328,897	141,962	186,935
Period ending:					
1970	1,698,760	1,955,594	[1]256,834	[1]353,358	96,524
1975	1,784,981	2,171,533	[1]386,552	[1]326,367	[1]60,185
1980	2,245,862	2,816,755	[1]570,893	[1]474,456	[1]96,437
1985	1,985,965	3,357,038	[1]1,371,073	[1]1,283,022	[1]88,051
1990	901,937	3,764,620	[1]2,862,683	[1]2,796,991	[1]65,692

[1] Savings.

This law makes no change in requirements under the old pension program as to disability, length of service, age, and unemployability of a veteran. These requirements are as follows:

A veteran of World War I, World War II, or the Korean conflict is eligible for pension if he is permanently and totally disabled from nonservice-connected disability not the result of willful misconduct or vicious habits. He must either have served in the active military, naval, or air service for a period of 90 days or more during the applicable period and have been discharged under conditions other than dishonorable, or have been discharged for a service-connected disability.

The determination of permanent total disability is made on a liberal basis. Such rating is granted (where the requirement of permanence is met) when there is a single disability of 60 percent, or two or more disabilities one of which is 40 percent in degree, combined with other disability or disabilities to a total of 70 percent, and unemployability attributed thereto.

Although age alone is not a basis for entitlement to pension, it is considered in association with disability and unemployability in determining permanent and total disability. The aforementioned percentage requirements are reduced on the attainment of age 55 to a 60-percent rating for one or more disabilities, with no percentage requirements for any one disability; at age 60 to a 50-percent rating for one or more disabilities; and at age 65 to one disability ratable at 10 percent or more. When these reduced percentage requirements are met and the disability or disabilities involved are of a permanent nature, a permanent and total disability rating will be assigned, if the veteran is determined to be unable to secure and follow substantially gainful employment by reason of such disability.

A widow's age, disability, or unemployability is not considered in determining her eligibility for a pension, either under existing law or under the provisions of Public Law 86–211. Under the old law, a widow of World War I, World War II, or the Korean conflict is required to meet an annual income limitation of $1,400 if she has no dependents or $2,700 if she has dependents. In addition, the deceased husband of a widow of World War II or the Korean conflict must have had a service-connected disability, although his death was not caused by this disability. Public Law 86–211 removes this latter requirement and places the widows of World War II and the Korean conflict in the same status as widows of World War I veterans. (Approved August 29, 1959.)

Public Law 86–212 (H.R. 255): Makes applicable to a competent veteran who disappears the provisions of existing law which provide that where an incompetent veteran who is receiving compensation for a service-connected disability disappears, the Veterans' Administration may pay to his wife, children, and parents the compensation otherwise payable to such veteran, amounts payable to each not to exceed the amount payable if the veteran had died from a service-connected disability. (Approved September 1, 1959.)

Public Law 86–222 (H.R. 7106): Prior to passage of Public Law 86–222, the Administrator of Veterans' Affairs had authority to forfeit the rights of veterans, widows, children, and dependent parents to all gratuitous benefits under laws administered by the Veterans' Administration. Forfeiture was authorized in two categories:

(1) Where the Administrator finds the one claiming benefits has been guilty of mutiny, treason, sabotage, or rendering assistance to an enemy;

(2) Where a false or fraudulent statement has been made concerning any claim for benefits.

The forfeiture decision of the Administrator was final and not subject to review in the courts. Forfeiture, if adjudged, forfeits all benefits and continues for the lifetime of the forfeited individual, unless pardoned by the President.

This law continues the authority of the Administrator to forfeit in all cases where the guilty person resides, or is domiciled, outside the jurisdiction of the U.S. courts.

Where the accused resides, or is domiciled, within the United States at the time of the offense, the new law eliminates the authority of the Administrator to impose a forfeiture based upon false or fraudulent statements. Forfeitures previously imposed are not affected. This law also provides for automatic forfeiture of rights to gratuitous veterans' benefits in all cases of conviction of certain specified offenses involving loyalty or security. A Presidential pardon restores the right to benefits.

Authority of the Administrator of Veterans' Affairs to make an apportionment award disability compensation to dependents of veterans in cases of administrative forfeiture for fraud or forfeiture for offenses involving loyalty or security is terminated. (Approved Sept. 1, 1959.)

Public Law 86–236 (H.R. 2773): Provides war orphans' educational assistance to children of veterans of the Spanish-American War who die as the result of a disability incurred or aggravated during that period of war service. (Approved Sept. 8, 1959.)

Public Law 86–239 (H.R. 7373): Expands the program of assistance for severely disabled veterans in acquiring homes equipped with special facilities made necessary by the character of their service-connected disabilities. The bill brings into this program those with compensable permanent and total disabilities incurred when such disability includes (1) blindness in both eyes, having only light perception, plus (2) loss, or loss of use, of one lower extremity such as to preclude locomotion without the aid of a wheelchair. Also, it removes the limitation that where eligibility is based on loss, or loss of use, of both lower extremities that such loss must have been due to certain specified conditions. (Approved Sept. 8, 1959.)

Public Law 86–490 (H.R. 276): Authorizes payment to veterans of additional compensation for dependents (based on establishment of a disability rating of not less than 50 percent) from the effective date of the increased percentage evaluation, provided basic proof of dependents is received by Veterans'

Administration within 60 days from date of notification of rating action. (Approved June 8, 1960.)

Public Law 86-491 (H.R. 641): Authorizes payment of service-connected death compensation to an otherwise eligible widow of a veteran if she was married to him before the expiration of 15 years after the termination of the period of service in which the injury or disease causing his death was incurred or aggravated. (Approved June 8, 1960.)

Public Law 86-492 (H.R. 7502): The service-connected death benefit of dependency and indemnity compensation is payable to a widow at a monthly rate equal to $112 plus 12 percent of the "basic pay" of her deceased husband. Generally, such basic pay is computed by using the rank of the veteran at the time of his death in active service or last discharge therefrom. The bill would change the method of computing basic pay for dependency and indemnity compensation purposes by using a higher rank held in service than that held at the time of a veteran's death in service or his discharge therefrom, if the use of such higher rank would result in a greater benefit to the widow. It would apply to cases where the veteran had satisfactorily served on active duty for 6 months or more in such higher rank and was so serving within 120 days of death or discharge. (Approved June 8, 1960.)

Public Law 86-494 (H.R. 9785): Grants gratuitous national service life insurance in a maximum amount of $10,000 to any enlisted person who died as the result of an aviation accident incurred in line of duty while undergoing flight training in the active service of the Army or Navy after October 7, 1940, and before August 4, 1942, if such person would have been eligible for life insurance with premiums paid by the United States had he been serving under an appointment as an aviation cadet. Upon application filed generally within 2 years, the insurance would be payable effective from the date of enactment of the bill in monthly installments to a limited class of beneficiaries, if living, and no payment would be made to the estate of any person. Liability for such payments would be borne by the national service life insurance appropriation. (Approved June 8, 1960.)

Public Law 86-495 (H.R. 9788): Prohibits the payment or furnishing of benefits under laws administered by the Veterans' Administration to or on account of any child by reason of the death of more than one parent in the same parental line. However, it would permit a child to elect one or more times to receive benefits by reason of the death of any one parent in the same parental line, thus allowing the child to receive the greater of two or more benefits. The bill would apply only to cases where the death of a parent occurs after the date of enactment thereof. (Approved June 8, 1960.)

Public Law 86-497 (H.R. 10703): Grants waiver of payment of national service life insurance premiums, upon application, in any case in which an insured, during World War II or the early Korean conflict, became totally disabled in line of duty after making application for insurance and prior to the effective date thereof and remained continuously totally disabled to date of death or the date of enactment, whichever is earlier. A waiver of premiums under this bill would render the insurance nonparticipating while the waiver is in effect. (Approved June 8, 1960.)

Public Law 86-499 (H.R. 10898): Authorizes payment of additional $12 per month for each child of service-connected disabled war veterans who qualify to receive dependents' allowance (50 percent disabled or more) and 80 percent of that rate for peacetime veterans. (Approved June 8, 1960.)

Public Law 86-501 (H.R. 113): Prohibits the severance of a service-connected disability which has been in effect for 10 or more years, except when based on fraud or when military records clearly show that the individual did not have the requisite character of discharge or service. To be effective January 1, 1962. (Approved June 10, 1960.)

Public Law 86-590 (H.R. 10108): Authorizes reimbursement for ferry fares, and bridge, road, and tunnel tolls, in addition to the mileage allowance payable for the travel of certain Veterans' Administration beneficiaries and their attendants. (Approved July 5, 1960.)

Public Law 86-598 (H.R. 7966): Provides for the furnishing of needed services of optometrists by the Veterans' Administration to veterans having service-connected eye conditions. The Veterans' Administration today is authorized to furnish outpatient medical care for veterans with service-connected disabilities. This care is furnished primarily in Veterans' Administration clinics but is supplemented by using the services of fee-basis private physicians where it is not feasible to care for veterans at the clinics. It is expected that enactment of this legislation will cause the Veterans' Administration to materially expand its use of the services of optometrists in its outpatient fee-basis program. (Approved July 7, 1960.)

Public Law 86-625 (H.R. 10596): Reimburses State homes at the rate of $2.50 per veteran per day (or a maximum of $912.50 a year per veteran) rather than at the rate of $700 per annum, for care of veteran members who are eligible for care in Veterans' Administration hospital or domiciliary facilities. (Approved July 12, 1960.)

Public Law 86-626 (H.R. 11776): Veterans' Administration appropriations, fiscal year beginning July 1, 1960, and ending June 30, 1961. (For details, see: "Veterans' Administration Appropriations." This legislation reported from House Appropriations Committee.) (Approved July 12, 1960.)

Public Law 86-639 (H.R. 7965): Authorizes the Administrator of Veterans' Affairs to furnish medical services for a non-service-connected disability when reasonably necessary in preparation for admission of a veteran in need of hospital care. Outpatient treatment reasonably necessary to complete treatment incident to a veteran's hospital care also would be permitted. (Approved July 12, 1960.)

Public Law 86-663 (H.R. 7211): Establishes a new statutory rate of disability compensation for certain service-connected seriously disabled veterans. A monthly rate of $265 would be authorized for a veteran who has a service-connected disability rated as total and (1) has additional service-connected disability or disabilities independently ratable at 60 percent or more, or (2) by reason of his service-connected disability or disabilities is "permanently housebound." (Approved July 14, 1960.)

Public Law 86-665 (H.R. 7903): Extends the World War II loan guaranty program and the World War II and Korean conflict direct loan program for 2 years, from July 25, 1960, to July 25, 1962. It also authorizes an additional year for processing loan guaranty applications received by July 25, 1962, and permits the Administrator of Veterans' Affairs to close direct loans subsequent to July 25, 1962, on the basis of commitments issued before that date. Authority for Treasury advances to the direct loan revolving fund in the aggregate amount of $150 million per fiscal year (but not more than $50 million in any one quarter) would be continued through fiscal years 1961 and 1962. Committee amendment adopted on House floor provides (1) for issuance of guarantee when veteran has in fact occupied house as his home but occupancy certifications were not completed; (2) that a veteran's deposit or downpayment be held by seller in a trust account until the loan is closed; and (3) that a revolving fund be established in the Veterans' Administration. (Approved July 14, 1960.)

Public Law 86-670 (H.R. 9786): Permits Indian war and Spanish-American War veterans to elect to receive aid-and-attendance pension at the rates and under the conditions (except service requirements) applicable to World War I veterans. (Approved July 14, 1960.)

PASSED HOUSE AND PASSED SENATE WITH AMENDMENT, RETURNED TO HOUSE FOR CONSIDERATION OF AMENDMENT

H.R. 11045: Provides a new plan of insurance for national service life insurance (NSLI) policyholders. The plan is modified life insurance which provides a level premium throughout the life of the insured but the face value of the policy will be automatically reduced by 50 percent at the end of the day preceding the insured's 65th birthday. The face value of any extended term insurance in force under the modified life policy would also be reduced by 50 percent at that time. The plan is permissive. Policyholders may elect to retain the insurance otherwise lost at age 65 by paying premiums for age 65 without medical examination. The modified life plan will provide permanent plan insurance at a lower premium rate than the existing permanent plans of insurance. This is true because the protection is cut in half at age 65 and a more realistic table is used for calculation of premiums on participating insurance. A comparison of premiums per $1,000 of participating insurance is as follows:

Age	Annual premium for the modified life plan	Annual premium, present rates		Level premium after age 65	
		5 LPT	O.L.	If 50 percent face continued	If 100 percent face continued
30	$9.83	$8.41	$18.47	$9.83	$13.22
35	11.72	9.00	21.31	11.72	45.11
40	14.09	10.06	25.10	14.09	47.48
45	17.17	11.72	30.07	17.17	50.56
50	20.84	15.04	36.94	20.84	54.23
55	25.22	20.95	46.53	25.22	58.61
65		47.00	78.97		

Senate amendment permits issuance of national service life insurance to persons eligible to apply between October 8, 1940, and December 31, 1956, both dates inclusive. Application to be submitted in writing within 1 year after January 1, 1961, with proof of good health at time of application. Veterans who served between April 26, 1951, and December 31, 1956, with service-connected disabilities may obtain a special type of policy. Administrative cost and cost of physical examination to be borne by veteran.

House Report: No. 1543; April 21, 1960.

Passed House: May 2, 1960.

Referred: Senate Finance Committee; May 3, 1960.

Senate Report: No. 1485; May 26, 1960.

Passed Senate: June 2, 1960, with amendment.

H.R. 3313: Amends the Soldiers and Sailors' Civil Relief Act of 1940 to provide that facts may be established by written unsworn statements, declarations, verifications, or certificates which are certified to be true under penalty of perjury. These statements would be in lieu of affidavits which are today required in any court action or proceeding where there is default of any appearance by the defendant. In such a case the claimant shall, prior to entering a judgment, file in the court an affidavit setting forth either (1) that the defendant is not in military service, or (2) that the defendant is in military service, or (3) that the plaintiff is unable to determine the status of the defendant insofar as military service is concerned.

Senate amendment extends vocational rehabilitation program until July 25, 1965, for service-connected disabled veterans of World War II who have been prevented from entering or completing training because: (a) they had not attained, retained, or regained medical feasibility for training because of disability; (b) they had not met the requirement of an honorable discharge but character of discharge was later changed by appropriate authority; or (c) they had not timely established the existence of a compensable service-connected disability. Program is also extended for those veterans in training on June 1, 1960, until such time as training is completed.

House Report: No. 1309; March 2, 1960.

Passed House: March 21, 1960.

Referred: Senate Committee on Labor and Public Welfare; March 22, 1960.

Senate Report: No. 1621; June 20, 1960.

Passed Senate: June 29, 1960, with amendment.

BILLS PASSED BY HOUSE, REPORTED BY SENATE COMMITTEES

H.R. 4306. Provides educational assistance for the children of persons who die as the direct result of armed conflict or while engaged in extrahazardous service (including such service under conditions simulating war) during the period after January 31, 1955, and before the end of compulsory military service.

Senate committee amendment extends eligibility to children of persons who die as the result of disabilities incurred in the performance of duty and specifies conditions under which training by open-circuit television may be allowed.

House Report: No. 722, with amendment; July 28, 1959.

Passed House: August 17, 1959.

Referred: Senate Committee on Labor and Public Welfare; August 18, 1959.

Senate Report: No. 1645, with amendment; June 22, 1960.

BILLS PASSED BY HOUSE, REFERRED TO SENATE COMMITTEES

H.R. 268. Adds "deafness of both ears, having absence of air and bone conduction" to the other types of service-connected disabilities specified in the law pertaining to veterans' disability compensation for which an additional award in the amount of $47 monthly is provided.

House Report: No. 411; June 2, 1959.

Passed House: August 31, 1959.

Referred: Senate Finance Committee; September 1, 1959.

Senate committee action: Tabled; April 4, 1960.

H.R. 270. Increases from $10 to $100 the monthly pension payable to holders of the Congressional Medal of Honor, permits payment at any age instead of the present requirement of attaining the age of 65 years, and pays holders of the medal whether or not they are on active duty.

House Report: No. 413; June 2, 1959.

Passed House: July 20, 1959.

Referred: Senate Finance Committee; July 21, 1959.

Senate committee action: Ordered reported, with amendments; April 4, 1960.

H.R. 283: Provides that if a veteran, as a result of service-connected disability, has suffered the anatomical loss or loss of use of one foot, or one hand, or both buttocks, or blindness of one eye, having only light perception, the rate of compensation therefor shall be $47 per month for each such loss or loss of use independent of any other compensation provided in subsections (a) to (j). At present this provision limits payment thereunder to one statutory award of $47 per month for all such losses, except where the losses are in addition to other combinations of disabilities specified in subsections (l) to (n). Under the bill as reported, the total payment in any case may not exceed $309 and the loss of more than one creative organ would, for this purpose, be considered a single "loss." In peacetime cases the rates are 80 percent of the above-mentioned rates.

House Report: No. 415, with amendments; June 2, 1959.

Passed House: August 31, 1959.

Referred: Senate Finance Committee; September 1, 1959.

Senate committee action: Tabled; April 4, 1960.

H.R. 5996: Authorizes payment in a lump sum of the total amount of compensation, representing the statutory awards of $47 monthly for the anatomical loss or loss of use of a creative organ and $67 monthly for arrested tuberculosis disease, which would have been payable for the period August 1, 1952, to date of bill's enactment had claim therefor been filed on August 1, 1952 (the effective date of Public Law 427, 82d Congress, which first provided such statutory awards for World War II and Korean conflict veterans). Applies to all cases in which the condition was determined, before August 1, 1952, as service connected, and would require reduction of the amount payable by any such statutory awards paid during that period.

House Report: No. 419; June 2, 1959.

Passed House: July 20, 1959.

Referred: Senate Finance Committee; July 21, 1959.

Senate committee action: Tabled; April 4, 1960.

H.R. 8098: Permits the combination, or tacking, of two or more separate periods of service during more than one period of war in satisfying the 90-day service requirement for payment of non-service-connected disability or death pension to veterans and their widows and their children.

House Report: No. 1536; April 21, 1960.

Passed House: May 2, 1960.

Referred: Senate Finance Committee; May 3, 1960.

H.R. 9792: Provides that the salaries of managers of Veterans' Administration hospitals, domiciliaries, and centers shall be not less than $16,500 per annum and the salaries of Directors of Professional Services shall be $16,250 per annum.

House Report: No. 1539; April 21, 1960.

Passed House: May 16, 1960.

Referred: Senate Committee on Post Office and Civil Service; May 17, 1960.

BILLS REFERRED TO HOUSE COMMITTEE FOLLOWING PASSAGE BY SENATE

S. 1138: Provides readjustment benefits to persons with more than 180 days of service, entering the service after January 31, 1955, and before the termination of compulsory military service (July 1, 1963), as follows:

(1) Education and vocational training;

(2) Vocational rehabilitation (for veterans with service-connected disabilities); and

(3) Guaranteed and direct-loan assistance for the purchase of a home or farmlands, livestock, machinery, etc., to be used in farming operations conducted by the veteran.

S. 1138, 86TH CONG. (AS PASSED BY THE SENATE ON JULY 21, 1959)

TABLE 1.—*Sec. 2. Education and training—Estimate of expenditures for direct benefits and monthly average trainees* [1]

Fiscal year	Expenditures for direct benefits			Monthly average trainees				
	Total	Educational loans [2]	Grants	Total	College	Below college	Job	Farm
1961	$178,000,000		$178,000,000	134,000	76,000	47,000	8,000	3,000
1962	360,000,000	$25,000,000	325,000,000	271,000	128,000	108,000	22,000	13,000
1963	379,000,000	37,000,000	342,000,000	285,000	134,000	114,000	24,000	13,000
1964	375,000,000	34,000,000	341,000,000	281,000	128,000	116,000	24,000	13,000
1965	362,000,000	39,000,000	323,000,000	272,000	124,000	112,000	23,000	13,000
1966	359,000,000	38,000,000	321,000,000	269,000	121,000	112,000	23,000	13,000
1967	322,000,000	38,000,000	284,000,000	242,000	109,000	104,000	18,000	11,000
1968	247,000,000	31,000,000	216,000,000	186,000	84,000	81,000	12,000	9,000
1969	182,000,000	24,000,000	158,000,000	137,000	62,000	61,000	8,000	6,000
1970	130,000,000	18,000,000	112,000,000	98,000	45,000	44,000	4,500	4,500
1971	90,000,000	13,000,000	77,000,000	67,000	32,000	30,000	2,000	3,000
1972	58,000,000	9,000,000	49,000,000	44,000	21,000	20,000	1,000	2,000
1973	37,000,000	6,000,000	31,000,000	27,500	13,500	12,500	500	1,000
Total [3]	3,079,000,000	312,000,000	2,767,000,000					

[1] This estimate assumes enactment early in fiscal year 1961, prior to the beginning of the school year. Amounts which might be expended because of retroactive payments for training subsequent to Sept. 1, 1959, as currently provided in the proposal, are not included in the estimate. With retroactive payments for fiscal year 1960, approximately $46,000,000 additional would be expended for grants, and approximately $10,000,000 of the total expenditures shown for fiscal year 1961 would be for loans.

[2] Assumes persons taking loans would take as much as they would have received on a grant basis.

[3] Total is through fiscal year 1973 only. Additional expenditures for direct benefits beyond fiscal year 1973 have not been estimated. The program will continue for several years beyond fiscal year 1973.

S. 1138, 86TH CONG. (AS PASSED BY THE SENATE ON JULY 21, 1959)

TABLE 2.—*Sec. 3. Vocational rehabilitation—Estimate of expenditures for direct benefits and monthly average trainees* [1]

Fiscal year	Expenditures for direct benefits	Monthly average trainees
1961	$6,000,000	3,200
1962	13,000,000	6,800
1963	18,000,000	9,000
1964	19,000,000	9,800
1965	19,000,000	9,900

[1] These estimates assume that there will be no concurrent readjustment education and training program. Participation and cost would be reduced to approximately ½ the amounts shown if there is a concurrent readjustment education and training program.

Administrative costs, including counseling and beneficiary travel, would approximate one-sixth of the direct benefits cost.

S. 1138, 86TH CONG. (AS PASSED BY THE SENATE ON JULY 21, 1959)

TABLE 3.—*Sec. 4. Home and farm loan benefits*

Participating veterans [1] 1,000,000–1,250,000
Administrative cost ..... $40,000,000–$50,000,000

[1] Assumes that the number of entries into the Armed Forces continues at approximately the present rate and that from 3,000,000 to 4,000,000 veterans will become eligible for the loan benefits.

The cost to the Government of the proposed extension of the loan guaranty benefits is not subject to precise estimate. It is quite problematical whether a one-half of 1 percent fee (the maximum permitted by the bill) would be adequate for offsetting the expenses resulting from claims under the guaranty and the subsequent expenses which might result from acquisition of properties, their management and sale. To the extent that the mortgage guaranty fund, which would be derived primarily from such fees, proved inadequate to meet these expenses, they would be paid out of appropriated funds.

No additional direct loan funds would be provided by the bill beyond those which will be available under present law for the World War II and Korean veterans. Hence, no additional direct loans would be authorized, but there would be an increased demand for the limited amount of direct loan money available.

Senate Report: No. 514; July 14, 1959.

Passed Senate: July 21, 1959, with amendment.

House committee action: Hearings; February 23, 24, 25; March 3, 4, 9, and 14, 1960.

S. 2201. Proposes to amend the definition of the term "Veterans' Administration facilities" contained in 38 U.S.C. 601(4)(C) to include private contract facilities for veterans of any war in a State if (1) no Veterans' Administration hospital is located in the State on the effective date of the act, and (2) no Veterans' Administration hospital is located within 500 miles of the border of the State.

This would permit the use of private contract hospitals for the care of war veterans with non-service-connected disabilities in the State of Alaska. Hawaii having become a State, private hospitals there could also be used for hospitalization of veterans with non-service-connected disabilities.

Senate Report: No. 1730; June 24, 1960.

Passed Senate: June 28, 1960.

Referred: House Committee on Veterans' Affairs; June 29, 1960.

BILLS REPORTED BY HOUSE COMMITTEE

H.R. 12566: Requires that decisions of the Board of Veterans' Appeals shall be in writing and shall contain findings of fact and conclusions of law separately stated.

House Report: No. 2030; June 29, 1960.

H.R. 12653: Establishes a Court of Veterans' Appeals consisting of five judges to be appointed by the President with the advice and consent of the Senate. Judges are to be appointed for 10-year terms.

The bill also authorizes the court to appoint not more than 50 commissioners. The commissioners shall perform such duties as the court may prescibe, including the conducting of hearings, the receiving of evidence, and the making of such reports as the court may perscribe.

The court is given exclusive jurisdiction to review by appeal decisions of the Board of Veterans' Appeals except in cases involving life insurance contracts housing or business loans where jurisdiction is now vested in the U.S. courts.

The decisions of the court shall be final. This, for the first time, subjects decisions of the Administrator of Veterans' Affairs to review by a separate and independent agency.

House Report: No. 2031; June 29, 1960.

VETERANS IN AMERICA

Population of veterans

America's population of living veterans is about 22,500,000.

About two-thirds, or more than 15 million served in World War II. They average 41 years of age.

More than 5,500,000—average age 31—served during the Korean conflict period. Approximately 960,000 of them are "double duty" veterans, serving both in World War II and the Korean conflict.

Less than 2,700,000—average age 66—served in World War I.

Spanish-American War veterans—average age 83—number 37,000. Only about 50 old-timers—in their 80's and 90's—served in the Indian wars.

The Nation's veterans, together with their families, make up about 45 percent of the total population of the United States.

MEDICINE

VA operates 170 hospitals for the care of ill and disabled veterans. On any average day, VA's patient load exceeds 114,000. During an average year, VA admits nearly half a million veterans in its hospital program.

Admissions are under a priority system.

First call goes to veterans with service-connected conditions. Generally, the service-connected are admitted immediately.

And next—if beds are available—come veterans with non-service-connected ailments who are unable to pay for private hospitalization. In addition to signing a statement of inability to pay, they also must submit a statement of their assets and liabilities.

INSURANCE

Approximately 6 million veterans today hold GI insurance policies valued at over $42 billion. The breakdown:

Nearly 5 million World War II veterans hold $34.7 billion of participating national service life insurance; 620,000 Korea veterans hold $5.9 billion of special nonparticipating national service life insurance; 43,000 disabled Korea and post-Korea veterans hold $380 million of special nonparticipating insurance—the only type that may now be newly issued; 275,000 World War I veterans hold $1.4 billion of participating U.S. Government life insurance.

GI LOANS

Eligibility: Any person who served in the armed services at any time on or after September 16, 1940, and prior to July 26, 1947, or on or after June 27, 1950, and prior to February 1, 1955, discharged under conditions other than dishonorable after active service of 90 days or more or because of disability incurred in line of duty is eligible. Generally loans, or applications for guarantee, must be made prior to July 26, 1960, for World War II veterans; veterans of Korea have until January 31, 1965. Widows of deceased veterans whose death was due to service may also qualify.

Amounts: Non-real-estate loans up to $2,000 and real-estate loans in certain cases up to $7,500, or a prorated portion thereof, or loans of both types or combinations thereof, may be guaranteed with interest at not more than 5¼ percent per annum, repayable in not more than 30 years, except in the case of farm realty, which may run for 40 years. (Maturity on non-real-estate loan may not exceed 10 years.) If the proceeds of the loan are to be used for the acquisition of residential property, the amount guaranteed may be 60 percent of the loan but not over $7,500. Banks or other lending institutions make the loans, with the Government guaranteeing 50 or 60 percent of the loan, but in no case to exceed the above amounts. Under certain conditions, Veterans' Administration is authorized to lend, until July 25, 1960, up to $13,500 directly to the veteran when private sources are not available.

Under this program, veterans of World War II and the Korean conflict have borrowed more than $48 billion for homes of their own. VA has guaranteed more than half of this amount, or $26 billion.

The record established by veterans in meeting their GI loan obligations is unparalleled.

So far, veterans have repaid in full nearly 1,600,000 GI loans having a total value of $10 billion.

Defaults on GI loans—for which VA has had to make good the guaranteed portions to lenders—number a mere 61,000, or slightly more than 1 percent of the total number of loans granted.

EDUCATION

More than 10½ million veterans so far have trained under the four programs. That's more than three times the total enrollments in every college and university in the United States of America.

Of the 10½ million total more than 7,800,000—one-half of all World War II veterans—trained under the World War II GI bill. Of them, 44 percent went to schools below the college level (such as trade and technical schools); 29 percent studied in college, and the rest trained on the job and on the farm.

Another 2,330,000—more than 2 out of every 5 Korean veterans—trained under the Korean GI bill. Their number will grow (the program doesn't end until 1965).

A new trend has developed under the Korean GI bill. Fewer veterans have attended schools below the college level (36 percent), and more have gone to college (more than 50 percent). Enrollments in on-the-job and on-the-farm courses account for the balance.

Another 615,000 disabled World War II veterans and 64,000 disabled Korean veterans have received vocational rehabilitation training. Some 40 percent have trained for top-level jobs in professional and managerial fields.

It has helped raise the educational level of veterans to better than 4 years of high school, whereas the level of nonveteran males, same age group, is but 2 years of high school. "Your every voter, as surely as your chief magistrate, exercises a public trust," said Grover Cleveland. Through more education, veterans have become better prepared to exercise this public trust.

It has helped build up America's reservoirs of trained manpower, so urgently needed for our Nation's strength and well-being. This country has gained immeasurably from the 478,000 engineers, 391,000 schoolteachers, 275,000 in the medical and related fields (130,000 doctors, dentists, nurses), and 140,000 scientists who learned their skills under the GI bill and the vocational rehabilitation programs.

Approximately 20,000 war orphans have trained since the war orphans educational assistance program began in the fall of 1956. Of these, 79 percent trained in college and the rest in schools below the college level. Approximately 1 in 6 had selected objectives in the scientific field. Of the 1,400 training in the medical and related fields, more than 900 were female students most of whom selected the field of nursing. Almost all of the 1,100 training to be engineers were males. More than 500 trained to be scientists. Approximately 2,300 trained to be schoolteachers.

Number of participants and deaths in service during all wars; number of living veterans, and veterans and dependents on compensation and pension rolls, Dec. 31, 1959

REVOLUTION (1775–83)

Participants	395,000
Deaths in service	4,000
Last veteran died Apr. 5, 1869	age 109
Last dependent died 1906	age 92

WAR OF (1812–14)

Participants	536,000
Deaths in service	2,000
Last veteran died May 13, 1905	age 105
Last dependent died 1946	age ?

MEXICAN WAR (1846–48)

Participants	130,000
Deaths in service	13,000
Last veteran died Sept. 3, 1929	age 98
Dependents on compensation and pension rolls:	
Widows	3
Children	1

CIVIL WAR (1861–65) (UNION FORCES ONLY)

Participants	2,213,000
Deaths in service	364,000
Last veteran died Aug. 2, 1956	age 109
Veterans and dependents on compensation and pension rolls (Union and Confederate Forces):	
Widows	3,399
Children	761

INDIAN WARS (APPROXIMATELY (1860–98)

Participants	106,000
Deaths in service	1,000
Living veterans	55
Veterans and dependents on compensation and pension rolls:	
Widows	705
Children	22
Veterans	55

SPANISH-AMERICAN WAR (1898–1902)

Participants	392,000
Deaths in service	11,000
Living veterans	40,000
Veterans and dependents on compensation and pension rolls:	
Parents	3
Widows	76,856
Children	2,409
Veterans	36,369

WORLD WAR I (1917–18)

Particpants	4,744,000
Deaths in service	131,000
Living veterans	2,724,000
Veterans and dependents on compensation and pension rolls:	
Parents	11,226
Widows	418,787
Children	74,583
Veterans	983,414

WORLD WAR II (SEPT. 16, 1940–JULY 25, 1947)

Participants	[1] 16,535,000
Deaths in service	409,000
Living veterans	[2] 15,220,000
Veterans and dependents on compensation and pension rolls:	
Parents	251,385
Widows	89,597
Children	178,032
Veterans	1,641,079

KOREAN CONFLICT (JUNE 27, 1950–JAN. 31, 1955)

Participants	[1] 6,807,000
Deaths in service	54,000
Living veterans	[2] 5,466,000
Veterans and dependents on compensation and pension rolls:	
Parents	36,466
Widows	10,395
Children	21,818
Veterans	211,624

TOTAL—ALL WARS

Participants [3]	31,858,000
Deaths in service	989,000
Living veterans	[4] 22,599,000
Veterans and dependents on compensation and pension rolls:	
Parents	[5] 316,733
Widows	[6] 615,644
Children	[7] 289,361
Veterans	[4] 2,972,069

[1] Includes 1,476,000 who served in both World War II and the Korean conflict.

[2] Includes 951,000 with service in both World War II and the Korean conflict.

[3] Persons who served in more than 1 war are counted as participants in each.

[4] Includes approximately 100,000 former members of the (peacetime) Regular Establishment who are receiving VA disability compensation.

[5] Includes 17,653 parents of deceased former members of the (peacetime) Regular Establishment.

[6] Includes 15,902 widows of deceased former members of the (peacetime) Regular Establishment.

[7] Includes 11,735 children of deceased former members of the (peacetime) Regular Establishment.

PROCEEDINGS OF THE SENATE SUBSEQUENT TO ADJOURNMENT

CORRECTION OF THE RECORD

Through inadvertence, the following was omitted from the RECORD of July 2, 1960:

Mr. CARROLL. Mr. President, I ask unanimous consent that the permanent RECORD be corrected in connection with an insertion made by the junior Senator from Colorado on June 30.

The insertion contains a profile article about Dr. Walter Orr Roberts, director of the University of Colorado High Altitude Observatory, as published in the New York Times. The title of the article, beginning in the first column of page 14045 of the RECORD, is "A Keen Eye for Weather."

In the line just below the title is a word which inadvertently found its way into the RECORD and does not belong there. Instead of simply reading "Walter Orr Roberts," it reads "By Walter Orr Roberts." The word "by" is superfluous and misleading in that it creates the impression that the article was written by Dr. Roberts. Actually it was not. It was written by a staff member of the New York Times. The word "by" preceding the name of Dr. Roberts should therefore be stricken.

The ACTING PRESIDENT pro tempore. Without objection, the correction will be made.

SENATE BUSINESS TRANSACTED SUBSEQUENT TO ADJOURNMENT

The following business of the Senate was transacted subsequent to adjournment:

AMENDMENT OF HELIUM ACT OF SEPTEMBER 1, 1937, AS AMENDED—INDIVIDUAL VIEWS (PT. 2 OF S. REPT. NO. 1814)

Under authority of the order of the Senate of July 1, 1960, Mr. CARROLL, from the Committee on Interior and Insular Affairs, on July 7, 1960, submitted his individual views to accompany the bill (H.R. 10548) to amend the Helium Act of September 1, 1937, as amended, for the defense, security, and the general welfare of the United States, which were ordered to be printed.

ENROLLED BILLS SIGNED SUBSEQUENT TO ADJOURNMENT

Pursuant to House Concurrent Resolution 712, agreed to July 2, 1960, the President pro tempore signed the following enrolled bills and joint resolutions, which had previously been signed by the Speaker of the House of Representatives:

On July 4, 1960:

H.R. 12311. An act to amend the Sugar Act of 1948, as amended.

On July 5, 1960:

S. 2535. An act for the relief of Joseph Lue Fan and Aura Joan Lue Fan;

S. 2674. An act to authorize the acquisition of certain lands for addition to Harpers Ferry National Monument, and for other purposes;

S. 2765. An act for the relief of Safia Skōlopoulos;

S. 2969. An act to authorize the award posthumously of appropriate medals to Chaplain George L. Fox, Chaplain Alexander D. Goode, Chaplain Clark V. Poling, and Chaplain John P. Washington;

S. 3247. An act to amend the act of September 9, 1959 (73 Stat. 473), to provide that payment for the lands covered by such act may be made on a deferred basis;

S. 3319. An act to authorize the Administrator of General Services to release the recapture provisions contained in the conveyance of certain real property to the city of Little Rock, Ark., and for other purposes;

S. 3450. An act to amend section 22 (relating to the endowment and support of colleges of agriculture and the mechanic arts) of the act of June 29, 1935, to increase the authorized appropriation for resident teaching grants to land-grant institutions;

S. 3616. An act to deny to the District of Columbia, in suits on claims arising out of the negligent operation of vehicles owned or controlled by it and operated by its employees in the performance of their official duties, the defense of governmental immunity, to relieve such employees of liability in such cases to third persons, and for other purposes;

H.R. 808. An act to authorize the Secretary of State to evaluate in dollars certain financial assistance loans expressed in foreign currencies arising as a result of World War II, and for other purposes;

H.R. 1422. An act for the relief of Alessandro Maraessa;

H.R. 1493. An act for the relief of Antonio Mendez Garcia and Palmira Lavin Garcia;

H.R. 1588. An act for the relief of Julius F. Steinhoff;

H.R. 1643. An act for the relief of Francesco Carozza;

H.R. 2117. An act for the relief of Ireneo B. Brodit and Antonio D. Brodit;

H.R. 2124. An act for the relief of Mrs. Teruko Teri Miyamoto (nee Ikeda);

H.R. 2705. An act for the relief of Bernardo Paternostro;

H.R. 2716. An act for the relief of Miss Elisabeth Hollander;

H.R. 2944. An act for the relief of Luciano Di Franco;

H.R. 3524. An act for the relief of certain aliens;

H.R. 3804. An act for the relief of Rosolina Ciuferri;

H.R. 3900. An act to permit the admission to registry and the use in the coastwise trade of certain foreign-built hydrofoil vessels;

H.R. 4546. An act for the relief of Margaret P. Copin;

H.R. 4555. An act for the relief of Anatolijs Janitis;

H.R. 4595. An act to clarify and make uniform certain provisions of law relating to special postage rates for educational, cultural, and library materials, and for other purposes;

H.R. 4970. An act for the relief of Haralambos Groutas;

H.R. 5055. An act to amend the restriction on the use of certain real property heretofore conveyed to the city of St. Augustine, Fla., by the United States;

H.R. 5436. An act to provide for a register in the Department of Commerce in which

shall be listed the names of certain persons who have had their motor vehicle operator's licenses revoked;

H.R. 5647. An act for the relief of Wong Gee Sing;

H.R. 6556. An act to amend subdivision (c) of section 39 of the Bankruptcy Act (11 U.S.C. 67c) so as to clarify time for review of orders of referees;

H.R. 6804. An act for the relief of Mary Elizabeth Tighe Crespo;

H.R. 7004. An act to facilitate the administration of the public lands, and for other purposes;

H.R. 7367. An act for the relief of Chieko Sakano and her child, Masao Sakano;

H.R. 7379. An act to amend the act of July 27, 1956, with respect to the detention of mail for temporary periods in the public interest, and for other purposes;

H.R. 7425. An act for the relief of Mrs. Humiko Ross;

H.R. 7551. An act for the relief of Hubert O. Beckles;

H.R. 7593. An act to provide that the Civil Aeronautics Board may temporarily authorize certain air carriers to engage in supplemental air transportation, and for other purposes;

H.R. 7634. An act authorizing the construction, repair, and preservation of certain public works on rivers and harbors for navigation, flood control, and for other purposes;

H.R. 7895. An act for the relief of Gloria Anne Loveday;

H.R. 8229. An act to amend the Internal Revenue Code of 1954 to provide an exemption from income tax for supplemental unemployment benefit trusts;

H.R. 8384. An act for the relief of Otto Small;

H.R. 9042. An act for the relief of Anna Semechole Marcolina;

H.R. 9610. An act for the relief of Sister Frances Cabrini (Virginia Bilbao);

H.R. 9786. An act to amend sections 511 and 512 of title 38, United States Code, to permit Indian War and Spanish-American War veterans to elect to receive pension at the rates applicable to veterans of World War I;

H.R. 9960. An act for the relief of Doctor Tze I. Chiang;

H.R. 10002. An act for the relief of Ida Exle (nee Ida Sterio);

H.R. 10495. An act to authorize appropriations for the fiscal years 1962 and 1963 for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes;

H.R. 10511. An act to grant additional benefit to persons receiving cash relief under the Panama Canal Cash Relief Act of July 8, 1937;

H.R. 10793. An act for the relief of Ray C. Thompson;

H.R. 10952. An act to authorize the National Society Daughters of the American Colonists to use certain real property in the District of Columbia as the national headquarters of that society;

H.R. 10997. An act to grant to the Government of Guam certain filled lands, submerged lands, and tidelands;

H.R. 11135. An act to aid in the development of a coordinated system of transportation for the National Capital region; to create a temporary National Capital Transportation Agency; to authorize negotiation to create an interstate agency; and for other purposes;

H.R. 11389. An act making appropriations for the Executive Office of the President and sundry general Government agencies for the fiscal year ending June 30, 1961, and for other purposes;

H.R. 11516. An act to create a judicial officer for the Post Office Department;

H.R. 11748. An act to continue until the close of June 30, 1961, the suspension of duties on metal scrap, and for other purposes;

H.R. 11776. An act making appropriations for sundry independent executive bureaus, boards, commissions, corporations, agencies, and offices, for the fiscal year ending June 30, 1961, and for other purposes;

H.R. 11854. An act to clarify the ownership of certain church properties located in the Virgin Islands;

H.R. 11931. An act to amend the act of March 3,1901, with respect to the time within which a caveat to a will must be filed in the District of Columbia;

H.R. 12231. An act making appropriations for military construction for the Department of Defense for the fiscal year ending June 30, 1961, and for other purposes;

H.R. 12465. An act to provide for a simpler method of determining assessments under the Federal Deposit Insurance Act, and for other purposes;

H.R. 12584. An act to amend the Uniform Narcotic Drug Act for the District of Columbia;

H.R. 12740. An act making supplemental appropriations for the fiscal year ending June 30, 1961, and for other purposes;

H.J. Res. 397. Joint resolution to enable the United States to participate in the resettlement of certain refugees, and for other purposes;

H.J. Res. 605. Joint resolution providing for the preparation and completion of plans for a comprehensive observance of the 175th anniversary of the formation of the Constitution of the United States;

H.J. Res. 672. Joint resolution authorizing and requesting the President to issue a proclamation with respect to the 1960 Pacific Festival, and for other purposes; and

H.J. Res. 722. Joint resolution relating to the entry of certain aliens.

On July 6, 1960:

H.R. 11545. An act to amend the act of October 31, 1949, with respect to payments to Bernalillo County, N. Mex., for furnishing hospital care for certain Indians.

ENROLLED BILLS PRESENTED

The Secretary of the Senate presented to the President of the United States on July 5, 1960, the following enrolled bills:

S. 1315. An act for the incorporation of the Blue Star Mothers of America, Inc.;

S. 2585. An act for the relief of Joseph Lue Fan and Aura Joan Lue Fan;

S. 2674. An act to authorize the acquisition of certain lands for addition to Harpers Ferry National Monument, and for other purposes;

S. 2765. An act for the relief of Sofia Skolopoulos;

S. 2969. An act to authorize the award posthumously of appropriate medals to Chaplain George L. Fox, Chaplain Alexander D. Goode, Chaplain Clark V. Poling, and Chaplain John P. Washington;

S. 3076. An act for the relief of Daisy Pong Hi Tong Li;

S. 3247. An act to amend the act of September 9, 1959 (73 Stat. 473), to provide that payment for the lands covered by such act may be made on a deferred basis;

S. 3319. An act to authorize the Administrator of General Services to release the recapture provisions contained in the conveyance of certain real property to the city of Little Rock, Ark., and for other purposes;

S. 3450. An act to amend section 22 (relating to the endowment and support of colleges of agriculture and the mechanic arts) of the act of June 29, 1935, to increase the authorized appropriation for resident teaching grants to land-grant institutions; and

S. 3616. An act to deny to the District of Columbia, in suits on claims arising out of the negligent operation of vehicles owned or controlled by it and operated by its employees in the performance of their official duties, the defense of governmental immunity, to relieve such employees of liability in such cases to third persons, and for other purposes.

APPROVAL OF SENATE BILLS AND JOINT RESOLUTION SUBSEQUENT TO ADJOURNMENT

The President of the United States, subsequent to adjournment of the Senate, notified the Secretary of the Senate that, on the following dates, he had approved and signed the following bills and joint resolution:

On July 5, 1960:

S. 1018. An act to authorize and direct the transfer of certain personal property to State and county agencies engaged in cooperative agricultural extension work;

S. 1752. An act for the relief of Stamatina Kalpaka;

S. 2053. An act to provide for the acceptance by the United States of a fish hatchery in the State of South Carolina;

S. 2174. An act to permit the filing of applications for patents to certain lands in Florida;

S. 2331. An act to provide for the hospitalization, at St. Elizabeths Hospital in the District of Columbia or elsewhere, of certain nationals of the United States adjudged insane or otherwise found mentally ill in foreign countries, and for other purposes;

S. 2443. An act for the relief of Edgar Harold Bradley;

S. 2481. An act to continue the application of the Merchant Marine Act of 1936, as amended, to certain functions relating to fishing vessels transferred to the Secretary of the Interior, and for other purposes;

S. 2618. An act to authorize the exchange of certain war-built vessels for more modern and efficient war-built vessels owned by the United States;

S. 3189. An act to further amend the shipping laws to prohibit operation in the coastwise trade of a rebuilt vessel unless the entire rebuilding is effected within the United States, and for other purposes;

S. 3226. An act to amend section 809 of the National Housing Act; and

S. 3485. An act to amend section 7 of the Administrative Expenses Act of 1946, as amended, to provide for the payment of travel and transportation cost for persons selected for appointment to certain positions in the United States, and for other purposes.

On July 7, 1960:

S. 1886. An act to amend the Communications Act of 1934 with respect to certain rebroadcasting activities;

S. 2384. An act for the relief of Tommy Tadayoshi Shuto (Tadayoshi Takeda);

S. 2566. An act for the relief of Peter Leo Bahr, John Trevor Jefferies, Chairman Candy Jefferies, and Stephen Reid Jefferies; and

S. 2941. An act for the relief of Ming-Chen Hsu.

On July 12, 1960:

S. 598. An act for the relief of Anthony Di Giovanni;

S. 747. An act to provide for the conveyance of certain lands which are a part of the Des Plaines Public Hunting and Refuge Area and the Joliet Arsenal Military Reservation, located in Will County, Ill., to the State of Illinois;

S. 1283. An act to regulate the interstate distribution and sale of packages of hazardous substances intended or suitable for household use;

S. 1409. An act for the relief of Donald B. Thurston and other employees of the Fish and Wildlife Service;

S. 1454. An act for the relief of Keitha L. Baker;

S. 1502. An act to provide for adjustments in the annuities under the Foreign Service retirement and disability system;

S. 1509. An act to amend the Interstate Commerce Act, as amended, to provide "grandfather" rights for certain motor carriers and freight forwarders operating in interstate or foreign commerce within Alaska and between Alaska and the other States of the United States, and for certain water carriers operating within Alaska, to provide "grandfather" rights for certain freight forwarders operating between Hawaii and the other States of the United States, and for other purposes;

S. 1600. An act for the relief of Grace L. Patton;

S. 1795. An act relating to the promotion and separation of certain officers of the regular components of the Armed Forces;

S. 1965. An act to make uniform provisions of law with respect to the terms of office of the members of certain regulatory agencies;

S. 2113. An act for the relief of George K. Caldwell;

S. 2197. An act to protect the public health by amending the Federal Food, Drug, and Cosmetic Act so as to authorize the use of suitable color additives in or on foods, drugs, and cosmetics, in accordance with regulations prescribing the conditions (including maximum tolerances) under which such additives may be safely used;

S. 2277. An act for the relief of the Geo. D. Emery Co.;

S. 2548. An act for the relief of Henry C. Larson;

S. 2689. An act for the relief of Hwachii Lien;

S. 2740. An act for the relief of Julia Sukkar;

S. 2744. An act to extend the term of design patent No. 21,053, dated September 22, 1891, for a badge, granted to George Brown Goode, and assigned to the National Daughters of the American Revolution;

S. 2817. An act for the relief of Joseph R. Paquette;

S. 2855. An act for the relief of Brenda Nicholson Miller;

S. 2857. An act to amend the Civil Service Retirement Act so as to provide for disposition of contributions in the case of annuitants whose length of service exceeds the amount necessary to provide the maximum annuity allowable under such act, and for other purposes;

S. 3105. An act for the relief of William Y. Allen, Jr., Donald Baldwin Quintero, Johann Friedrich Stapelfeld, and Kenneth Gordon Woods;

S. 3125. An act for the relief of Robert William Neal, Robert J. Naumann, Charles LeRoy Van Slyke, and Franklin Jordan;

S. 3179. An act to increase the authorization for appropriations for construction of facilities for the Gorgas Memorial Laboratory;

S. 3545. An act to amend section 4 of the act of January 21, 1929 (48 U.S.C. 354a(c)), and for other purposes; and

S.J. Res. 41. Joint resolution to establish a National Institute for International Health and Medical Research, to provide for international cooperation in health research, research training, and research planning, and for other purposes.

On July 14, 1960:

S. 1315. An act for the incorporation of the Blue Star Mothers of America, Inc.;

S. 2585. An act for the relief of Joseph Lue Fan and Aura Joan Lue Fan;

S. 2674. An act to authorize the acquisition of certain lands for addition to Harpers Ferry National Monument, and for other purposes;

S. 2765. An act for the relief of Sofia Skolopoulos;

S. 2969. An act to authorize the award posthumously of appropriate medals to Chaplain George L. Fox, Chaplain Alexander D. Goode, Chaplain Clark V. Poling, and Chaplain John P. Washington;

S. 3076. An act for the relief of Daisy Pong Hi Tong Li;

S. 3247. An act to amend the act of September 9, 1959 (73 Stat. 473), to provide that payment for the lands covered by such act may be made on a deferred basis;

S. 3319. An act to authorize the Administrator of General Services to release the recapture provisions contained in the conveyance of certain real property to the city of Little Rock, Ark., and for other purposes;

S. 3450. An act to amend section 22 (relating to the endowment and support of colleges of agriculture and the mechanic arts) of the act of June 29, 1935, to increase the authorized appropriation for resident teaching grants to land-grant institutions;

S. 3616. An act to deny to the District of Columbia, in suits on claims arising out of the negligent operation of vehicles owned or controlled by it and operated by its employees in the performance of their official duties, the defense of governmental immunity, to relieve such employees of liability in such cases to third persons, and for other purposes.

SENATE BILLS DISAPPROVED SUBSEQUENT TO ADJOURNMENT

The President of the United States, subsequent to adjournment of the Senate, notified the Secretary of the Senate that on the following dates, he had disapproved the following bills of the Senate, together with his reasons for such action:

On July 6, 1960:

ECONOMIC REGULATION OF ALASKA RAILROAD UNDER INTERSTATE COMMERCE ACT

I am withholding my approval from S. 1508, a bill to provide for economic regulation of the Alaska Railroad under the Interstate Commerce Act, and for other purposes.

I cannot approve the bill because it would (1) subordinate certain of the President's statutory powers to those of a regulatory commission, (2) allow a State to regulate a Federal agency, and (3) apply to the Alaska Railroad laws, rules, and procedures which are intended solely for application to privately owned and operated railroads and which are completely inappropriate for a Government agency established to carry out a public purpose.

The power to construct and operate the Alaska Railroad and to set the rates charged by it are vested in the President. To subject the President's exercise of these powers to the review and perhaps disapproval of the Interstate Commerce Commission would be repugnant to our constitutional system.

By allowing the State of Alaska to regulate the Railroad, which is a Federal agency, the bill violates the principle that the Federal Government's authority shall be supreme. Under S. 1508, the State could thwart public purposes declared by the President and the Congress, but it would have no responsibility for the success or for the financing of the Railroad.

The laws, rules, standards, and procedures concerning tariffs, rates, accounts, services, and employees of private railroads are not suited to a Government agency. Accounting standards established by the Interstate Commerce Commission for private railroads cannot, for example, assure the President and the Congress of adequate control over the use of Federal funds by a Federal agency. In requiring the Commission to consider the needs of Government financial agencies, and in other exceptions it makes, the bill itself recognizes that standards applied to private industry cannot be applied to the Alaska Railroad.

By extending the Employers' Liability Act to cover the Alaska Railroad's liability to its employees, who are already covered by the Federal Employees' Compensation Act, the bill may give this group of Federal employees either dual compensation from the Federal Government for a single injury or the right to choose between two methods of obtaining compensation. Either result would be inconsistent with the Federal workmen's compensation policy that all employees be treated equally.

The President and the Congress have ample authority to insure that the Railroad operates in the public interest. In due course, it will be determined that the Railroad's Federal purposes have been achieved. At that time the Congress should authorize disposition of the Railroad to a non-Federal agency, and it would then automatically become subject to Interstate Commerce Commission regulation.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *July 6, 1960.*

On July 12, 1960:

METHOD FOR REGULATING AND FIXING WAGE RATES FOR EMPLOYEES OF PORTSMOUTH, N.H., NAVAL SHIPYARD

I am withholding my approval from S. 19, to provide a method for regulating and fixing wage rates for employees of Portsmouth, N.H., Naval Shipyard.

My reasons for disapproving an identical enactment of the 85th Congress still apply. This bill, like its predecessor, strikes at the heart of the statutory principle that rates of pay for 673,000 Federal wage board employees shall conform, as nearly as is consistent with the public interest, with private rates of pay in the immediate vicinity of the particular Federal activity.

This principle is sound. It insures Federal employees a fair wage. It insures against the payment of unwarranted hourly rates by the Government. And it insures that Federal rates of pay will not upset the economy of the community in which the Federal establishment is located.

S. 19 would disregard this principle by providing that hourly rates for Portsmouth Naval Shipyard employees should be based on those which obtain, not in Portsmouth, but rather in the Boston industrial complex, 60 miles distant. Private industrial rates are substantially higher in Boston than in Portsmouth—and therein lies the explanation of the bill.

But why should the Government pay a much higher hourly wage rate than do fair-minded private employers in the Portsmouth area? If the Portsmouth Naval Shipyard were a private establishment, there would be no question of a differential. The going rate for the area

would be paid. But because the Government is the employer, and just because it is, there is apparently an expectation that the Government should pay more than these hourly employees in fairness and equity have a right to expect. Further, it is seemingly of little or no concern that in so doing the Government would be departing from sound principle and business practice and would be unsettling the economy of the Portsmouth community.

This kind of legislation—this expectation of something-for-nothing from the Government just because it is the Government—weakens our national fabric and with each occurrence leaves it more seriously impaired. The spread of this expectation, and its reflection in an increase of such legislation, are profoundly disturbing for the future of America.

In this one instance, for example, S. 19 as a law would provide a ready precedent for the eventual dissolution of the wage board principle and system. The Portsmouth Naval Shipyard in no way presents an unusual situation. Several Federal establishments, less distant from Boston than Portsmouth, have lower pay scales than those of the Portsmouth Naval Shipyard.

By no rationale can this bill be justified. Wage disparities exist throughout the United States but under the wage board principle the Government pays the fair and equitable hourly rates of the particular area in which it finds itself—and so it should.

For these reasons I am unable to approve the bill.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *July 12, 1960.*

PROCEEDINGS OF THE HOUSE SUBSEQUENT TO ADJOURNMENT UNTIL AUGUST 15, 1960—BILL ENROLLED

[Omitted from the RECORD of July 5, 1960]

Mr. BURLESON, from the Committee on House Administration, reported that on July 4, 1960, that committee had examined and found truly enrolled a bill of the following title:

H.R. 2117. An act for the relief of Iranso D. Brodit and Antonio D. Brodit.

ENROLLED BILL SIGNED

[Omitted from the RECORD of July 5, 1960]

Pursuant to the authority granted the Speaker by House Concurrent Resolution 712, 86th Congress, he did sign an enrolled bill of the House of the following title:

H.R. 2117. An act for the relief of Iranso D. Brodit and Antonio D. Brodit.

BILLS AND JOINT RESOLUTIONS PRESENTED TO THE PRESIDENT

Mr. BURLESON, from the Committee on House Administration, subsequent to the adjournment of the House of Representatives, reported that, on the following date, that committee had presented to the President for his approval bills and joint resolutions of the House of the following titles:

On July 7, 1960:

H.R. 7593. An act to provide that the Civil Aeronautics Board may temporarily authorize certain air carriers to engage in supplemental air transportation, and for other purposes;

H.R. 7634. An act authorizing the construction, repair, and preservation of certain public works on rivers and harbors for navigation, flood control, and for other purposes;

H.R. 7895. An act for the relief of Gloria Anne Loveday;

H.R. 8229. An act to amend the Internal Revenue Code of 1954 to provide an exemption from income tax for supplemental unemployment benefit trusts;

H.R. 8384. An act for the relief of Otto Small;

H.R. 9610. An act for the relief of Sister Frances Cabrini (Virginia Bilbao);

H.R. 9042. An act for the relief of Anna Semechole Marcolina;

H.R. 9786. An act to amend sections 511 and 512 of title 38, United States Code, to permit Indian war and Spanish-American War veterans to elect to receive pension at the rates applicable to veterans of World War I;

H.R. 9960. An act for the relief of Dr. Tze I. Chiang;

H.R. 10002. An act for the relief of Ida Exle (nee Ida Sterio);

H.R. 10495. An act to authorize appropriations for the fiscal years 1962 and 1963 for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes;

H.R. 10511. An act to grant additional benefit to persons receiving cash relief under the Panama Canal Cash Relief Act of July 8, 1937;

H.R. 10793. An act for the relief of Ray C. Thompson;

H.R. 10952. An act to authorize the National Society Daughters of the American Colonists to use certain real property in the District of Columbia as the national headquarters of that society;

H.R.10997. An act to grant to the Government of Guam certain filled lands, submerged lands, and tidelands;

H.R. 11135. An act to aid in the development of a coordinated system of transportation for the National Capital region; to create a temporary National Capital Transportation Agency; to authorize negotiation to create an interstate agency; and for other purposes;

H.R. 11389. An act making appropriations for the Executive Office of the President and sundry general Government agencies for the fiscal year ending June 30, 1961, and for other purposes;

H.R. 11516. An act to create a judicial officer for the Post Office Department;

H.R. 11545. An act to amend the act of October 31, 1949, with respect to payments to Bernalillo County, N. Mex., for furnishing hospital care for certain Indians;

H.R. 11748. An act to continue until the close of June 30, 1961, the suspension of duties on metal scrap, and for other purposes;

H.R. 11776. An act making appropriations for sundry independent executive bureaus, boards, commissions, corporations, agencies, and offices, for the fiscal year ending June 30, 1961, and for other purposes;

H.R. 11854. An act to clarify the ownership of certain church properties located in the Virgin Islands;

H.R. 11931. An act to amend the act of March 3, 1901, with respect to the time within which a caveat to a will must be filed in the District of Columbia;

H.R. 12231. An act making appropriations for military construction for the Department of Defense for the fiscal year ending June 30, 1961, and for other purposes;

H.R. 12465. An act to provide for a simpler method of determining assessments under the Federal Deposit Insurance Act, and for other purposes;

H.R. 12584. An act to amend the Uniform Narcotic Drug Act for the District of Columbia;

H.R. 12740. An act making supplemental appropriations for the fiscal year ending June 30, 1961, and for other purposes;

H.J. Res. 397. Joint resolution to enable the United States to participate in the resettlement of certain refugees, and for other purposes;

H.J. Res. 605. Joint resolution providing for the preparation and completion of plans for a comprehensive observance of the 175th anniversary of the formation of the Constitution of the United States;

H.J. Res. 672. Joint resolution authorizing and requesting the President to issue a proclamation with respect to the 1960 Pacific Festival, and for other purposes; and

H.J. Res. 722. Joint resolution relating to the entry of certain aliens.

BILLS AND JOINT RESOLUTIONS APPROVED SUBSEQUENT TO ADJOURNMENT

The President of the United States, subsequent to the adjournment of the House of Representatives until August 15, 1960, notified the Clerk of the House that on the following dates he had approved and signed bills and joint resolutions of the House of the following titles:

On June 30, 1960:

H.R. 8186. An act to amend titles 10 and 14, United States Code, with respect to reserve commissioned officers of the Armed Forces;

H.R. 8457. An act for the relief of Richard Schoenfelder and Lidwina S. Wagner;

H.R. 9226. An act for the relief of Pietro Mela;

H.R. 9322. An act to make permanent the existing suspension of duties on certain coarse wool;

H.R. 9652. An act for the relief of Lt. Col. Alonzo C. Tenney;

H.R. 9862. An act to continue for 2 years the existing suspension of duties on certain lathes used for shoe last roughing or for shoe last finishing, and to extend the suspension of duty on imports of casein;

H.R. 9881. An act to extend for 2 years the existing provisions of law relating to the free importation of personal and household effects brought into the United States under Government orders;

H.R. 10569. An act making appropriations for the Treasury and Post Office Departments, and the Tax Court of the United States for the fiscal year ending June 30, 1961, and for other purposes.

H.R. 10631. An act for the relief of George T. Moore, Carl D. Berry, and Dr. Harold J. Heck.

H.R. 11001. An act to provide for the participation of the United States in the International Development Association.

H.R. 12052. An act to extend the Defense Production Act of 1950, as amended, for an additional 2 years.

H.R. 12115. An act to extend the minimum national marketing quota for extra long staple cotton to the 1961 crop.

H.R. 12381. An act to increase for a 1-year period the public debt limit set forth in section 21 of the Second Liberty Bond Act and to extend for 1 year the existing corporate normal-tax rate and certain excise-tax rates, and for other purposes.

H.R. 12415. An act to amend section 6387 (b) of title 10, United States Code, relating

to the definition of total commissioned service of certain officers of the naval service; and

H.J. Res. 688. Joint resolution for the relief of certain aliens.

On July 1, 1960:

H.R. 12346. An act to amend section 14(b) of the Federal Reserve Act, as amended, to extend for 2 years the authority of Federal Reserve banks to purchase U.S. obligations directly from the Treasury.

On July 2, 1960:

H.J. Res. 778. Joint resolution making temporary appropriations for the fiscal year 1961, and for other purposes.

On July 5, 1960:

H.R. 1600. An act for the relief of Francis M. Haischer;

H.R. 1844. An act to amend the Life Insurance Act of the District of Columbia approved June 19, 1934, as amended by the acts of July 2, 1940, and July 12, 1950;

H.R. 3122. An act directing the Secretary of the Interior to issue a homestead patent to the heirs of Frank L. Wilhelm;

H.R. 3789. An act for the relief of Preciolita V. Corliss (nee Preciolita Valera);

H.R. 3805. An act for the relief of Religiosa Luigia Frizzo, Religiosa Vittoria Garzoni, Religiosa Maria Ramus, Religiosa Ines Ferrario, and Religiosa Roberta Ciccone;

H.R. 4786. An act declaring certain lands to be held in trust for the Cheyenne River Sioux Tribe of Indians of South Dakota;

H.R. 4964. An act for the relief of Mrs. Betty L. Fonk;

H.R. 5033. An act for the relief of Betty Keenan;

H.R. 5569. An act to amend title 10, United States Code, to authorize the award of certain medals within 2 years after a determination by the Secretary concerned that because of loss or inadvertence the recommendation was not processed;

H.R. 6081. An act for the relief of M. Sgt. Emery C. Jones;

H.R. 8226. An act to add certain lands to Castillo de San Marcos National Monument in the State of Florida;

H.R. 8315. An act to authorize the Secretary of the Army to lease a portion of Fort Crowder, Mo., to Stella Reorganized Schools R–I, Missouri;

H.R. 8740. An act to provide for the leasing of oil and gas interests in certain lands owned by the United States in the State of Texas;

H.R. 9201. An act to validate certain mining claims in California;

H.R. 9443. An act for the relief of Mrs. Ethel B. Morgan;

H.R. 9541. An act to amend section 109(g) of the Federal Property and Administrative Services Act of 1949;

H.R. 9921. An act to validate certain payments of additional pay for sea duty made to members and former members of the U.S. Coast Guard;

H.R. 10021. An act providing a uniform law for the transfer of securities to and by fiduciaries in the District of Columbia;

H.R. 10108. An act to authorize reimbursement of certain Veterans' Administration beneficiaries and their attendants for ferry fares, and bridge, road, and tunnel tolls;

H.R. 10695. An act to provide for the rotation in overseas assignments of civilian employees under the Defense Establishment having career-conditional and career appointments in the competitive civil service, and for other purposes;

H.R. 11646. An act to amend the act authorizing the Secretary of Agriculture to collect and publish statistics of the grade and staple length of cotton, as amended, by defining certain offenses in connection with the sampling of cotton for classification and providing a penalty provision, and for other purposes; and

H.R. 12265. An act to amend title 10, United States Code, to authorize certain persons to administer oaths and to perform notarial acts for persons serving with, employed by, or accompanying the Armed Forces outside the United States.

On July 6, 1960:

H.R. 3291. An act to amend title 10, United States Code, with respect to certain medals;

H.R. 4251. An act to amend the Internal Revenue Code of 1954 with respect to the limitation on the deduction of exploration expenditures;

H.R. 6108. An act to provide for the establishment of the Arkansas Post National Memorial, in the State of Arkansas;

H.R. 9142. An act to provide for payment for lands heretofore conveyed to the United States as a basis for lieu selections from the public domain, and for other purposes; and

H.R. 12311. An act to amend the Sugar Act of 1948, as amended.

On July 7, 1960:

H.R. 2584. An act for the relief of Courgen H. Assaturian;

H.R. 2665. An act for the relief of Briccio Garces de Castro;

H.R. 2823. An act for the relief of Fumie Yoshioka;

H.R. 3375. An act to encourage and stimulate the production and conservation of coal in the United States through research and development by authorizing the Secretary of the Interior to contract for coal research, and for other purposes;

H.R. 3534. An act for the relief of Epifanio Trupiano;

H.R. 3923. An act to provide for the presentation of a medal to persons who have served as member of a U.S. expedition to Antarctica;

H.R. 4670. An act for the relief of Karnail Singh Mahal;

H.R. 5888. An act to authorize the Secretary of the Navy to transfer to the Massachusetts Port Authority, an instrumentality of the Commonwealth of Massachusetts, certain lands and improvements thereon comprising a portion of the so-called E Street Annex, South Boston Annex, Boston Naval Shipyard, in South Boston, Mass., in exchange for certain other lands;

H.R. 7932. An act for the relief of William E. Dulin;

H.R. 7966. An act to amend section 601 of title 38, United States Code, to provide for the furnishing of needed services of optometrists to veterans having service-connected eye conditions;

H.R. 8212. An act to amend title 10, United States Code, with respect to the procedure for ordering certain members of the reserve components to active duty and the requirements for physical examination of members of the reserve components, and for other purposes;

H.R. 8241. An act to amend certain provisions of the Civil Service Retirement Act relating to the reemployment of former members of Congress;

H.R. 8253. An act for the relief of Pierre R. DeBroux;

H.R. 10644. An act to amend title V of the Merchant Marine Act, 1936, in order to change the limitation of the construction differential subsidy under such title, and for other purposes;

H.R. 11522. An act to amend the act of August 26, 1935, to permit certain real property of the United States to be conveyed to States, municipalities, and other political subdivisions for highway purposes;

H.R. 11748. An act to continue until the close of June 30, 1961, the suspension of duties on metal scrap, and for other purposes;

H.R. 11787. An act to authorize a continuation of flight instruction for members of the Reserve Officers' Training Corps until August 1, 1964;

H.R. 11998. An act making appropriations for the Department of Defense for the fiscal year ending June 30, 1961, and for other purposes; and

H.R. 12263. An act to authorize the conclusion of an agreement for the joint construction by the United States and Mexico of a major international storage dam on the Rio Grande in accordance with the provisions of the treaty of February 3, 1944, with Mexico, and for other purposes.

On July 12, 1960:

H.R. 1157. An act to provide for promotion of economic and social development in the Ryukyu Islands;

H.R. 2671. An act for the relief of Antonia Martinez;

H.R. 4049. An act to amend the Federal Aviation Act of 1958 in order to authorize free or reduced-rate transportation for certain additional persons;

H.R. 4346. An act to amend the Bankruptcy Act to limit the use of false financial statements as a bar to discharge;

H.R. 4386. An act to amend title 18 of the United States Code to make it unlawful to destroy, deface, or remove certain boundary markers on Indian reservations, and to trespass on Indian reservations to hunt, fish, or trap;

H.R. 5040. An act to amend and clarify the reemployment provisions of the Universal Military Training and Service Act, and for other purposes;

H.R. 5098. An act to provide for the application and disposition of net revenues from the power development on the Grand Valley Federal reclamation project, Colorado;

H.R. 6179. An act to grant the right, title, and interest of the United States in and to certain lands to the city of Crawford, Nebr.;

H.R. 7726. An act to amend section 678 of the Bankruptcy Act (11 U.S.C. 1078) relating to the transmission of petitions, notices, orders, and other papers to the Secretary of the Treasury in chapter XIII proceedings;

H.R. 7965. An act to amend section 612 of title 38, United States Code, to authorize outpatient treatment incident to authorized hospital care for certain veterans;

H.R. 8295. An act to authorize the transfer to the Navajo Tribe of irrigation project works on the Navajo Reservation, and for other purposes;

H.R. 9702. An act to amend section 2771 of title 10, United States Code, to authorize certain payments of deceased members' final accounts without the necessity of settlement by General Accounting Office;

H.R. 9711. An act for the relief of Robert L. Stoermer;

H.R. 9751. An act for the relief of Mrs. Icile Helen Hinman;

H.R. 10068. An act to amend section 303 of the Career Compensation Act of 1949, to authorize travel and transportation allowances, and transportation of dependents and of baggage and household effects to the homes of their selection for certain members of the uniformed services, and for other purposes;

H.R. 10500. An act to amend the Career Compensation Act of 1949 with respect to incentive pay for certain submarine service;

H.R. 10596. An act to change the method of payment of Federal aid to State or territorial homes for the support of disabled soldiers, sailors, airmen, and marines of the United States;

H.R. 11389. An act making appropriations for the Executive Office of the President and sundry general Government agencies for the fiscal year ending June 30, 1961, and for other purposes;

H.R. 11602. An act to amend certain laws of the United States in light of the admission of the State of Hawaii into the Union, and for other purposes;

H.R. 11776. An act making appropriations for sundry independent executive bureaus,

boards, commissions, corporations, agencies, and offices, for the fiscal year ending June 30, 1961, and for other purposes;

H.R. 12200. An act to amend title 10, United States Code, to authorize reduction in enlisted grade upon approval of certain court-martial sentences;

H.R. 12231. An act making appropriations for military construction for the Department of Defense for the fiscal year ending June 30, 1961, and for other purposes;

H.R. 12232. An act making appropriations for the legislative branch for the fiscal year ending June 30, 1961, and for other purposes;

H.R. 12570. An act to amend section 303(c) of the Career Compensation Act of 1949 by imposing certain limitations on the transportation of household effects; and

H.J. Res. 627. Joint resolution to authorize appropriations incident to U.S. participation in the International Bureau for the Protection of Industrial Property.

On July 14, 1960:

H.R. 808. An act to authorize the Secretary of State to evaluate in dollars certain financial assistance loans expressed in foreign currencies arising as a result of World War II, and for other purposes;

H.R. 1422. An act for the relief of Alassandro Maraessa;

H.R. 1493. An act for the relief of Antonio Mendez Garcia and Palmira Lavin Garcia;

H.R. 1588. An act for the relief of Julius F. Steinhoff;

H.R. 1643. An act for the relief of Francesco Carozza;

H.R. 2117. An act for the relief of Ireneo D. Brodit and Antonio D. Brodit;

H.R. 2124. An act for the relief of Mrs. Teruko Teri Miyamoto (nee Ikeda);

H.R. 2705. An act for the relief of Bernardo Paternostro;

H.R. 2716. An act for the relief of Miss Elizabeth Hollander;

H.R. 2944. An act for the relief of Luciano Di Franco;

H.R. 3524. An act for the relief of certain aliens;

H.R. 3804. An act for the relief of Rosolina Ciuferri;

H.R. 3900. An act to permit the admission to registry and the use in the coastwise trade of certain foreign-built hydrofoil vessels;

H.R. 4555. An act for the relief of Anatolijs Janitis;

H.R. 4595. An act to clarify and make uniform certain provisions of law relating to special postage rates for educational, cultural, and library materials, and for other purposes;

H.R. 4970. An act for the relief of Haralambos Groutas;

H.R. 5055. An act to amend the restriction on the use of certain real property heretofore conveyed to the city of St. Augustine, Fla., by the United States;

H.R. 5486. An act to provide for a register in the Department of Commerce in which shall be listed the names of certain persons who have had their motor vehicle operator's licenses revoked;

H.R. 5647. An act for the relief of Wong Gee Sing;

H.R. 6556. An act to amend subdivision c of section 39 of the Bankruptcy Act (11 U.S.C. 67c) so as to clarify time for review of orders of referees;

H.R. 6804. An act for the relief of Mary Elizabeth Tighe Crespo;

H.R. 7004. An act to facilitate the administration of the public lands, and for other purposes;

H.R. 7033. An act for the relief of Jack Darwin, Adolphe Herstein, and Nicholas Anthony Marcantonakis;

H.R. 7211. An act to provide additional disability compensation for certain seriously disabled veterans;

H.R. 7367. An act for the relief of Chieko Sakano and her child, Masao Sakano;

H.R. 7379. An act to amend the act of July 27, 1956, with respect to the detention of mail for temporary periods in the public interest, and for other purposes;

H.R. 7425. An act for the relief of Mrs. Humiko Ross;

H.R. 7551. An act for the relief of Hubert O. Beckles;

H.R. 7593. An act to provide that the Civil Aeronautics Board may temporarily authorize certain air carriers to engage in supplemental air transportation, and for other purposes;

H.R. 7634. An act authorizing the construction, repair, and preservation of certain public works on rivers and harbors for navigation, flood control, and for other purposes;

H.R. 7895. An act for the relief of Gloria Anne Loveday;

H.R. 7903. An act to amend chapter 37 of title 38, United States Code, to extend the veterans' guaranteed and direct loan program for 2 years;

H.R. 8229. An act to amend the Internal Revenue Code of 1954 to provide an exemption from income tax for supplemental unemployment benefit trusts;

H.R. 8384. An act for the relief of Otto Small;

H.R. 9042. An act for the relief of Anna Semechole Marcolina;

H.R. 9610. An act for the relief of Sister Frances Cabrini (Virginia Bilbao);

H.R. 9786. An act to amend section 511 and 512 of title 38, United States Code, to permit Indian war and Spanish-American War veterans to elect to receive pension at the rates applicable to veterans of World War I;

H.R. 9960. An act for the relief of Dr. Tze I. Chiang;

H.R. 10002. An act for the relief of Ida Exle (nee Ida Sterio);

H.R. 10495. An act to authorize appropriations for the fiscal years 1962 and 1963 for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes;

H.R. 10511. An act to grant an additional benefit to persons receiving cash relief under the Panama Canal Cash Relief Act of July 8, 1937;

H.R. 10793. An act for the relief of Ray C. Thompson;

H.R. 10952. An act to authorize the National Society Daughters of the American Colonists to use certain real property in the District of Columbia as the national headquarters of that society;

H.R. 10997. An act to grant to the Government of Guam certain filled lands, submerged lands, and tidelands;

H.R. 11135. An act to aid in the development of a coordinated system of transportation for the National Capital region; to create a temporary National Capital Transportation Agency; to authorize negotiation to create an interstate agency; and for other purposes;

H.R. 11516. An act to create a judicial officer for the Post Office Department;

H.R. 11854. An act to clarify the ownership of certain church properties located in the Virgin Islands;

H.R. 11931. An act to amend the act of March 3, 1901, with respect to the time within which a caveat to a will must be filed in the District of Columbia;

H.R. 12465. An act to provide for a simpler method of determining assessments under the Federal Deposit Insurance Act, and for other purposes;

H.R. 12584. An act to amend the Uniform Narcotic Drug Act for the District of Columbia;

H.R. 12740. An act making supplemental appropriations for the fiscal year ending June 30, 1961, and for other purposes;

H.J. Res. 397. Joint resolution to enable the United States to participate in the resettlement of certain refugees, and for other purposes;

H.J. Res. 605. Joint resolution providing for the preparation and completion of plans for a comprehensive observance of the 175th anniversary of the formation of the Constitution of the United States;

H.J. Res. 672. Joint resolution authorizing and requesting the President to issue a proclamation with respect to the 1960 Pacific Festival, and for other purposes; and

H.J. Res. 722. Joint resolution relating to the entry of certain aliens.

BILLS DISAPPROVED SUBSEQUENT TO ADJOURNMENT

The President of the United States, subsequent to the adjournment of the House of Representatives until August 15, 1960, transmitted to the Clerk of the House a list of House bills disapproved, together with his reasons for such actions, as follows:

On July 6, 1960:

JUAN D. QUINTOS ET AL.

I am withholding my approval from H.R. 1516, for the relief of Juan D. Quintos, Jaime Hernandez, Delfin Buencamino, Soledad Gomez, Nieves G. Argonza, Felididad G. Sarayba, Carmen Vda de Gomez, Perfecta B. Quintos, and Bienvenida San Agustin.

The bill would waive the applicable statute of limitations and confer jurisdiction upon the Court of Claims to hear the claims of these individuals for losses of jewelry, coins, relics, and currency which were somehow included in one of four large wooden boxes delivered to the United States High Commissioner to the Philippines by the Philippine National Bank in response to the Commissioner's direction, in December 1941, that the bank deliver to him "all cash reserves, bullion, negotiable securities, and other negotiable papers held by your bank, or held by you in trust for others." The purpose of the directive was to prevent such items from falling into the hands of the enemy who, at that moment, was invading the islands. When the property of these claimants was discovered, it was turned over to a representative of the Philippine government, who rejected suggestions of United States Army officers that it be sent out on an American submarine. Instead, he voluntarily placed the property in a safe at Corregidor where it was confiscated by the Japanese. From these facts it is apparent that the possibility of a valid claim against the United States is very remote.

More importantly, these claimants had ample opportunity to present their claims in a timely manner. Under the applicable statute of limitations, they had until December 1947—2 years after the end of the war—to file suit in the Court of Claims. They had 5 months after the Treasury Department, on July 25, 1947, advised that there was no statute or appropriation permitting the administrative settlement of such claims. They waited, however, for 4 years, until 1951, before petitioning the Court of Claims.

Nothing in the record justifies special treatment for these claimants, particularly when it is remembered that many

others filed suit against the United States in the Court of Claims for damages arising out of incidents in the Philippines during the war years and had their cases dismissed because of the expiration of the statute of limitations.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *July 6, 1960.*

On July 7, 1960:

SAM J. BUZZANCA

I am withholding my approval from H.R. 6712, a bill "For the relief of Sam J. Buzzanca."

Mr. Buzzanca, at a Federal tax sale in 1954, purchased certain real estate which had an estimated market value of $21,000, but which was subject to a mortgage prior in time to the Federal tax lien. It was announced at the tax sale that principal and interest in the amount of $8,320 was due under this prior mortgage. The real estate was sold to Mr. Buzzanca for $8,100—far less than the amount of the Federal tax lien which exceeded the market value of the property.

Two months later the holder of the first mortgage, who also had acquired whatever rights the heirs of the delinquent taxpayer and former owner had in the property, successfully sued Mr. Buzzanca to obtain possession of the property. Although the United States was not a party to this action, the District Director for the area did render informal assistance to Mr. Buzzanca. On appeal, the Supreme Court of Alabama affirmed.

Mr. Buzzanca's claim for relief appears to rest on the contention that the first mortgagee obtained a judgment for possession of the property because the tax sale to Mr. Buzzanca was defective and did not convey to Mr. Buzzanca the former owner's interest.

Internal Revenue Service records reveal no defect in the seizure and sale. This being so, Mr. Buzzanca has no ground for complaint against the United States. Because the existence of the first mortgage was made known at the time, the tax sale did not purport to convey rights superior to a valid first mortgage.

The United States cannot and does not attempt to warrant or defend title to property seized and sold under the internal revenue laws. No warranty is available to a purchaser at a tax sale and a deed is not a warranty of the title conveyed. The right, title, and interest conveyed is derivative, and the purchaser acquires only the interest of the delinquent taxpayer. To compel the United States to warrant and defend the title to all property sold by it for taxes would be costly and inadvisable.

For these reasons I cannot, on the facts at hand, approve this bill for it would create a precedent that would encourage dissatisfied purchasers at Federal tax sales to ask Congress to underwrite their losses and guarantee their titles.

Were Mr. Buzzanca, however, to adduce direct evidence establishing incontrovertibly that the tax deed in question was defective, I would of course be willing to sign a similar bill subsequently enacted.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *July 7, 1960.*

On July 14, 1960:

MARGARET P. COPIN

I am withholding my approval from H.R. 4546, for the relief of Margaret P. Copin.

This bill would direct that its beneficiary be credited with a 20-year service period for purposes of civil service retirement annuity, payable commencing October 1, 1959.

This claimant, during three periods beginning in August 1920 and ending in June 1949, was on the employment rolls of the Treasury Department for a total time of 20 years and 29 days. This included, however, 7 months and 21 days of leave without pay in calendar year 1922. Her actual service therefore, totals only 19 years, 5 months and 8 days. Nevertheless, in computing Mrs. Copin's length of service for retirement annuity purposes, the normal rules of the law were applied; namely, free credit of 6 months of leave without pay taken in 1932 and exclusion of the excess amount.

Despite the credit of 6 months, the claimant still lacks 22 days of the 20 years of creditable service which would have given her the right to an immediate reduced annuity beginning October 1, 1958, when disability annuity payments theretofore received were terminated pursuant to a finding that she was reemployable. Instead, her status is that of a deferred annuitant, and retirement annuity will not be payable until March 1, 1964, after she has attained 62 years of age. The difference in the total value of the two annuities, based on life expectancy, is $4,200, which would be, in effect, a gratuity from the Federal Government.

The record on H.R. 4546 discloses no valid justification for the favored position the bill would accord this claimant. To confer such a preferential advantage on one individual participant in the retirement program would be highly discriminatory and contrary to the principles of fair play and equality of treatment which are basic to sound personnel administration.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *July 14, 1960.*

On July 14, 1960:

BERNALILLO COUNTY, N. MEX.

I am withholding my approval from H.R. 11545, to amend the act of October 31, 1949, with respect to payments to Bernalillo County, N. Mex., for furnishing hospital care for certain Indians.

A 1949 law authorized the Government to contribute $1,500,000 toward construction of a hospital in Bernalillo County upon Government donated land. In return, the county must make available, when required, at least 100 beds for the care of eligible Indians. Further, the cost of caring for Indians admitted to the hospital was to be paid by the United States and, as an experiment, the Government undertook to guarantee the county a payment at least equal to the cost of operating 80 percent of the beds reserved for Indians irrespective of the number actually hospitalized.

The minimum guaranty provision, previously twice extended and now expired as of June 30, 1960, would be extended for still another year under H.R. 11545.

Ordinarily in such cases the United States pays for Indian care on the basis of actual hospitalization. Accordingly, the Department of Health, Education, and Welfare, in reporting to the Congress in 1957 pursuant to the original law, recommended that the experimental 80 percent minimum guaranty be permitted to expire. The Congress nevertheless extended the guaranty provision for another 3 years.

Funds for contract hospital care should be available for expenditure wherever the health needs of Indian patients so require, and no portion of them should be mandatorily tied to a single contract facility without regard to actual need or use. Moreover, because other Government service contracts for Indian care do not include a minimum payment guaranty, it would be highly inequitable to continue this provision solely for the Bernalillo County Hospital.

Finally, the completion of other facilities now under construction will in all likelihood reduce the number of Indian patients at Bernalillo Hospital and the bill would thus mean unnecessary expense to the Government and without any corresponding advantage, either to the Government or to this program.

For these reasons, I am unable to approve this bill.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *July 14, 1960.*

STATEMENTS BY THE PRESIDENT

The President of the United States, subsequent to the adjournment of the House of Representatives until August 15, 1960, transmitted to the Clerk of the House the following statements:

On July 12, 1960:

INDEPENDENT OFFICES APPROPRIATION, 1961

I have today approved H.R. 11776, the Independent Offices Appropriation Act, 1961.

In enacting this law the Congress refused to provide recommended funds which would have enabled the General Services Administration, at small cost, to include fallout shelters in certain appropriate new and existing Federal buildings. In fact, by a general provision, the law actually precludes the construction of fallout shelters in Government-owned or leased buildings unless specifically authorized.

It is an aspect of the Federal Government's policy in this area to provide leadership by example. The incorporation of fallout shelters in appropriate new and existing Federal buildings is intended to stimulate State and local governments and the public to undertake shelter projects on their own initiative.

State Governors attending a recent White House meeting on civil defense unanimously agreed that providing pro-

tection from fallout was an essential requirement of national policy. Last year, in Puerto Rico, and again this year in Montana, the Governors' Conference reached the same conclusion.

The Congress accordingly should appropriate the omitted funds when it convenes again in August. Such positive action would be in the best interests of our national security.

On July 14, 1960:

RELIEF OF CERTAIN ALIENS

I have today approved House Joint Resolution 397, to enable the United States to participate in the resettlement of certain refugees, and for other purposes, because of its general merit and the urgent need to accomplish the purposes of the measure. Under this provision, the special authority of the Attorney General to parole into the United States certain refugees could be terminated upon the adoption of a simple resolution to that effect by either House of Congress. The Attorney General has advised me that there is a serious question as to whether this provision is constitutional. Nevertheless, in view of the short period for which this power is given and the improbability that the issue will arise, it is believed that it would be better to defer a determination of the effect of such possible action until it is taken.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

OFFICE ADDRESS: House Office Building, Washington, D. C.

Appendix

Tribute to Gen. John J. Pershing

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, August 8, 1960

Mr. JAVITS. Mr. President, on September 13 we celebrate General of the Armies John J. Pershing Centennial Day in honor of the 100th birthday of one of America's greatest soldiers. To honor the man who commanded the American Expeditionary Force in World War I, little known incidents and statements which illustrate General Pershing's strong devotion to human rights have been recalled by the National Jewish Welfare Board, the Government-authorized agency for serving Jewish military personnel in the U.S. Armed Forces.

I ask unanimous consent to have printed in the appendix of the RECORD the article by Bernard Postal entitled "Pershing and the Fighting Jews."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PERSHING AND THE FIGHTING JEWS—A CENTENNIAL REMINDER OF A FORGOTTEN CHAMPION OF HUMAN RIGHTS

(By Bernard Postal)

Once, at an American Legion convention in the early 1920's, the late Sam Dreben, known as the fighting Jew because of his valor in the Philippine insurrection, the Boxer Rebellion and World War I, tried to crash a banquet. Two husky marine sentries halted the Russian-born and Texas-raised soldier of fortune who had fought in Mexico, Venezuela, and Nicaragua, and informed him, none too gently, "only generals allowed."

Dreben was asking how come when a band struck up, "Hail to the Chief," as Gen. John J. Pershing, Marshal Foch, General Diaz, and Admiral Beatty entered the hotel. Dreben snapped to attention. Pershing spotted Dreben, stopped and said to Marshal Foch: "General, I'd like you to meet one of my finest soldiers." Seeing the French decorations Dreben wore (his awards also included medals from the United States, Italy, and Belgium), Foch embraced him. Then, as the sentries blinked in amazement, Pershing and Foch linked arms with Dreben and marched into the room reserved for "generals only."

Ex-Sgt. Edward Cohn, one of the American servicemen who remained in France after World War I, was Pershing's wartime orderly. Whenever Pershing came to France after the war, he and Cohn got together and fought the war all over again. Despite the difference in rank, a genuine friendship grew up between the two men. Sgt. Harry Epstein, a former New Yorker who settled in Arizona, was Pershing's wartime mess sergeant.

Up to World War II, General Pershing had under his command the largest body of Jewish soldiers of all time. Serving under him in France during World War I were more than 150,000 American Jews whose religious and morale needs brought into being the National Jewish Welfare Board in 1917.

Responding to a Rosh Hashanah greeting in 1917 from Col. Harry Cutler, then president of JWB, Pershing cabled these words: "The stirring message of greetings from the National Jewish Welfare Board is much appreciated by the American Expeditionary Forces. The contant support and cordial assistance of our brothers of the Jewish faith and the thought that all creeds are united under one banner gives courage to our Army and urges us on to victory."

At the close of World War I, in an official message to Colonel Cutler, General Pershing expressed to JWB his praise for the splendid services American Jewry had rendered through JWB, to the AEF. In that message Pershing said, "The activities of your organization in France commenced in the summer of 1918, with the opening of a clubroom in Paris to which American soldiers, irrespective of creed, were welcomed. Handicapped by lack of personnel and facilities, your representatives, during the remaining months of hostilities, did valuable work among the soldiers of the Jewish faith and others, taking advantage of the opportunities offered by the larger welfare agencies to keep our soldiers in touch with their religion and their homes.

"Since the signing of the armistice you have grasped the opportunity for increased recreational facilities, and have increased your personnel, opened additional club rooms at important centers, and shown a commendable eagerness to cooperate with the Army and the other welfare societies and to bear your full share of the responsibility for keeping up this important work until all troops can be returned to America."

Pershing's appraisal of the Jewish fighting men under his command and his vigorous support of Jewish reconstruction in post-World War I Europe were expressed in a now forgotten speech he made on December 5, 1926, before a great meeting of Catholics, Protestants, and Jews in New York's Cathedral of St. John the Divine. It was at that meeting that Pershing proposed that the Christians of America raise $25 million to match the sum being sought by American Jews under the leadership of the Joint Distribution Committee for European Jewish relief and reconstruction.

In that address, General Pershing said, among other things:

"Jews are an essential part of America. As citizens among us, they have always done their full part. When the time came to serve their country under arms, no class of people served with more patriotism or with higher motives than the young Jews who volunteered or were drafted and who went overseas with our other young Americans. I well remember, in my inspections of New York divisions, seeing so many patriotic, well-disciplined, well-behaved young Jewish soldiers, whose commanders spoke of them in the highest terms. During the war there was no such thing as race or creed—they were forgotten.

"During this campaign they also should be forgotten. It is for generous Americans, of whatever religion, to aid the Jews of America in succoring their brethren overseas. The Jews of America have always been in the forefront of charitable works. There has never been an attempt to raise a large sum of money for a public cause in which the Jews have not done more than their share. It is up to the Christians of America to show that they appreciate what the Jews have done in the past. The spirit of this occasion appeals to me tremendously. This gathering should be the beginning of an era of good will that should spread throughout America. It is not so much a question of giving as it is of showing the proper spirit. A spirit of good will is needed in America, today. It could have no better beginning than here in New York in this great cathedral.

"It is a difficult thing for us in our prosperous country to imagine just what suffering those poor people overseas are going through. This is an occasion for all Americans, whether Christians or what not, to show our Jewish friends that we have charitable instincts and that there is no such thing as race prejudice in this great country. To my mind this is one of the great lessons we can teach the people of Europe by contributing to this fund.

"I was brought up as a Methodist, and the Methodists are the greatest beggars in the world. I want to hark back to my Methodism and appeal to Christian American to give much greater contributions to the Jewish fund than they have contemplated. I feel sure that this undertaking will meet with very cordial and generous response all over the country, especially if New York City gives it the right kind of start. Christians of America ought to raise at least as much as the Jews themselves are raising. Twenty-five million dollars are not too much for the Christians to raise to help those poor people over there. The Jews will raise their $25 million all right, and if the Christians cannot duplicate it—well, I don't know, I'd like to tell them what I think about them."

Five years earlier, in another address at Madison Square Garden, called to protest postwar German propaganda, General Pershing said a few things which are still timely and pertinent. Speaking of the foreign born, he declared: "There were with me in the Philippines, in Mexico, and in France thousands of foreign-born men hardly able to speak our tongue who had in their hearts the spirit of Americanism and devotion to make the supreme sacrifice. Indeed, there was often a zeal for all that America means that put to blush many older Americans who have fallen below the obligations of their birthright."

In the same vein he defended the right of naturalized Americans to maintain a continuing interest in the culture of their birthplace. "We have no quarrel," Pershing declared, "with Americans of foreign birth or stock who cling to the music, art, folklore, and the better traditions of the old land. They would be less than human and we would be poorer if they didn't. We recognize our obligation to all these. We want all to know that America is an inspiration, that it is something spiritual, a goal toward which we aim. If we bring together people from different lands, of different creeds and varied conditions and merge them into one America, the product will be the greatest of all nations and a race that will long hold a compelling place in the world."

That was Gen. John J. Pershing, commander in chief of the American expeditionary forces in World War I, the centennial of whose birth on September 13 has been proclaimed by President Eisenhower and Congress as General of the Armies John J. Pershing Centennial Day.

Puerto Rican Constitution Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. MULTER. Mr. Speaker, on July 25, 1952, the people of Puerto Rico entered into a new relationship with the United States. On that day the island became the Commonwealth of Puerto Rico, or, as the Puerto Ricans call it, an associated free state.

This transformation took plaee in accordance with a freely negotiated compact between the Puerto Ricans and the Federal Government. Under its terms, the islanders drafted a Constitution which was approved first by the U.S. Congress and then by an overwhelming majority of Puerto Rico's population.

Our own ANTONIO FERNÓS-ISERN, Resident Commissioner of Puerto Rico here in the House of Representatives, served as chairman of the convention that drafted the Constitution. Knowing and admiring Mr. FERNÓS-ISERN as we do for his very great abilities, we are not surprised that the convention he led produced a Constitution imbued with political wisdom.

This year we celebrate the eighth anniversary of that Constitution, the eighth year of a new and exciting era for our fellow citizens, the Puerto Ricans. American troops first landed on Puerto Rico 62 years ago, and in 1917 Puerto Ricans were granted American citizenship. From the day of the first landing the island's inhabitants have been moving inexorably toward that fuller understanding and experience of democracy embodied in the American ideal. They have dedicated themselves to a mastery of local autonomy that is both the root and the fruit of the American way of life.

We need look no further than the preamble of the Puerto Rican Constitution for a brilliant summary of the lofty aims of these people:

> We consider as determining factors in our life our citizenship of the United States of America and our aspiration continually to enrich our democratic heritage in the individual and collective enjoyment of its rights and privileges; our loyalty to the principles of the Federal Constitution; the coexistence in Puerto Rico of the two great cultures of the American Hemisphere; our fervor for education; our faith in justice; our devotion to the courageous, industrious, and peaceful way of life; our fidelity to individual human values above and beyond social position, racial differences, and economic interests; and our hope for a better world based on these principles.

With these words Puerto Rico proclaimed its new political status. A new sense of stability, confidence, and urgency accompanied the birth.

In its role as a Commonwealth, Puerto Rico has maintained complete control of its own internal affairs and, at the same time, has enjoyed the benefits of United States protection in foreign relations, defense, and full American citizenship.

The desire and ability for self-government on the part of the Puerto Rican people had long been evident. With the adoption of their Constitution, they assumed responsibility for that local control that has been one of the most important factors in the growth of democracy in the United States. In the operation of that Constitution, Puerto Ricans have demonstrated beyond question the political equilibrium and community enterprise that is the mark of a mature and progressive society.

This maturity is in no way better illustrated than in the choice of leaders Puerto Ricans have made. I have already mentioned the splendid work of our colleague, Mr. FERNÓS-ISERN. Puerto Ricans have also been fortunate to have in their midst a towering political figure.

Gov. Luis Muñoz Marín served as Puerto Rico's first elected Governor before the Commonwealth and continues in that office to this day, holding the significant distinction of governing the island for a longer period than any other current executive in Latin America. And he has maintained his tenure through the support of large majorities of his people, as exhibited in free elections.

The ideal of leadership in newly self-governing areas, Governor Munoz Marin deserves the primary credit for Puerto Rico's current stability and, more especially, for Puerto Rico's phenomenal economic and social development.

Statistics dramatically illuminate these advances. Puerto Rico's death rate decreased 62 percent between 1940 and 1957; it is now lower than that of the continental United States. Puerto Rico's per capita income has leaped so far upward that it is now the highest in the Caribbean area and second in all of Latin America only to that of oil-rich Venezuela. Family income almost quadrupled between 1940 and 1956.

Under Operation Bootstrap Puerto Rico has been setting world records in raising itself from the depths of poverty and illiteracy. This great effort, though it still leaves Puerto Rico far from being a wealthy state, nevertheless has elevated the island to a position that is the envy of underdeveloped countries all over the world. Representatives of these nations come regularly to Puerto Rico to study the methods by which this miracle of growth was accomplished, and still continues.

Puerto Rico's economic problems once seemed unsurmountable. The island was cursed, as are many Caribbean lands, with a one crop economy, a limited supply of land, and almost no industry worthy of the name. Puerto Rico's leaders recognized that the land could never become prosperous without industry. The Government exerted itself, therefore, to attract American firms to set up branch factories on the island, offering as incentives capital loans, factory buildings at low rent, the promise to train labor in the necessary skills, and 10-year tax exemptions. The net gain of more than 400 new factories since the introduction of Operation Bootstrap is testimony to the skill, initiative, and determination of the Puerto Rican people.

These qualities convince me that we need not fear for the economic future of the island. Puerto Rico can be made prosperous, and Puerto Ricans have demonstrated that they have the skill and intelligence to accomplish that metamorphosis.

The Commonwealth's political future needs more thought on our part. The exact legal nature of Puerto Rico's status has not yet been determined by our courts. But whatever that status is, we know that numerous voices have been raised for change. Some advocate independence. Others press for statemood.

We must never forget that Puerto Ricans are American citizens, living on American soil. We must never forget that they have made significant contributions to our culture, in the arts, sciences, and professions. We must never forget that thousands of Puerto Ricans served valiantly in the Armed Forces of the United States during two World Wars and the Korean conflict.

My conviction is that we must consider carefully all aspects of Puerto Rico's political relationship with the United States. If we find that Puerto Rico is ready for statehood, and if we find that the Puerto Ricans sincerely desire statehood, it is our duty to grant such status to the island.

These problems will, I am certain, be considered at the proper time, and with sympathetic attention. I want to reiterate my congratulations to the Puerto Rican people on the anniversary of their constitution and to wish them every success for the future.

Pollution of the Air

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, August 8, 1960

Mr. KEATING. Mr. President, we all know the expression "free as the air." But today, it is beginning to appear that even the air we breathe is not going to be free much longer. The problem of air pollution, which renders the air around us unclean and unfit to breathe without possibly expensive new depolluting techniques or restrictions on various activities, is becoming a matter of increasing concern to all parts of the country.

I ask unanimous consent to include in the Appendix of the RECORD the following release from the Office of Public Health Education of the State of New York. It indicates the extent of the problem in Elmira, N.Y., some of the causes, and measures that can be taken to ameliorate it.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

> ALBANY, August 4.—Adequate preventive and abatement measures are needed in Greater Elmira in order to head off the possibility of a future air pollution problem in that area, it was announced today by Dr.

Herman E. Hilleboe, State health commissioner.

Dr. Hilleboe, who is chairman of the New York State Air Pollution Control Board, made the statement following receipt of "Air Pollution in Greater Elmira," a survey report prepared for the air pollution control board.

He said that at present there is no serious air pollution condition affecting the metropolitan area. He added, however, that "the significance and seriousness of air contamination in Greater Elmira will increase with the expansion of industry, accelerated growth of population, greater use of motor vehicles, and accompanying social and economic developments." There has been a 17.7-percent increase in the population of the area in the last 10 years.

The State health commissioner pointed out that Greater Elmira's basinlike topography, low wind speeds, numerous fogs, and temperature inversions indicate that the atmosphere over this portion of New York State will be unable to cleanse itself of contaminating material if sources and amounts continue to increase. "Then Greater Elmira will be faced with a serious air pollution condition," he said.

Among the highlights of the 64-page report are:

Forty percent of the 40,000 tons of solid and gaseous air contaminants emitted in the area each year are from industrial sources. Private sources contribute 33 percent, with 16 percent from public sources and 11 percent from commercial operations.

In the five towns, three villages, and one city surveyed local legislation and control activities are inadequate or totally lacking. However, municipal zoning, fire control, refuse disposal, and general ordinances do contain provisions for better air quality—but these largely are unenforced.

Air pollution control facilities including technical services, sampling equipment, and laboratory installations cannot be supported individually by the local communities. This, plus the intercommunity nature of some pollution, suggests a need for intercommunity control.

Rules and regulations based on findings and recommendations of the survey now are being written and will be submitted for discussion at a public meeting before adoption.

Capital Times' Bill Evjue Bids Farewell to Champion of Consumer, Leland Olds

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, August 8, 1960

Mr. PROXMIRE. Mr. President, no newspaper in America has been a more consistent and fighting champion of the public interest, and particularly of the interest of the consumer, than the Capital Times, of Madison, under the command of that last of the great crusading editors, William T. Evjue.

Few men in public life have more devotedly and effectively dedicated themselves to the consumer than Leland Olds, the former battling member of the Federal Power Commission.

When Mr. Olds died a few days ago, I anticipated that the Capital Times would have words of national significance on his life and service. Bill Evjue's editorial fully met my expectation.

Mr. President, I have edited the editorial to bring it into conformity with Senate rules. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEATH OF LELAND OLDS GETS 16 LINES IN THE PRESS

A great public servant died the other day with very little attention paid in the press or by the politicians. His name was Leland Olds, a man to whom the American consumer owes a deep and lasting debt of gratitude.

Olds began his adult life as a schoolteacher, but he felt that he could be of greater service to the public in some other capacity. He quit his job and went to Washington where he began a study of the utility industry in the Library of Congress because he believed that in this field the consumer was getting a raw deal.

Word of his unusual interest reached the then Governor of the State of New York who was struggling with this problem. He called Olds to Albany and asked him to take over the job of regulating utilities in New York to get a better break for the consumer.

When the New York Governor, whose name was Franklin Delano Roosevelt, was elected President, he asked Olds to come to Washington with him to help in giving the consumers across this land the kind of a new deal he had forged in New York.

Idealistic, tireless, and devoted, Olds became one of the towering figures in the New Deal as a member of the Federal Power Commission. He looked upon the FPC as an agency set up to serve the public in contrast to regulatory agencies today which operate on the principle that they are meant to serve the industries they are supposed to regulate.

Under Roosevelt, Olds continued to be reappointed to the FPC, despite the efforts of the utility industry and natural gas interests to drive him from public life.

In 1949 President Truman appointed him to another term. * * *

The utilities and the gas and oil industry launched a vile campaign smear against him, charging him with communism, socialism * * *.

To the great credit of Harry Truman he refused to recall Olds' name. The fight went into the Senate.

* * * Olds was crushingly defeated by a vote of 53 to 15, his record of service repudiated, his name blackened from one end of the Nation to the other.

It is a sad reflection on the social values of our time that * * * the death of this great public servant was noted in a United Press International dispatch of 16 lines.

He died of a heart attack at the age of 69 shortly after attending church services. Who would have believed 11 years ago, in the whirlwind of charges against this "dangerous radical" that he ever went to church?

Recognition for Dedicated Teachers

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, August 8, 1960

Mr. JAVITS. Mr. President, good education requires satisfactory buildings and equipment, but it is dependent ultimately on the quality of teaching. The "apple for the teacher" symbolizes the appreciation which the community has always felt for the dedicated, inspiring teacher. However, the financial rewards of teaching usually fall short of what they should be, with the result that the national teacher shortage as estimated by the National Education Association amounts to 135,000 teachers.

What we can do in the Nation to help fill the need for more teachers is to stimulate an appreciation of the role of the teacher in our national life and to get our people to understand, accept, and build on this appreciation. This can be done without interference with traditional local control of education.

I pointed out the importance of encouraging greater understanding and recognition of the teacher in our society when I introduced a resolution calling for National Teachers Recognition Day to be celebrated annually on the fourth Wednesday of April.

I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from certain statements and news items regarding the role of the dedicated teacher.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

REMARKS OF JUDGE JONAH J. GOLDSTEIN, PRESIDENT, GRAND STREET BOYS' ASSOCIATION, AT DEDICATED TEACHERS LUNCHEON, JANUARY 16, 1960

A kid hits a teacher, and it is front page news; but the fine things done in our schools, the day-to-day job of helping children to learn to grow and to thrive, the art exhibits, the musical festivals, the dramatic performances, the winning of scholarships, the academic achievements of our students, all the results of the efforts of dedicated teachers, are ignored.

We, of the Grand Street Boys' Association, headquarters of those who love New York, recall with profound gratitude the dedicated teachers who taught us, and so we wanted to honor the dedicated teachers of today.

We do not want our expression of approbation, our pat on the back, to be a substitute for deserved increases in the salary schedules of the teachers in our city, in recognition of the important services rendered by our teachers.

Our efforts this year do not constitute a single shot in the dark. We hope to make this an annual affair and those who were not included in the 1960 list of dedicated teachers, will have ample opportunity of being cited as dedicated teachers of 1961, and those who did not receive the $500 award this year may receive the coveted prize in 1961, 1962, or in years thereafter.

Most important, we hope this pebble in the lake has ripples that go far and wide and we hope to see our community aroused, and through them the communities in the whole Nation aroused to the importance of attracting dedicated teachers, rewarding them well, and honoring their dedicated service. For in this way lies the salvation of the America of tomorrow.

NEW YORK TIMES EDITORIAL, JANUARY 18, 1960

The Grand Street Boys' Association and Foundation has called fresh attention to the thousands of dedicated teachers in our New York City school system, mean and women who work far beyond the call of duty, who through wise and friendly guidance inspire their pupils and who successfully mold the character of the youngsters who will be the voting citizens of tomorrow.

A committee of 35 prominent retired and active educators carefully screened more than 1,000 nominations made by principals,

assistant superintendents, faculty councils, parent-teacher organizations, alumni associations and community leaders. One hundred were selected to receive an illuminated, dedicated-teacher scroll, and in addition 10 of these were awarded a prize of $500 each.

This expression of appreciation is a starting signal for a general campaign in which all citizens will participate in an effort to improve our schools by providing attractive salaries for our teachers. This will not only help solve the serious problems of our teacher recruitment program, but will also assure us that the effectiveness, the spirit and the morale of our 40,000 New York City instructors will bear the hallmark of the dedicated teacher.

THANK YOU, MR. CHIPS

(By Raymond Moley)

JANUARY 13, 1960.—Somehow, it seems to me, the public's image of the teachers and of the incomparably valuable profession which he or she represents has been tarnished by some of the arguments made for improving the teacher's economic and professional status. Some statements of fact embodied in those arguments are undeniably true, some are at least arguable, some require further substantiation. Some remedies proposed would not help solve such problems as exist.

Such dedicated teachers—and there are such public servants in every school system—rank with the most significant individuals in our civilization. They have labored over many years, never for glory or ostentatious honors, because they live teaching and are richly rewarded in the love of inspired pupils. They are the Mr. and Miss Chipses in our midst.

The least we can do is to pay them our respect and gratitude for what they have done to help save this generation.

LETTER BY JUDGE JONAH GOLDSTEIN

DEAR FELLOW AMERICAN: Thank you for your expression of interest in the dedicated teachers project carried on by the Grand Street Boys' Association and the Grand Street Boys' Foundation in New York.

Briefly stated, here is the story. Use it as a springboard—and go on and do better.

WHY WE DID IT

1. The Nation needs, and our children deserve, good schools and fine teachers.

2. We need to do more to increase community appreciation of the important contributions made by teachers, to improve their status in every respect.

3. In this way, we can attract and hold in this profession the talent we seek.

4. Our awards are tokens and symbols of a broad community drive to achieve these objectives.

5. Concrete deeds are meaningful, even if one reaches relatively few, provided the purposes are nobly inspired and clearly stated.

WHAT WE DID

Our approach achieved our objectives, but another may be as good or more appropriate for your community.

1. Judge Goldstein sought and won the support of the project by the organization he heads, and got additional private financial support for the enterprise.

2. We set up a committee of advisers—retired and respected men and women of eminence in education, public affairs, business and labor, to carry out the program.

3. We publicized the program widely in every medium, making clear the objectives, purposes, our techniques, and limitations.

4. We urged educational authorities, PTA's, teacher faculties, and alumni groups, to submit names and supporting data on candidates for awards.

5. The committee screened, sifted, considered and made the final choices.

6. We announced the names of the 100 winners, out of over 800 submitted, and invited the 100 to a luncheon at which they were to receive scrolls. Ten were each to receive a $500 prize.

SUGGESTIONS

1. Involve students, parents, and the whole community.

2. Make the gifts meaningful.

3. Citations were read for those receiving the cash prizes, outlining their dedicated service to the schools and children.

4. Make the event a tradition.

Please let us know how your efforts succeed. After all, our purpose in tossing a pebble into the lake is to cause ripples that will reach distant shores.

Best wishes in our common devotion to American democratic ideals.

EXCERPTS FROM ADDRESS BY DR. BUELL GALLAGHER, PRESIDENT, COLLEGE OF THE CITY OF NEW YORK, JANUARY 16, 1960

It is a genuinely sound impulse which leads the Grand Street Boys to do honor to the teaching profession and symbolically to express that honor by calling special attention to the representatives who are here gathered. Accept, then, if you will, these apples of affection and appreciation I bring. My accolade goes to the teacher who continues to be a warm, alive human being in the face of every manifestation of contrary tendencies. My approval goes to the teacher who, despite the obvious expectation of peers, superiors and inferiors, refuses to show favoritism to selected friends and achieves instead a warm, friendly fairness toward all.

The greatest peril which threatens the public employee, and teachers are not excepted in this instance, is that that he may yield to corrupting temptation. Neither is it laziness or deliberate inefficiency. It is complacency.

Praise should go to the teacher who refuses to be complacent, who continually finds new and better ways of achieving new and better results, who know that healthy and stimulating controversy is the life-process of academic growth and who makes a constructive contribution to the growth process.

We who are in public service, whether in Government or in education, have rested upon us the very heavy burden of justifying the democratic process and the democratic way of life, not only through words but also in deeds. We are servants of the people, not of politicians: partisan interference in our work must be resisted like the plague. We are Catholics, Jews, Protestants, and Free Thinkers: but we are indifferent to these distinctions in the performance of our work. We are of many races and come from many nations: we cannot permit this to color our relationships or to condition our performance.

This apple, then, goes to the teacher who refuses to be the docile donkey for the administration—and who also refuses to be the gullible goat for the professional agitator and organizer. If there is anything of value, any sweetness of flavor, in the apples I have tenderly laid on the teacher's desk today, let that be ascribed to my desire to give recognition to the honest and dedicated efforts of teachers to meet the needs of school children. I bring a word of warm appreciation for being themselves, for dedicating themselves to the profession which molds the youth and builds tomorrow.

NEW YORK TIMES EDITORIAL, MAY 17, 1960

There is more honest sincere feeling of appreciation accompanying Teacher Recognition Day than on most or all other days.

In this grave time in international affairs recognition of the importance of the school, of the teacher, is almost automatic. On a radio program last night, the superintendent of New York City's schools, Dr. John J. Theobald, said: "I think the future of this entire Nation rests in the hands of our teachers. I think that what they do—what they do working with the parents and working with the community and developing each and every one of these youngsters to the maximum—I think that this, more than anything else, is going to be the payoff in terms of what we are tomorrow. And I would say to you that far from feeling that we push too much to get better salaries for teachers, honestly, as a community, we can't afford to place this responsibility in the hands of people we are not willing to pay and pay well for it. This is the kind of thing that really either spells a bright future or catastrophe."

Social Security System Best Method for Health Care for Senior Citizens

---

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 8, 1960

Mr. HUMPHREY. Mr. President, administration of health care for our aged citizens through the social security system would provide a sound, contributory plan of health insurance free from pauper's oath provisions.

John Beidler of the AFL–CIO legislative department in an article in the August 1960 issue of Allied Industrial Worker explains how the social security system can be used effectively to remove the threat of costly, lengthy illness and frightening financial burdens from our elderly men and women.

I ask unanimous consent that John Beidler's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOCIAL SECURITY SYSTEM BEST

(By John Beidler)

Insurance through the social security system, paid for by workers during their productive years, seems to be the soundest way of solving the most pressing social welfare problem of our day—the human and financial disaster that illness imposes on the aged.

That is why the AFL–CIO and other interested groups support the Forand bill and reject all substitutes, no matter how well-intentioned, which would not do the job.

This Nation has solved, or reached partial solutions for, many social problems in the United States. It has put a floor under wages through the Fair Labor Standards Act. It has provided a cushion for old age through the Social Security Act. It has established a system of unemployment compensation through the same act, and of supplemental unemployment benefits via union contracts.

But it has done almost nothing for older citizens, living on small incomes and suffering lengthy illness.

Social security pensions now go to 11 million persons. About one million of them also are covered by private pension plans.

But the primary Federal social security benefit, on which most retirees must depend exclusively, averages only $73 a month, or $16.85 a week. For a retired couple, the maximum benefit is $180 a month, $41.53 a

week, which few beneficiaries actually receive.

These amounts are small enough by today's living standards. But out of them must come rent, food, clothing, and other necessities of life. There is no margin for medical expenses brought on by a stay in a hospital.

It is true that many retired persons have some form of health insurance. But a recent Federal study showed that, of all pensioners who had medical expenses in 1957, only 14 percent of the couples and 9 percent of the single persons drew any insurance benefits whatever.

The Forand bill does not solve the entire problem of medical care for the aged, but it does guard against total disaster. The bill would:

Pay in full for 60 days of hospital care for all persons eligible for old-age and survivors' benefits. This would include the dependent children of widows.

Meet the cost of combined nursing home and hospital care up to 120 days a year, and also cover certain surgical expenses.

Social security records would be used to establish the rights of applicants to funds.

The Forand bill includes standard safeguards as to the quality of care, negotiation of rates, and freedom of cooperating institutions from Government interference.

The program would cost about $1 billion a year at the start. It would be met by a rise of one-quarter of 1 percent in social security taxes on employers and employees, and three-eighths of 1 percent on farmers and other self-employed persons. The most any worker would pay, if he makes $4,800 or more a year, would be $12 a year.

What are the alternatives to the Forand bill?

Ask for public assistance, say the doctor's organizations and the House Ways and Means Committee.

Public assistance is, the AFL–CIO says, the free care available to the poverty stricken through State and Federal funds. It is necessary, it is worthy, it should be improved. Many doctors donate their services unselfishly.

But public assistance is public relief. Those who get it must prove their poverty, often to the point of taking a pauper's oath. They must exhaust their savings and, in many States, sell their TV sets, their homes, their ancient cars, to become eligible.

Buy private, commercial insurance, say the insurance companies.

Such insurance is available for the 65-plus group. But where the cost of private insurance is within reason, the benefits are meager. Where the benefits are adequate, the cost is out of reach of the average oldster.

This is bound to be true of a plan under which the aged are insuring themselves. To be workable, any insurance plan must be broad enough to include good risks along with bad risk, the young along with the old.

Private insurance can supplement a Federal program. It cannot replace it.

Get the children and grandchildren to pay hospital and medical bills, say others.

Many emergencies have been solved in that way. But a medical catastrophe to parents is in many cases beyond the means of willing children. At best, such help is a poor bulwark for pensioners who have worked all their lives to earn their independence.

None of these alternatives seems to labor people and others to be acceptable in a society of free and independent citizens.

Under the Forand bill the Secretary of Health, Education, and Welfare would administer the program, as he does the present social security system.

Any qualified hospital or nursing home could participate. Rates for services to the eligible sick would be set by agreement between the Government and the institution, using the kind of formulas already developed in many Government and private plans.

Why We Need a Democratic President in 1960—Prize-Winning Oration by George Flynn, St. Paul, Minn.

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 8, 1960

Mr. HUMPHREY. Mr. President, in Minnesota, as in all States, young men and women are attracted to the Democratic Party because it is the party for today and the future, and not the party of yesterday. Three young Minnesotans who participated in the Minnesota Young Democratic-Farmer-Labor Party oratorical contest on June 19, 1960, in Minneapolis, demonstrated the fine talent and straight thinking on major national issues that these young people bring to our party.

I ask unanimous consent that the prize-winning oration by George Flynn, third place, St. Paul, Minn., be printed in the Appendix of the RECORD.

There being no objection, the oration was ordered to be printed in the RECORD, as follows:

The man who will be the next President of the United States will be a man whose decisions and actions will guide the destination of this world for the next 8 years. Therefore who that man is will be of tremendous consequence, but of more consequence will be what that man stands for. And the way in which we best know what his actions while in the White House will be is by the party to which he belongs. Since it is my firmest conviction that we need a Democratic administration during the next 8 years, let me analyze the reasons why we need a Democratic President in 1960.

Since any question can be decided from two angles it is my purpose to show the affirmative reasons for a Democratic President in 1960 as well as the negative reasons for a change in the present administration. Through the course of my speech I will show how the Democrats have done a better job in relation to the areas of labor, farming, and small business, as well as making far more significant progress in the field of foreign relations.

The Democratic Party is the party of the common man; proof of this may be seen in the Roosevelt and Truman era, when the Democratic administration brought this country from the depths of depression to the heights of prosperity. This progress was not caused by the neglect of big business but rather by the correct policy and foresight which was introduced by Roosevelt and carried out by Truman. Since the Republican administration has been in office they have cast the farmers deeper in debt as well as causing many to leave the farms and overflood the cities with an extra surplus of labor thus causing further unemployment. Through all this, however, they were able to set new profit heights for the big business monopolies while completely disregarding the small businessmen by allowing these monopolies to exist.

During the era of the sixties a plausible theory must be found once again by the Democratic Party, since the Republicans have shown they cannot by their actions through the past 8 years, and the Democrats speaking in restrospect, have proved they can by the solutions which they found during the New Deal period. Therefore from the interior point of view there is no question that we not only need but must have a Democratic President in 1960 to solve the aforementioned problems.

The Republicans have provided during their years in office nothing but an expensive, inadequate, and illogical solution to the farm problem. Meanwhile in a Democratic Congress there were continued efforts to bring about a solid solution but every answer they came up with was overruled by the Republican administration in favor of their inane plan.

In the field of labor the Democratic Congress was able to pass a useful and sensible bill, which helped the common man, without causing strife and confusion among the businesses in which they are employed. Meanwhile, the Republicans passed a harmful and sometimes disastrous bill over the Truman veto during his administration. Again it is evident that they are not qualified in this field to take the reins, so to speak, which must be taken in the sixties.

Also in the field of business they have been unable to stop the ever-rising cycle of inflation, which was nil at the time they took office. They have encouraged and supported the rise of big business while completely disregarding the smaller, insignificant businessman. Again it appears that the Republicans cannot keep the correct relation between business and labor, which was the situation when they took office.

In the field of foreign relations, again the basic philosophy of representing the common man must be employed, in direct opposition to the Republican philosophy of representing the dollar.

In the daily papers we read of demonstrations and violence against the policies and even the theory of the United States. For the past 2 years the Republican administration has used the field of foreign relations for their political gain and not for the gain of America. There was no other country at the fragment of a summit conference, which even made mention of bringing their second in charge to it. Yet the United States made a great play of bringing NIXON for no positive reason but for the gaining of political prestige. This points out the pure mockery which is evidenced in Republican handling of foreign relations.

Looking at the Democratic administrations we find that America was looked upon as the ultimate in free government, the country which was considered to use a phrase, heaven on earth. There was never a demonstration against us in the free world, yet in the past 8 years, even our own allies have been questioning our aims.

The reason for this turn of events is again the Republican philosophy of the dollar. When we give foreign aid we give it with the idea of getting that country's trade or establishing businesses there ourselves. We show no consideration for the common man or the country itself, but only for their trade and money. Another fault of the Republican administration is the practice of peace at any price. A person can only crawl back so far before he has to fight, yet daily the Communists are taking little pieces of land from our allies and we send nothing but a mere note of objection. Quemoy one of the islands we are pledged to defend is being shelled daily, yet all we do is complain. This same situation exists throughout the world yet we do nothing but deny their requests for help as we did with Hungary.

Peace is valuable and it must be preserved but not at the cost of sacrificing our ideals and prestige as is the case now. All we have to do is help arm the countries being attacked but yet we neglect to do so, or if we do we again do it with the thought of preserving the ever powerful dollar.

In this field again we see the need for a better policy and a better handling of the situation, the Republicans have showed they can't do it, and Democrats have proved they can. Therefore we see again the advantages which can be gained from a Democratic President in 1960.

In conclusion therefore we find that the situation which exists today needs a man with strong convictions and principles for the presidency. For a man to even be a candidate for the presidency he must have these convictions. However, we must look deeper into the party to which he belongs to see if the ideals are the right ones and in so doing there can be but one answer as to what party the next President of the United States can belong to, and that party is the Democratic Party of the United States, the situation of the world today needs the continued success of America; America must have it, and the people of America demand it.

Government Aid for the Arts

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, August 8, 1960

Mr. JAVITS. Mr. President, our American heritage is steeped in the arts which form an important reflection of the character of each period in our history. We have developed a rich and varied culture in many art forms, but it is largely concentrated in large metropolitan centers, leaving great areas throughout the country that are most often blacked out to professional cultural activities.

I believe that some help from the Federal Government is necessary to encourage the development of the arts and to spur their dissemination more widely than is presently possible, and as a step in this direction I have sponsored legislation calling for the establishment of a U.S. Arts Foundation.

There are four specific objectives to be gained by the participation of the Federal Government in the arts: expanded opportunity for individual arts; security in the development of artistic careers; recognition abroad as well as at home of the arts as a central expression of our Nation, and enrichment of our culture on a broad basis as a vital element in our total educational process and in our morale. Such a program could be aimed at both the professional and amateur levels, and would help private, nonprofit, theater as well as the other performing arts; it would also assist colleges and universities and State and municipally sponsored arts councils.

This stimulation, dollarwise, could accelerate to as much as 10 times the amount contributed by the proposed Arts Foundation on total performing arts performances. The good it could accomplish for the theater was discussed recently by Joseph Papp, founder and producer of the New York Shakespeare Festival which has the backing of the New York municipality and is a case history in this field,

I ask unanimous consent that his analysis, entitled "Government Aid," which appeared in the New York Times on July 24, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, July 24, 1960]

GOVERNMENT AID

(By Joseph Papp, founder and producer of the New York Shakespeare Festival)

Asking for Government subsidy of the theater was represented by Brooks Atkinson in a recent Sunday column as an invitation to control. By this token, commercial theater, the very antithesis of Government-supported theater, should be a veritable bastion of freedom, a powerhouse of provocative and unorthodox ideas.

Yet were a Government committee to select our theater of private investment as a target for censorship, it would have slim pickings indeed. Unless it were to consider deleting a subversive bump from "Gypsy" or curbing the radical enthusiasm of the magnificent dancers in "West Side Story."

Why, with all the apparent freedom of privately financed theater, are there so few plays that stretch the boundaries of freedom?

Though the commercial producer has absolute freedom of choice in the selection of plays, he instinctively turns to the one with the greatest potential gross. Is this not a significant encroachment on the freedom of the theater?

If we believe that the theater, to be worthy of its heritage, should stand in the vanguard of thought, should be an area for challenging ideas in both content and form, a place for deep and stimulating experiences, then we must also feel unsatisfied with what we have.

The invisible villian of the piece is anarchy. We have a theater without scheme or purpose, without consistent artistic leadership; a theater based on whim, subject to economic laws thoroughly at odds with creative objectives; a theater with pickup teams of talent plucked from theoverflowing pool of unemployment.

WASTING TALENT

This chaos, inspired by the "freedom" of commercial investment, restricts and, in turn, inhibits the real freedom necessary for a vital theater—the freedom that comes from the planned utilization of our now wasting talent resources—the freedom for our actors, writers, and directors to develop artistically and consistently in permanent repertory companies.

When we ask the Government to support the theater, we do so because we realize that the arts cannot operate on the profit principle. We also recognize that they are an essential part of our lives and necessary for our survival. These ingredients have motivated the Government's entry into education, science, and the postal service. The fact that these functions of society are too important to be left in private hands is the substance of my argument.

Since it is the area of ideas that concerns us most, let us take a look at education and the Government. Schools are the crucibles of our thinking. Yet we accept without reservation the necessity for Government-subsidized education. Now certainly this inherently means control. Though the danger is always great that some governmental committee or ambitious politician will try to invade the realm of education, it is no argument for the abolition of public education.

Therefore, how can we reasonably deny the theater the help we accept for our subsidized educational system in the fear of interference? The fear is real—but the conclusions unrealistic. In a democracy there is no alternative but to constantly defend the sensitive areas of thought and expression against incursions. There is only one way to guarantee freedom in the schools, the theater and elsewhere—to defend it—eternal vigilance being the price of fredeom.

THE FOUNDATION

Mr. Atkinson suggests in his article that "private subsidy as opposed to Government subsidy is, when it is given, a guarantee of freedom." He cited foundation assistance as a case in point.

For the New York Shakespeare Festival, foundations have proven to be its main source of operating income. Without it the festival would be hard put to survive. Therefore, to critically examine the role of foundations in their relationship to the theater is not to deny their necessity, at a time when the only real alternative, Government subsidy, is not in the offing.

In the long run, foundations are no answer to the problems of the theater and no guarantee of its freedom. To support this latter contention we may take the example of the Rockefeller Foundation, which rejected an appeal from the New York Shakespeare Festival on the ground that free admission destroyed incentive.

The Ford Foundation likewise turned down a request. Here it was subtly hinted and cautiously intimated that free Shakespeare smacked too much of socialism. Whatever their justifications, it appears that these giant foundations, responsible for the largest grants in the field of the arts, would not necessarily guarantee freedom of the theater.

Furthermore, decisions concerning grants are made in private. The public has no knowledge of them, nor can it expect to have. There is comparatively little public pressure that can be brought to bear on these private organizations. On the other hand, were the Government involved, one would, at least, have recourse to the system of checks and balances, to the principle that the Government is responsible to the people. Under those circumstances it would be possible to cry havoc and petition our Government for a redress of grievances. Admitting that interference is undesirable, but having the choice of private or Government interference in the theater, it would seem that the latter is preferable.

CONTINUITY NEEDED

Aside from the issue of control, the unpredictable and temporary nature of foundation giving leaves unresolved the key problem of the theater—guaranteed continuity; and it must be guaranteed to make any sense. Foundations gear their support to the understandable philosophy of a boost, to help the recipient over a hurdle. Grants are not given in perpetuity. Their purposes are varied and subject to change. Nor can they be expected to limit their commitments year after year to a single project.

The theater, like education, needs the security and comfort, if you will, of inclusion in a Government budget. It may be attacked. It may be cut. But it is there to be defended and fought for. Any discussion of freedom of the theater without considering its permanency is largely academic.

By making the theater a responsibility of Government, it makes it also a responsibility of the people. Restricting the theater to private subsidy cuts it off from the mainstream of American life and perpetuates the grow-

ing separation of the theater from its vast potential audience.

Only with Government aid can we have ticket prices within the reach of everybody, a greater number and variety of plays and a guarantee of continued existence for the theater. Private subsidy narrows the scope of the theater. Government involvement broadens its role into the larger area of education and contributes to the development of a greater, more intelligent and more responsible audience.

Health Care for the Elderly

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 8, 1960

Mr. HUMPHREY. Mr. President, shortly before the recess I received a message from a group of distinguished social security experts.

These experts urge us to include hospitalization and related health services under the Federal old-age, survivors, and disability contributory social insurance program.

The people who signed this message represent a tremendous accumulation of wisdom and experience in the field of social security and I believe my colleagues should give very serious attention to the views of these experts when we take up the social security bill, H.R. 12580.

I ask unanimous consent that this message and the list of signers be printed in the Appendix of the RECORD.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

JUNE 30, 1960.

MEETING THE HEALTH CARE NEEDS OF OLDER PEOPLE THROUGH SOCIAL INSURANCE

The undersigned who have long been identified with the American system of social security, having served the Government in administrative or advisory capacities, urge the incorporation in social security legislation now before the Senate of a program of contributory social insurance through which our citizens can pay for the cost of the hospital and related services they may need in old age. An extension of Federal old-age, survivors, and disability insurance to include hospital coverage would provide a systematic way of financing serious illness and prevent the exhaustion of the savings of aged persons and the consequent, often devastating, demands upon the resources of their children.

There is every indication of the willingness of Americans to share the cost of basic health protection for their elderly parents and later for themselves by paying for such a program through their working years. If such health protection were available for older persons, private organizations would be enabled to offer more economical protection to the younger people in our population.

We sincerely hope that the social security bill now pending before the Senate will be amended to provide for hospital and related services to older people through the social insurance system.

LIST OF SIGNATORS

Mr. Arthur Altmeyer, Madison, Wis., former chairman of Social Security Board and Commissioner for Social Security.

Mr. Joseph P. Anderson, executive director, National Association of Social Workers, member, Advisory Council, 1961 White House Conference on Aging.

Dr. Eveline M. Burns, professor of social work, New York School of Social Work, Columbia University, former consultant to Committee on Economic Security and Social Security Board, and member of Advisory Committee to Secretary of Health, Education, and Welfare (1954).

Mr. Wilbur J. Cohen, professor, public welfare administration, School of Social Work, University of Michigan, member of the staff of the President's Committee on Economic Security (1934-35).

Mr. Nelson Cruikshank, AFL–CIO, Washington, D.C., member, Advisory Council on Social Security (1948–49) and Advisory Council on Social Security Financing (1958–59).

Miss Loula Dunn, Chicago, Ill., member, 1959 Advisory Council on Public Assistance.

Mr. Fedele F. Fauri, dean, School of Social Work, University of Michigan, former consultant on social security to House Ways and Means and Senate Finance Committees.

Miss Helen Hall, National Federation of Settlements, member, Advisory Council of the President's Committee on Economic Security (1934–1935).

Mr. Seymour Harris, Littauer professor of political economy, Harvard University, consultant to President's Council on Economic Advisors.

Miss Jane M. Hoey, New York City, director, Bureau of Public Assistance, Social Security Administration (1936–54).

Mr. Raymond W. Houston, commissioner, New York State Department of Social Welfare, member, 1959 Advisory Council on Public Assistance.

Mr. John Kidneigh, director, Graduate School of Social Work, University of Minnesota, chairman, 1959 Advisory Council on Child Welfare Services.

Mr. Murray Latimer, Washington, D.C., former chairman, Railroad Retirement Board.

Mr. Richard A. Lester, professor economics, Princeton University, member, Advisory Committee to Federal Bureau of Employment Security.

Mr. Norman V. Lourie, deputy secretary, Penhsylvania department of public welfare, member of Ad Hoc Advisory Committee to Department of Health, Education, and Welfare.

Mr. Charles I. Schottland, dean, Florence Heller Graduate School of Social Welfare, Brandeis University, former Commissioner of Social Security (1954–58).

Mr. Karl de Schweinitz, Washington, D.C., former consultant to Social Security Board, and professor emeritus, University of California.

Mr. Herman M. Somers, chairman, Political Science Department, Haverford College, former consultant to Social Security Administration.

Mr. John W. Tramburg, commissioner, New Jersey State Department of Institutions and Agencies, former Commissioner of Social Security (1953).

Mr. George K. Wyman, executive director, Welfare Council of Metropolitan Los Angeles, former deputy Commissioner of Social Security (1959).

Mr. J. Douglas Brown, dean of faculty, Princeton University, Chairman of Advisory Council on Social Security (1937–38) and member of Advisory Council (1948–49).

Mr. John J. Corson, McKinsey & Co., Washington, D.C., former Director, Bureau of Old Age and Survivors Insurance.

Our Defense Posture

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, August 8, 1960

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address I delivered at the annual banquet of the Virginia Court Clerks' Association, last Friday, Aug. 5, at Hotel Chamberlin, Old Point Comfort, Va., with reference to our present defense posture.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR A. WILLIS ROBERTSON AT THE ANNUAL BANQUET OF THE VIRGINIA COURT CLERKS' ASSOCIATION, HOTEL CHAMBERLIN, OLD POINT COMFORT, VA., AUGUST 5, 1960

Early in my congressional service, when the handling of domestic issues was not complicated, either by a tremendous national debt incurred in fighting a Second World War, or by a threat to our survival from an unscrupulous foreign dictator, I had the honor and great pleasure of addressing your annual meeting at this lovely and historic hotel. The memory of that meeting nearly a quarter of a century ago will always be a cherished one.

While I do not minimize the seriousness of the economic problems growing out of our greatest depression, they pale into insignificance when compared with the destruction of civilization in the event of another world war. How to prevent such a war is by all means the most serious issue confronting our Nation today.

Hence in this historic area of the Old Dominion which cradled and defended the infancy of our Republic, the scene of victory in our revolutionary fight for independence and freedom, the present location of the world's greatest naval base and shipbuilding facilities, and the training area for our first venture into manned exploration of space, I feel it would be both timely and appropriate to give you a brief report on the Military Establishment we are building with the hope that fear of punishing retaliation will stay the coldblooded and calculating hand of the Soviet dictator.

Most of my congressional service has been devoted to the handling of fiscal matters—10 years in the House during which I, as a member of the Ways and Means Committee, helped to frame 12 tax bills, including the heavy and burdensome income and excise taxes of World War II, and 14 years in the Senate, during which I have served on the Appropriations Committee that has handled unprecedented peacetime budgets, and on the Banking and Currency Committee that has handled vital legislation relating to the congressional power to coin money and fix the value thereof.

With full knowledge of how burdensome our taxes are, with keen appreciation of the importance of a sound and stable economy in a successful fight for the preservation of our cherished democratic institutions, I have been working in recent years for an adequate defense program that could be financed within the framework of a sound fiscal policy. While fully agreeing with the able Secretaries of the Treasury of the present administration concerning the importance of a balanced budget, I have voted in recent years to cut foreign aid and domestic spend-

ing by an amount sufficient to measurably increase our defense posture. But for the inclusion a few years ago, on my insistence, of an additional $900 million for strategic bombers which Secretary of Defense Wilson said was not needed and would never be spent, we would not today have our present wings of B–52 bombers—the weapon most feared by the Communists.

Again this year, in advocating an airplane carrier to cost $293 million in the budget but not in the House bill, a start on a wing of B–70 bombers, costing $285 million which was not in either the budget or the House bill and increases for Army modernization, guided missiles and warning systems, I could point to cuts that had been made in the budget for domestic spending and to the cut I thought could and would be made in the mutual assistance or foreign aid program that would more than offset the $661 million that the Congress added to the President's defense budget. If no new spending schemes are adopted in the adjourned session that commences next Monday (and I hope none will be) the President can use all of the defense funds we have appropriated and still close his last fiscal year with one of the largest surpluses of his term.

On the basis of hundreds of pages of expert testimony presented to our Defense Subcommittee on Appropriations I do not think we need a crash program of any military activity costing two or three billion dollars of additional funds as some have proposed.

In order that you may more intelligently follow the debate that is sure to come on this issue in the next few weeks and in the next few months, I will present to you tonight a bird's-eye view of our current defense program and the additional items costing some $660 million which the Congress approved.

We must all recognize quite clearly that world domination has remained a steadfast and paramount Communist goal over the years and that this is the supreme threat to the free world and to our own way of life. Recent events have shown that this threat, exploiting all forms of power, has not lessened but on the contrary has been intensified in critical regions of the world. Indeed, we now see its manifestations at our very doorstep.

In company with this constant pressure against the West and its institutions there has been a change in the nature of the threat. This is reflected by a marked Soviet emphasis on intercontinental missiles and by the emergence of a dynamic, aggressive, and hostile Communist China. In the course of these events, and despite the talk of armament controls, both the Soviet Union and Red China have consistently improved their already large and effective military forces. Simultaneously they have stepped up their expansionist drives in important regions of the world. It is vital that we realize that these threats to our friends all over the globe are actual and direct threats to ourselves. In the long run, we in the United States can be defeated through erosion of the free world position just as well as by any overwhelming attack on our homeland. This means that we must remain strong militarily and that we must be able to successfully counter aggression wherever and in whatever form it may occur. We and our friends must be able to protect ourselves, and to do so the United States must maintain a fast striking, highly effective, modernly equipped Army.

In making its contribution to the national defense program our Army has four main tasks. It keeps forces overseas to deter aggression and to effectively resist such aggression should deterrence fail. It maintains combat-ready strategic units in the United States for rapid reinforcement of our forces in forward areas and those of our allies. Thirdly, it provides a significant share of the air defense of the United States. Lastly, it maintains a base for rapid mobilization, and this includes our civilian component forces as an essential ingredient. In addition to these primary tasks the Army has other important functions. Among these are the furnishing of military advisory groups and training missions to over 40 allied nations, the support of other armed services and governmental agencies, certain support for the atomic delivery systems which we provide other nations, and a large number of other activities which assist our national effort.

To carry out its mission in fiscal year 1961, the Army has been authorized a strength of 870,000 for its active forces and a paid drill strength of 700,000 for its Reserve components—the Army Reserve and the Army National Guard. The Active Army will include 14 divisions, eight being stationed overseas and six being located in the United States. Three of these divisions in the United States will continue to be in a high state of readiness for immediate deployment in any emergency. This is the famed Strac, "ready around the clock." During the year our Active Army forces will be increased by a battle group, a missile command, two and one-half more Nike battalions, and by 2 surface-to-surface missile battalions, even though the overall strength stays the same.

In supporting the air defense of the United States the Army's excellent surface-to-air missile units, armed with the Nike-Hercules, will expand their protection of major population centers, bases of the Strategic Air Command, and our industrial base. They will be complemented by other Nike missile units operated by the Army National Guard.

In this connection, all the Army's plans and programs will continue to place heavy dependence upon its Reserve components. Their capability to provide combat-ready units for the immediate backup of the Active Army and to furnish a training base for mobilization is at the highest level in our peacetime history. In particular, six divisions of the Army National Guard are prepared at all times for immediate mobilization and use. This overall state of readiness will continue to improve.

Several years ago it became apparent that new weapons and technology were altering the fundamentals of warfare as they had been known previously. As the result of long and extensive tests and studies, the Army has now revamped its organization and concepts to meet these changing conditions. Today, as never before, it emphasizes quality, flexibility, mobility, and the highest possible state of training and combat readiness. All of these require constant improvement in methods, in ideas, in equipment, and in the human element.

The Army considers the soldier as the basic and indispensable element for the defense of the Nation and so it is natural that it has attempted to attract and retain the best and most highly qualified people. Programs enacted by the Congress have permitted the Active Army to stabilize its personnel, a trend that also has been reflected in the Reserve Components. A large part of the Army budget for fiscal year 1961 will go toward the pay and allowances ($3.507 billion, Active Army: $234 million, Army Reserve: $230 million, Air National Guard) of these increasingly capable and highly qualified personnel.

Modernization of our Army has become urgent. The Soviet Union has made vast strides in re-equipping its land forces with the most modern weapons. This imposes upon us the absolute necessity to maintain a qualitative superiority if we are to keep our power posture in the international arena and if we are to be prepared to defend ourselves and help our allies protect themselves. Such modernization involves, first, research and development of new equipment and techniques, and then the procurement and issuance to our troops of advanced types of weapons.

The Congress has voted nearly $1½ billion for Army research and development during the new fiscal year. This sum exceeded the President's original budget request by $158,352,000. This will be devoted to a large number of projects, covering specific equipment items as well as many broad research investigations. This money will also finance contracts with educational institutions and will support extensive development and test programs by installations like the White Sands Missile Range and the Engineer Research and Development Laboratory at Fort Belvoir here in Virginia.

It would be difficult indeed to go into the hundreds of projects in this category. As examples of things that will be done, the Congress is concerned with the protection of our industrial and population centers from intercontinental ballistic missiles. The Army's Nike-Zeus is to be given full-scale testing in the near future. In these tests the Nike-Zeus will be set up in the Kwajelein area of the Pacific and will be fired against our own ballistic missiles fired from the West Coast. Many feel that the Air Force's Bomarc is a superior antimissile weapon.

To give our troops better fire support at medium ranges new solid-fueled missiles, such as the Pershing, will be pushed. These will replace older types which although reliable must be replaced by new and improved weapons. Dispersed units in the field need better defense against attack by low-flying aircraft and air-breathing missiles and this added protection will come both from missiles under procurement and from the development of a highly mobile system called the Mauler. Mobility of the Army, so essential if we are to gain the full capabilities of the Pentomic concept, will be enhanced through newer types of aircraft and helicopters, by better combat vehicles, and by more efficient means of transporting supplies. And in the area of firepower the Army is working hard on a new tank, and on better artillery with longer ranges and more lethal effects.

You may be interested in a brief description of a few of these items. There is a flying vehicle called the Avrocar which moves along above the ground on a cushion of air and which the Army hopes will go a long way toward getting some of our soldiers out of the mud. A brand new weapon is the Redeye, a hand-held guided missile that frontline troops can use to shoot down aircraft. And improvements continue on the Davy Crockett, a man-carried weapon which for the first time puts a nuclear weapon in the hands of small units. Really fantastic developments in electronics are being applied to devices for communication and for locating hostile forces and in identifying targets.

However, successful research and development is but the forerunner of procurement. As has been stressed, both are essential to modernization, and the Congress has emphasized its concern that the Army be modernized. During the forthcoming year this modernization will accrue quite largely from the replacement of wornout items by new equipment, and the Congress has made sizable funds available for this purpose—$1½ billion total for procurement.

The firepower of combat forces will be increased through the purchase of a whole family of missiles for use against ground targets. No doubt you have heard the names of some of these—Little John, Honest John, Lacrosse, and Sergeant. Even though the small nuclear weapon Davy Crockett is still being refined through research, initial quantities are going to be bought since this

weapon is needed quickly. To continue to improve our air defenses the Army is improving Nike-Hercules. This, of course, is the missile now protecting many of our most vital areas; for instance, the entire Norfolk region, but its effectiveness against a large-scale attack has been seriously questioned.

Air defense for our combat units also is being significantly improved by the purchase this year of more Hawk missiles for use against lower-flying aircraft. Conventional forms of firepower are being modernized by new and improved tanks, artillery pieces, and rifles and machineguns. These latter—the rifles and machineguns—will use ammunition made standard for all NATO countries.

To improve its mobility posture the Army is getting quite a few better types of aircraft. These will be used for such things as photography, reconnaissance, and the transportation of troops and supplies within the area of combat. Too, there will be some new helicopters which can lift up to 32 men or as much as 3 tons of equipment. While movement in the air is important, our modern Army still needs large amounts of surface transportation. For this reason, some 18,000 trucks will be bought, as well as quantities of armored personnel carriers.

The growing tempo of warfare, using all these improved weapons and faster means of getting from place to place, impose critical problems in connection with the command and control of all these diverse elements. For this purpose the Army will get new radios, teletype machines, and electronic systems to help locate enemy forces and targets.

The speed at which things take place, together with the large amounts of machines and weapons, make it essential that the flow of food, ammunition, gasoline, and all sorts of other supplies, keep pace with the battle. You may be sure that items like roadbuilding equipment, mobile bridges, generators for large amounts of electric power, are being bought.

Related closely to the modernization of the Army is the ability to move it strategically to the part of the world where it is needed. As you know, the Army depends upon its sister services for this transportation by sea and by air. The Congress has given special attention to this matter and has decided that our capability to move the Army needs strengthening. So funds ($310 million) have been given the Air Force for the particular purpose of modernizing its airlift through purchase of the most modern type of planes and the development of new types.

In addition to the operation and maintenance of installations, already mentioned, there is the need to continue certain military construction. For the active Army ($148.4 million) the Congress has approved additions to the Nike-Hercules air defense system, mainly in new radar sites. It has provided for building the necessary test facilities for the Nike-Zeus, and for airfields and helioports needed by the Army's aviation program. A limited amount of new construction is also planned for maintenance facilities, hospitals, and troop housing. We have given additional funds for new and better armories and training facilities for our Reserve Components ($16 million for the Army Reserves; $17.5 for the Army National Guard).

Of the moneys appropriated by the Congress for the Army, an appreciable amount will be devoted to activities and projects in the State of Virginia. Some of these, like armories and public works, are quite firmly planned, while others, like procurement contracts, can only be estimated at this time. However, it would appear at present that from the funds made available to the Army, expenditures during fiscal year 1961 will approximate the following amounts:

	Million
Civilian payroll	$52.1
Military payroll	71.2
National Guard (pay, operation and maintenance)	6.0
Construction, Active Army	9.2
Construction, Army Reserve	1.0
Construction, ANG	.6
Procurement contracts (over $10,000 only)	76.0
Civil works (under Army Corps of Engineers)	6.0

The overall effect of congressional action on the Navy budget was to add $258 million for procurement and ship construction and $50 million for research and development. Sixty-eight million was cut in other areas, mainly in operations and maintenance and military construction. The Navy budget approved by both Houses of Congress was $12.35 billion, an increase of about $230 million over that recommended by the President. But let me discuss these events in a little greater detail.

The funds in the budget provided for the support of 619,000 active duty personnel and 129,000 Reserve personnel, 817 ships of the active fleet and 6,800 aircraft. The Navy's budget request included funds for the support of the Navy Shore Establishment, which also was reduced in size, both in number of facilities and personnel.

The funds in the President's budget request provided for procurement of 658 aircraft and several types of guided missiles, the building of 20 new ships, 14 of which were for the purpose of antisubmarine warfare, and modernization of 15 other ships. It is interesting to note that the new ships included one attack aircraft carrier, five guided missile frigates and destroyers, two escort vessels, one nuclear powered attack submarine, three Polaris ballistic missile submarines plus long leadtime items for nine more, and six other ships.

The funds also provided for the procurement of new equipment for detection and attack of enemy submarines and aircraft and for communication equipment for ships, aircraft and supporting stations.

In the Navy's original budget request were funds for the research, development, test and evaluation of many types of equipment, stressing improvements in antisubmarine warfare equipment, attack ability of the fleet, nuclear power propulsion, and aircraft and ship missile systems. Funds were also requested for space projects. Increase in mobility and reaction speed of the striking power of the Marine Corps were provided for in the research and development funds.

After hearings and deliberations on the Navy's budget the House Appropriation Committee recommended substantial changes, the most drastic of which was deletion of the aircraft carrier.

After the House completed action on the Navy budget, hearings were held by the Senate Appropriations Committee in which the Navy programs were again reviewed. After serious consideration the Senate recommended restoration of the attack carrier in the budget, as well as other changes to the House recommendations. In so doing, the Senate reaffirmed its faith in the Navy's attack carrier striking force as a powerful and valuable weapon in wars of all kinds. I should like to state here that I have always been a firm believer in the value of the attack carrier and have supported a strong carrier program on every possible occasion. As a member of the Senate Appropriations Committee I was able to express my convictions, and, I believe, helped to convince my colleagues as to the great importance of this new carrier to the sea supremacy of the United States.

In the joint conference meeting on June 25, the House and the Senate Appropriations Committees compromised in their action on the President's appropriation bill, agreeing on restoration of funds for the attack carrier, and on five Polaris ballistic missile submarines with long lead time items for seven more. The joint conference also agreed to provide funds for four nuclear attack submarines and two destroyer escorts, a $50 million augmentation for research and development in antisubmarine warfare, and cuts in other areas amounting to $207 million. The overall increases in the Navy budget amounted to about $350 million.

The additional funds voted by the Congress will be of material assistance in improvement of the Navy's readiness for war. In strengthening procurement and research and development efforts these funds assist significantly toward giving the country an aggressive, modern Navy equipped with weapons superior to those of any possible enemy.

As you know, the 20th of July marked the advent of a new and highly effective deterrent force when the successful firing of two Polaris missiles took place from a submerged Polaris submarine, the *George Washington*. The additional funds voted by the Congress for a total of five of these ballistic missile submarines to be started this year will provide a major augmentation of this invaluable and invulnerable deterrent force. With these voted by the Congress the total authorized to be built is 14. Since each submarine holds 16 Polaris solid propellant missiles the Congress has increased by 32 the number of nuclear armed ballistic missiles which can be fired against any aggressor from virtually invulnerable platforms. Polaris missiles are capable of a range of more than 1,000 nautical miles and will be equipped with nuclear warheads. Later versions expected to be available in 1962 will be capable of about 1,500 nautical miles and by 1965 up to 2,500 nautical miles. The missiles can be fired rapidly from the Polaris submarine either submerged or on the surface. The first two Polaris submarines will be ready for operations with missiles on board later this year. Two of the five ballistic missile submarines approved by the Congress for fiscal year 1961 have already been awarded to naval shipyards. The remaining three have been awarded on competitive bids to private yards. Of these, one will be built by the Newport News Shipbuilding Co.

Aside from Polaris types the three additional nuclear attack submarines added by the Congress to the one in the Navy budget will be highly important additions to the Navy's growing fleet of these revolutionary ships. Currently there are 9 completed and 23 others authorized, most of which are building. The new attack submarines are capable of sustained high speed while submerged. They are one of the Navy's most effective means of countering enemy submarines of which the Russians have over 400. They are many times more effective than the diesel-powered types previously built, of which the Navy now has about 95. The contract for at least one of the four fiscal year 1961 submarines will be let on a competitive basis to a private yard. The construction of the other three will be determined later.

Navy offensive capabilities will be greatly improved by the antisubmarine warfare research and development funds provided by the Congress. Additional research funds of $50 million will provide for development of new equipment of all types. The funds will be used to expedite the development of present antisubmarine warfare projects

which are nearing completion, to increase effort in ocean surveillance systems, and to develop new weapon systems and methods of defeating enemy submarines. Some of these funds will augment basic research in the field of ocean surveillance by long-range acoustics.

Thus it can be seen that the addition of the funds by the Congress has given a sizable boost to Navy's defense programs for fiscal year 1961 and will have its effect on readiness of the fleet and in the deterrence of general war in the very near future.

The attack carrier funds for which were restored in the budget by Senate action, will provide a badly needed replacement for one of the remaining World War II *Essex* class, which are now becoming obsolescent and are near the end of their useful life.

The new carrier will be an improved *Forrestal* class ship. It will be about 77,000 tons, with a flight deck of about 1,025 feet, almost a fifth of a mile. Its angled deck, mirror landing system, and heavy-duty catapults and arresting gear will permit handling of modern high-performance aircraft with safety and speed. Its flight deck will be 71 percent larger in area than the World War II *Essex* class ships. It will be able to operate aircraft in rough seas which would prevent so doing in the case of *Essex* ships. The ammunition capacity will be three times, the aviation fuel capacity double that of the *Essex* class. Working space, maintenance shops, and many other features will be vastly more modern, convenient, and efficient than in previous ship types. The new carrier will add greatly to the power of the attack carrier striking force when it joins the fleet in 1965.

The attack carrier striking force, of which the fiscal year 1961 carrier will be a significant element, is essential to U.S. Navy sea supremacy. It is the most powerful tool in the world for maintaining control of the seas and for establishing control of land areas from the seas. This force will keep sea lanes open for free world nations and deny them to the enemy for many years to come. Perhaps most significant of all, it is a force which is sovereign in itself. It is not subject to the changing climates to which our other bases are subject. This means that it can be in position and prepared to project our forces when needed overseas without danger of revocation by some other authority.

Both the offensive and defensive capabilities of the Air Force were strengthened substantially through recent appropriations.

Money was provided to take the B–70 bomber program out of the prototype development stage and put this airplane into production as the most powerful manned aircraft yet devised. While the President had asked for only $75 million to build two B–70 prototypes, the Congress raised this to $265 million so the Air Force could proceed as rapidly as possible to develop this 2,000-mile-an-hour airplane as a fighting weapon. Many experts believe that this is the ultimate transitional craft between manned and unmanned offensive aerial striking power.

Moreover, the Congress appropriated another $100 million to be used either for additional fighter aircraft or for the B–70. If these funds are used entirely for the bomber, a total of $365 million can be put into the B–70 program.

On the defensive side, the Air Force and the Defense Department have revised their planning against attack of the North American Continent by manned bombers.

Careful attention was paid to the reduced number of Bomarc interceptor missiles that would be available in the near-term future, the optimum deployment of the manned fighter-interceptor force because of this, and the complex requirements for adequate ground environment systems—that is, the devices used to detect and identify attacking forces and to control the defensive weapons turned against them.

These revisions provide for the redeployment and reequipping of our manned fighter-interceptor force and a number of adjustments and improvements in our radar warning network. Still more revisions are being planned and will be announced later.

In this connection, the 48th Fighter-Interceptor Squadron at Langley Air Force Base is to be reequipped in September of this year with improved F–106 aircraft to enable it to perform its functions with greater speed, effectiveness, and power.

Today, the predominant threat is unquestionably from the Soviet strategic bomber force. The threat from this force will contiaue to exist indefinitely into the future. As time progresses, however, the threat of the growing Soviet ICBM force will rapidly become our principal concern. Air Force analysis indicated that maximum achievable effectiveness against the total threat would result from an accelerated completion of a semiautomatic defense system against the manned bomber, substantially improved over that existing today, coupled with further concentration on timely deployment of systems designed to counter the ballistic missile threat.

Specifically, the Bomarc interceptor missile program is being substantially reduced to 7 "A" and 9 "B" squadron equivalents (28 launchers per squadron) located on 10 bases, including 2 in Canada. Modernization of the manned fighter-interceptor force is expected to offset this Bomarc reduction to a degree adequate to meet the threat. Nonetheless, the decrease in total weapons available made it necessary to reposition and reequip certain units of the manned fighter-interceptor force in consonance with the reduced numbers of Bomarc to be deployed and with other existing air defense weapons.

A twofold objective guided all planning in this repositioning and reequipping of fighters. The first objective was to insure maximum defense capability along the most probable attack routes toward the most important national strategic targets. The second was to provide a rough equivalence in all areas of the United States as regards the relationship between weapons available, strategic targets to be defended, and enemy attack capabilities. This planning involves reducing the total number of weapons previously located in certain of the States and in other areas of the North American continent, as well as reequipping certain fighter-interceptor squadrons with aircraft of improved performance. The planned changes in the manned fighter-interceptor force may be summarized as follows:

REPOSITIONING

(a) Movement of three squadrons to different bases.

(b) Inactivation of six squadrons and transferring their aircraft and equipment to the Air National Guard or other Regular Air Force squadrons.

REEQUIPPING

(a) Replacing the aircraft in nine Regular Air Force and seven Air National Guard squadrons with aircraft of higher performance.

(b) Increasing the number of aircraft in four squadrons to provide greater defense capability in the areas where these squadrons are located.

One of the major portions of our air defense system is the ground environment, that is, the radar, radio and computer devices which are employed for detection and identification of hostile aircraft and for control of our defense missiles and fighter-interceptors. As you are aware, the revision of our previous air defense plan as presented to the Congress in March of this year included many changes in this ground environment. Specifically, we recommended cancellation of the SAGE supercombat center program and certain modifications in the original SAGE 1 program. This reorientation of our semiautomotic control centers made it necessary to revise our previous plans for deployment of radars. Certain radars which were required to support our SAGE supercombat centers now are either not required or contriute very little to the overall command and control system. Included among these radars which are no longer required are sites which have previously been in operation as well as those which were planned but have not yet been constructed.

The Air Force expects to shut down the radar equipment at 13 of these stations within the next 12 months, and to cancel plans for another station not yet constructed.

Let me say in conclusion that no man—in the Congress, in the White House or in the Pentagon—can tell with certainty whether our Defense Establishment is adequate at any given moment to meet and completely defeat every possible combination of assaults that might be made on us. We simply do the best we can, on the basis of the best available advise and planning, to keep the country as strong and as alert as possible within the means available for a long and continuing effort.

In this connection, I am glad to say that no authorization bill passed by the Armed Services Committee of the Senate since the start of the cold war has ever failed to get adequate funds from the Appropriations Committee on which I serve. I mentioned earlier some examples in which additional funds were made available for particular programs that seemed vital in our judgment.

I am informed that, starting next year, the Armed Services Committee will enter still more fully into the area of authorizing legislation on the procurement of aircraft, missiles, and vessels as part of its plan to oversee more closely than even before the area of military policy planning. This undoubtedly will permit the Appropriations Committee to work in still closer harmony with the Defense Establishment and the Armed Services Committee.

I can assure you that the elimination of waste and inefficiency in the procurement of items ranging from aircraft carriers to paper clips will continue to be a major concern of the Congress, but no price tag will be placed upon our security and the Congress can be depended upon to appropriate sufficient funds to maintain our present military superiority.

High Wages Not Pricing Us Out of World Markets

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 8, 1960

Mr. HUMPHREY. Mr. President, Sylvia Porter, in one of her recent columns, warns that the fallacy that our high wage rates are pricing American goods out of world markets is fast becoming folklore. A second fallacy also being widely circulated is that American wage rates are continuing to rise faster than Western European rates, thus putting us in a

continually worsening competitive situation.

Miss Porter, in a sharp analysis of some aspects of our world trade position, points out that our workers turn out more goods per hour and that production costs often are higher in other nations than in the United States and finally that wages in Europe are rising faster than in our country.

The solutions Miss Porter recommends lie in finding answers to our lack of real selling, our tendency to cut product service, our tough credit standards, and our indifference to planning. The answers are not to be found in cutting wage rates.

I ask unanimous consent that Miss Porter's column be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

HIGH WAGES NOT PRICING US OUT OF WORLD MARKETS

(By Sylvia Porter)

A fallacy which shows dangerous signs of becoming folklore in our land is that our climbing wage rates are progressively pricing American products out of the world's markets—that, in short, because of our far higher wage levels, our products are less and less competitive with the goods of cheap labor nations.

Another fallacy which shows equally dangerous signs of becoming folklore is that our wage level is rising much faster than the wage levels of the major nations of Western Europe, and thus the wage spread between our country and European countries is widening and making our competitive position worse and worse.

It well may be that you believe these fallacies; they certainly are being publicized widely enough. But they cannot be supported by facts. Rather, new statistics just brought out by world-respected sources emphasize that:

Wages in Western Europe are rising faster than in the United States and the likelihood is that they will continue to rise faster, thereby closing, not widening the labor-cost gap.

Although Europe's wage levels are substantially below our levels—as they have been for generations—many factors other than wage levels decide the total cost of a product, and these other factors make it possible for a long list of products to be produced cheaper in our country despite our higher wage rates.

These facts are underlined in a new study by the French National Institute of Statistics and Economic Studies and are considered so important by New York's Chase Manhattan Bank that it is sending them in a report to all U.S. businessmen considering investments in Western Europe. They surely will be of interest to you too.

To begin with, the fact which is basis for the fallacies about our problems in the world's markets today is that our wage level is still so much above Europe's. Our hourly average of $2.68 compares with $1.08 in Sweden (highest in Europe) and 57 cents in the Netherlands (lowest average in Europe). These comparisons include fringe benefits or social charges which, incidentally, account for much larger part of total labor costs in Europe than here. In Italy, for instance, social benefits account for 43 percent of total labor costs.

In view of this central fact, how can it be argued that wages are not pricing us out of the world's markets? Here is how:

The hourly wage figures may often, as the Chase Manhattan Bank puts it, "understate actual labor costs." Our workers can turn out more goods per hour because they have more equipment behind them and they are more effective than equivalently skilled European workers.

Other costs beyond wages must be considered—such as the cost of fuel, power, construction, raw materials—and these other expenses frequently are higher abroad than here.

The trend is toward a more rapid rise in wages in Europe than in our country. Between 1950 and 1958, the wage rise in six European countries averaged almost 8 percent a year against about 5 percent here. And European labor unions are tightening their organizations, building their financial resources, pressing harder for more pay, shorter hours.

What is hurting us in the world markets is not our always superior wage scale. What is hurting us is our lack of real selling, our inferior if not deteriorating servicing of our products, our unnecessarily tough credit demands, our complacent indifference to topnotch planning to compete with our alert, vigorous, aggressive European competitors.

To accept the fallacy that we're being priced out of the world's markets by our wage rates is to accept defeat. We certainly are not going to slash our wage rates, and it will be a long time before Europe's level reaches ours. The answers lie in our common sense and courage, qualities American industrialists are supposed to possess in abundance.

Teachers Exchange Program

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, August 8, 1960

Mr. JAVITS. Mr. President, exchanges of American students and teachers with those in other countries serve our national interest, supplement our foreign policy and help disseminate the ideals of freedom and democracy in many parts of the world.

The number of Americans studying abroad, however, as well as the number of foreign students in this country is not as high as it should be. We need an exchange program which will result in the outflow of 100,000 Americans studying abroad annually compared to about 14,000 today. We are capable of enlarging our exchange program, reenforcing those which exist and instituting new ones.

One program presently functioning is the university contract system operated under International Cooperation Administration, by which American teachers help foreign governments and universities train their apprentice teachers and improve their educational standards. The success of this program so far is indicated by Dr. John H. Fischer, dean of Teachers College at Columbia University, in a letter to the House Appropriations Subcommittee on Foreign Operations, describing the experience of Teachers College. I think that Dr. Fischer's comments show how important is the university contract program and how necessary it is that we support this program and others like it, which seek to increase international exchanges of students and teachers. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a letter from Dean Fischer.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

We understand that in discussion of the mutual security authorization bill (H.R. 11510) questions have risen concerning university contracts in the ICA program. Since Teachers College is now working with three such contracts, in Turkey, India, and Afghanistan, it has occurred to us that you might be interested in a brief summary of our experience.

In Afghanistan since 1954 we have been working with the Institute of Education and Kabul University. A staff of some 30 persons, headed by 1 of our senior professors, works in 3 major fields. We advise the appropriate Afghan officials and actively assist them in establishing and conducting a program of teacher education for the elementary and secondary schools. We work directly with Kabul University in training teachers of the English language. In the third branch of our program our people serve as teachers of English in Afghan secondary schools.

All of these activities are related directly to appropriate departments in Teachers College so as to focus upon the problems of education in Afghanistan the total strength of our professional resources here in the United States.

Under our Indian contract we work with the Ministry of Education of the Government of India and with the Central Institute of Education, the National Institute for Basic Education, the National Fundamental Education Centre, the Central Bureal of Textbook Research, the Central Bureau of Educational and Vocational Guidance, and the National Institute of Audio-Visual Education. The overall purpose of our activities is to assist the appropriate Indian authorities in strengthening the national program of professional education for teachers. Since February 1959, three of our most distinguished professors, each with an international reputation, have been assigned to this project. One is currently serving as our chief of party on a 2-year assignment. Each of the professors, one in social and philosophical foundations of education, one in instruction, and the third in educational administration, has contributed to the project not only his personal competence but also the benefit of his extensive professional and scholarly contacts in his field.

Our third contract has to do with the development of the Florence Nightingale School of Nursing in Istanbul. This will be the first collegiate level school of nursing in Turkey. The work began 2 years ago when a group of 10 Turkish nurses, selected as the nucleus of the faculty of the new school, came to the United States for advanced study in the Teachers College Department of Nursing Education. In their work here they became acquainted with recent developments in nursing education in this country and at the same time planned the program for the new school in Istanbul. When they returned to Turkey in the summer of 1959, they were accompanied by two members of our faculty who continued to work with the Turkish faculty and other medical and nursing agencies in Istanbul. The project is moving forward and the building for the new nursing school is under construction.

The principal value we see in the university contract system is that the Americans who serve as consultants and advisers abroad go not merely as individual technicians but as representatives of established and powerful American educational institutions, to which they may continuously turn for help.

At the same time the experience accumulated by the consultants flows back into the university to strengthen the programs by which young people, both Americans and citizens of the host countries, are trained to carry forward the work begun by the consultants. I can testify on the basis of personal conversations with officials of the countries in which we are working that they value highly the association with American universities which these contractual arrangements make possible.

From the point of view of our own institution, the oversea contract program brings a number of additional problems which certainly make our lives no easier. Every time one of our professors is assigned overseas, we must find a suitable temporary replacement for him. Maintaining sound communication between the campus and the field project is complex and difficult. Arranging to receive and properly care for foreign student participants is a time-consuming and delicate business. Setting up and administering any government contract requires many hours of the time of administrative officers and professors. Nevertheless, we are convinced that the role of education throughout the world today is so important that we would fail in our duty if we were not willing to accept a fair share of responsibility in this work.

Whether or not our own institution continues in the contract program, we trust that the special values and long-range importance of university involvement in the international relations of the United States will be carefully and objectively appraised. We are certain that the benefits to America and to our friends overseas will be found to justify the necessary investment of public funds and private effort.

Very truly yours,

JOHN H. FISCHER.

Statement by Frank N. Hoffmann, Legislative Director, United Steelworkers of America

EXTENSION OF REMARKS
OF
HON. FRANK E. MOSS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Monday, August 8, 1960

Mr. MOSS. Mr. President, on July 20 of this year Mr. Frank N. Hoffmann, legislative director of the United Steelworkers of America, made a statement at the nonferrous conference of the United Steelworkers of America in Salt Lake City, Utah. Since the statement is one of policy made by a large national organization, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF MR. FRANK N. HOFFMANN, LEGISLATIVE DIRECTOR, UNITED STEELWORKERS OF AMERICA, AFL–CIO, AT THE NONFERROUS CONFERENCE OF THE UNITED STEELWORKERS OF AMERICA, NEWHOUSE HOTEL, SALT LAKE CITY, UTAH, JULY 20, 1960

Mr. Chairman, it is a pleasure to be here after the turmoil and tumult of the Democratic Convention last week at Los Angeles where I sincerely hope we nominated the next President of these United States.

The program of our union for the domestic nonferrous minerals industry lays down the line that the domestic minerals industry is not an island by itself. It is part and parcel of our entire economy. To the extent that the problems of the minerals industry are the problems of the economy as a whole, the solution must rest on an overall economic program.

The market for minerals is international; therefore, price is set on an international basis.

When supply becomes excessive lower prices result. This has an adverse effect on a segment of our mining industry. These are the high-cost producers whose operations are on a relatively small scale. We do not feel that tariffs and quotas offer a real solution to this problem. All that tariffs and quotas would accomplish would be windfall profits for the major producers.

1. As a general rule the big mines are low-cost producers; the small mines are high-cost producers.

2. One of the major ills of this industry is the erratic movement of prices.

3. The United States is an import nation, insofar as most minerals are concerned.

4. Many United States ore bodies are poorer in metal content than foreign ore bodies.

5. Some high-cost mines must eventually shut down.

In order to best alleviate many of the problems facing the domestic nonferrous minerals industry, the United Steelworkers proposes that Federal legislation be enacted providing for the creation of a domestic minerals agency. This agency would be empowered to—

1. Establish an economic price for minerals based upon the following standards: (A) Domestic production costs, (B) historic price of minerals, (C) prices of substitute materials, (D) defense and other domestic needs of minerals.

2. Administer a program of subsidy payments to domestic producers whenever the selling price is below the economic price. This subsidy will apply on a yearly basis only to a limited, fixed tonnage of any mine.

3. Administer a buffer stockpile of domestic minerals. The agency will buy the mineral when the market price is below the economic price. It will sell when the market price is above the economic price. As a general rule, purchases for the stockpile will increase as prices decline. The agency will not purchase more than 20 percent of any mine's output in any year. Appropriate restrictions would be set up to prohibit the use of the stockpile to break or weaken a strike.

4. Administer and exploration and development aid program. Loans will be made available for exploration and development purposes. In addition, development and exploration will be subsidized on a dollar-matching basis.

5. Administer a readjustment program. Extremely high-cost mines may well be forced to close. In these areas, technical and financial assistance will be provided to hard-pressed companies unable to meet the costs to modernize, diversify, or build new plants and businesses. In addition, special inducements will be offered to new industries to locate in the area. As a last resort, full assistance will be given for the purpose of relocating people in other areas. Such assistance must include: (a) Unemployment benefits, (b) assistance in finding another job in another area, (c) moving expenses, (d) retraining to acquire news skills.

So much for a general outline of the problems confronting us.

Now what have we been doing as a union to have this ambitious program enacted and bring some relief to this industry?

We have advocated aid for this industry since the 79th Congress. We have testified before every session of Congress since then.

During the 85th Congress, the Committee on Interior and Insular Affairs held a series of hearings on a long-range program for the minerals industry.

These hearings extended over a period of 4 months. They are the best and most complete hearings on the subject that have been made to date.

President McDonald laid the groundwork for the program that I have already outlined, at these hearings.

On September 22, 1958, the administration finally moved to do something when the President agreed with the unanimous finding of the U.S. Tariff Commission that escape clause relief was warranted in the case of lead and zinc.

The President's proclamation limited imports by an annual quota equivalent in amounts to 80 percent of average annual commercial imports during the 5-year period, 1953–57.

The quota was allocated among exporting countries and subdivided by calendar quarters and by tariff schedule classifications.

The President stated in his proclamation that the imposition of quotas was an unusual step. Of course any step that would help industry or labor would be an unusual step—to a Republican administration.

I would like to point out that the administration had rejected higher lead and zinc tariffs at that time and instituted a Government stockpile buying plan instead, to help the industry out of a recession, while at the same time the late Secretary of State, John Foster Dulles, asked representatives of the importing countries not to take advantage of the stockpiling plan by increasing production sharply and flooding this country with metal. Canada was one of the countries that complied conscientiously with this request.

It should be mentioned that the quotas which restrict imports of lead and zinc to 80 percent of the average amount that entered this country from 1953 through 1957 could not take exclusive credit for the slight improvement. Demand for both metals already had started to pick up when the quotas were announced on September 22, 1958, to be effective on the 1st of October.

Under the quotas, imports may not exceed 354,720 tons of lead a year or 520,960 tons of zinc. These represent 80 percent of the average 1953–57 commercial imports of 443,400 tons of lead and 651,200 tons of zinc. However, import quotas have not proved a satisfactory means of curtailing imports of lead and zinc. Since 1951, imports of lead have increased from 75 percent of U.S. production to more than 90 percent; imports of zinc have zoomed from 72 percent of domestic production to more than 115 percent. At the same time, the number of domestic lead and zinc mines has declined substantially.

One of the items in testifying on S. 4036, this year before the House Committee on Interior that we fought for was a bonus or subsidy for small producers of lead and zinc.

We strongly advocated such a step and I am happy to report that the House of Representatives recently approved by a vote of 197 to 191, a bill—the Edmundson bill—to allow the Federal Government to subsidize the mining of lead and zinc by small domestic producers.

The vote was close because Republican and Southern Democrats teamed up to fight the bill.

This bill would provide subsidies to producers whose mine output amounts to less than 2,000 tons of lead and zinc a year.

Payments would be made to insure producers return of 14½ cents a pound for zinc and 17 cents a pound for lead.

Current prices for lead and zinc are 13 cents for lead and 12 cents for zinc. Under the subsidy plan, the Federal Government would make up the difference.

Just before Congress adjourned to reconvene in August the Senate Finance Committee approved a bill that would put a fixed duty on lead of 2 cents a pound plus a flexible additional tax of 1 cent a pound.

This flexible tax would apply when lead prices drop below 13½ cents and would be removed when they reached 14½ cents. The fixed duty on zinc would be 1½ cents a pound. In addition, a flexible duty of 0.7 cents would apply when zinc prices dropped below 12½ cents a pound and would be removed when they rose to 13½ cents. We do not agree with the approach of the Senate Finance Committee.

There is a good chance that the subsidy to small mine owners—the Edmundson bill—will pass the Senate. However, there is a distinct possibility that the President will veto the bill.

The Administration will probably recommend to the White House that both bills be vetoed. The White House contends that current quotas limiting lead and zinc imports are adequate protection for the industry.

We are going to do all that we can when the Congress reconvenes in August to see that this Edmundson bill is enacted into law.

This will be a step forward in helping an industry that has suffered altogether too long—and is certainly deserving of help.

I wish you success in this conference.

The Puzzle of Farm Politics

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Monday, August 8, 1960

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial entitled "The Puzzle of Farm Politics," published in the Wall Street Journal of August 5.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PUZZLE OF FARM POLITICS

For a generation or more the farm program has been, inevitably, an election issue; today it is a national scandal. Unfortunately neither candidate seems prepared so far to offer any useful suggestions for dealing with it. And this is strange, because practical political solutions are possible today as never before.

It is perfectly true, as the Democrats charge, that the costs of the Federal agricultural programs have skyrocketed in the years of the Republican administration; that Federal surpluses have increased enormously; and that, despite all the outpouring of money from Washington, total net farm income has not improved.

But these statements do not mean much unless it is asked why matters have turned out so disastrously. The principal reason is the continuation of the high price-support policies designed to spur maximum production as a World War II emergency measure. Secretary Benson has succeeded in getting through Congress some modifications of this, but Congress has balked at significant changes. So it is not the Republican administration but the Democratic Congresses that stand indicted for the farm chaos.

That responsibility, one might suppose, would impel the Democrats in particular to search for commonsense solutions. Instead we find in the party platform and the statements of Senator KENNEDY an appalling intellectual poverty. As though high price props were not the root of the trouble, the Democrats would make them worse by restoring them to a rigid 90 percent of parity.

Vice President NIXON, for his part, has yet to provide details of his approach to the farm problem. But he has already talked, alarmingly enough, of massive aid without regard to budgetary considerations.

There is no mystery, however, about the right approach. It is a progressive lowering of price supports to a point where domestic and foreign markets are able to absorb farm produce without these monstrous Government surpluses. Objective agricultural experts know this; farmers themselves say it over and over. The trouble is that this approach is considered politically unrealistic.

A couple of facts, it seems to us, strongly suggest that even the politics of a sound farm program is far less formidable than the politicians profess to think. One is that the bulk of price support payments goes to the growers of a very few crops which account for the worst surpluses. Some of those growers are wealthy—are, indeed, corporations. What is politically so suicidal about opposing huge Federal handouts to corporations for the purpose of piling up costly Government surpluses?

Another fact is that a large segment of the farm population embraces people who are not properly speaking farmers. These include people with other jobs or income who have taken up farming on the side to get in on the Government gravy. Politicians hardly need to shed public tears for these.

In addition, are the so-called marginal and largely unsubsidized farmers who add practically nothing to the national product and can't make a decent living at farming. Under the guise of preserving farming as a way of life or preserving the family farm, the politicians demand that these people be kept at it by subsidies which could not make them efficient producers. What is so noble about condemning them to continued and needless squalor?

That is not humanitarianism. The humanitarian thing is to encourage marginal farmers to get into productive work. Where needed during a transitional period, the Government might well spend some of the money it is wasting on farm millionaires in helping train these erstwhile marginal farmers in industrial or other work that would enable them to share in the general prosperity.

A further, and powerful, political fact is that the farm population is declining despite all the solicitations of Washington; the tremendous increases in productivity per man and acre have decreed that. It should be a source of pride rather than a cause for rebuke, as when the Democrats charge that 3 million people have been driven from the farm since 1952.

Whatever the validity of that particular statistic, the decline has been notable for decades. Its political meaning is that the farm bloc is no longer so potent in an increasingly urban America—particularly when farmers are also dissatisfied with the Democratic policies which the Republicans have perforce pursued.

Over a year ago, Mr. Benson said: "The economics of the farm dilemma is simple—it is the politics of the problem that is baffling. What farmers want and need is less Government in the farming business—less politics in agriculture."

But the politics, it seems to us, need no longer be such a hopeless hurdle, if the candidates would show the political sense to state the honest facts and draw the plain conclusions.

Why We Need a Democratic President in 1960—Prize-Winning Oration by Susan Springborg, St. Paul, Minn.

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 8, 1960

Mr. HUMPHREY. Mr. President, in Minnesota, as in all States, young men and women are attracted to the Democratic Party because it is the party for today and the future, and not the party of yesterday. Three young Minnesotans who participated in the Minnesota Young Democratic-Farmer-Labor Party oratorical contest on June 19, 1960, in Minneapolis, demonstrated the fine talent and straight thinking on major national issues that these young people bring to our party.

I ask unanimous consent that the prize-winning oration by Susan Springborg, St. Paul, Minn., second place, be printed in the Appendix of the RECORD.

There being no objection, the oration was ordered to be printed in the RECORD, as follows:

"The Eisenhower administration is like a tranquilizer pill factory. With each speech and each public appearance, it seeks to lead us gently and expertly into an unreal, delightful, trivial world, without veracity, without dignity, without humanity, and without purpose, except, of course, the purpose of balancing the budget." This statement by Adlai Stevenson sets the tone well for the more specific inadequacies of the administration which I would like to suggest today. However, remembering that it is easy to criticize, and more difficult to solve a problem, I would like to do more than simply point out Republican failures. I'd like to suggest solutions which have been proposed by leading Democrats, solutions which I think have the potential for success.

In analyzing the specific inadequacies I referred to, I'll review the record of the present administration in two phases, at home and abroad. In doing this I realize I am committing the same blunder that the administration has, trying to separate domestic and foreign policy. But I hope you will forgive me for this error, realizing that the separation will serve an organizational purpose for my remarks.

First, then, let's look at the past 8 years here at home by evaluating our economy and the progress made toward solving domestic problems. Let's measure our economy in terms of the three comprehensive goals set forth by Economist Leon H. Keyserling. The first of these goals is, "To achieve steady and optimum growth in real terms." Our rate of growth in gross national product is about 3 percent a year, as compared to a Soviet minimum growth rate of 6 percent a year. These statistics from the New Republic of March 7, 1960, present a challenge to us, not only in terms of the Soviet threat, but also in respect to the population explosion at home. Why have we failed to meet this challenge? I believe that our failure can be attributed to Eisenhower's fiscal policies. According to the Progressive, the Republicans have acted "as if a balanced budget was the paramount means of meeting the Soviet economic offensives." Inflation has been complicated by tight money policies and high interest rates designed to slow down

our economy. Keyserling summarizes: "The repressive budgetary policy has stunted economic growth and truly aggravated price inflation."

Further, unemployment remains as an unsolved problem. Currently, about 6 percent of the working force is unemployed. In 1959, when 4,750,000 men and women were without jobs, the President did not even deign to mention them in his state of the Union message.

And finally, there is no solution to the longstanding farm problem. Mr. HUMPHREY commented, "I am particularly conscious that the farmers have suffered more than any other group in the American economy from the stubborn stupidity and dogmatic shortsightedness of the Republican administration."

Similarly, our economy has not fulfilled the second goal, which is "to apportion our total national production wisely, in accord with relative priorities of needs, so that we do not get what we need least at the expense of what we need most." We have what Galbraith has called the "social imbalance." Increased financing for education, particularly on the Federal level, is urgently needed. Mr. NIXON recently defeated a bill for such aid in the Senate. We must provide added help to the aged, for 80 percent of those 65 and over live on less than $2,000 a year, and 60 percent of them on less than $1,000. Mr. Eisenhower has opposed the Forand bill. Conservation, urban redevelopment, mental health research, water and air polution—all of these require our attention if we are to erase the "social imbalance." Yet, during the last session of Congress, Mr. Eisenhower used the veto 150 times.

Taxation must be altered to provide for these needed expenditures. The New Republic of March 7, 1960, stated, "At current levels of taxation the best rise in the GNP that the country is likely to get will not bring enough funds to do what must be done." This does not necessarily indicate an increase in the tax rate, but rather a tightening of taxing policies. Leading Democrats have suggested that $4 billion in dividend income goes unreported; if there was a dividend withholding tax, as in the case of many other sources of income, the Government would collect at least a billion dollars of the dividend-based revenues that were due it (Progressive, May 1960). The administration has also chosen to ignore the Democratic proposal to tighten up the tax-free expense allowances.

The third economic goal is to combine economic progress and efficient use of resources with economic justice. We have failed here also. The administration has not met the challenge of technological unemployment and displacement, nor of the pockets of poverty throughout the country. A recent report of the Bureau of the Census stated that slightly under 25 percent of U.S. families live on less than $3,000 a year, and 6.4 percent on less than $1,000. Yet, according to the Progressive of March 1959, "The President's messages and budget do not contemplate any direct attack on, or for that matter, show any awareness of, the needs created by the recession or the longrun problem of technological unemployment."

At home, a consuming fear of inflation has blinded the Republican administration to America's urgent economic and social needs. That is the first reason I would choose a Democratic President in 1960.

Now let's examine the Republican policy abroad, in the areas of defense and foreign relations.

"The millitary position of the United States has, in the short span of 15 years, declined from one of great security to one of great insecurity" (Washington Center of Foreign Policy of Johns Hopkins University, December 1959). Why? The reasons are numerous: lack of planning, coordination, basic research, and efficiency. But may I mention just one, inadequate financing. We are spending about $45.8 billion on major national security this year, and several independent studies, requested by the President to evaluate our defense, have concluded that these expenditures are inadequate. The Rockefeller report stated: "The overall U.S. strategic concept lags behind development in technology and in the world political situation. Systems of budgets, appropriations, and financial management are out of gear with the radically accelerating flow of military developments." The Gaither Committee, appointed by Eisenhower in 1957; concluded: "If, for the 10 years ending 1967, Russia continues to increase her military expenditures by 6.5 percent per year—while ours remains fixed at $40 billion per year—then we will obviously fall behind in relative military strength." And finally, the President's Committee to Study U.S. Military Assistance Programs, which added, "The reduction in funds for the military assistance programs in the present fiscal year involves a serious security danger for the United States and the free world."

In spite of these warnings, the President continues to sacrifice our national safety to his budget.

Although the administration has been at fault in the area of defense, it has been even more negligent in striving for disarmament. Public opinion polls indicate that the American people are most concerned with peace, not missiles. Yet, Eisenhower's administration has been more interested in "the Nation's capability to destroy the potential enemy rather than in ending the cold war. It has not taken a positive or creative approach to negotiated disarmament" (Progressive, May 1960). JOHN KENNEDY has pointed out that delegates to peace conferences have been poorly prepared, and that we have no consolidated leadership in working for peace. There are six different governmental agencies in the area. HUBERT HUMPHREY has offered his solution in the form of a national peace agency, and JOHN KENNEDY has suggested an arms control research agency. Either one of the proposals would serve to intensify research and effort toward achieving peace and disarmament by consolidating the various agencies.

In respect to our foreign policy as it affects the uncommitted world, I could mention the U–2 blunder, the Japanese fiasco, the problems created by not recognizing Red China, of the questionable success of our buy-American trade policies. But let's glance at our record in foreign aid. The administration has acted on the principle, "Buy friends and influence people." It has been more concerned with the military rather than the economic growth of underdeveloped nations. Adlai Stevenson commented, "I regret that the administration rejected the recommendation of the Senate Foreign Relations Committee last winter for a $1.5 billion loan fund for about 5 years." If the recommendation had been approved, it would have allowed long-term planning, something which is badly needed.

Stagnation, not innovation, has been the keyword for the past 8 years. Arthur Schlesinger summarized the situation well: "The administration's new ideas have either been flops, like the Baghdad Pact and the Eisenhower doctrine, or else, were fortunately, never carried out, like the unleashing of Chiang Kai-shek and massive retaliation." There have been no fresh suggestions, like Mr. HUMPHREY's White Fleet, the International Educational Development Foundation, and food for peace. Creativity has been absent.

Abroad, a concern for the budget rather than our national security, a failure to progress toward negotiated disarmament, an ineptitude in dealing with the uncommitted nations, and a deficiency of new ideas, has characterized the years of Republican administration. That is the second reason I would choose a Democratic President in 1960.

Again, a concluding statement by Adlai Stevenson seems appropriate, "I believe that the United States is ready for a new awakening and the achievement of greater goals. Within it are the moral and material elements of new purpose and new policy. It is the task of leadership to marshal our will and point the way. We had better start soon for time is wasting."

May I add my own footnote. We can start—with a Democratic President in 1960.

Citizens' Platform for 1960 Political Campaign

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, August 8, 1960

Mr. WILEY. Mr. President, as we know, the major political parties—Democratic and Republican—created at their national conventions and presented to the American people party platforms for the 1960 election.

The platforms for the most part reflect what the parties propose or promise to do for the people.

We recognize, of course, that in many fields the Federal Government does have a fundamental and/or supplemental responsibility.

Naturally, each party wishes to—and, in fact, must—clarify what it proposes to do on major national issues, if it hopes for victory in November.

As citizens, however, I believe it is significant that—as provided by the Constitution—we reserve the responsibility and opportunity to do what we can for ourselves.

Among other things, this means retaining the rights, freedoms, and responsibilities, to stimulate the creative efforts and "test the mettle" of the American people.

In effect, we do not want to spoon-feed our citizens with a ladle of bureaucracy, from the cradle to the grave.

Recently, I was privileged to outline proposals for a citizens platform for the 1960 campaign, in an address over Wisconsin radio stations. I ask unanimous consent to have excerpts from the address printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

The major political parties—Republican and Democratic—have adopted platforms upon which to run in the 1960 elections. For the most part, however, these resolutions propose—or at least promise—what the parties would, if elected, do for the people.

About 100 years ago, however, Abraham Lincoln—in a now time-tested statement—said: "The legitimate object of government, is to do for a community of people, whatever they need to have done, but cannot do at all, or cannot so do well, for them-

selves—in their separate, and individual capacities."

As citizens, I believe that it is essential that we—the people—retain the maximum rights, freedom, and responsibility—to stimulate the creative potential and "test the mettle" of our people. What we do not want is to spoon-feed our citizens by the ladle of bureaucracy from the cradle to the grave.

What, then, is the citizen's role—yours and mine—in this upcoming campaign?

BILL OF RIGHTS FOR VOTERS

Fundamentally, Mr. and Mrs. Voter have both rights and obligations.

In the campaign, we, as citizens, have a right:

1. To be presented with all the facts—not just "selected data" to prove allegations;

2. To expect candidates to "live up" to their campaign promises;

3. To a campaign debating the issues, not a mudslinging foray; and

4. Since we are living in a "glass house"—so to speak, with the world looking on—we have a right to expect responsibility by candidates in public statements. Why? Because any such statements may provide propaganda ammunition in the Communist international ideological struggle. In these times, we are no longer an island unto ourselves. Consequently, we need a new "high road" of campaigning.

Today the American people are looking more closely at the qualifications and capabilities of candidates. Also, there is a growing trend—with some exceptions—away from the hard-and-fast "party line" voting. The voter who "thinks for himself" is a growing phenomenon. Overall, I believe this is a healthy sign in U.S. political life.

VOTERS' OBLIGATIONS

Now, let's look at voter obligation: These include:

First, to roll up our sleeves and work in the party of our choice;

Second, if we can, contribute. In the words of the popular slogan: "Don't pass the buck, instead, give a buck."

Third, be informed on the candidates, their qualifications, and the issues of the day; and

Fourth, to vote.

The voting record by U.S. citizens is deplorably low—ranging from 24 percent in 1904 to 63 percent in 1952 in a national election.

By contrast, voting in other countries has reached such ranges as follows: Italy, 93 percent; Germany, 86 percent; Turkey, 87 percent; Denmark, 80 percent.

For 1960, the Nation should shoot for a minimum of 75 percent, and, if possible, a 90–100 percent voting record in the election.

Now, why is voting so necessary?

In a complex age, each of us, as citizens, faces the task of fulfilling a dual role: First, as an individual integrated into our social and economic structure; and second, as a civically responsible citizen in our political system.

Tragically, the voters of the country—historically—have demonstrated far too little interest in exercising their voices in government. Specifically, what does this really mean?

Loss of a voice in government—through negligence—for millions of people;

Rule of a minority, since the total vote at its top is barely over 50 percent of the population;

An inordinately strong voice in government for the special interests crusading for their own goals; and

A loss to the Government itself in terms of strength of support, ideas, efficiency, and organization of the nonvoting populace.

In general, the apathetic attitude toward voting results in "somebody minding our business.'" However, government is the business of each of us.

NEW LOOK AT CITIZEN'S ROLE IN ECONOMY

Over the years, the Government has assumed a larger and larger share of responsibility in a great many fields. Unless voluntary effort is undertaken by the people to handle as many programs as possible, it can be safely assumed that the long arm of Uncle Sam will reach farther into the affairs of our citizens. Again and again, it must be stressed that the success of a free society depends upon maintaining opportunity for the initiative, ingenuity, and enterprising spirit of its citizens.

Today, we live in a fast-changing world. Again, to paraphrase Lincoln: "In new times, we need to devise new programs." During this process, however, we must be careful not to forget the role of the individual and assign all new responsibilities to Uncle Sam. Instead, there needs to be every precaution taken to preserve—within an orderly society—the opoprtunity for the individual to make his unique contribution with a maximum degree of freedom.

What does this mean? Among other things:

A reevaluation of the individual versus governmental role in developing new programs.

A stronger, more active voice in Government for our citizens;

Surveying the gamut of programs to see how and where, individual effort and group, State, or county initiative can take the burden off Uncle Sam;

Adopting an "election year" resolution that candidates and parties—not just with "promises" of more Government aid, but with a "sense of responsibility," will merit—and get—our votes in November.

The lifeblood of a republic is its people—well informed, creative, thinking citizens.

To a large degree, progress in a free society depends upon the active participation of its citizens.

First, we must elect the right candidates to serve our country; and

Second, following such election, we cannot adopt the attitude of "Well, we've elected him. Now let him do the job."

Instead, in these challenging times, we need a real mobilization of our national manpower and resources—on a voluntary basis—to assure an ever-better life for our citizens and establish peace on the globe.

Commencement Address by Lt. Gen. Arthur G. Trudeau

EXTENSION OF REMARKS

OF

HON. FRANK E. MOSS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, August 8, 1960

Mr. MOSS. Mr. President, on the 22d of July Lt. Gen. Arthur G. Trudeau, Chief of Research and Development of the Department of the Army, made the commencement address to the 1960 Defense Strategy Seminar at the National War College. His message was a warning to America. He calls attention to the threat of Communist aggression and to the need of America to recognize the threat and do something about it. In hopes that more of America may become alert to the threat, I ask unanimous consent that the remarks by General Trudeau be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ACTION 1960

Remarks by Lt. Gen. Arthur G. Trudeau, Chief of Research and Development, Department of the Army, Defense Strategy Seminar, 1960, the National War College, Officers' Open Mess, Fort Lesley J. McNair, Washington, D.C., Friday, July 22, 1960

Thank you, General Harrold, General Armstrong, distinguished guests, graduates of the 1960 Defense Strategy Seminar, ladies and gentlemen, and fellow Americans. I deeply appreciate the opportunity to be here with you this evening. I congratulate those who have conducted and made this fine course possible. I also congratulate all the students who have had the opportunity to benefit from the splendid curriculum. You must sense new horizons. Instead of thinking of today's events as your graduation, however, I suggest you think of them as your ordination. I hope your diploma will haunt you everytime you look at it unless you embrace it as a commission and a directive to go forth and tell all those your voice or pen can reach how dire is our danger and how urgent, our need.

The need of the hour, above all else, is a dynamic awakening of American public opinion in support of worthy, clear-cut, comprehensive national goals.

I hope you all have read—and given much thought to—the splendid series of articles in Life magazine during May and June concerning this Nation's need to reexamine its pillars of national purpose. And I hope you are aware of the work of the President's National Goals Commission under Dr. Henry Wriston, the president of the American Assembly whose report is due at the end of the year.

I urge you to study and to keep abreast of these developments—they are guided by men who understand the deep and fundamental meanings of what our national purpose should be. There is no doubt in my mind that if such guidance is implemented our country can rise to meet the Communist challenge and advance the vital interests of freedom throughout the world, and here your leadership is badly needed.

As a people we must more meaningfully define our national goals and objectives and again fire the fuel that brightens the uplifted torch of liberty, but it can only come from within the heart and soul and body politics of an awakened America.

There is a growing recognition of this fact as America stands today at a critical moment in history—at the crossroads of our destiny—fighting to halt and repel the advancing growth and spread of an alien and amoral ideology relentlessly dedicated to the suppression of freedom and domination over the globe. For a half century, the challenge of communism steadily has grown in all of its ramifications—economic, social, psychological, and political as well as military—until today it is reaching the full crest of its drive.

The time is now—to strike and shatter it by force of dynamic policies and actions propelled by an awakened people.

This is where you come in. The challenge has never been so grave nor the cold war so hot. The relative power of the Sino-Soviet bloc has never been so great in the military, economic, and political-subversive fields. The free world must awaken—now.

We need to get pulled out figuratively of our campagne-filled bathtubs and thrown under in ice-cold shower.

The alternatives to such an awakening are either a nuclear hell or the continued submersion of free men beneath the enervating and lethal waves of communism.

The Red-written record is clear. And it has been starkly clear since the first unfurling of the banner raised by Marx and Engels and Lenin against God and man. Make no mistake: Since that convulsive event, Christian civilization and communism have been locked in a struggle to the finish—and wiser heads have realized it.

Like you, I view this situation with some trepidation, but I am more shaken by the fact that many—many of our people do not. They are too complacent, too beset with seeking final solutions to world problems through such hopeful policies as containment and status quo, as they are lulled and dulled by the siren of peaceful coexistence and languor in the lap of luxury and domestic prosperity.

Our people must come to the realization that the tides of history cannot be contained and that there is no such thing as maintaining the status quo. Unless we have the urge to push onward and upward, we shall be thrust back. To rest is to rust. I can find in history no periods which mankind views with real pride except those in which heroic efforts usually accompanied by great sacrifices were made to advance. There is inspiration and growth in the path of progress; there is only atrophy of the spirit in fancied security and repose. The great illusion of the invincibility of American power needs to be carefully reexamined in the cold light of a new era.

There can be no doubt in any well-informed mind that a rapidly expanding Soviet technology with all its sinister facets, poses the greatest threat of our day to the peaceful and productive evolution of mankind. With all our energy and resourcefulness we must counter this threat but it can't be done by ignoring it.

Within this context, I speak to you today.

Since last year's class graduated, the yeast of their enthusiasm has leavened thousands of other Americans. Now we look to your fertile minds to again bulge the numbers who recognize that, at our level at least, greater leadership can and must be generated. Any of you who fail to do so are not worthy of the effort or expense of bringing you here or of the uniform you wear. Tell our people the facts.

As we engage this enemy, let us be fully aware of two other fast-moving phenomena, which are part and parcel of the worldwide upheaval of this new era.

One is the rising tide of ethnic nationalism which burst forth from the agonizing struggles of World War II and from the impact of modern communication and transportation—and which is creating truly significant problems in those vital areas of Africa and Asia, known as the uncommitted world. These people—diseased, undernourished, illiterate, impoverished—call for an improved standard of living. They look to see which system—the free world's or the Communist—can best help them secure the economic necessities of life—and which system can do it more rapidly. We must find solutions to their problems and show them that economic growth and technological progress are in better harmony with our system and our type of freedom—than with Communist slavery.

Do you realize that 30 percent of the 100 nations in the U.N. by 1965 will be from Africa?

Do you know that in all of the Congo, there are only three natives who are college graduates? And 47 in Libya?

Do you know that the Congo contains half the world's uranium, 70 percent of its cobalt, 80 percent of its industrial diamonds, the world's purest copper and much of its tin?

Do you know that more central Africans are being educated and trained behind the Curtain than on this side of it?

Do you know that the Congolese are waiting for a young Congolese native to finish a course in business before he assumes the presidency of their Central Bank?

Can we define the difference between anarchy and chaos? What do the sickening events of these last weeks mean?

What about a Khrushchev who completely ignores wholesale murder, disorder, brutality and rape in calling for us to do nothing in the Congo and even to evacuate the only remaining forces of law and order.

How thin is the veneer of our civilization against the rising temperatures that scorch it from below? Can we invent and use a fire extinguisher before man's loftiest goals and noblest dreams are a charred and smoking mass of ruins?

On the international scene, our leaders must seize, retain, and exploit the initiative in all fields of human endeavor. We must unmask the false image communism is projecting to the world—the image of a winning movement inevitably riding the rising wave of history. We must use the fruits of our free enterprise technology to counter and disprove this Soviet claim.

An obvious example of this initiative is the need for greater concentration of technological effort in Asia and Africa in order to bolster fledgling and underdeveloped countries now reaching out from centuries of backwardness toward the promise of political liberty, economic freedom, and material improvement. In this uncommitted part of the world, we have some influence, and we should have; but we should not confuse our affluence at home with our influence abroad. To have luxuries is one thing; to have comforts is another; and to have the necessities of life is a third. What are luxuries to others are considered necessities by us. It is high time now for Americans to differentiate between these separate and profoundly different human requirements and possessions and reassess our values from a mature and modern viewpoint.

The populations of the Middle East and Latin America share a common awareness of the problems in Asia and Africa and a passionate conviction that they can offset the great divergence between their living standards and those of the West. If peace and stability are to be maintained in this shrinking world of ours, their aspirations must be recognized and their needs met to a greater degree. To the extent we can assist, we should, in the interest of both humanity and of international peace and progress. As I said if the threat of world communism were removed tomorrow, the problems caused by ethnic nationalism so rampant in all the underdeveloped areas of the world would still challenge our best efforts for the next century.

The other phenomenon is the explosion in science and technology which is drastically reshaping our world, bringing to our generation more changes than were faced by our forebearers in any past period of history.

In the last 100 years 2 percent of recorded time—mankind has achieved 90 percent of his technological progress. The future may be even more astounding! Of all the men who have ever been trained in science and technology, it is estimated that nine-tenths of them are alive today.

The implications of this exploding technology are truly fantastic. Not only will national security profit from this amazing surge in technology, but literally all mankind if we have but the wisdom to employ its potential.

At the taproot of this marvelous technological age is the disturbing fact that nations have at long last achieved the awesome power of mutual destruction. With the key of science and technology, mankind has freed these fearful forces which cannot be reimprisoned. Today, a single nuclear-tipped missile can equal in destructive power all the devastation created during World War II. There is worldwide concern that this terrible power will, by design or miscalculation, break loose and wreak havoc upon nations and peoples.

Now, in this life there are few certainties, but one of them is that eternal vigilance is the price of liberty—and today, even of survival—and great as our problems are, their solutions are not beyond the genius of the American people. Informed and dedicated—alive to the stark reality of our time—we can prepare to sacrifice and know it is better to give freely of our treasure and sweat now, than our blood and tears later.

Whose memory today is so short and shallow he fails to remember that less than 10 years ago, the blood of 140,000 Americans was shed on Korean hillsides as a measure of our determination to repulse aggression and to advance the cause of freedom whatever the cost, whatever the sacrifice? This was 4 times as costly as our own revolution but the price of freedom is higher today—both to gain and to retain. We were right beyond measure in meeting that challenge—and experience is a bitter teacher, but every citizen should remember the lesson to insure that next time we be more ready and better armed when the Communists charge again. I wonder how well we have done so?

Never must we forget that the Communists consider themselves perpetually at war with the non-Communist world. In their ugly, tortured logic, peace is a condition that can exist only on their terms. They cry "peaceful coexistence" when they actually mean "coaxful nonresistance." They define peace itself as a condition that can only exist in a classless or Communist world.

Consider for a moment the growing Communist drive in Latin America and the provocative Soviet remarks on the Monroe Doctrine. Our President told the Communists as well as our friends that the policy announced by his courageous predecessor over 135 years ago was a rock that the surging waves of communism could not wash away. I wonder how many recall that when the Monroe Doctrine was promulgated in 1823, it was as much directed against Russia as a leader of the Holy Alliance and a growing threat to our Pacific coast as against the nations of Western Europe. And today, as again events have come full circle in the tide of history, we can consider the menacing situation in Cuba in light of these words of Rudyard Kipling:

"Fenced by your careful fathers, ringed by your leaden seas,
Long did ye wake in quiet and long lie down at ease;
Given to strong delusion, wholly believing a lie,
Ye saw that the land lay fenceless, and yet let the months go by.

But ye say, 'It will mar our comfort.' Ye say, 'It will minish our trade.'
Do ye wait for the spattered shrapnel ere ye learn how a gun is laid
For the low, red glare to southward when the raided coast-towns burn?
(Light ye shall have on that lesson, but little time to learn.)"

Yet, the powerful material forces arrayed in this struggle, while of vital importance, are still secondary, for this worldwide battle will be won or lost primarily on the windswept crags of the spirit—in the hearts and minds of men.

True, the competition is very real in the economic and military realms because both sides possess vast power, but the best defense of all that we hold dear is to keep freedom's fire burning brightly in those three immutable pillars of our Western civiliza-

tion—the home, the church, the school—and only an awakened people can do so.

In ever-strengthening and vitalizing these institutions, we must redouble our efforts to differentiate between our standard of living and our way of life.

The American way of life, based on a belief in the dignity of man, faith in God, free enterprise, and freedom and justice for all, was clearly spelled out by our founders. To enjoy these blessings, millions of people sought, and still seek, the protective arm and guiding light of the Statue of Liberty. Today, though less than 200 years old as a nation, we stand as the patriarch of all freedom-loving peoples everywhere. This is why we must lead; this is what we have to protect! Quality is more important than quantity. If democracy is only the triumph of mediocrity, we are doomed. We must not tarry in the mirage of material comforts when there are bolder and brighter horizons worthy of our struggle.

Our standard of living is something else. Our collective talents, energized by easy access to great resources, free enterprise and advantages stemming from our creed and our system, have given us material benefits in excess of any other people in this world. But we must be on guard to assure that these blessings are disciplined—held in their perspective—that they are made to contribute to the advancement of our way of life, not permitted to command and subvert it.

We must never, never forget that the real capstone of all strength lies in firm advancement of the spiritual values that have made America the leading nation on this earth—that infatuation with things material can destroy us—that the true strength of freemen and nations everywhere comes from faith in a Supreme Being—dedication to a just cause and courage to live, or if necessary to die, for it.

Thus, the heavy mantle of free world leadership, now resting precariously on our shoulders, will drape itself more securely and more gracefully about us if we not only guard it against the ominous pressures of today but guide our Nation to an enlightened and happier tomorrow. Your job is to get out and do your part. The need for courage on the battlefield was never greater than in the mortal combat in which we are now locked to the finish.

The great days of America must not lie shrouded in past glories. We have but glimpsed the dawn of national achievement. Unlimited is our future if we have the courage to seek it. A glimpse of the coming years burns bright with promise—for those who dare. Our heritage bespeaks our greater destiny, and freemen everywhere pray that we will find the wisdom and the strength to gain it for all mankind.

The kind of national spirit, dedication, and courage that we must have today was clearly demonstrated to the Connecticut State Legislature back in the 18th century. Those were still times of deep-rooted superstitions and beliefs about all of the forces of Nature. When the sun darkened from a total eclipse of the moon, the good citizens of Hartford thought the Day of Judgment was at hand. The legislature was in session that day and the members, some of them panic stricken, began to rush about excitedly. The speaker of the house stilled the commotion and rapped for order. Then the old man raised his voice above the babble and said: "This darkness does not matter unless it means the end of the world. And if the world is indeed ending, I choose to meet my Maker while doing my duty. Therefore, I ask that candles may be brought, so that this house can continue its business."

Take your candle and light it—now.

And Godspeed and good luck to all of you.

Water Pollution

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, August 8, 1960

Mr. KEATING. Mr. President, water pollution is rapidly reaching the proportions of a major problem in this country. In what may well be a precedent-setting court suit, the Federal Government has moved toward suing the city of St. Joseph, Mo., in order to compel it to stop polluting the Missouri River. A Conference on Water Pollution, arranged on the recommendation of the President, will meet in Washington this December to study the pollution question as a whole.

I ask unanimous consent to include in the Appendix of the RECORD the following account of the program and progress of the Conference to date.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DR. BURNEY CALLS NATIONAL CONFERENCE ON WATER POLLUTION

More than 1,000 leaders representing all walks of life throughout the United States will meet in Washington, D.C., next December to attack one of the great still-unsolved health and economic problems facing the American people.

The first federally sponsored Conference on Water Pollution ever held will be called to order on Monday, December 12, by Surg. Gen. Leroy E. Burney before an audience representing some 300 national groups and organizations. The 3-day meeting will be held at the Sheraton-Park Hotel.

The National Conference is being called at the direction of President Eisenhower and of Arthur S. Flemming, Secretary of Health, Education, and Welfare. Secretary Flemming will make the opening address of the Conference on December 12.

Organizations to be invited to the Conference will include a broad sampling of national groups with a special stake in maintaining adequate supplies of clean water. Among these will be municipal, State, interstate, and Federal organizations and agencies; industrial, farm, and labor groups; civic clubs and associations; fish, game, and boating associations; and organizations in the fields of recreation, conservation, engineering, public health, and scientific research.

PRESIDENT ASKS FOR MEETING

The Conference arises from a message delivered to the Congress by President Eisenhower on February 23, 1960. In his message Mr. Eisenhower wrote—

"I am requesting the Secretary of Health, Education, and Welfare to arrange for a National Conference on Water Pollution to be held next December. This Conference will help local taxpayers and business concerns to realize the obligation they have to help prevent pollution. * * * In short (it) will provide a forum in which all concerned can confront and better appreciate their mutual responsibility for solving this pressing problem."

Aside from the President's message, professional and technical leaders in public health and water management have discussed for some time the need for setting up a national conference to study water pollution. Such a conference, these experts feel will do much to build a national program against water pollution and to mobilize public opinion behind such a program.

When delegates meet at the Conference in December it will be against a background of increasing competition of industries and municipalities for adequate supplies of clean water.

Despite the enormous advances in technical knowledge about pollution control and correction, many sanitary engineers point out, the Nation's water problems are in many respects more serious from economic and health standpoints than a generation ago. During the 1960's, they feel, the situation may become even worse in light of the Nation's population explosion and its expanding economy.

The first step in preparing for the Conference was taken a month ago with the calling together of a steering committee representing government, conservation, industry, civic, and other groups. The committee held its initial meeting in Washington in June and plans a second meeting, also in Washington, in August.

CONTROLLING WATER POLLUTION: A JOB FOR NATIONAL TEAMWORK

For nearly 50 years efforts to control water pollution in the United States have been carried on through a four-way partnership between industry, municipalities, the States, and the Federal Government. All four of these—together with the general public—will be represented next December when the National Conference on Water Pollution opens in Washington, D.C.

The need for establishing and protecting clean waters in the United States became evident in the 1880's and 1890's. Increasing urban populations and the dumping of raw sewage in rivers and streams brought about a succession of waterborne epidemics of typhoid fever during these years—in Pittsburgh and Chicago, and States as widely separated as Massachusetts and Minnesota.

As the result of the work of Pasteur, Lister, and other 19th century scientists, there was no doubt that many epidemics resulted from contaminated drinking water. Lawrence, Mass., and Louisville, Ky., were the two earliest of a number of cities which experimented with new methods of filtering and chemically treating their water. A number of States also became active in water-treatment work during this period.

At the turn of the century, the U.S. Public Health Service had the assignment—among many other assignments—of safeguarding the water supply of trains and ships, under the interstate quarantine laws. The question was raised throughout the country as to how the Service might be of additional help in stemming the steadily worsening condition of widespread water pollution, and a variety of bills were introduced in the Congress with this object from 1897 to 1909.

The act which was passed in 1912 authorized the Public Health Service to carry on investigations of pollutions of major rivers and lakes with particular attention to sewage and its effect on health. Six sanitary engineers were employed and placed on duty at the Ohio River Investigation Station at Cincinnati. The work done by that laboratory is still applied in sanitary engineering today and is the basis of much of today's knowledge of stream pollution and natural purification.

The Water Pollution Control Act, under which the Federal Government now conducts its water pollution control activities, was passed in 1948 and strengthened and amended in 1956. Under this act the Federal Government is required "to support and aid technical research relating to the prevention and control of water pollution and to provide

Federal technical services and financial aid to State and interstate agencies and to municipalities in connection with the prevention and control of water pollution."

Water problems change

During these years of legislative history the problems of water pollution have been changing. While health agencies are still concerned with the potential threat of typhoid fever, intestinal ailments, and other diseases known to be waterborne, new types of wastes and contaminants have made their appearance, particularly since World War II, and are now calling for new research.

Almost all of the new wastes and contaminants have resulted from the Nation's increase in population, its vast industrial expansion, and the new chemical technologies now used in industry and agriculture. Some of these newer contaminants are difficult to avoid and many are hard to remove. Most are in tiny amounts today but their cumulative effects on health are unknown.

The need for large supplies of clean and healthful water is increasing. Cities and suburban areas need more water; industries are dependent on water for their continued existence and expansion; and our large population needs clean and healthful water for recreation, swimming, boating, and fishing.

In seeking to build and protect a celan water resource for the United States, teamwork has been shown to be necessary among all users of water and all levels of government.

Roles described

In a report issued last year by the U.S. Public Health Service, the various roles of States, local governments, industries, and the Federal Government were described as follows:

"The State has primary responsibility for controlling pollution of intrastate waters. It sets standards and enforces its regulations, conducts surveys, collects and evaluates data, and provides technical assistance to local governments and industries. Some States conduct research and a few provide financial assistance to cities and industries.

"Local governments construct and operate sewage treatment plants, make surveys, provide assistance to local industries, and enforce local ordinances.

"Industries construct and operate treatment facilities when their wastes are not discharged to municipal sewers. They change plant operations or adopt new processes to reduce or eliminate harmful contaminants. Many industries conduct research to solve their own problems.

"The Federal Government, through the Public Health Service, supplements, and supports the work of the other team members by furnishing assistance of various kinds, such as consultation, technical services, research, and financial aid. It carries out the limited enforcement provisions of the Federal law with respect to interstate waters."

BUTRICO NAMED SECRETARY

Frank A. Butrico, career sanitary engineer in the U.S. Public Health Service, will head the staff of the forthcoming National Conference on Water Pollution in the post of Executive Secretary. His appointment was announced in May by Dr. Leroy E. Burney, Surgeon General of the Service.

Mr. Butrico is Chief of the Office of Engineering Resources in the Division of Engineering Services, and has served in both Washington and the field in all aspects of environmental health problems. He has also contributed widely to professional journals in the fields of sanitary and related engineering.

Death of McCook (Nebr.) Publisher Harry Strunk

EXTENSION OF REMARKS

OF

HON. ROMAN L. HRUSKA

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, August 8, 1960

Mr. HRUSKA. Mr. President, last Friday Nebraska lost a true friend of conservation.

No single citizen was more dedicated to, more closely associated with the development and conservation of our water resources than Harry D. Strunk, of McCook. Last week, after an extended illness, he passed away.

A niche in Nebraska's history has been cut by this man. And for a good reason. Harry Strunk was a doer. Behind him stands a record of noteworthy achievements that brought great benefit to the southwestern quarter of our State. He will be warmly remembered by those conscious of, and concerned with, the promotion of reclamation.

It is deeply gratifying that Harry Strunk could have participated in the recent ground breaking ceremonies for a dam and reservoir on the Red Willow Creek, a tributary of the Republican River which flows through his home country. This project will make opportunities possible for reclamation, irrigation, and recreation in a three-State area. There could be no more fitting climax to his distinguished career.

Although the Red Willow Dam project is a genuine tribute to the long-range planning and persistent effort of the Republican Valley Conservation Association over which Harry Strunk presided since its organization in 1940, it is by no means the only recognition paid him during his lifetime. In 1952 he saw the reservoir behind Medicine Creek Dam near Cambridge, Nebr., named after him. He thus became one of very few living persons to have such an honor bestowed. Also in that same year he was the recipient of an award by the Department of Interior for his lifetime of work for conservation. His picture hangs in the Bureau of Reclamation Hall of Fame.

By profession Harry Strunk was a newspaperman. Founder and publisher of the McCook Gazette, he was well known and highly regarded as a fearless and conscientious journalist. In his later years, however, his occupation became primarily that of a conservationist. In 1953, he turned over the management of his paper to his son, Allen, while he devoted his total energies and time to that vital cause.

A colorful and imaginative personality, Harry Strunk left his community a standard for public service that will be hard to surpass. His wise counsel and leadership will be sorely missed. As a personal note, I want to add that I have lost a loyal and close friend. Mrs. Hruska and I express our deep sympathy to Mrs. Strunk, her fine children and family.

Among the tributes paid to Harry Strunk was the following by Mr. Harold Sutton, a neighbor and long time friend:

We lost probably the greatest leader and one who has done the most to develop our valley.

The work he accomplished will live many decades through enjoyment and through the addition to our economy.

He worked hard for the development of our recreational and economical possibilities along the valley.

I ask unanimous consent, Mr. President, to have printed in the Appendix of the RECORD an article highlighting Harry Strunk's life from the August 6, 1960, issue of the Lincoln Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

McCOOK PUBLISHER HARRY STRUNK DIES

McCOOK.—Harry D. Strunk, 68-year-old publisher of the McCook Gazette, died Friday after an extended illness.

He was president of the Republican Valley Conservation Association since it was organized in 1940 and was active in the southwest Nebraska reclamation program.

Strunk founded the Gazette as a semiweekly in 1911 and turned to daily publication in 1926.

He was a native of Pawnee City, Nebr.

Strunk, who left school after the 8th grade, was one of two living persons to have a lake named after him. That was Lake Harry Strunk near Cambridge. The other person is former President Herbert Hoover.

Strunk was the only living person to have his picture framed in the Bureau of Reclamation Hall of Fame while living.

Funeral services are tentatively set for Monday.

Strunk, suffering from a kidney and liver ailment, had been in the hospital several times in the past 6 months.

He was a charter member of the McCook Elks Lodge.

In 1952 Strunk received the Interior Department award for his work in the field of conservation and that same year former President Harry Truman signed bills naming the reservoir behind Medicine Creek Dam as "Harry Strunk Lake."

Strunk said at the time that "to me this honor comes not as a result of my efforts but of the efforts of one of the finest organizations ever formed—the Republican Valley Conservation Association."

He was the first man in the Western States to receive the Interior Department award which cited him for a lifetime of work in behalf of the conservation and utilization of the natural resources of the Republican River Basin and the entire Missouri River basins."

In 1953 he turned over active management of the Gazette to his son, Allen.

Born on December 2, 1892, at Pawnee City, he was educated there and as a youth was apprenticed to one of the local papers.

From 1908 to 1910, he was employed by newspapers at Fairbury, Fremont, and Beatrice. He had acted as publisher of newspapers at Pawnee City, Holton, Kans., and Franklin.

In 1910 he became a printer on the McCook Tribune and in 1911, established the Red Willow County Gazette, a weekly. In 1924 he transformed it into a daily and in the following years absorbed several weeklies.

Mr. Strunk was a member of the Nebraska Press Association, the McCook Chamber of

Commerce, the Inland Daily Press, the Elks and the Congregational Church. He was also active in Boy Scout work.

In 1942, Mr. Strunk was given the annual community service award of the McCook Rotary Club because of his leadership in the southwestern Nebraska movement for flood control, irrigation, and conservation.

Why We Need a Democratic President in 1960—Prize-Winning Oration by Craig Anderson, Hopkins, Minn.

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 8, 1960

Mr. HUMPHREY. Mr. President, in Minnesota as in all States young men and women are attracted to the Democratic Party because it is the party for today and the future and not the party of yesterday. Three young Minnesotans who participated in the Minnesota Young Democratic-Farmer-Labor Party oratorical contest on June 19, 1960, in Minneapolis, demonstrated the fine talent and straight thinking on major national issues that these young people bring to our party.

I ask unanimous consent that the prize-winning oration by Craig Anderson, Hopkins, Minn., first place be printed in the Appendix of the RECORD.

There being no objection, the oration was ordered to be printed in the RECORD, as follows:

WHY WE NEED A DEMOCRATIC PRESIDENT IN 1960

(By Craig Anderson, Hopkins, Minn., first place Minnesota State winner)

"The price of liberty is eternal vigilance." These words of Thomas Jefferson, the founder of the Democratic Party, have a special significance. For again, the enemies of human dignity, tyranny abroad and selfishness at home, compel the Democratic Party to launch a crusade to strengthen democracy: to strengthen democracy, to follow the courageous example of Thomas Jefferson, who would not compromise human rights; to strengthen democracy, to reaffirm Andrew Jackson's belief in the importance of the common man; to strengthen democracy, to rededicate our Nation to the philosophy of Woodrow Wilson that freedom must be guarded everywhere; to strengthen democracy, to practice the ideals of Franklin Delano Roosevelt, who had faith in time of crises to free America from want of substance and want of security.

In the next 4 years, 180 million Americans will look to their President to lead the United States through a most critical juncture in history, a juncture in history where America cannot be content merely to survive, but an hour in history where America can enable all her citizens to realize fully the opportunities that lie ahead. The next President will have to guide our Nation to meet a twofold challenge—a challenge abroad and a challenge at home, the challenge of international communism, and the challenge of social needs that are unfulfilled. How can these challenges be fulfilled? Will they be met by the worn techniques from the past? Will a return to Warren G. Harding's normalcy suffice for a spirit of dedication? Can a keep-cool-with Coolidge philosophy be substituted for enthusiasm and industry?

Should a two-chickens-in-every-pot policy be exchanged for economic justice? Must we be contented with a peace that rests precariously on the brink of war? Must we be satisfied with a prosperity that is not enjoyed by all?

When I considered these questions, I decided that I want a Democratic President in 1960. Because I want a President who can seize the initiative in foreign policy, a man who does not only anticipate crises, but a man who is willing to try new and inspiring methods in the tradition of Wilson and Roosevelt and Truman, to be willing to promote a challenging idea. Remember Woodrow Wilson; he was willing to sacrifice his life in order that some day nations might settle their differences at a conference table rather than on the battlefield. Remember Franklin Delano Roosevelt; he regained the confidence of our Latin American neighbors with a new appeal for inter-American cooperation, the good neighbor policy. Remember Harry S. Truman; he was willing to help Europe to help herself through a new expression of our dedication to freedom and justice, the Marshall plan. Again, in order to win this struggle for men's minds, we need to stress the positive. We need a liberal attitude in foreign policy. Only when America can prove in terms of better food, better health, and better shelter, will the world recognize the inherent worth of democracy. Yet, during the past 8 years our aid has not gone to the countries with greatest need, but to six countries forming a "Maginot line" around the Soviet Union. And only one-third of our aid has been to meet the daily needs of nourishment, medical care, and housing.

Yet, the present administration feels that one-fourth of 1 percent of our national income is enough to capture the creative imagination of the world. This is why I firmly believe that America must be lead by a Democratic President who can show true understanding and compassion for our friends abroad.

At the same time, the United States, long the arsenal and citadel of democracy, must remain militarily strong. Except today I cannot say with confidence that we are not vulnerable to the forces of tyranny. I cannot be sure that we are the strongest nation when responsible men admit that there is a missile gap. In order to remain strong, we must make full advantage of our talented men, and our national resources. To stay strong, our defense administrators must not be burdened with poor organization and inadequate funds. But still the GOP is unwilling to modernize the Defense Department. And with a don't-rock-the-boat attitude they are willing to pinch pennies and gamble with our very existence as a nation. This is why there is a need for a change, a change from Republican conservatism, to Democratic vision, to hope and foresight with a Democratic President—the same hope and foresight that led us through the uncertain thirties, the hope and foresight that dispelled the shadow of fascism in the tumultuous forties, the same hope and foresight that can secure a more equitable and a more certain life for us in the coming decade. But which party has had a spirit of vision, which party has worked to improve equality of opportunity, which party has had a record of devotion to public welfare? The same party which promoted a graduated income tax, social security, and workers' compensation. Yes, the Democratic Party has shown foresight. The Democratic Party, the party willing to work toward modifying the social shortcomings of society.

Now let us examine a recession in the general tide of progress, the past 8 years of a Republican administration. In 1956, the Bureau of the Census found that 13 million urban housing units were substandard. Yet, the current administration opposed more funds for adequate shelter. The Rockefeller Foundation reported that urban renewal must increase at a rate seven times the current rate. Nevertheless, the urban renewal bill was vetoed. Today, 15 million Americans over 65 have no assurance that they can afford adequate medical care. Yet, the GOP dismissed the Forand bill. Almost defying history, the farmer has improved his efficiency, but he has experienced a drop in his income at the same time. How can the farmer be given his fair share of the national income? Must he fall victim to the law of supply and demand, and to poor conservation? Might we ask: Is the Republican freedom to suffer truly an ideal? In 1952, the GOP promised 100 percent of parity, but after the election apparently Mr. Benson had a lapse of memory when he drastically reduced commodity price supports. Will such a program increase the farmer's freedom? Or will a program that has forced hundreds of thousands off the farm bring the liquidation of the family farm? I believe the answer is obvious, for a farm program—unlike the Benson program—should take into account the human element. The farmer does not want to be given a handout, but he wants a chance to earn his own living. Just as labor and industry control production to protect their workers and stockholders, the farmer must be protected from the disaster of a flooded market. Only if the next administration takes the advice of the Democratic leadership and puts excess croplands into conservation programs and turns our surplus into a blessing to the poor nations of the world; will the diligence of the American farmer be rewarded.

Another necessary area of improvement is education. Our Nation must face up to the warning of sputnik. How long can we adequately educate all our youth when New York spends a dollar for every quarter that Mississippi spends on education. Never before has there been a greater need for an increase in our support of education. The resources of the local community must be supplemented by the resources of the U.S. Government if we are to have the educated citizenry for the nuclear age. However, giving lipservice to the problems of a nation is not enough. It is not enough for the GOP heir-apparent to say: "Inadequate classrooms, underpaid teachers, and flabby standards, are weaknesses we must constantly strive to eliminate" and in the same week to kill the school construction bill. An approach that is timid, indecisive, or cheap will not satisfy the hopes of a great people. In all areas of social welfare, action, not mere words, are needed, action to move our still young country forward, action that dispels the fear of advancement, action that improves our Nation as a whole by raising the opportunities for each individual, action that enlivens our democratic traditions, the democratic traditions that have enabled the Democratic Party to write new epochs in the story of humanity. This is why I want a Democratic President to lead our Nation over the hurdles of tyranny abroad and selfishness at home to the goal of a better America for all.

Beaumont Enterprise Says No Reason for Putting Off Until Next Year Padre Island National Park Bill That Could Pass This Year

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 8, 1960

Mr. YARBOROUGH. Mr. President, although there is a great deal of vitally important legislation awaiting congressional action, I want again to urge action at this session on my proposal to establish a national seashore recreation area on Padre Island.

There are those who have taken the position that despite the fact that the bill is a sound, reasonable, and needed measure to preserve America's last, great open beach for public use, the proposed action should be put off until early next year.

Hundreds of thousands of Texans and many lovers of outdoors across the Nation believe that in this case we should not put off until next year what we can achieve this year. To begin with, it would be more costly to wait, because the same property will be more expensive with each passing year.

What is more, if we do not act this year, we shall run the very real risk of losing a very substantial part of the area to private development as part of America's fenced-off, vanishing shoreline.

Within the past few weeks, private property owners, under a new ruling they have gotten from the Supreme Court of Texas, have gone onto the beach and have driven railroad ties into the sands, to keep people from driving their cars up and down the beach—the first time since Europeans first gazed upon the shores of that part of the Western Hemisphere that those beaches have been fenced off and have been removed from use by the general public.

Mr. President, at the present time this land can be acquired for moderate amounts of money.

The Secretary of the Interior has recommended that the bill be passed and that the Federal Government spend $8 million on this badly needed recreational area, which will be 88 miles long—the last long section of available seashore on either of our costs. The administration, even though it is very money conscious, and slow as it has been to develop the resources and the recreational facilities of America, has in this instance said that this situation is so critical that it will spend $8 million for this purpose, over a period of 5 years, if the Congress will take action on it this year. However negligent the administration has been and however slow and misguided its "no new starts" policy has been, we cannot complain about its policy with respect to this badly needed recreational area. So it is up to the Congress to pass the measure at this session, and thus give the American people the opportunity to have this ocean beach area—suitable for both fishing and other recreational purposes—available the year around, for the benefit of all the people of the United States.

Recently the Beaumont Enterprise, one of Texas' most straightforward and responsible daily newspapers, editorialized on this subject. It pointed out there are some obstacles to passing the measure in this session at this time, but the paper calls for passage at the present time, because, with the passage of time, land that is available now may not be available later, and the cost will increase by millions and millions of dollars.

I am hopeful the Senate Committee on Interior and Insular Affairs will bring this bill up. Full hearings were held at Corpus Christi, in December of 1959. My senior colleague from Texas has written me that he was for this measure. With that combined support, this bill should become law.

I ask unanimous consent to have the editorial from the Wednesday, July 27, 1960, Beaumont Enterprise, entitled "Applause for Mr. YARBOROUGH," printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

APPLAUSE FOR MR. YARBOROUGH

Senator RALPH YARBOROUGH's staff says, reports the Dallas Morning News, the Senator will be pushing for passage of the Padre Island National Park bill when the Senate reconvenes on August 8.

Despite the fact that other so-called must measures are first in line, YARBOROUGH feels the bill has a good chance, the News report adds.

This is encouraging in that not only is Mr. YARBOROUGH continuing the fight for the Padre Island legislation—on which he has done a most admirable job—but also that the junior Senator continues to have confidence that Congress may pass the bill this year. Unfortunately, few Texans share Mr. YARBOROUGH's confidence at this time. However, the Senator is in a better position than most of us to judge the chances of the measure.

It is to be hoped Senator YARBOROUGH's hard work will pay off. But if it doesn't, it certainly won't be his fault. Texans can and should commend the Senator for what he has already done.

Boris Pasternak's Last Message to the World

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 8, 1960

Mr. WILEY. Mr. President, in these days of history-changing international events, we are experiencing a rapid series of crises, almost in day-to-day succession. The temperature of the cold war goes up and down upon a thermometer of time. The East-West struggle goes on—consisting of charges and countercharges, proposals, and disagreements, threats, counterthreats.

The Western nations, I believe, despite the efforts of the Kremlin to divide us, the problem of strengthening our coalition, and the job of ironing out any differences between our countries, have done an admirable job of holding back the tide of communism and of serving the interests of peace.

In the face of diverse and sometimes fast-changing tactics of the Kremlin, however, we need to continue relentlessly to be prepared to stave off outspreading problems of the conspiracy, as well as to establish—as we can—more effective ways, not only of stopping the outspread of communism, but also of turning the tide in the other direction.

In this effort, we must ask ourselves: Are we really, day by day, understanding any better the scope of, and ways to deal with, the challenge?

Our Government, I am satisfied, is attempting to carry forward a wide variety of programs—within the limitations of manpower and money available—to do what it can, on a government-to-government basis.

But the question, I believe, also should be asked: Are we, the people—individually and together—going forward rapidly enough in our understanding of the Communist mind and purpose, and also of the heart and will of the Communist-dominated people?

Personally, I am convinced that even among the enslaved peoples behind the Iron and Bamboo Curtains, there is the universal will for peace, for a better life.

As it is possible, I believe that a greater effort must be made to extend our ingenuity and creativity toward finding ways in which we, the people, universally dedicated to peace, can find common grounds of understanding with those under the domination of communism.

Yesterday, This Week magazine published a thought-provoking interview by Jhan Robbons with Boris Pasternak, the late Russian poet, novelist, and Nobel Prize winner. In itself, the article is illuminating. More than that, however, it reaffirms what many of us have long believed—that is: The human will for peace, brotherhood and a better life, is universal—on both sides of the Iron and Bamboo Curtains; the spirit of man will not be satisfied with bread alone; the propaganda of atheistic, materialistic Communists is not supplanting the desire and yearning for peace in the hearts of the people whom they dominate.

To the contrary, the dictatorial, social, and economic philosophy of communism continues to frustrate and defeat the inherent God-given will and aspirations of people of all lands subject to its totalitarian reins. Because it fails to allow the soul of man opportunity to rise to its greatest heights, I am convinced that communism ultimately must fall—either from without or from within.

As published in This Week, the interview records that even under communism—designed to enslave body, mind and soul of man—the universal will for self-expression still strives to lift its voice.

I quote from the interview with Boris Pasternak: The question is, "Can a man control his future?"

Yes. Despite the system he lives under, I believe that men everywhere have more power over the future than ever before. The important thing is that we must choose to exercise it. It is conventional to say that the future belongs to our unborn children but the fact is it belongs to us. What we do today determines how the world shall go. Tomorrow is made up of the sum total of today's experiences. No one knows what the formula is, nor how slight a change may reshape the pattern to our heart's desire. Far from feeling hopeless or helpless, we must seize every opportunity, however small, to help the world around us toward peace, productivity and human brotherhood.

Appreciating the dramatic effect of Boris Pasternak's last message to the world, I believe, however, that the message of Boris Pasternak—symbolizing the courage of a human soul in the face of only God knows what pressures to still his voice—will live long in history.

I ask unanimous consent to have the interview printed at this point in the RECORD, along with excerpts from a recent address which I was privileged to make over Radio Liberty to people behind the Iron Curtain.

The purpose of the broadcast was to counter some of the propaganda which has been spread about U.S. activities, as well as again to reassure the Russian people that despite tirades of propaganda, we and our U.S. leaders are committed, not to war, not to imperialism—which is really the characteristic of communism—but to the establishment of a just and lasting peace in the world.

There being no objection, the article and the excerpts from the address were ordered to be printed in the RECORD, as follows:

[From This Week magazine]

(By Jhan Robbins)

The recent death of Boris Pasternak released me from a pledge of secrecy he did not ask me to make, but which I made to myself. When I spent an afternoon with him last September I was, I believe, one of the last representatives of the non-Communist world to speak to him at length. When I came away I had the peculiar feeling that comes from spiritual and mental contact with one of those rare human beings who are born far ahead of their time. I was aware that in our talk he had made a stirring declaration to the world.

As a journalist I could not help but be tempted to file the story while I was still trembling with the impact. Just as strongly I knew that I could not. I had not come to him as a reporter. Our 4-hour talk was the kind that occurs between two people who meet, exchange views and feel at once that they can be friends. I did not want to write anything that would make life more difficult for this man who had already suffered so much.

Now Pasternak is dead. The man who refused the Nobel Prize for Literature on pain of exile can no longer be hurt by anyone. In America and in the countries of Western Europe, the news was received with shock and grief. To many the author of "Doctor Zhivago" was clearly a martyr in the worldwide struggle which is seeking to decide whether the rights of the individual shall be recognized ahead of the needs of the state. Details of his funeral were read by millions with a mixture of reverence and indignation. In his own country it is doubtful that very many people even knew of his passing. Most newspapers in the Soviet Union virtually ignored it.

Yet he was known and loved there, too. It is said that once when he merely mentioned that he was going to read some of his poetry on a certain Wednesday night in midwinter, nearly a thousand people tramped through bitter cold to hear him. They pushed so enthusiastically into the meeting hall that they broke a grandstand.

I, myself found him unforgettable. Although he must even then have been suffering from the cancer which killed him 8 months after I saw him, he had a sturdy, hard-looking body. He wore his silver hair in a rough thatch. As we talked I watched the dark, deep-set eyes blaze with conviction, cloud with pain and then suddenly sparkle with amusement. (I had just told him that my wife, who is also a writer, finds it relaxing to scrub floors. "Ah," he said, nodding, "I shall have to try that.")

As a Quaker, I went to see Boris Pasternak because members of the Religious Society of Friends were acutely aware of his anguish and my wife and I were asked to convey a private message of comfort and support.

Once in Moscow, however, when I mentioned Peredelkino, where Pasternak lived, our interpreter shook her pretty blond head and said firmly, "It is much too distant. Besides, there is nothing to see." My wife then asked to be taken on a tour of Moscow's colorful secondhand shops and I resorted to that international source of information, a taxi driver. "Peredelkino," I asked, "daleky (far)? Or blizky (near)?"

He grinned and answered, "blizky." I gave him a fistful of rubles and off we went. The trip, 25 minutes in length, took us to a sleepy suburb choked with white birch trees. Pasternak's two-story brown frame house was at the end of a long, narrow lane. On his door was a hand-lettered sign in Russian. I knocked.

Pasternak himself answered. His eyes swept over my American clothes. In perfect English he asked exasperatedly, "Didn't you read my sign?"

I replied that I understood only a smattering of Russian. He translated: "Journalists and others, please go away, I am busy."

I was overwhelmed with a sense of my own bad manners. I blurted out my message and began to stumble back down the steps. His face softened.

"Wait," he said. "Do you like poetry?"

Taken by surprise, I answered, "Some, yes. And some, no."

"Come in," he said. "Let's talk."

Three times, as the afternoon wore on, I thanked him for his hospitality and rose to go. Each time, he waved me back to my seat beside him at the large round dining table. Between us, we consumed three pots of strong tea sweetened with beet sugar. The house was quiet. In the kitchen two servants were washing and ironing. On the walls were etchings signed by Pasternak's artist father. Books in French, German, English and Russian were piled on the floor, on chairs and tables and crammed onto shelves.

Like a modern Socrates he posed universal questions that engross the minds and hearts of all men—and eagerly answered them himself. Here is what Boris Pasternak said to me. As it turned out it was probably his last spontaneous testament to mankind:

"IS RELIGION REALLY NECESSARY?

"Yes. I think that man will always strive to find a meaningful form of worship. I was born a Jew. My family was interested in music and art and paid little attention to religious practice. Because I felt an urgent need to find a channel of communication to the Creator, I was converted to Russian Orthodox Christianity. But try as I might, I could not achieve a complete spiritual experience. Thus I am still a seeker. Some people tell me that religion won't make any progress until the world has solved its practical problems. But I believe we shall find it is the other way around.

"IS PATRIOTISM OUTDATED?

"I say no. In this era most problems cry out for international solutions. Nevertheless, love of country is one of the highest and most stirring human emotions. I know that many Russians of my generation went into exile after the Revolution, some because they were hunted and others because they could not face the changes that were coming. To me, exile would be worse than death. Patriotism, of course, must not be blind. The mother corrects her child; the son sees the weaknesses of his father. But love does not turn aside from ugliness or error. Loyalty to the land where you were born and the people from whose loins you sprang is the beginning, not the end, of internationalism.

"ARE MOST WORKERS TODAY MERE ROBOTS?

"They need not be. The industrial revolution has made plenty for all a possibility in our time.

"I have never been a farmer and, except during World War I when I worked in a factory in the Urals, I have never been a laborer. Yet I know that agricultural products are the result of a partnership of man and nature, which is uncontrollable, unpredictable and often cruel. A man who fits nuts and bolds together on an assembly line is working in partnership with his fellow men. Surely this is not less noble or less satisfying. I believe passionately in the dignity of all necessary work. At the moment I am writing a play. It is the first I've attempted. I don't know whether I'll ever finish it. But I know that when I complete a line that sounds exactly right, I am better able to love those who love me and to understand those who don't.

"CAN A MAN CONTROL HIS FUTURE?

"Yes. Despite the system he lives under, I believe that men everywhere have more power over the future than ever before. The important thing is that we must choose to exercise it. It is conventional to say that the future belongs to our unborn children but the fact is it belongs to us. What we do today determines how the world shall go. Tomorrow is made up of the sum total of today's experiences. No one knows what the formula is, nor how slight a change may reshape the pattern to our heart's desire. Far from feeling hopeless or helpless, we must seize every opportunity, however small, to help the world around us toward peace, productivity and human brotherhood."

Pasternak's inspiring conversation was still racing when darkness fell. I knew that I had to leave. I told him that I hoped one day to entertain him in my home.

"Perhaps," he said. And he pressed my hand.

The taxi was waiting on the main road. As it whirled through the dusk toward the lights of Moscow, I scribbled furiously. Pasternak certainly did not pretend to be either a lawgiver or a moralist. He was a brilliant, perceptive man who was perhaps more keenly aware of the human condition than most of us can be.

Boris Pasternak will be remembered for his poetry, for his Shakespearean translations, for the controversial novel which cost him the world's most coveted literary prize. I shall always remember him as a man who believed that love, faith, pride, and vigor are the real answers for tomorrow.

TRUTH BROADCASTS ABOUT U.S. RELATIONS WITH CUBA AND LATIN AMERICA TO PEOPLE BEHIND THE IRON CURTAIN

(Excerpts from address by Hon. ALEXANDER WILEY of Wisconsin)

If nuclear-missile war is to be avoided, then the people of the world must rise up, en masse, to provide the governing light for the handling of affairs that affect the interests—yes, even the survival—of mankind.

We do not want war; we do not believe that you—the people of the Soviet Union—want war.

Instead, we believe that you—like ourselves—wish for freedom

To our deep sorrow, however, the threats and counterthreats of war; of strife; of international tensions; of fear from destruction by nuclear-missile attack will continue to threaten peace and survival of mankind.

Why?

The Communists say: It is the fault of the Americans.

The Americans say: It is the fault of the Communists.

Which is true? For the answer, let's look at the post-World War II record of history.

During World War II, the United States—fighting side by side with the Russian people—had a major role in victory against dictators. Yet, we did not take for ourselves 1 foot of territory.

Instead, let me review historically the treatment of nations and peoples once under the wing of the United States.

Philippine Islands: Granted independence in 1946.

Puerto Rico: Became a self-governing commonwealth with its own constitution in 1950.

Alaska: Previously a territory, joined the United States as a State by free election in 1959.

Hawaii: Formerly a territory. By free elections they voted to become the 50th State of the United States in 1959.

Now, let's look at the Communist record. Following World War II, Communists—by treaty breaking—obtained and maintained iron-fisted control over such countries as Albania, Bulgaria, Czechoslovakia, Estonia, Latvia, Lithuania, Poland, and Rumania.

Yes; and you all remember Hungary.

Moreover, you, the people of a great nanation, can best remember how, and with what bloodshed, the Communists gained control of your country.

UNITED STATES-LATIN AMERICAN RELATIONS

Now, looking to the present and future, apparently you are being "hit" with barrages of false propaganda about U.S. relations with our neighbors, in Latin America, particularly in Cuba.

Briefly, let me acquaint you with the truth.

Historically, we have enjoyed excellent relations with the people of Cuba. Our citizens visited friends and vacationed with our island neighbors; American industries made investments that helped improve the economy and create jobs for more workers. Our Government established special programs and policies—such as the sugar agreement—to help Cuba financially—even though it meant economic loss for the United States.

On the two-way street, a great many Cubans came to us: To become citizens; for educational opportunities; for jobs; to enrich us with the Cuban culture, particularly the unique music that is important in their heritage.

Prior to the present regime, Cuba was governed by a dictator. Although we do not approve of dictatorship, the United States—as a policy—does not interfere with the internal affairs of other countries.

Under the leadership of Castro, the dictator was overthrown. With the revolution were born new hopes—particularly in Cuba, the United States and the Western Hemisphere—that the fine people of the island could be free, independent, and self-governing.

Unfortunately, and sadly indeed, Castro is now betraying the great trust placed upon him by the Cuban people. How? In many ways: By unreasonable, unjustified, and erratic lying and distortion of facts, he is attempting to disrupt—if not destroy—good relations with the United States. Although he promised distribution of land under a so-called reform program to the Cuban people, he is failing to fulfill that promise.

Other dictator practices include: Restriction of free press, radio, and television; refusal to hold free elections; trial by firing squad instead of a court system; rubbing out in dictatorial fashion any opposition to his regime.

Regrettably, Soviet Premier Khrushchev approved Castro's dictator methods and is attempting to stick his nose in United States-Cuban relations. We, in accordance with traditional policies, have warned Mr. K. to stay out of the Western Hemisphere.

The real fact is that dictatorship—whether under the guise of communism, nazism, fascism, or similar-type isms—is really dead—killed by long centuries of failure—and should be buried.

Despite the effort to destroy freedom in Cuba, I am confident the betrayal—even with Khrushchev's help—will not succeed.

In the face of erratic tirades by Castro, the United States has demonstrated toleration and forebearance—not the killer-type policies demonstrated by the Kremlin in Hungary. The good people of Cuba—I am confident—will ultimately take matters into their own hands and redirect their fine country onto the right road of progress and freedom.

IMPROVING UNITED STATES-LATIN AMERICAN RELATIONS

To further illustrate the spirit of friendship and cooperation demonstrated by the United States, President Eisenhower recently proposed a new, broad plan of mutual cooperation with Latin America.

What is its purpose?

I quote from the statement by President Eisenhower upon announcing the program:

"In the Americas, as elsewhere, change is the law of life, and the interests of the people will be better served if that change is effected constructively and peacefully, not violently. Clearly, the aspirations and needs of the peoples of the Americas for free institutions and a better way of life must be met. Our desire is to help the American nations to meet their own responsibilities—to help them develop their institutional and human resources, to strengthen the framework of freedom, to protect individual dignity and to gain a better life for those who are underprivileged, underemployed, and undereducated."

CONCLUSION

In conclusion, I want to again assure you that the people of the United States—yes; and of the free world—want above all things, peace. The will of the world, I believe, is for peace. We, the free world, shall expect of you, the great dynamic people of the Soviet Union, help, in spirit and, as you can, in action, to create the conditions and climate of peace for the future.

America's National Goal: Freedom for All Men

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, August 8, 1960

Mr. HUMPHREY. Mr. President, Msgr. Francis J. Lally, editor of the Pilot, the weekly newspaper of the Catholic Archdiocese of Boston on June 4, 1960, delivered a baccalaureate sermon at Marquette University, Milwaukee, Wis. In his sermon, Monsignor Lally, who is a member of the U.S. National Commission for UNESCO, pointed out that the American dream of freedom is not only our dream but the dream of all men—a part of the patrimony of all mankind.

Monsignor Lally said:

Our fathers created an island of liberty in a sea of tyrannies at a time when such islands were very rare indeed. * * * Our task now is to relate that island to the rest of the world and to spread the liberty so nobly won, and we may add so nobly used, among all other men.

I ask unanimous consent that Monsignor Lally's address as printed in the July 15, 1960, issue of the Catholic Bulletin of St. Paul, Minn., be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

UNITED STATES OF WORLD PROPOSED AS NATIONAL GOAL

At the present moment we are engaged in a debate that could be immensely consequential for the future of America. Thoughtful men of many backgrounds have begun to talk in terms of a reassessment of our national purpose. Already several observers have expressed their views publicly in order to suggest along what lines they consider it appropriate for our thoughts to run.

These men are speaking in the language of liberty, human rights, the American dream, democratic living and many other familiar terms and concepts. It might be salutary, in the reflective mood of today's exercises, to ask ourselves a bit about this new debate and its present implications for Americans.

Certainly there is some question about our ability to project ourselves as a nation in a manner calculated to catch the inspiration of other peoples.

Although men in many lands once looked here to see the torch that might light other paths to freedom, it is no longer true that America is the great vision that inspires the beginnings of new peoples and reforms the institutions of older ones.

What the Founding Fathers did so well, now, nearly 200 years later, needs to be done again, if we can expect to rally the spirits of our own citizens and give an example to the citizens of other lands. But is it enough for us merely to translate into contemporary language, so often less eloquent, the expressions of an earlier time?

Is it true that men have forgotten what we believed to be the unforgettable words of the Declaration of Independence, the preamble of the Constitution and its Bill of Rights? If our only problem is to sell the old ideas, to repackage them, as it were, this crisis comes at a providential time indeed, for American know-how has never been more slick in the area of salesmanship.

On the other hand, however, if the product itself needs some attention—and this is the clear implication of the great debate—then we must postpone our appointment with the admen, until we have had our day with the thinkers.

What has given special urgency to our present problem is the naked and ugly fact that there is another product on the market in competition to ours, and there is more than a little evidence to support the view that this product has been sold even where we thought we had a corner on the market.

Just as competition has its effects in business, so too does it affect politics; what we

could allow to happen in the days of what seemed to be our monopoly, we cannot permit now as an advantage to our competitors. When our fathers at the moment of their independence spoke of a decent respect for the opinions of mankind they were talking about something which was a desideratum, but very far from being a necessity for them.

It is so very different with us. The "opinions of mankind" is precisely the matter that is now at stake. In a divided world, men are asked to make a choice.

On the one side, there are those who claim, with a powerful logic and certain undisputed victories already won, that the future belongs to them; on the other side, there is the free world still using the old words and struggling to put new fire into them.

Unless we can articulate a new philosophy of freedom with immediate relevance, we will fail to catch men's minds and we will never inflame their imaginations.

What is there then to say about our national purpose? The opening words of our Constitution are still familiar to us: "We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare and secure the blessings of liberty for ourselves and our posterity do ordain and establish this Constitution of the United States of America."

These phrases surely still ring with greatness and sing with hope, they still represent an ideal and a vision, a dream if you wish, toward which we move and for which we labor. But why do men not turn toward them from every nation, as they once did; has our revolution, in time past the model for destroying tyranny, lost its power to move men to action?

Some people will suggest that our American philosophy of men and society has need only of a new voice to interpret it in fresh tones. The bold torch can still blaze brightly, but there are no hands strong enough to raise it high for men to see again, no men of the character of our fathers who can command the assent of other men's souls.

Even after the Founding Fathers, we are told, mankind listened to the voice of our country but only at those moments when men of special stature spoke—as Abraham Lincoln or Theodore Roosevelt or Woodrow Wilson. It is suggested that what we need is the kind of personality around which men once again may rally, and in an age of strong men, one more man of strength.

This is certainly a quick and perhaps superficial response; for the greatness of our founders and of those who have followed has not been one of personal strength, but of the power of ideas—a vision that could electrify a whole people and before which the world was forced to pause in admiration.

Is it just possible in our present juncture that we have lived too long without reinvesting the legacy of our fathers? What they did with singular greatness is now nearly two centuries passed; there is even a sense in which it is many worlds away from the present—and here perhaps is the clue we are seeking.

Our contemporaries are asking for a declaration of a new national purpose, but the very phrase itself is obsolete. We simply cannot think in these terms today. What once was so uniquely our national purpose is now everyone else's national purpose and it has been for a long time.

What we need for this moment is a declaration of purpose which transcends national boundaries, which disallows distinctions between peoples, which concerns the total human family. This is the new revolution—that mankind is one; this is the new purpose—to make possible a United States of the World.

Small wonder men are no longer electrified or fascinated, small wonder that they are not aware of an ideal or a vision when it is expressed always in national terms. What our fathers—boldly and bravely, clearly and unequivocally—declared once for America, we must now in the same manner declare for the entire world.

Look back for a moment at the text of our founding—then ask ourselves if we dare to rewrite it in terms of a new order for man, not just for one nation, but for all mankind. We, the people of the United States of the World, in order to form a more perfect planet, establish justice, insure global tranquility, provide for our common defense, promote the universal welfare, and secure the blessings of liberty for all men now and in posterity, do ordain and establish a new constitution of the United States of the World.

Does this say too much, too soon? Isn't it just possible that the old vision is renewed by being enlarged, that it becomes a vision for all men just as soon as all men are given a place in it?

America has proven that a land of liberty can be a reality; now that reality must be realized everywhere good men want freedom and are willing to work for it.

The declaration of our national purpose is now in a real sense the declaration that there is no national purpose, distinct at least from the destinies of other nations and other peoples. The American dream, in all of its excitement and promise, is everyone's dream and the American reality, in all its freedom and prosperity is everyone's reality.

Now for nearly a generation Americans have spread their riches across the world—first defending the defenseless, then assisting the dispossessed, and finally aiding the less-favored peoples. We have already exported the American dream and the American reality, but we have failed to remove the labels.

It is not our dream, or our freedom. These dreams and these realities are now a part of the patrimony of all mankind. The basic pattern, the immediate design, to be sure can be ours, but the product may say "made in Africa," "made in Asia," "made in Latin America," or whatever else.

Our fathers created an island of liberty in a sea of tyrannies at a time when such islands were very rare indeed. It was a herculean labor and they worked well. Our task now is to relate that island to the rest of the world and to spread the liberty so nobly won, and we may add so nobly used, among all other men.

In this work you and I as American Catholics have a rather special role to play. Let us not accept Archibald MacLeish's suggestion that either religion or geography have made us unfriendly to freedom, either in theory or in practice. Catholics were among the signers of the Declaration of Independence and the Constitution of the United States. Both of these documents look back for their inspiration to the many charters of an earlier and more catholic time when the tradition of the common law itself was established.

It may very well be that Catholics who had so much to do with the discovery and exploration of America—as the name of your university so eloquently testifies—were not numerous among the founders of the Republic. Our absence was an historical accident which the immense migrations of the 19th century and the early 20th have already managed to correct.

For all of that, our claims on liberty are ancient claims, they are indeed the very springs from which the great rivers of freedom in our days take their source. More than 7 centuries ago, it was a prince of the church, Stephen Cardinal Langton, who produced the Magna Carta for the signature of King John. And even then the struggle for liberty was an old one.

Fifty years earlier, Thomas, Archbishop of Canterbury, cut down at Vespers by the soldiers of King Henry, was protesting in an ecclesiastical context the same arbitrary power of the monarch. Professor Carlyle, in his monumental history of the Middle Ages says that the history "of civilization during the last 2,000 years is primarily the history of the development of liberty." What is this but the story of the Christian church?

Catholics of our time too often fail to feel the continuity that reaches back from Thomas More and Nicholas of Cusa, back to Gregory and Ambrose and Gelasius, and indeed to Paul and the evangelists—to the very origins of our Christian faith.

We cannot forget that we have reached our present eminence only because we have been able to stand on the shoulders of these great men of early times. To be sure, our vision has been clouded because the impressive democratic movements of modern times have for the most part been separated from the gospel inspiration, but this does not mean that their authentic voice, where it has been heard, has not spoken in accents familiar in Christian history.

At the present time, and particularly in this land, Catholics must rediscover that stream for freedom, which here and there has been permitted to go underground, and bring it to the surface of men's attentions where its refreshing waters can again solace a suffering mankind.

As we rehearse during these years the meaning of our national purpose, Catholics can broaden the view of American freedom into that larger picture of the freedom of all mankind. For us, this is an opportunity to translate to our fellow Americans the claims of earlier times and many lands, to point out how liberty is universal or it is without meaning, how its proper object is humanity itself, "that great family," as Pope Benedict said, "extending beyond the boundaries of any country and every continent."

This is truly the contemporary extension of traditional American liberty. Once we welcomed all men to these shores who sought freedom, and this was a glorious adventure; now we must export that liberty itself for men on every shore and in every hinterland, and this is an even more challenging adventure.

The timid, the shy, and the selfish will counsel differently. For them it is enough to draw up the bridges on this island of freedom and prosperity, enough to man the towers and protect our barns and bins. Conceivably, we could survive this way, at least for a while.

But we would be unfaithful to the national purpose for which we were founded and, what is worse, faithless to those deeper spiritual traditions which urge us on, even now, to greater things. There is a purpose that transcends all national barriers and blots out the lines of division which separate one man from another, and it cannot fail to recognize those elements of unity which bind us together in a single human family. This is the purpose that America must enunciate if we wish other men to listen, this is the call that can bring all men to rally.

This, I would like to suggest, and not some mere radio broadcast, is what we should describe in those noble words, the voice of America calling all mankind to freedom, under God.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D.D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Schoeppel, and Cooper.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long of Louisiana, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Curtis, and Morton.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long of Louisiana, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Aiken, Capehart, Carlson, and Williams of Delaware.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Javits.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Carroll, Church, Gruening, Moss, Long of Hawaii, Lusk, Dworshak, Kuchel, Goldwater, Allott, Martin, and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Dirksen, Hruska, Keating, and Cotton.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Dirksen, Case of New Jersey, Javits, Prouty, and Brunsdale.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Yarborough, Clark, Jordan, Randolph, Carlson, Fong, and Brunsdale.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Long of Hawaii, Lusk, Case of South Dakota, Martin, Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Keating, and Brunsdale.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, 3013 Q St.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Improving the Outlook for Small Business

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, August 9, 1960

Mr. WILEY. Mr. President, in the weeks ahead, we will be hearing a great deal about what the major political parties—both Democratic and Republican—propose to do for the American people.

Naturally, it is important that Government—guided by its administrating officials—do what is necessary to keep the wheels of progress moving forward.

At the same time, however, it is important that we vigilantly maintain a climate of maximum freedom in which the people have opportunity to do all that they can for themselves.

We recognize, of course, that maintaining a strong economy is an important part of our job. The strengthening of our job-creating, free-enterprise system, is fundamental to our economy. Today, there are more than 4.6 million businesses in the country. About 95 percent of these are small businesses.

Recently, I was privileged to discuss over Wisconsin radio stations the opportunity for further improving the small business outlook.

At this time, I ask unanimous consent to have excerpts of my remarks printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

The Nation—to combat communism, spur progress, and promote peace—must assure a strong economy. A few of the necessary steps include: Maintaining a sound, noninflationary, money policy—neither too tight nor too loose; plugging loopholes in the tax system; finding new ways to help job-creating business—particularly small ones—to progress; brightening the trade outlook, including efforts to expand exports; and—at the same time—to protect the domestic economy from the adverse impact of imports; encourage greater cooperation between the consumer, business, labor, and government—not only to combat inflation but to promote maximum progress.

FREE ENTERPRISE UNDERGIRDS ECONOMY

We recognize, of course, that our job-creating, free-enterprise system is the foundation of our economy. Throughout the country, there are about 4.6 million firms in business. This is an alltime record; 95 percent of these are small enterprises.

In addition to turning out our "arsenal of defense," these businesses and industries provide our people with the jobs, and goods and services necessary for better living, and for economic progress.

Currently, our output of goods and services—termed the gross national product—has reached an alltime high of over $500 billion. In addition, the gross national income has zoomed to more than $400 billion annually.

Unfortunately, it is difficult to relate these gigantic figures to the economic problems in the daily lives of each of us. However, the steady upward climb of national wealth does reflect meaningfully that the economy as a whole is going forward promisingly.

The fundamental task is to provide a climate of opportunity—for each of us—to reap a proportionate share of the Nation's wealth. This is true for farmers, professionals, businessmen, and folks in all other walks of life.

ROLE OF SMALL BUSINESS IN ECONOMY

On the main streets of America, small business—including more than 110,000 in Wisconsin—in the villages, towns, and cities, are the wellsprings of our economic life. However, further efforts are needed to improve the outlook. Although there are many ways it may be done, any major program, I believe, should include:

1. Providing an opportunity for greater participation in Federal defense and defense procurement programs.

2. Establishment of local development companies to provide financing funds for small businesses—in areas where other adequate financing sources are not available.

3. Efforts by States—as well as small businesses, themselves, to cooperate in providing managerial and technical assistance to small business for resolving problems, improving efficiency, and other tasks that may be too expensive for the small business budget.

4. Further improving the patent system for protection of ideas and systems.

5. Expansion of research providing management aids through voluntary groups and—as necessary—through State and Federal assistance programs.

6. Encouraging labor—management peace, or conversely, preventing strife to minimize costs of labor-management difficulties. Fundamentally, their interests are mutual—not conflicting.

DEVELOPMENT OF SMALL BUSINESS "POOLS"

The development of small business "pools" also is helping to meet some problems that could not otherwise be resolved, such as:

Collect market and research information related to a particular industry for dissemination to participating members;

Construct, acquire, or establish laboratories and other facilities for the conduct of research;

Prosecute applications for patents and render patent services for participating members; as well as

Negotiate and grant licenses under patents held under joint programs.

TAX OUTLOOK

Taxes for individuals as well as business of course, are always a serious matter.

What is the outlook?

As things look now, the great pressures on Uncle Sam's pocketbook—particularly for defense, as well as domstic programs, threaten to increase, rather than diminish.

Consequently, the outlook for immediate, across-the-board tax cuts is dim. However, this would be a good time, I believe, to undertake what has long been needed—and that is, a top-to-bottom overhaul of the tax system.

For this purpose, I have introduced legislation to establish a Hoover-type tax commission. The purpose would be to plug loopholes, iron out inequities, eliminate unintended hardships or benefits, capture revenue that now may be escaping taxation; and make adjustments in the tax structure to reflect the changing needs of the economy, the technological revolution, shifts in the pattern of consumer and national requirements—and other purposes.

In a free enterprise system, it is absolutely essential that tax laws be formulated to encourage—not limit—economic growth and expansion. In addition, there is a need for simplifying tax reporting—particularly for businesses as well as individuals.

Despite the fact that taxes have been at a substantially high rate, ranging up to 91 percent, however, the economy has progressed in the last 8 years; for example, the gross national product, as I mentioned, has increased 35 percent.

EXPANDING FOREIGN TRADE

There are, of course, opportunities for improving the outlook for job-creating business and industry through expanding trade.

Traditionally, the U.S. market has been the major target for the products of our factories as well as farms. With further improvement of our mass production techniques—for stepping up production—however, we need to look for new horizons. Currently, for example, studies are underway by the Department of Commerce to see what new opportunity exists in the export field. As of now, only a minor portion of firms in Wisconsin—and the United States—have engaged in foreign commerce.

Around the world, however, there are many potential markets. The less-developed countries of Latin America, Africa, and Asia, particularly, offer real prospects for new business oportunity. In effect, they need everything.

How can we take advantage of the emerging opportunities?

First, we need to broaden our horizons; to attempt to find new markets.

Second, expand U.S. and Wisconsin participation in international trade fairs, offering opportunity to locate customers.

Third, utilize services of Department of Commerce—as well as cooperate with other business—to locate and attempt to supply new markets.

PROBLEMS IN EXPORTING

We recognize, of course, that there are difficulties. These include:

Financing the necessary market research.

Competing with goods produced at lower wages and operating costs from other countries.

Acquiring the financing as well as developing the know-how for entering and profiting by participation in foreign trade.

Difficulty of converting foreign currency—earnings or principal—into U.S. dollars.

Problems of complying with national laws as well as local ordinances affecting distribution of goods in other countries; and

Running the risks of expropriation or even confiscation of property in unstable countries where such investments are necessary for market outlets.

Currently, the United States is negotiating with other countries to attempt to resolve a number of these problems. This would mean not only greater health for business and industry, but more jobs for the workers in America.

IMPACT OF IMPORTS

We recognize that trade is a two-way street. Unfortunately, a number of Wiscon-

sin and U.S. firms are now suffering from the impact of imports. We cannot ignore this situation. Instead, a realistic effort must be made to protect U.S. industries—and their workers—from being too hard hit by imports—often produced by lower wage levels and operating expenses.

Recently, I joined in cosponsoring legislation to establish a special committee to study the impact of imports on domestic industries. The purpose would be—by a clear and objective study and survey by competent persons—to determine the necessary steps to provide protection for domestic industries. Also the committee would see what could be done by enterprising exploration and official negotiations to improve the opportunity for new markets in other countries.

After the recess, I believe that Congress should take speedy action to set up this committee. In the interests of the overall economy, we cannot too long endure losses by domestic firms—which affects not only firms but our workers and the overall economy.

CONCLUSION

This, then, is a brief review of a few of the problems involved in further strengthening our economy.

Again, I want to stress that, as one sector advances, the whole economy is benefited, conversely, as any segment suffers, so does the whole economy—not only in terms of loss of business and industrial activity, but in jobs for the workers of the country.

Penalties of Prejudice

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 9, 1960

Mr. YARBOROUGH. Mr. President, history has recorded that perhaps the most serious challenge to our democratic way of life, our incomparable system of freedom and equality for each individual, has grown from prejudice.

Recently the Beaumont Journal published an outstanding editorial column by Mr. Matthew Adams on this subject. I ask unanimous consent to have printed in the Appendix of the RECORD the column from the June 21, 1960, issue of the Beaumont Journal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PREJUDICE SAPS STRENGTH OF GOOD SOIL AND CREATES USELESS STRIFE

(By Matthew Adams)

We are going to wake up some fine day and realize how barbarous is prejudice.

The open mind is like a field over which the wind bathes the flowers and foliage in its arms.

Prejudice is made up of roots that sink into perfectly good soil, only to sap away its life and richness, and prevent useful growth from producing its natural fruit in its way.

What useless strife prejudice creates. It puts boulders across the smooth path of progress and blocks strong men from attaining their ends.

If it hadn't been for prejudice, some earlier Columbuses would have found the New World centuries sooner. All reforms are stabbed at their onsets by the hand of prejudice.

Prejudice at this very moment has its secret agents in the seats of the mighty, seeking what it may destroy.

At heart, we are all both small and great. Prejudice enters us while we sleep or while we are in careless mood, binding us to ways that it takes herculean will to break when we want them broken.

Let us have a thousand doors to our mind. Let us throw away our keys and invite the opinions of any and all to enter freely.

Let us all have at least one prayer that we have learned to utter as we enter upon every day. This it is: "God give me an open mind—to see all sides and every truth."

Progress in the Battle Against the Purveyors of Pornography

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, August 9, 1960

Mr. KEATING. Mr. President, one of the satisfying accomplishments of the 86th Congress has been the progress which has been made to strengthen the Federal laws against obscenity. Definite strides have been made to bring to book those who engage in the filthy business of printing and distributing pornography and other unwholesome material. It is my hope that while all of us applaud the enactment of certain laws thus far, we will now rededicate ourselves to placing others on the statute books.

A recent editorial in the Catholic News, which has long crusaded against the barons of obscenity, points up the progress which has been achieved and emphasizes what individuals can do in this important battle. I ask unanimous consent that the fine editorial to which I have referred be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Catholic News, Aug. 6, 1960]

PROGRESS AGAINST OBSCENITY

There is no more important problem before our people at this time than that of the obscenity flooding through our newsstands and through the mails to the homes of the Nation. Where it is not inspired by atheistic totalitarianism, it still serves its purpose, for a primary tactic of communism is to weaken the moral fiber of Americans, particularly the young.

Court decision after court decision protecting the rights of the small minority of those who are making huge sums by the printing, distributing and selling of such filth and ignoring the rights of the moral majority has hampered the fight the public authorities are making against this tide of salaciousness. Members of Congress and officials of the Post Office Department have complained that bills seeking to remedy the condition have rough going in the legislature hopper. There are indications, however, that the situation is changing for the better.

Recently Congress has approved and the President has now signed into law a bill giving Federal district court judges power to impound for as long a time as they deem necessary mail addressed to a person who is believed, on reasonable grounds, to be dealing in obscenity. This cuts such dealers off from their source of revenue. Another law, similarly approved by Congress and the President, gives statutory status to the position of Post Office judicial officers who ordinarily hand down the final departmental decision in obscenity cases.

These laws will strengthen the efforts of the Post Office and other authorities in dealing with such salaciousness. In the meantime parents and others are under civic and moral obligation to help in the battle by reporting to the proper office the receipt of unordered salacious mail sent especially to the young, and by seeing to it that neither they nor their children patronize places of business where such smut is sold.

Let Your Light Shine

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, August 9, 1960

Mr. CASE of New Jersey. Mr. President, young Christopher Dearie, president of the Student Government Association of Mountain Lakes, N.J., High School, delivered an outstanding oration at his commencement June 23, 1960. Calling his address "Let Your Light Shine," Christopher compares June graduates to stars with the essential, important distinction that the young people have free wills.

I ask unanimous consent that his speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LET YOUR LIGHT SHINE

(Oration delivered by Christopher Dearie, president of the Student Government Association of Mountain Lakes, N.J., High School at commencement June 23, 1960)

People say the stars come out at night, but astronomers tell us that they really do not come out at all—they are there all the time. The stars cannot be seen in the daytime because the sky is too bright. It is only when the sun sets and the sky is dark that they are visible. And so it seems, just as the sun, you, our parents and teachers, have subdued your brilliant lights to allow us to glow on this commencement night.

Astronomers also tell us there are billions of stars in the sky, and yet there are no two exactly alike. Although we, the class of 1960, in our caps and gowns appear to be alike, we are, so to speak, like the stars, individual and different. We know the stars are in unchangeable order, so much so, that travelers look to them to find their way.

We, however, are unlike the stars because of our free wills. We are in a position to cooperate with the Creator in working out our own destinies.

Here we are, each with individual talents. How shall we accept them? bury them? deny them? or use them?

It is rather exciting, I think, to realize that each of us has a distinctive ability that no person before us, with us or after us, can display. With this knowledge, it is our obligation, our duty, to develop our God-given talents to the fullest. If we fail, much will be lost to man and to the world.

"You are the light of the world. Let your light shine before all men." As you know,

these words, from the Sermon on the Mount, were spoken to all generations, 2,000 years ago, and it applies to you and to me, tonight.

It is only on occasions such as this that we realize our importance as individuals, as builders of eternity—whatever our work may be.

We may not be another Joan of Arc, who saved France at the age of 16, or another Mozart who made concert tours as a boy, or indeed, another George Washington, or Abraham Lincoln. No, our purpose for existence may not be something as dramatic and noteworthy as that of these people. But we all have to make our contribution to mankind, no matter how small and unimportant it may seem to us. The poet expresses it this way:

"There is some place for you to fill
Some work for you to do
That no one can or ever will
Do quite as well as you."

When do we start? It seems to me, it is a daily task to do what we can with what we have, where we are today. Newman says it in a way easy to remember—"If a man waited until he could do something so well that no one would find fault with it, nothing would ever be accomplished." We have an excellent example today in Thomas Dooley, a young Navy doctor who went to Laos during the war. He saw great suffering there, and his future work in life unfolded before him. He felt that something should be done and he wanted to do it. Should he wait until he was rich and famous, enjoy the good things in life first? No. He started that day and stayed to establish a hospital and take care of the sick and needy. He found his purpose in life and he has truly been called the splendid American.

Let us keep the Dr. Dooley type in mind and remember that each of us is unique, with a special mission to perform that no one else can do quite as well as we. Let us develop, cultivate and use our talents to make our lives worthwhile to ourselves and to others. In this setting, on this commencement night, let us meditate for a moment on these words of a French philosopher:

"I shall pass through this world but once. If, therefore, there be any good thing I can do, or any talent I can use, let me do it now; let me not defer nor neglect it, for I shall not pass this way again."

Resolution of New Jersey State Association of Chiefs of Police Commending Cooperation by Federal Bureau of Investigation

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, August 9, 1960

Mr. CASE of New Jersey. Mr. President, the Federal Bureau of Investigation has long performed outstanding service to America on a local as well as on a national level, particularly concerning the important matter of police training. The New Jersey State Association of Chiefs of Police adopted, at its convention in Spring Lake, N.J., in June, a resolution commending the excellent cooperation the New Jersey police have received from the FBI, its Director, J. Edgar Hoover, its various divisions and special agent in charge in New Jersey, William W. Burke. Mr. President, I ask unanimous consent to place this resolution in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the members of the New Jersey State Association of Chiefs of Police and their respective departments have continued to receive excellent cooperation and assistance from the Federal Bureau of Investigation, its Director, J. Edgar Hoover, and its various divisions; and

Whereas Director Hoover and special agent in charge in New Jersey, William W. Burke have diligently supported the aims, objectives, and ideals of this association and assisted tremendously in police training in New Jersey: Now, therefore, be it

Resolved, That the New Jersey State Association of Chiefs of Police, in convention assembled at Spring Lake, N.J., June 27, 28, and 29, 1960, extend its greetings and best wishes to Director Hoover and express its continued appreciation and thanks for the splendid cooperation and assistance received and its confidence and trust in Director Hoover and his associates in the Federal Bureau of Investigation; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, the Attorney General of the United States, to Director J. Edgar Hoover, of the Federal Bureau of Investigation, Washington, D.C., and to Special Agent in Charge William W. Burke, as well as to Gov. Robert B. Meyner and the U.S. Senators and Congressmen of New Jersey.

Chief CHAS. H. MCCOY,
Chairman, Resolutions Committee.
SPRING LAKE, N.J., *June 29, 1960.*

Bringing Foreign Market to United States

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 9, 1960

Mr. WILEY. Mr. President, one of the great challenges facing American business today is finding new markets, especially overseas. Of course, there have been many experiments of various ways to attract new foreign markets.

One of our country's leading manufacturers, A. O. Smith Corp., of Milwaukee, Wis., has now opened the door to greater advances in foreign marketing. Under the sponsorship of A. O. Smith—a going concern of over 8,000 Wisconsin employees—68 German farmers recently came to Wisconsin and were entertained and instructed on the merits of labor-saving crop storage units called Harvestores.

The Germans paid for their own transportation, food and lodging, while A. O. Smith furnished side trips and a banquet. The result: A reported sale of 15 Harvestores. This month a similar trip is being planned for a group of Italian farmers.

Reflecting the kind of business initiative which has made our country great—and will contribute to our general prosperity and better international understanding in the future—I ask unanimous consent that an article "Bringing Foreign Market To United States" from the July 9 Business Week be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRINGING FOREIGN MARKET TO UNITED STATES

A planeload of German farmers left Milwaukee for home last week after a 2-week initiation into the ways of American farmers—and the merits of A. O. Smith Corp's glass-lined crop storage units, called Harvestores—in a European sales promotion run off in Smith's own midwestern backyard.

The visitors had been entertained and instructed on the merits of Harvestores by A. O. Smith International S. A., a subsidiary of the Milwaukee-based company, and Mannesmann-Regner GmbH, its distributor in European Economic Community countries. The working part of the trip by the 68 German farmers was climaxed by a barbecue, beerfest, and horse show and overnight stays on farms in Walworth and Rock Counties, Wis.

Sales spurt: At week's end, Smith reported sales of 15 units, which will cost the Germans about $13,750 each, less a special 5 percent discount offered during the trip. The price tag and the financing of the Harvestores are the biggest problems for Mannesmann-Regner, of Duseldorf, a subsidiary of Mannesmann AG, metal fabricator and third largest manufacturer in West Germany. However, Dr. Fritz Lehmann, chief of Mannesmann-Regner's foreign department, says the company has sold 40 Harvestore units in the past 4 months in European countries inside and outside of the Economic Community—mostly Germany, Italy, and Great Britain.

Smith says the farmers could have toured some of the 56 installations of the Continent but these have been operating less than a year and detailed records aren't yet available. Besides, none of the farmers had been to the United States.

What Harvestores do: Harvestores resemble ordinary silos, but Smith people quickly explain that they are sold as complete plants for vertical farming, designed to simplify a farmer's work and increase his income by better utilization of existing acreage.

The storage units, which also are used in the food processing, chemical, and lumberjack industries, date back to 1949 but were only a minor factor in Smith's diversified operations until 1956. In that year Smith perfected an automatic unloading mechanism that won farmer approval. Smith now says it has nearly 7,000 units in place on American farms, ranging in price from $10,000 to $13,000. The pushbutton feeding device, plus improved nutritive value of the feed and reduced spoilage, are Harvestores' principal selling points.

Germans' tour: The laborsaving feature most pleased the Germans, who say their land is expensive, labor is scarce, and more mechanization is needed. To show its visitors the wonders of the Harvestore, Smith set up a week-long tour beginning with a visit to Kankakee, Ill., home of the company's Permaglas products group which makes Harvestores and other glasslined products.

The hardy Germans, who flew over in a DC-4 and traveled in the United States by bus, also toured stockyards, packing plants, agricultural schools, and farm equipment plants. But most of all, they clambered over farms and learned about Harvestores. In all, they trundled through some 200 miles of the country's richest farmland in Illinois, Iowa, Minnesota, and Wisconsin, a major area where people of German descent live.

Windup: The tour wound up with a 24-hour blowout at Elkhorn, Wis., a typical farm

community of 3,600 tucked away in the southeastern corner of the State. Elkhorn laid out the Willkommen mat and the visitors drank Milwaukee beer, consumed 320 pounds of barbecued beef, and watched a horse show.

Local farmers then took two of the Germans to each of their farms. There they watched the Americans do their chores, enjoyed a home-cooked dinner and spent the night and following morning trading information.

Target: The Germans, who paid their own way, spent about $450 each for transportation, food, and lodging. Smith picked up the tab for the buses on the tour of Harvestore farms, for the Elkhorn doings, and for the banquet the previous night at which it made its only hard sell of the tour. Its bill: $1,800.

This month Smith and Mannesmann-Regner plan a similar trip for a contingent of Italian farmers. Their tactics will, they hope, increase Harvestore sales in Europe from about $500,000 this fiscal year ending July 31 to over $1 million next year.

Resolution by Polish American Congress, Central and Northern New York State District, Reaffirming Dedication to Faith in America and Her Future, and Eventual Independence of Poland

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, August 9, 1960

Mr. KEATING. Mr. President, I commend to the attention of the Senate an important resolution recently adopted by delegates to a regional meeting of the Polish American Congress, central and nothern New York State district. At this conference, which was held in June in Utica, N.Y., members of the congress voiced their faith in America and her future, and their dedication to the heritage and the eventual independence of noble Poland.

In order that the meaningful sentiments expressed by these members of this fine organization may receive the wide readership they deserve, I ask unanimous consent that this resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF THE POLISH AMERICAN CONGRESS, CENTRAL AND NORTHERN NEW YORK STATE DISTRICT, SCHENECTADY, N.Y.

The delegates to the Polish American Congress, central and northern New York State district, in their regional meeting assembled at the Polish American Community Club, Columbia Street, in the city of Utica, on Sunday, June 26, 1960, have unanimously adopted the following resolution:

"With faith in our belief that God created man to his own image and breathed into him the breath of divine life, we stand vigilant in the defense of our United States of America, our American way of life, and our American institutions, thereby upholding the dignity of man, the individual—all of which root and stem and sprung to life and continue to grow from that faith and belief.

"On this occasion we greet all our fellow Americans and we wholeheartedly support our Government in its efforts to seek a just and lasting peace and we have full faith in our sincere and courageous leader, the President of the United States, Dwight D. Eisenhower.

"We urge our Government to stand ready and always prepared to defend our country.

"We hereby express our gratitude and sincere thanks to our spiritual leader, our chaplain, the Reverend Ladislaus Guziolek, who for so many years devotedly has contributed to much to our organization by his advice, counsel and active participation.

"We note with much satisfaction, for their valued, faithful and untiring service, the raising to the dignity of Prothenetary Apostolic, the Right Reverend Monsignor Casimir S. Piejda; to the dignity of domestic prelates, the Right Reverend Monsignor Bernard A. Janczewski and the Right Reverend Monsignor John A. Kociela; and we note the 25-year anniversary of fruitful service rendered to God as a priest by the Reverend Edmund Stankiewicz, pastor of St. Stanislaus Parish. To all these right reverend and reverend fathers we send greetings and we offer our wholehearted congratulations and best wishes: Szczesc Jem Bozé.

"We call upon all our fellow citizens to support the Polish American Congress, the Alliance College, the Catholic League, the Kosciusko Foundation, the Orchard Lake Seminary, the Paderewski Foundation, the Polish Immigration Committee, the Pulaski Foundation, and all the other noteworthy charitable and humanitarian organizations.

"We call upon all Americans to act, initiate, and organize committees for the purpose of drawing up programs to appropriately observe:

"1. The 1,000-year anniversary of the acceptance of Christianity by the Polish Nation, noting its myriad contributions to Europe, Christianity civilization, and the world.

"2. The 100-year anniversary of the birth of Ignacy Jan Paderewski, champion of freedom and world-renowned maestro of the piano and musical composer.

"3. The Refugee Year in which the Nations of the world have and are participating and which is so proclaimed by our President of the United States, Dwight D. Eisenhower, whereby help and aid is given to the refugees cast and strewn all over the world and particularly those of Polish descent who are calling for our aid and help and on whose behalf our great leader, the Right Reverend Monsignor Colonel Felix F. Burant, through our Polish Immigration Committee, is appealing to us.

"4. In memory of one of the greatest fighters for freedom, that brave American Revolutionary War hero, a contemporary and colleague of our Founding Fathers and of George Washington, Gen. Casimir Pulaski.

"We call upon our brethren, the Americans of Polish descent, not to forget, but to dignify them by appropriate testimonial ceremonies for their well deserved contributions made to their Polonais, those elder statesmen, the pioneers and builders, the Seniors of our Polonais who have spent a lifetime in building those communities which include churches, schools and community homes wherein the best of Polish culture is expressed to add to the beauty of the American landscape; whereby they will be made to feel that their life's work for the community is appreciated.

"And at this time we hail Konstanty Sarnowski, one of the senior builders of the Schenectady community.

"We urge our Governor, the Honorable Nelson A. Rockefeller, and the honorable mayors in our district to proclaim Paderewski Day to be observed on November 7, 1960, in honor of the 100-year anniversary of the birth of that champion of freedom and to proclaim Gen. Casimir Pulaski Day on October 11, 1960, to commemorate that great patriot's memory.

"We send brotherly greetings to the people of Poland in their continuing fight for freedom and democracy and we assure them of our continued support in their efforts and in their struggle.

"We bow our heads in reverence to His Eminence, Cardinal Stefan Wyszynski, the Primate of Poland, and we assure him of our support in his cause.

"And together, as we ascend to the various summits confronting our national and international life may the blessing of the Lord be upon us.

"The Polish American Congress, Central and Northern New York State District: Rev. Ladislaus Guziolak, Chaplain; Mr. Stephen Obremski, President; Dr. W. Kotwas, Vice President; Mrs. Ann Szczepanska, Vice President; Mrs. Sophia Czachowska, Vice President; Mr. Stanley Zabek, Financial Secretary; Mrs. Violet Michalska, Secretary; Mr. Robert J. Pietruszka, Assistant to the President; Mr. Anthony Sawicki, Sergeant at Arms; Mr. Joseph Dylong, Treasurer."

Needed: New Study To Expand Trade and Commerce Through St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 9, 1960

Mr. WILEY. Mr. President, the St. Lawrence Seaway—completed in 1959—offers new, untested opportunity for expanded trade and commerce. The challenge now is to take full advantage of the great potential.

As a sponsor of the original seaway law, Public Law 358, of the 83d Congress, I am particularly concerned with assuring that (a) the seaway fulfills its full potential in terms of market opportunity for Wisconsin, and the great agricultural-industrial complex of the upper Midwest; and (b) that it pays off the costs of operation and construction—a $140 million investment by the American people.

A comprehensive review, and exploitation of, the potential is absolutely essential—if the seaway is to fulfill these objectives.

Recently, I contacted the Secretary of Commerce to urge that a comprehensive study be undertaken by the Department of Commerce aiming toward improving and expanding trade and commerce through the St. Lawrence Seaway. I ask unanimous consent to have the text of my letter to Secretary Mueller urging such a study printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MY DEAR MR. SECRETARY: I am writing to respectfully urge that a comprehensive study be undertaken by the Department of Commerce, aimed toward improving and expand-

ing trade and commerce through the St. Lawrence Seaway.

As you well appreciate, the seaway, completed in 1959, offers new commercial opportunities for the agricultural-industrial complex of the upper Midwest—the greatest in the world and the whole Nation.

The challenge, now, is to take full advantage of these new opportunities.

We recognize, of course, that the search for markets, rerouting of trade, changing of trade patterns—these, and other complex innovations—cannot be done overnight.

However, I believe that a comprehensive study—covering the whole scope of possibilities for expanding trade, commerce, and tourist traffic, through the seaway, would help tremendously in benefiting the economy, providing new opportunities for the farms and factories of America to transport their products to new markets; strengthen and improve trade relations with other countries; assure that tolls from the operation of the seaway—as provided by law—will support the costs of operation, as well as pay off the debt of construction.

Naturally, you are in the best position to determine the scope of such a study. In my humble opinion, however, I believe that any such survey should cover such fields as: A review of potential markets for U.S.-produced products, transportable through the seaway; providing information on the seaway to foreign and domestic shippers; encouraging a greater flow of tourists, to, and through, the seaway; explore for new ways and means to increase interest in utilizing the seaway by shippers and producers, as well as consumers abroad and elsewhere in the United States.

As we recall, the Grace Line recently received permission from the Maritime Board to withdraw its vessels from the Great Lakes-Caribbean service route. Generally, I believe this marks a setback for seaway traffic—at a time when it should be expanding in an uninterrupted way.

In carrying out such a study, it would appear that the services of the St. Lawrence Seaway Development Corporation, itself, as well as your own Department—could make invaluable contributions to providing data and information—and perhaps new trade policy recommendations—to assure maximum utilization of the potential of the St. Lawrence Seaway.

I sincerely hope, therefore, that you will find it possible to initiate such a study in the near future.

Sincerely,

ALEXANDER WILEY.

Dr. Ephraim McDowell—Pioneer Surgeon

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 9, 1960

Mr. ROBERTSON. Mr. President, during the recent recess of the Congress, I had the great good fortune to hear delivered in my hometown of Lexington, Va., before the Rockbridge Historical Society, a remarkable address by Mrs. Gordon Graham Heiner on Dr. Ephraim McDowell.

Born and reared in Rockbridge County, Va., Dr. McDowell is justly known as the father of abdominal surgery. The operation on which his claim to fame is based was performed in Kentucky, where he had moved for the practice of medicine and surgery, and he now represents Kentucky in Statuary Hall.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the splendid address on Dr. McDowell and his most famous patient, delivered by Mrs. Heiner before the Rockbridge Historical Society on July 25, 1960, at Lexington, Va.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF MRS. GORDON GRAHAM HEINER TO THE ROCKBRIDGE HISTORICAL SOCIETY ON JULY 25, 1960, AT LEXINGTON, VA., DURING EPHRAIM MCDOWELL-JANE TODD CRAWFORD WEEK

Members of the Rockbridge Historical Society, honored guests, tonight we have come together to remember a great surgeon and a brave patient who were born in this county—one 10 miles, and the other only 3 miles from where we are tonight.

We must go back 150 years and 6 months to see them as they approached the time of an operation full of pain and unknown danger, an operation whose influence would save the lives of thousands of patients between that time and this.

We must go back to an icy forest trail that led from Greenwood, Ky., to Danville, to see an exhausted woman clinging to a horse, supporting on its pommel a dreadful burden, as big as a child, that is a part of her body.

The way is 60 miles long, in the fearful December cold, but she presses on, attended as well as possible under those conditions by her anxious husband and a colored woman servant. It is a long way, yet short and terrifying, because she knows that each step her horse takes may be carrying her nearer to a miserable death from a surgeon's knife.

The determined woman who rides through "trackless wastes" is Mrs. Thomas Crawford, born Jane Todd, 3 miles from Lexington on route 60, and the doctor who waits to "experiment" on her, in spite of the warnings of all his colleagues, is Dr. Ephraim McDowell, also born in Rockbridge County, 10 miles from Lexington on Route 11.

In a few more days, as church bells ring out to greet the birth of Christ, Mrs. Crawford will lie down of her own choice, without the relief of anesthesia, with only her faith in God and her trust in a country doctor to soothe her pain, and allow Dr. McDowell to cut away the 22½-pound tumor that bulges before her, in what has been called the first successful abdominal operation to be recorded anywhere in the world.

"Jennie" Todd was 8 years old on November 11, 1771, when another of Samuel McDowell's 11 children was borne by his wife, Nancy McClung McDowell. The couple had been married 17 years, almost as many as the age of each had been when they had made their vows to each other.

The winter cold pressed in on the ochre-stained logs of the red house, and in the distance, wolves howled in the night, but the Indian dangers that had caused a 24-year-old colonel in the British Colonial Army named George Washington to have special fortifications built in Augusta County had subsided, and the Revolutionary War was still only a threat.

When Benjamin Borden had offered John McDowell a thousand acres of land of his own selection if he would survey and settle in the Borden Grant, John had selected a site 10 miles from Lexington near what is now Fairfield, and built his large log house immediately behind the site of the present stately mansion.

He skinned the logs, afterward staining them with red ochre paint which he made from powdered material found on a bank of his land. This caused the cabin to be called the red house, as the present red brick house, owned by Mrs. J. P. Alexander, is now called.

John McDowell was a man of importance in the community, and was made captain of the local militia. According to the historian, Waddell, visiting Indians always lived off of the country, and when they were drinking, they would make targets with their arrows of any hogs or cattle that they saw. A band of Iroquois had been camping near the red house, on their way to North Carolina to fight the Cherokees. It was the duty of Captain McDowell and his militiamen to escort them from the area.

At Balcony Downs, near the present town of Glasgow, a renegade white man shot at a lame Indian who had stepped out of the path. The chieftain, who was riding by the side of Captain McDowell, "whirled and shot him." Someone else shot the chief, and a number of whites and Indians were killed before the latter escaped to the mountains, and returned to New York.

The anger of the Indians, who felt that they had been betrayed, has been described to the Society in another paper by the able historian, Dr. George West Diehl, who found Indian records concerning the battle.

The little stream where it occurred is still called "Battle Creek," and some authorities say that it was on Christmas Day in 1743 that Captain McDowell and seven of his men were killed, 66 years before his grandson would perform his historic operation. Others give the 18th of December as the date.

John's son, Samuel McDowell, who had often carried the chain during the Borden Grant surveys, and was an important witness in the ensuing boundary disputes, was a sturdy young man of 18 in what was then Augusta County, Va., when he married Miss Nancy McClung, a daughter of John McClung and Elizabeth Alexander, on January 17, 1754. She was 1 day older than her husband.

Ephraim was the ninth of their 11 children, accustomed to frontier hardships and to war and change. His father had fought in the French and Indian wars before he was born, and had been present with George Washington's troops at Braddock's defeat.

One can imagine little Ephriam as a quiet, retiring, yet determined child, looking at his grandfather's crudely carved tombstone in the gloomy McDowell Cemetery, only a stone's throw from the red house, with its simple inscription: "HIER LYES THE BODY OF JOHN MACK DOWELL DECD DECEMBER 1743."

One can see him in the kitchen of the red house, watching, with his eyes as black as an Indian's, as chickens, geese and ducks were dissected before they were cooked, or helping the men with the slaughtering of cattle, hogs and large game, and unconsciously absorbing lessons in anatomy.

He may have absorbed other lessons in cleanliness too, in this age before germs and antiseptics were known. Nancy McClung was born of Scotsmen who had settled in Ireland, and their belief that "cleanliness is next to godliness," exemplified in the kitchen smell of homemade lye soap, may have been one reason why Ephraim later could repeatedly perform abdominal operations after which patients recovered, while the patients of surgeons who tried to emulate him often died of peritoneal infection.

In the meantime, Jane Todd was growing up only 13 miles away.

She was the second of six daughters and two sons, and according to the late Dr. E. Pendleton Tompkins, her birthplace "was almost certainly on Whistle Creek, near Beatty's Mill." (This mill is now owned by H. E. Van Der Veer.) According to land records, her father's property adjoined the land of Hall's meeting house, which was later called New Monmouth Church. The society visited the spot 3 miles from Lexington on Route 60 some years ago.

"Jennie" was described many years later, by Mary Young Ridenaugh, Ephraim's granddaughter, as having a good form, above medium height, with eyes of "that full gray kind which indicate firmness." Her features were too prominent and large to be handsome, with firmly set, curling lips, but clusters of waving brown hair softened her forehead, and her face expressed character, determination of spirit, and large patience.

With her older sister, Lydia, and the younger ones, Polly, Ella (or Alice), Sarah and Hannah, and the sons, John and Samuel, Jane must have gone to hear the long sermons at old New Monmouth Church, only a short distance from her house, which sometimes lasted intermittently for 2 or 3 days to the delight of the religion-hungry settlers, when a traveling minister was available to the Presbyterian congregation.

One can imagine her keeping her gray eyes upon her squirming charges in the pew beside her with the dignity and confidence of the older sister.

This church was without a regular pastor until 1776, when the Reverend William Graham, of Princeton College, who was head of Liberty Hall Academy, became its pastor. The Reverend Mr. Graham also preached at Timber Ridge Church, where the McDowells must have worshiped, but there is no record of a meeting between Ephraim and Jennie Todd.

After the Revolution, in 1782, Samuel McDowell was appointed one of the commissioners to settle land claims in the district of Kentucky, which was then still part of Virginia. In 1783, he took his family, including Ephraim, who was about 12 years old, over the wilderness road, first to Harrodsburg, Ky., and later to Danville, when the district court, of which he became a judge, moved there.

The red house and its lands were sold to the Trevy family, who built the present mansion in front of the cabin, which was first used as a tenant house, moved, and finally torn down. For over a hundred years, the property has belonged to the Alexanders.

On January 9, 1794, Jennie or Jane Todd was married to Thomas Crawford, whose family had lived in Rockbridge County at the junction of Buffalo and Broadneck Creeks. The Reverend Sam Houston conducted the ceremony. According to August Schachner, Samuel Todd, Jane's father, had been sheriff of Botetourt County in 1791 and 1792.

In 1805, Jane and her husband followed the McDowells, emigrating to Green County, Ky., moving with Jane's sister, Rachel, and her husband, Thomas Mitchell.

Because of Indian dangers and other difficulties in this dark and bloody ground, immigrants usually moved in groups. The Crawfords located on the Blue Spring branch of the waters of Caney Fork, 9 miles southeast of Greensburg, and about 60 miles from the McDowells in Danville.

But even before Jane's marriage, Ephraim McDowell had returned to the Shenandoah Valley to study medicine.

Dr. Alexander Humphreys, a graduate of the University of Edinburgh, Scotland, then the most famous medical institution in the world, was a prominent physician in Staunton, and in addition, was one of the first trustees of Staunton Academy, a high school for boys.

Ephraim studied in Dr. Humphreys' "shop" for 2 or 3 years. There he could be watched and counseled by his oldest sister, Magdalene, and her husband, Andrew Reid, of Lexington, and his life must have been closely associated with Mulberry Hill, where stands the beautiful old house erected by his brother-in-law.

When Ephraim was in Staunton, Dr. Humphreys' life had been darkened by the mysterious disappearance of an English friend and drinking companion named William Richardson Watson, and the discovery of a bag of bones in a cave, above the present railway station.

Two of Humphreys' students testified that the bones were those of a Negro, which they had dissected after having taken him from his grave in order to learn an insight into their business. They had then sewn him in a "crokass" bag, and placed his bones in the cave. In spite of their testimony, Humphreys was tried for murder.

Although he was acquitted, slander suits and countersuits continued for years, until Ephraim McDowell earned his teacher's gratitude by pointing out that the hair which remained on the skull was undoubtedly that of a Negro. Although this somewhat restored Dr. Humphreys' prestige, he moved to Kentucky a few years after Ephraim left his "shop."

When his father decided to allow Ephraim to go to the University of Edinburgh, Scotland, to continue his medical studies, Samuel was a judge in Kentucky, so far removed from Virginia that he left the whole management of the credits Ephraim would take with him in the hands of his son-in-law, Andrew Reid.

"You and him must do as you find it best," he wrote, "and I hope he will act prudently. If you have any doubt of his economy or prudence, pray let me know, for I would not be for his going to Scotland, if he was of an imprudent behavior in any respect whatever."

Chemistry, anatomy, and surgery were studied by Ephriam in Edinburgh after his arrival there in 1793. Part of the time he was fortunate in being under Dr. John Bell, a brilliant teacher, who Schachner says, "Doubtless, forcibly depicted the hopeless status of ovarian tumors as it then existed, and the possibility in the future of a relief through surgery."

Walking trips through Scotland, a foot race when he was chosen by his friends to compete with a boastful Irishman, in which McDowell first allowed himself to be beaten for 10 guineas, then won a longer race for a hundred, showed that his trip abroad was not all work. But in 1795, probably because of lack of funds, he turned homeward without a degree, to take up practice in and around Danville, Ky., as "Dr. McDowell," and to become "the first surgeon west of the Alleghanies."

His lack of a calfskin did not make him less careful. Until the end of his life he kept up his study of anatomy, and all his cases were prepared for surgery through preliminary treatment. He rehearsed his operations, rigorously drilled his assistants, and although there is no mention of any particular effort at cleanliness in that day before germs were recognized, his successes tell their own story.

In spite of some criticism, he often scheduled his operations on Sunday, some said so his patients could have the benefit of prayers of the church, and others because it was a quiet and restful day.

He was literally a doctor on horseback, because his practice took him through wild forests, where there was still danger from Indians and wild beasts.

Fourteen years after the start of his practice, on December 13, 1809, Dr. McDowell rode 60 miles on horseback to Motley Glen, near Greensburg, where he had been called to see Mrs. Thomas Crawford. Two physicians had requested his aid in delivering her, as she was thought to be pregnant. Her symptoms were similar to those of labor pains without relief.

Upon examining her, Dr. McDowell found her abdomen distended by a tumor of enormous size.

For a century, there had been discussion of the hopeless nature of this condition. In a paper published 7 years after the operation in the Eclectic Repertory and Analytical Review, Dr. McDowell said:

"My patient was a woman of small stature; her abdomen had become so pendulous as to reach almost to her knees. Having never seen so large a substance extracted, nor heard of an attempt or success attending any operation such as this required, I gave to the unhappy woman information of her dangerous situation.

"She appeared willing to undergo an experiment which I promised to perform if she would come to Danville (the town where I live), a distance of 60 miles from her place of residence. This appeared almost impracticable by any, even the most favorable conveyance, though she performed the journey in a few days, on horseback."

It was almost Christmas when Mrs. Crawford said goodby to her five children, was helped on the sidesaddle of a horse (Kentucky legend says it was a mule), and started her slow, perilous journey toward life or death.

There is no record of the number of days the awful journey in the depth of winter took, but it was necessary for her to rest the tumor (which was weighed after the operation, and found to be 22½ pounds), on the horn of her side saddle. A weak or timorous woman could not have undergone the trip.

Upon reaching Danville, she ignored the ominous chorus of voice, including the doctor's own assistant, which warned her of death. On Christmas morning she allowed herself to be strapped to the table, and gritting her teeth, and repeating psalms from the Bible, submitted to the knife.

Dr. McDowell "perspired profusely during his operations from intensity of his concentration," and the first part of this one took 25 minutes. Then she was stitched together, with strips of adhesive plaster applied between the stitches, and put to bed, still alive after the ordeal.

Dr. McDowell described it thus:

"My nephew, Dr. James McDowell, whom I had brought up, had graduated a few months before this time in Philadelphia, and had commenced business as my partner. Being in delicate health at the time, it was my intention to remove to the country in the spring, or so soon as I could establish my nephew in business.

"From the time of Mrs. Crawford's arrival, he had made frequent attempts to dissuade me from operating; but finding my determination fixed, he agreed to be present, but not until the morning I operated, and as my partner, to assist, for should the patient die, the responsibility was all my own; should the patient live, it would assist him in his outset in business.

"The day having arrived, and the patient being on the table, I marked with a pen the course of the incision to be made, desiring him to make the external opening, which in part, he did. I then took the knife and completed the operation, as stated in the Medical Repertory. Although the termination of this case was most flattering, yet I was more ready to attribute it to accident than to any skill or judgment of my own; but it emboldened me to undertake similar cases; and not until I had operated three times—all of which were successful—did I publish anything on the subject. I then thought it due to my own reputation, and to suffering humanity, to throw all the light which I possessed upon diseased ovaria."

There are many stories of disturbances in Danville that Christmas Day. One is that a mob threatened Dr. McDowell's life if he operated, and was only stopped by a sheriff, who persuaded the men to wait for the outcome of the operation. Another is that the husband of Mrs. Crawford pointed a loaded gun at the doctor during the operation, promising to kill him if she died. There are no records of either, but it is known that a preacher denounced the operation in his

pulpit that morning, and that many in the town had angry words to say against it.

Danville knew about the operation, and knew that only 5 days after it, Dr. McDowell had discovered Mrs. Crawford up and making her bed. But when the news finally reached the outside world, it was considered a fairy tale.

Scornful attacks even ridiculed the "backwoods doctor's" report that the tumor rested on the horn of the saddle during Mrs. Crawford's trip to Danville, on the ground that the horn of the saddle is on the right side, and the tumor was on the left.

Apparently Dr. McDowell did not realize the tremendous importance of his achievement, not only to women with ovarian troubles, but to all those who needed abdominal surgery.

His first brief report, after 7 years and success in three ovariotomies, was made after repeated urgings of his friends. Two years later, when the storm of criticism and doubt continued, he published a further report in the Eclectic Repertory. But it was hard for the great medical schools and doctors of England and other countries to believe the truth, and jealous claims were made that others than this backwoods doctor should have the credit.

Even Dr. Robert Houston, of Scotland, who tried to probe a woman's tumor in 1701, and being unable to pull out the glutinous substance, took a strong fir splinter and thrust it into the wound, and turning it around, was able to catch and draw a large amount of a substance was quoted as having preceded McDowell's operation.

Twenty-five days after the operation, Mrs. Crawford was strong enough to take the long road home in the saddle. She and her family moved to Indiana a year later, some say because of her husband's disapproval of slavery, and she lived there in excellent health almost until her death, 33 years later.

As for her doctor, he continued to operate successfully during his entire life, once upon James Polk, when he was a sick boy of 17, to remove a bladder stone. Polk's health thereafter was excellent, and he became a President of the United States.

Even in the second half of the 19th century, abdominal surgery without modern antiseptics was associated in most minds with blood and death. The "Life of Pasteur" speaks of the situation in France, which was farther behind in this operation than some other European countries as late as 1863.

Since the infected air of the hospitals was blamed for the invariably fatal results of the operation, The Assistance Publique hired an isolated house in a salubrious spot near Paris. Ten women in succession were sent to that house. The neighbors watched the 10 entering, and a short time later, watched their 10 coffins being carried away.

The sudden death of Dr. McDowell is a mystery that has never been solved. Vigorous and free from illness at 59 years of age, he suddenly became acutely ill with abdominal pain and nausea, and died on June 20 or 25, 1830, after 2 weeks of "inflammatory fever of the stomach." He became ill one evening, according to his granddaughter, after eating quantities of fresh strawberries from the vine, and was convinced that he may have eaten a poisonous insect or poisonous insect eggs. The doctors who attended him did not agree with this diagnosis. It may have been that this man, who saved so many with his knife, died from appendicitis, for lack of a knife in a brother surgeon's hand.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D.D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Schoeppel, and Cooper.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long of Louisiana, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Curtis, and Morton.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long of Louisiana, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Aiken, Capehart, Carlson, and Williams of Delaware.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Javits.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Carroll, Church, Gruening, Moss, Long of Hawaii, Lusk, Dworshak, Kuchel, Goldwater, Allott, Martin, and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Dirksen, Hruska, Keating, and Cotton.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Dirksen, Case of New Jersey, Javits, Prouty, ———.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Yarborough, Clark, Jordan, Randolph, Carlson, Fong, ———.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Long of Hawaii, Lusk, Case of South Dakota, Martin, Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Keating, ———.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, 3013 Q St.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.

Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Address of Dr. Arthur A. Schuck, Chief Boy Scout Executive

EXTENSION OF REMARKS
OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 10, 1960

Mr. JOHNSON of Texas. Mr. President, it is heartwarming to know in the dynamic age in which we live that the ranks of adults are swelling with those who are dedicated to the Nation's youth, dedicated to the philosophy that youth replaces age and, therefore, youth must "be prepared" to assume its role as the future builder of tomorrow.

The Englishman, Lord Robert Baden-Powell, in 1908 envisioned that the will of God is to make a world of peace and happiness and that a way to creating that world is through the training of youth. He founded the Boy Scout movement in that year.

Two years later, an American named William B. Boyce founded the Boy Scouts of America. Today, there are more than 4 million Scouts in this country alone, and the number has increased each and every year since 1910.

As part of a program to commemorate the 50th anniversary of Scouting in this country, the chief Scout executive of that organization, Arthur A. Schuck, made one of the main addresses while they met in the Nation's Capital.

I ask unanimous consent to have the complete text of Mr. Schuck's remarks of June 3, 1960, printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF DR. ARTHUR A. SCHUCK, CHIEF SCOUT EXECUTIVE, BOY SCOUTS OF AMERICA, NEW BRUNSWICK, N.J.

Fifty years of scouting. Sometimes 50 years seems long, but when you think of the history of man, when you think of the contributions made by each generation to civilization's progress, when you think of the long trail of mankind ever reaching upward and onward, and seeking the day when he would have peace and happiness, then 50 years is a short time. And yet we are told that more progress has been made in the world in the last 50 years than in the 5,000 previous years.

It has been an important 50 years. How fortunate we are to have lived in this particular 50-year period. What physical and material progress we have seen. I have seen us go from the horse and buggy to the jet era. I have seen towns with local dirt roads that become four to six lane transcontinental highways. It was not long ago that I was out in a really rural part of Texas and here, about 30 miles outside of town, was a ranch and on the ranch gate, on one side it said, "The Bar XHX" or whatever it was ranch, and on the other side it said, "Telephone No. such and such." On the ranch house roof was a high arial. Just then down through the ranch road came a high-powered Cadillac car, and at the rate this man was going, he certainly would do the 30 miles from there to town in much less than an hour, probably a half of an hour. And I could not help but think of how life in America changed during my lifetime, that here in this ranch, in my lifetime, that which had been isolated now was part of a world neighborhood, through rapid transportation, telephone, and radio.

During my lifetime and that of many of you, transportation has been speeded from 5 days to cross America on a crack train to 5½ hours by jet plane. We have seen the transition from a rural America to an urban America, from an America where only 30 percent, we were told at this meeting, of the people lived in large cities to now 70 percent living in our large cities. And conversely, we have seen another change, a change from city to suburban living.

These represent great changes in American living and it is during this 50 years that Scouting has to make related readjustments. We have seen our Nation develop from a preponderance of small business enterprises to great corporations, from labor aggrandizement to dignity in labor, from backbreaking toil of a 50- to 60-hour week to machine operation and a 35-to 40-hour week. From manual to machine to electronic production, freeing man from the burden of toil and providing facilities for leisure. Providing facilities and equipment for man's leisure has become big business in America. We, in Scouting, have provided a constructive leisure time activity for man and boy in the interest of saving America.

We developed from a restricted economy with a few rich and many very poor to an expanding economy based on a high purchasing power of the common man that is the envy of the world. The average citizen has luxuries previously available to the few, and these have been the fruits of our democratic society.

Our financing of Scouting has expanded, with our economy and from being financed by a relatively few, we have now established a broad base of support.

Progress in transportation has neighborhood concepts from those that were confined to a few miles radius to a world neighborhood. From taking 8 to 10 days to go to Europe it is now 8½ hours. Thirty-three years ago the world was thrilled when Lindbergh flew to Paris in 33½ hours and we said, "This is marvelous, 3,600 miles in 33½ hours." Only a couple of weeks ago we launched a missile that went 9,000 miles in 52 minutes. With this world neighborhood realization America emerged from isolationism to twice save the freedom of the world, and now we are the world leader of the free nations, indeed, the hope of the free world.

During the 50 years came radio providing communication within the neighborhood. I can remember when as a young man I called on Olive, her mother had a crystal set. When she put those earphones on, silence descended upon the household. No one dared speak, mother was listening to the radio. And it was bringing in voices from the air and it was marvelous. Today, a rocket space explorer is launched up to 83 million miles from the earth and it sends back radio messages, and when that instrument is no longer effective, a button is pushed on earth and a directed beam starts a more powerful transmitter which can be heard on earth from up to 100 million miles away.

This is the kind of a world in which we are training youth to participate. Part of this 50-year growth, and keeping pace with this development, came Scouting. And it is, in my judgment, a God-given program to help meet the need of the day in which we live. Baden-Powell, I am sure, with all of his vision, had no concept how this movement would grow and influence the world. It was developed to contribute to the solution of what he recognized as a problem in Great Britain, namely, the need for character building and physical development of England's young men. But here was a program with the unique combination of ideas and ideals, ideas that appealed to the adventuresome and romantic minds of youth, but ideals that would develop character and good citizenship. A program involving voluntary participation but obligating the volunteer to a commitment to the principles of the Scout oath and Scout law.

Ideals have no national boundaries, and scouting came to America. In 50 years we have influenced 32 million men and boys in America. Today we have a membership, an astounding membership, of 5 million men and boys. One out of every four available boys are participants in the program, and actually at some time in their lives we reach one out of every two boys in America.

It has been my good fortune and pleasure to have been related to this movement for 47 of its 50 years, first in a lay and then in a professional capacity. During that time, one is bound to have many thrilling experiences. The fact that today our movement has nationwide endorsement and support of all the great religious, civic, business, educational, labor interest of America is gratifying to me. The fact that the American people believe in Scouting and have invested $72 million in our character and citizenship training camps is gratifying; as is the fact that they are generously contributing $38 million, as they did in 1959, for local operating expenses. The fact that a volunteer army numbering 1,360,000, including 306,000 women, give of their times to serve the boys of our Nation is gratifying, and certainly relieves us of much doubt as to the country's future.

But my friends, the mental pictures that give me the greatest satisfaction are those that relate to the influence of this program in the lives of boys.

Let me reminisce just for a moment. I was a Scoutmaster. I first organized a troop in an area where the boys of the more prosperous families lived. And then I wondered whether this program would work among poor boys, and so I went down into the underprivileged area of the city where boys were really living in poverty and most parents paid little attention to them. We organized a troop. The boys would come to this troop with wornout shoes, with torn trousers, and jackets that were pinned together with a safety pin in the winter, where mothers did not care enough to even sew a button on it. These looked like hopeless kids, and yet they were my troop.

The boys did not have enough money to buy handbooks. To instruct we had to use a blackboard. I recall one night on that blackboard I boxed the compass so they could learn it for their advancement. When I turned my back, which was a fatal thing to do with that troop, and began to write on

the blackboard, a fight started. You had to at least pretend to be as rough and tough as any of the boys, and I turned around and I said, "If there is going to be any fighting around here, I am going to do it." When the meeting was over, one boy, Mickey, stayed and I said, "What do you want?" He said, "You said if there was any fighting to be done around here you are the guy to do it." I said, "That is right." He said, "All right, I am ready."

So we went over to a corner closet where there was a set of boxing gloves and we put them on. We boxed all over the room. I finally gave him a push and set him down on a sofa, and said, "You know, you are a sucker for a left, and I can hit you in the nose any time I want." He said, "I bet you can't." I said, "Get up." I feinted and hit him in the nose, and I said, "It isn't important to me that I can hit you in the nose, but it ought to be important to you, and you should know how to block it." And I taught him how to block. I went home that night patting myself on the shoulder and said, you are a great boys' worker. Then the next week came and I was stupid enough to turn my back again, and somebody dropped a stink bomb. We were driven out of the room and after we assembled in another room, I lined them up. I said, "Now, boys, I don't care about the stink bomb; but I want to know whether there is one boy in this unit that is yellow, and I want the boy that dropped that stink bomb to step out." Who stepped out? Mickey.

When the meeting was over, he hung around again and I said, "What do you want now, do you want to fight again?" He said, "Don't you want to talk to me?" I said, "Not particularly. I'm your friend but you're not my friend. My friends don't treat me this way." And he said, "I'm sorry." The next week—to shorten the story—I made him patrol leader. He was a born leader. He came to me at the close of the meeting and I said, "What is it now?" And he said, "I don't know why you did it, but I'm going to be the damndest best patrol leader that there ever was." And he was.

Years went by and I went into Scouting professionally, and one day I received a letter from him. He had graduated from law school; he had qualified at the bar. He, in his letter, rehearsed this whole story, or I would have forgotten it. He said, "You had faith in me, you had confidence in me, you told me that if I lived the Scout oath and law and was willing to pay the price of hard work and concentrated effort I could achieve any worthy ambition. I believe you, and I have made good."

Some years later I was at a large meeting where they awarded Silver Beavers and was advised that one of the men to receive the award knew me. I did not recognize him. After the meeting that man came to me and asked, "Do you remember me?" I was terribly embarrassed, and had to say "No." He said, "Why, I was in your troop." When he mentioned the underprivileged district I identified him and said, "I remember you, and I'll prove it to you. You were the only boy in that troop that ever had a uniform, and all these years it has worried me as to where you got it."

He beamed, "You do remember me." I said, "Never mind the emotions, I have waited all these years, where did you get it?" He said, "Somebody gave it to me," and that is what I expected. Then I said, "Tell me your story, how come you received the Silver Beaver?" He said, "I remembered that you told us that if we obeyed the Scout oath and we lived according to the Scout law, if we believed in God and tried to follow after God, and if we believed that we could have anything we were willing to work for we could get it, and I believed you." He said, "Now I am manager of a large insurance company, I have a fine position. I have been for a number of years trying to pay back to Scouting what I got from Scouting, and tonight they gave me this award and now I guess I'll have to go back and work some more."

Then I went to a YMCA annual meeting and was introduced. When the meeting was over a man came to me and with pride told me practically the same story. He came from the same troop, and he had made good in life as a vocational guidance counselor.

What a thrilling thing it is to me, and one of the great dividends of my life, that from one poor troop that gave no promise, poor ragged boys, three of them made good because of the Scout oath and the Scout law.

I wish I had time to go on and tell you some other incidents that have meant so much to me in life.

What am I trying to do? It is my purpose this noon to try to lift your sights as to the great needs of our Nation and the world, and what must be Scouting's contribution to the future. Great has been our Scouting progress in the last 50 years, and then related to it historically we can trace the contributions that preceeding generation have made to civilization's status as of this day. Today, through modern science and invention, we have achieved or are in the process of developing marvels of science and engineering that place us on the verge of a breakthrough to a world of peace, abundant living for all, happiness, and indeed the existence that has been the hope of all preceding generations of man.

On the other hand, that same progress, science, invention, technology has placed within the hands of men the opportunity for extinction of civilization and our society. When we split the atom we released either utopia or we released hell, and men are going to decide which.

As each great era is closed in civilization's progress, those who achieved great heights in the era became the pioneers in the new era. Note what I say. To date with all our progress we must realize that we are a primitive society in a new era that has just been born. And great is the challenge to mankind in this new era. We must recognize that previous concepts must be revised, previous world relations and attitudes must change, previous isolation of nations is dead, previous natural defenses have vanished. The sea was our moat, the mountains our protective fortresses, but missiles have conquered distance and previous defenses.

Yes, modern science, transportation and communication facilities have taken a huge world, in my lifetime, and whittled it down to a small neighborhood, and to a vulnerable neighborhood.

If this neighborhood is to endure the world cannot be half slave and half free. We live in a time when there are the greatest number of people in slavery in the history of the world, 76 million in satellite countries behind the Iron Curtain alone. One or the other of the two conflicting ideologies must triumph.

This is our generation's challenge as we enter a new era. As pioneers in a new era, we must recognize that the cold war is a war of survival. We must recognize that we are at the crossroads, that we are determining civilization's future. The one road leads to freedom and the utopia of civilization and the other back down, retrogressively, to slavery. A free world based on the dignity of man, or a slave world with man subjugated to the will of the state. Sovietism has declared its determination to conquer the world. Their interest in coexistence, you can be assured, is limited in time until they believe they have the power to conquer the world.

Certainly, America must maintain the military might and strength as a deterrent to attack, or even a belief that we can be conquered. This requires in us a strong will to be free, to sacrifice whatever may be necessary, to pay whatever taxes may be necessary, to do whatever may be necessary to maintain our strength.

In our America we are in danger of placing personal security above freedom. We must recognize, and train our youth to recognize, that true security only comes through freedom. We must place the protection of freedom even above the seeking of security, and this is essential.

For long-range thinking and planning, we must realize that we must demonstrate to the people of the world that the fruits of a democratic society to the individual are greatly superior to the fruits of the state-dictated dominated society. In other words, our democratic society, if to be accepted, must be worthy of emulation. We must educate people to recognize that promised Soviet security ends in slavery. Merely preaching democracy to starving people in less favored lands is not a solution. We must educate people to recognize that the world has been made a small neighborhood, and that our mission as the leader of the free world is to create and maintain conditions that will help all people to a more abundant life throughout the neighborhood. We must demonstrate in a manner that can be understood by the peoples of the world that the democratic way is the way to human rights and freedom from fear of starvation, fear of persecution, fear of economic slavery.

Let us look at the human problems. There are today 2,790 million people in the world, and 1½ billion of them have inadequate food, clothing, and medical care. These people are stirring and they are seeking relief from want, and disease, and just the phrase "democracy" is not going to satisfy them. Which way shall the subjugated, underdeveloped, and uncommitted nations turn? Which way will they accept? The free way or communism, self-government, or promised benevolent dictatorship. What we demonstrate here in America will be a powerful influence.

What must we do? We must convince all people of our sincere determination to help create a world in which all people will be free, free from fear, free from hunger, disease, free from persecution, and with guaranteed human rights. We must encourage a world economy that will conquer poverty. We must have a will to better use our surpluses.

We must demonstrate to the world democracy's ability to solve fairly our problems of management and labor, not by government control, because that is the Socialist state, but by a united concept of what is right and reasonable and in the interest of our economic order, the ultimate good of our people, and our industrial growth.

Then we must recognize that the world questions the results of our democracy with our record of juvenile crime and delinquency. We know that it stems largely from broken or unstable homes, that correction lies basically in strengthening the home life of America. Here our Cub Scout program comes in and we must do more to get father, mother, and son living together, working together, playing together, stabilizing the American home.

We must utilize our revelations of science, engineering, chemistry for the good of the world, realizing that peaceful living can be achieved by world cooperation and sharing our know-how as well as our other resources. Atomic and nuclear energy must be channeled into worldwide constructive use. Our progress must be the world's progress or else there will be world chaos.

We must create a deeply spiritual world. Our Nation must be motivated by a deep spiritual resolution; intolerance must be eliminated. We must demonstrate a service

to all mankind. We must, under God, accept the injunction to be our brothers's keeper. We cannot be strong unless we are spiritually dynamic.

As I have given you this panorama of my ideas of the needs of the world, you may say it is a dream or it is a vision. I say it is the only way to exist in a world neighborhood. But if I were asked for a brief, concise statement of what is needed to achieve these things of which I speak, I would say a nation of character with citizens dedicated to freedom, under God, for all people. My friends, therein lies Scouting's challenge. We have had a glorious and successful 50 years. The next decades are the most challenging to our Nation. History of the greatest importance will be made; destiny will be determined.

We are preparing our youth today for vital participation as adult citizens in the affairs of our Nation in an era approximately 25 years from now. What do the experts predict America will be like at that time, in those things that relate to our movement?

The U.S. population will be 250 million with 6 million babies being born each year. We can look to a youthful Nation. It is believed that over 100 million of our population will be under 20 years of age. There will be 25 million boys of the ages that we serve, and if we do no better than we do now, God forbid, if we only reach 1 out of every 4 as we are doing now, we would have a membership of 6,250,000 boys alone.

Millions of people will work a 4-day week 25 years from now, 6 or 7 hours a day, and this leisure will be constructive or destructive. It will make or break America. We must challenge our people to use this leisure in training youth through Scouting. Outdoor living will thrive. A big problem will be our disappearing play space. Waterfront land along the ocean shores and lakes and rivers will be at a premium, if any is left. Here today is our challenge to plan, to acquire the facilities to meet youth needs in camping 25 years from now.

Incomes will be doubled, the dollar will be worth much less than today's dollar. Budget increases must provide for increased costs, including inflation. It is predicted there will be a trillion dollar economy, and in keeping with the trillion dollar ecenomy we must raise our sights, at least double our budgets and our staff and our program facilities in the next 25 years.

Then because we are a world neighborhood, we must recognize what we are doing today in international Scouting is but scratching the surface, and our America, with all of its resources, must do everything in its power to help the free nations of the world train their youth so that the entire free neighborhood will have an understanding of the fundamental principles that go toward making good character and toward the salvation of mankind.

What do we have to do? We need renewed dedication, certainly we must leave here recognizing the peril of the times. W must leave here recognizing that Scouting is more than a good thing, it is an essential thing. Leave here recognizing that Scouting is a game and must always be a game for boys, but it must be deadly serious business for us, training the youth of America and the world.

We must go from here determined to strengthen our district organizations and strengthen our councils, to have more adequate budgets and more adequate staff to meet this need. We must go forth determined to have our activities geared to the fundamental purpose of developing character and the kind of citizens that the world needs, who will accept the challenge of a new era.

Above all, we need a personal dedication. There is a story that I like about Babe Ruth. I used to play a little baseball when I was younger, and I have always been a baseball fan, and I admired Babe Ruth. One day Babe Ruth heard that a boy was seriously ill in the hospital and had asked to see him. So before the game he rushed to the hospital. They took him into the boy's room, and the boy was almost overcome when he saw Babe Ruth. Then after they talked a while, he said, "Son, is there anything I can do for you?" The boy answered "Yes, knock me a home run today, knock me a home run today." Babe Ruth went out to the park and each time he got up he tried and failed, and at his last time at bat, and he turned to the boys in the dugout and said, "You guys, I'm going to knock this one." And he went up there and knocked the ball clean out of the park. The person from whom I heard this story said that they never saw such a smile on Babe Ruth's face as he came in from third to home, having knocked the home run for that boy. He dedicated himself to something in the interest of a boy.

I say to you what you do for a boy you do for America. We have to see to it that they do get the program that they need.

I like parades, and I am going to close with one. Here they come, can you see them, the boys of America. Fifteen million today, each year increasing and within 25 years to 25 million. The bands are playing and the boys are marching. Where are they marching? They are marching through out adult world. Where are they going? They are going to build the America of tomorrow. What are they going to build it with? The only materials they will use in building the world of tomorrow are those that we make attractive for them to use and in which we have given them justified confidence.

You and I have a thrilling opportunity, a great responsibility. We are God's investment in the day in which we live. What we do determines life's dividends. God grant that each and every one of you will get the satisfaction that comes through achievement in doing the will of God. The will of God is to make a world of peace and happiness. A way of creating that world is through the training of youth.

Address by Senator Wiley Over Radio Station WIND, Chicago

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 10, 1960

Mr. WILEY. Mr. President, apparently Soviet Premier Khrushchev is engaging in a kind of crazy, mixed-up pattern of troublemaking around the world. To paraphrase what Prime Minister Macmillan recently said in his letter to the Soviet Premier, "It's difficult to understand—or find any logic in—the capricious but dangerous way Mr. K. is meddling in world affairs."

Despite the fact that the United States is undergoing a political campaign it should be made clear—as Secretary Herter has done—that this does not create an open season for Communist troublemaking and aggression.

Recently I was privileged to review Khrushchev's seemingly schizophrenic policies in a broadcast over radio station WIND, Chicago. The program included in addition some of the major issues confronting our country. I ask unanimous consent to have excerpts of the address printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR WILEY OVER RADIO STATION WIND, CHICAGO

Even though there is an upcoming political campaign in the United States, we should make it clear to Mr. Khrushchev and other world Communists that:

We are alert—not asleep;

We shall continue to vigorously support those fundamental policies that will improve the outlook for peace;

We will strongly oppose Communist efforts at expansion.

We, as Americans, need to keep our heads. During the upcoming campaign, there will be charges and countercharges. However, both political parties—Republican and Democratic—and their candidates have a great responsibility for presenting the real issues; for not distorting our Nation's accomplishments or its purposes; for underwriting a strong program for world peace; and for resolutely, clearly and realistically blueprinting future plans for security, progress and a better life for our people.

Along with Lincoln—whose ascendency to the Presidency 100 years ago we now celebrate—I have great faith in the people—in their God-given intelligence and ability to find the right answers in these challenging times.

IN-BETWEEN STATE OF AFFAIRS

As American citizens, we now find ourselves in an in-between state of affairs.

The political conventions—Democratic and Republican—have just concluded.

Congress reopens in about a week for a final session that promises plenty of "hot battles."

The campaign for the elections of 1960—of which there have already been "skirmishes"—promises to mount higher in intensity, as we approach the November elections.

Abroad, too, we—and the free world—face the current cycles of unpredictable, chaotic, unprincipled actions by the Communists—as they disrupt efforts to promote peace, attempt to confuse us, distort our purposes by worldwide propaganda, and utilize any and all techniques—however reprehensible—to attempt to attain their ultimate purpose of world domination.

Despite the campaign barrages at home—and the wild, unpredictable Communist antics abroad—I am confident that you, the citizens of this great country, will be able to keep your feet on the ground. In fact, our survival depends upon it.

REVIEW OF MAJOR ISSUES OF 1960 POLITICAL CAMPAIGN

First, let's take a look at the upcoming political battles. Briefly, I would like to review some of the major challenges.

Maintaining the peace

1. The No. 1 issue is: Maintaining the peace. Among other things, this includes:

Further strengthening our defenses,

Continuing efforts to reach safeguarded agreements to reduce East-West tensions, including reducing world armaments, and cessation of nuclear tests,

A creative counterattack to the Communist ideological-propaganda offensive.

Cooperation to carry forward with our allies constructive, realistic programs for common defense and—particularly to progress and provide a better life for folks in the less developed areas of the world.

Effectively resolve problems arising out of differing economic, social, and political views among the free nations themselves—without "unsettling rifts" in our relationships.

Further strengthening our economy

2. We must maintain and further strengthen the economy at home. This involves: Encouragement of a sound money policy to stimulate growth and expansion of our free enterprise system and halt inflation; the surplus of over $1 billion for fiscal year 1960—like the dramatic "slowdown" of inflation—illustrates that it can be done. Encourage full employment—now at an alltime high of 68.6 million; also we must wipe out remaining pockets of unemployment. Further brighten the outlook for job-creating free enterprise—95 percent of which are small businesses, through appropriate modification of the tax laws; effective employment of the antitrust laws; and similar actions. Further expand our housing program—to provide new and better homes, apartments, and other types of housing for more Americans. Carry on constructive conservation of our natural resources; and other measures.

Programs for human progress

3. As our times are new, we must also adopt new programs for preservation of human rights and promoting human progress. In an economically healthy country, we should—and must—create ever greater opportunity for our people in all walks of life. This includes: Assuring opportunity for workers to engage—and succeed—in a chosen vocation; providing necessary care—as well as opportunity to continue to contribute to community and national life—for our aging folks; establishing more creative youth-development programs; expanding our educational opportunities for the increasing students of school age, as well as for adult education; assuring protection—and opportunity to exercise constitutional rights for all citizens.

These, of course, are only highlights of complex fields in which we need to keep moving forward with our fast-advancing times.

Analysis of Khrushchev's schizophrenic policies

Now, let's take a look around the world. We recognize, of course, that peace and security are necessary—in fact, essential to survival—in this nuclear-missile age. Any consideration of the outlook for peace, and threats to our security, almost magnetically focus upon the Communists—the major troublemakers and threats to peace.

Regrettably, we continue to witness sequences of erratic, contradictory, illogical action by Khrushchev and the Soviet Government. Currently, efforts are being made to analyze the motivations behind such on-and-off, hot-and-cold, alternative "missile-threats and sweet-talk" policies. For one who looks for logic, adherence to reason and principles, respect for national order and law, and desire for peace, however, the utterings and actions of Khrushchev almost defy interpretation.

Recently, Prime Minister Macmillan, of Great Britain, wrote to Premier Khrushchev, saying, "I simply do not understand what your purpose is today."

There is one theory—which, recently, has appeared to "shed some light" on Mr. Khrushchev's seemingly schizophrenic policies: A number of years ago, a Russian scientist named Pavlov—by experimentation—discovered that if one dealt consistently in an inconsistent way with animals, the result was confusion and hysteria. In practice, he would alternately "pat them"—then "kick them"—for the same thing.

Apparently, Khrushchev is adopting a similar theory in his world policy. However, I believe we should not—and must not—be fooled by his Pavlovian tactics.

SETTING THE COMMUNIST RECORD "STRAIGHT"

To better deal with these contradictory policies, we—and the world—need to do a little "skywriting"—nationally and internationally—to more clearly distinguish the great differences between the Soviets' "word and deed." Let me cite a few examples: (1) Since World War II, the Soviets—seemingly in good faith—entered into over 40 top-level agreements with the United States. As it served their purposes, however, they flagrantly have broken over 37 of these treaties. (2) Contradictorily, the Soviet Premier preaches against imperialism outside the Iron and Bamboo Curtains; meanwhile the Communist blocs are building within their orbits—and attempting to extend—a great Colonial Empire. (3) Indulging in wild—and many times refutable—accusations against the United States and the West, for espionage, the Sino-Soviet bloc has created the greatest international conspiratorial, criminal-type ring of espionage and subversion known in world history. (4) Under guise of creating a "classless society," communism—in practice—has created a new, privileged class, both in China and the Soviet Union. Although the Communists number only about 2–4 percent in Red China, and 4–6 percent of the population in the Soviet Union, they, as a new, privileged class, "get the plums," dominate and enrich themselves in power and wealth at the expense of the common people of their countries; as well, they "siphon off" the wealth, manpower and national resources of the countries they dominate. (5) Under the ruse of the oft-repeated "peaceful, or competitive coexistence," the Communists are carrying on—on a warlike schedule—espionage, sabotage, subversion and other penetrations of the free world. Among free people, the idea of coexistence, historically, has been considered an inherent right of all nations.

For the Communists, however, this does represent a deviation from the old, Leninist line—still adhered to by Red China—that there must ultimately be a war between the capitalist and Communist nations.

Fundamentally, this is one of the reasons for the recent "spat" between Moscow and Peiping. Still in the first stages of communism—Red China finds it convenient, perhaps to a large degree for internal, propaganda consumption—to advocate war, for ultimate conquest of the world by communism.

Even though Mr. K., however, professes adherence to the concept of peaceful coexistence, his alley-brawl tactics—translated into Soviet policies on the international level—include anything—right or wrong, legal or illegal—if it will forward the Communist efforts toward domination of the world.

CONCLUSION

In the days ahead, we must set Mr. K. straight. By this I mean: We should make it evident that as always we shall continuously be ready and willing—regardless of an election—to protect the ramparts of freedom.

Air-Spray Program May Help Ranchers Win Brush Battle

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 10, 1960

Mr. FULBRIGHT. Mr. President, I have been working for many years to find some means to put the unproductive brush lands of the Ozarks to profitable use. Small scale experimentation with aerial spraying in recent years has indicated that much of the land in this region now covered by scrub timber can be returned to native range grasses and support profitable cattle operations. Much of the land is also suitable for the raising of commercial timber. A research project being conducted by the Forest Service Experiment Station at Harrison, Ark., is designed to find the answers to many of the questions which remain unanswered about the possibilities and effects of brush control work. Unfortunately, this project is handicapped by lack of sufficient funds to proceed at the optimum level of research. I hope that through greater public attention to the possibilities of brush control that the Department of Agriculture can be influenced to expand this important research work.

A recent article in the Arkansas Gazette reports results of the largest aerial chemical brush control job ever carried out in the United States without assistance through the ACP program. I know that Members of Congress from States which contain large areas of scrub timber will be interested in reading this report. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AIR-SPRAY PROGRAM MAY HELP RANCHERS WIN BRUSH BATTLE

(By Leland DuVall)

The airplane has forced strategists to rewrite all the rules of warfare—including the rancher's battle with the brush. Any cattleman who has tried to defend his pasture against an invasion by underbrush and scrub timber knows it can be a frustrating and expensive operation.

Paul Downs, who owns 23,000 acres of scrub timber and native grassland in Sharp County, has used a wide variety of weapons against the brush. Hurlon C. Ray, of Fayetteville, range conservationist with the U.S. Soil Conservation Service said Downs was using an air-spray control program which, he hoped, would permit a return of native grasses to the land.

Chemical brush control is a controversial practice, but indications are that it is becoming more widely accepted each year. Much of the disagreement has been centered in the agricultural agencies where experts often disagree over the merits of the system.

In several States, the agricultural stabilization and conservation committees have accepted chemical brush control as an approved practice in the agricultural ocnservation program handbook. This means that farmers who use the practice can qualify for cost-sharing payments from the Government.

So far, Arkansas has steered away from general acceptance of the practice as part of the ACP schedule, but it has been approved for some counties on an experimental basis.

Downs is definitely in the big operator class. He has owned ranches in Florida, Louisiana, Texas, South Dakota, and Mexico and still has ranches in South Dakota and Mexico in addition to his Arkansas land. He also grows cotton in east Arkansas.

Downs moved one of his cattle operations in Arkansas in 1952. In common with most newcomers, he found that conditions in Arkansas were different from those in other parts of the country. Because of brush, which gradually crept into the pastureland, some of the fields lost much of their cattle-carrying capacity. He tried a variety of

brush-clearing machines, including bulldozers, and found them slow and expensive.

Last year he called in SCS technicians and Hall's Aero Spraying Service of Clarksville for a 600-acre test of the effectiveness of chemicals. The spray work was done in June and the cattle were kept off the land during the summer in order to determine the results and give the native grasses a chance to grow.

About Thanksgiving 90 head of steers were turned in on the 600 acres of treated land. The native grasses had made enough growth during the summer to enable Downs to winter the herd on the land without feeding hay, Ray said. He used only cottonseed meal, as a protein source, and salt.

Downs inspected the herd and the range in March and decided to expand the project. He and Herbert Wilson, the ranch foreman, selected an additional 6,000 acres for treatment this year. Downs bought an airplane, hired Gene Winey as pilot, and opened his attack on the brush. The operation started May 27 and was completed June 18.

The mixture included 2 pounds of 2,4,5–T acid and 4.5 gallons of diesel oil to the acre. All the work was done between 3 a.m. and 7 a.m. in order to make the most effective use of the chemicals.

The plan of operation on the ranch is developing as part of the total cattle-growing program. Downs plans to raise calves on his other ranch land then ship them to Sharp County to be finished for the market. He has estimated that the native grasses on the farm can carry 2,000 head of cattle and still leave a wide safety margin in case of drought. According to the plan, the cattle will be allowed to eat about half the grass that grows each year.

The outcome of the project should prove interesting to thousands of landowners in north Arkansas and in other parts of the State. Chemicals are being used widely for control of brush but each new project adds to the fund of knowledge.

In south Arkansas particularly, as well as in other parts of the Nation, chemicals are being used to kill hardwoods and release pine timber for more rapid growth. The chemicals are selective killers and, when used correctly, do not damage pine.

Senator FULBRIGHT has sought approval for additional research work to determine the most efficient brush control measures in the Ozark area. He estimated that about 3,500,000 acres of the forest land in north Arkansas was dense growths of stunted hardwoods that had little economic value and prevented the landowners from receiving a fair return on their investment.

Despite the fact that a considerable amount of research work has been done and chemical brush control has been used extensively on farms, on timberland owned by major lumber companies, and along railroad and utility rights of way, the practice still encounters a considerable amount of opposition.

The SCS has favored and promoted the program for many years and has sought to have it adopted as part of the ACP handbook. Recently, the University of Arkansas spokesmen have backed the method of brush control as an approved land management practice under certain conditions.

The U.S. Forest Service, on the other hand, has generally opposed wholesale spraying of brush land. The argument on this side of the question is that the practice creates a danger of erosion and could destroy the ability of the land to produce any kind of timber.

The arguments will probably continue for years but, in the end, the question will be settled by the economic success or failure of the method on farms and ranches similar to the Downs land in Sharp County.

Doing Business With the Russians

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, August 10, 1960

Mr. KEATING. Mr. President, there has been a great deal of talk about increasing trade with the Soviet Union in the last year. It is a question in which some American firms have shown considerable interest. Many countries which have done business with the Soviet bloc, however, have found out, to their sorrow, that the products they thought they had profitably sold to the Russians came back home to roost; that is, the Russians have not hesitated to dump such commodities on the market to the detriment of another country's marketing arrangements, or to use machinery purchased from a foreign country to under-cut that country's own manufacturers. Pirating of goods produced under patents and trademarks in the free world is another favorite technique of Soviet businessmen.

The question of the advantages and disadvantages of trading with the Soviet Union is clearly a difficult one. Most businessmen will want to study all the possibilities very carefully before reaching any decision. One point of view is offered in the editorial "With the Kremlin Trade Is a One-Way Street," by J. Anthony Marcus, from the Saturday Evening Post. I ask unanimous consent that this piece be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WITH THE KREMLIN, TRADE IS A ONE-WAY STREET

(By J. Anthony Marcus)

A wholly owned branch of the Soviet foreign-trade monopoly, the Amtorg Trading Corp., has moved from "limited office space in an old loft building to the present site, where the offices occupy several floors in a new building," according to a New York Times announcement. This and several other recent events make it plain that the illusion of a profitable trade with Communist Russia is being revived. The recent announcement by the Department of Commerce that shipments to Russia of machinery and other hitherto prohibited articles are to be permitted is another symptom of the same illusion.

One of the first acts by the Soviet regime after seizing power in 1917 was the formation of the foreign-trade monopoly, which has waged economic war against the free world ever since. That war is now to be intensified. Later in the same year the Sovarkom—Council of People's Commissars—adopted a resolution signed by Lenin, Trotsky, Bunch-Bruyevich and Gorboonov, providing a special fund for Soviet representatives abroad to assist local Communists in their efforts to overthrow existing regimes—by all means, including trade.

The Department of Justice sues and prosecutes our own industrial and business corporations for antitrust violations, while Amtorg, under a New York State charter, can operate with impunity. Our corporations are forbidden by the antitrust laws to join forces to meet ruinous competition by this alien monopoly.

Unfortunately some businessmen of the free world seem eager to join the game. As Prof. Wilhelm Ropke observes in his new book, "A Humane Economy" (Regnery): "Moscow has no stancher allies in these designs than the Western businessmen * * * precisely the people who would be the first to be eliminated if communism were to win."

In a recent interview appearing in the magazine U.S.S.R., published by the Soviet embassy in Washington, Mikhail Nesterov, president of the U.S.S.R. Chamber of Commerce, strongly advocated increased trade relations with his country, pointing out that Russians are primarily interested in "industrial equipment, machinery, instruments and apparatuses which American manufacturers want to sell."

Were Mr. Nesterov speaking as representative of a free country with a genuine chamber of commerce consisting of independent businessmen, that would have been fine. But the Soviet Union respects no patent rights or trademarks. It buys samples from free countries, copies them for use in Soviet industry and exports the pirated imitations at ruinous prices to countries which have been buying from us and other nations of the free world.

Goods are sold abroad at any price where it will do the most good for world communization, and regardless of the need for them at home. Thus shiploads of Russian grain were sent to France and Italy shortly after the Second World War to bolster the local Communists in their effort to overthrow their governments, while famine was raging in many Russian areas. While offering to buy machinery and equipment from the United States, provided further credit is advanced—and the $800 million lend-lease debt presumably forgotten—the Kremlin is extending credits to Red China, neutralist India, Egypt's Nasser, Castro's Cuba and many other countries. In February Soviet chief monopolist Mikoyan agreed to ship to Cuba aluminum ingots and rolled aluminum, newsprint, sulfur, pig iron and rolled steel, fertilizer and many types of machinery. All of those items are in short supply within the Soviet Union.

The Soviet trade authorities recently granted an American automobile dealer the right to import and sell Soviet cars in the United States. While the Russian people trudge miles to and from work in subzero weather or blistering heat, their rulers are going to sell Soviet-made cars to Americans, fully supplied with motorcars. Surely our automobile manufacturers should be accorded an equal right to sell American cars in the Soviet Union. Needless to say, the Soviet monopolists would permit no such give and take.

Why shouldn't the Communist monopolists pursue an aggressive policy? They have found us a soft touch on so many occasions. In 1933 the late President Roosevelt entered into a treaty of recognition based, as all treaties are, on the principle of reciprocity. The Soviets agreed to abstain from propaganda here, but wasted no time in setting up Red cells in our very Government. During World War II we made necessary aid to the Soviet dictatorship a top priority, demanding no political conditions in return. A Red Eastern Europe is our reward. Therefore, if Mr. Khrushchev thinks he can invade our markets successfully and persuade us to send him complete textile plants, for example, to enable him to compete with our already-depressed textile industry and that of our allies, he has historical support for his great expectations.

This policy could have repercussions beyond the damage to important sections of

our economy. As C. L. Sulzberger reminded his readers in the New York Times recently, "There is no point in easing relationships with Russia at the risk of worsening relationships with our friends."

American Economic Development Without War

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, August 10, 1960

Mr. WILEY. Mr. President, many of us remember the dark days of depression in the 1930's—the long ranks of 8 million unemployed workers, the soup lines, the rock-bottom prices for our commodities. Bread sold for 5 cents a loaf—a sack of flour for 98 cents. Farm prices were so low that many farmers found it cheaper to burn their harvest of corn for fuel than to sell it for feed.

Then came World War II—and suddenly our production capacities all over the Nation were thrown into high gear. Gone were the relief measures and artificial projects created by the Government to alleviate the unemployment situation; American factories operated at top speed turning out orders for all types of goods—including armaments.

However, we all know that wars are not the way to develop the American economy. Aside from the humanitarian considerations, even though war cured the last major depression, its total effect on our country in the future would be disastrous. A thermonuclear war could literally extinguish civilization as we know it from the face of the earth. For example, not only is it estimated that the killing effect of the blast of a 20-megaton bomb dropped on one of our cities would extend for a radius of 5 miles—but, in addition, the radioactive fallout would blanket neighboring States for hundreds of miles.

Therefore, just as the solution to economic ills does not lie in war, neither can economic growth be forced through more and more inflationary Government spending, with its accompanying loose money policies. Such irresponsible fiscal methods would probably be the surest and most expeditious way of fulfilling Mr. Khrushchev's prediction that our grandchildren will live under a socialistic system.

Conversely, we know that our traditional American system of free enterprise has provided our people with the highest standard of living in the history of the world. The basis of our free enterprise system is formed by the voluntary accumulation of savings and the investment of those savings by individuals and financial institutions. Such increasing investment of savings makes us more productive, creates more jobs and paychecks, and raises the standard of living for all Americans. As has been so adequately stated:

The only effective way to accelerate economic growth is to increase the traditional strengths of our free economy—initiative and investment, productivity and efficiency.

Mr. President, recently there appeared in the August 8 issue of the U.S. News & World Report a fine editorial written by Mr. David Lawrence. Entitled "The Scare," in this article Mr. Lawrence has given a penetrating analysis of what he believes to be the underlying factors behind the uncertainty currently existing in American business. In the course of the editorial, Mr. Lawrence emphasizes how our free enterprise system has helped to make our country's economy the greatest in the world—providing our citizens with a wealth of the good things in life—and pointing out how that system must continue to be encouraged and perpetuated if we are to successfully prove to the rest of the world that our American way of granting freedom of opportunity to attain our personal goals and improve our economic status is far preferable to the Communist method of subjugation of the individual to the will of the State. I ask unanimous consent that David Lawrence's fine editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SCARE
(By David Lawrence)

Business is in an apprehensive mood. The stock market has been fluctuating widely. Profits of corporations in the second quarter have fallen sharply. Fear is in the air.

What is the cause of this psychological crisis? A turn in the economic trend is usually not due to just one factor but to the interrelation of several factors. Basically, however, the mood of the business world affects the expansion of existing plants or the halting of such programs.

For today there is great uncertainty. One reason is the deep concern over the international situation. Any day, it is felt, can bring a climax that could force wage and price controls by Government and a complete shift in our productive gears—from goods for private consumption to munitions of war.

The other factor, however, which is even more penetrating and more immediate in its impact, is domestic. Will there be a change in the national administration—a removal from office next January of all the high officials now intimately familiar with national and international affairs, and the introduction of a new set of officials who must spend precious months learning the ropes while our cold war enemies precipate crisis after crisis?

Do the people of this country, generally speaking, know what a change in administration really involves?

Businessmen already are beginning to fear a Democratic victory. They are being told that there are more Democratic than Republican voters in the country and that recent elections have been showing a tide running toward the Democrats.

Nor are businessmen wishful thinkers. They are realists. If they become convinced there is going to be a change, they will adjust accordingly. They will postpone plans for new activities which otherwise would mean the creation of more and more job opportunities. They will wait to see which way the new administration will go—toward socialism, as the New Deal did, or toward the maintenance of the private-enterprise system which has helped America to become so powerful in the economic world.

This system can be made to work only if there is a sense of responsibility on all sides. Management has been steadily giving in to demands for wage increases, not only to avoid strikes but to help sustain purchasing power. These objectives, however, have come into conflict with a tendency to let inflation go unrestrained. The Eisenhower administration has succeeded in bringing a measure of stability to the dollar. But now comes again the threat of New Dealism and socialism and more and more inflation through more and more Government spending.

Sure, inflation for a little while gives the appearance of prosperity and tends to send the stock market up. But American businessmen can see beneath the surface. They know that the coming election could mean another era of New Dealism, which was the most colossal failure, in an economic sense, the country has ever experienced. Relief measures and artificial projects were necessary, to be sure, as they always are in a depression. But the indifference exhibited for 8 long years toward the production of heavy goods kept unemployment at the 8 million mark. This condition was not relieved until World War II gave American factories orders for heavy goods. Wars are not the way to develop the American economy.

The Republican platform adopted at Chicago states the case succinctly:

"We therefore accord high priority to vigorous economic growth and recognize that its mainspring lies in the private sector of the economy. We must continue to foster a healthy climate in that sector. We reject the concept of artificial growth forced by massive new Federal spending and loose money policies. The only effective way to accelerate economic growth is to increase the traditional strengths of our free economy—initiative and investment, productivity and efficiency."

Messrs. KENNEDY and JOHNSON are committed by their platform to more and more spending of Federal funds without regard to the impact this can have on the private enterprise system.

Messrs. NIXON and Lodge are committed by their platform to the free enterprise system, with a minimum of Government intervention in the economic life of the Nation.

The American people are asked to choose between these two doctrines. Small wonder businessmen hesitate and worry over whether there is to be an epochal change in the United States from a system of private enterprise to a system of state socialism. Shall Nikita Khrushchev's prophecy that our grandchildren will live under a socialistic system be fulfilled?

We are at the crossroads this autumn as we face a choice between two fundamentally different philosophies of government. That's the reason for the scare today.

My True Security—The American Way

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 10, 1960

Mr. SCOTT. Mr. President, I would like to call attention to a prize-winning essay that recently won third place in the second annual My True Security—the American Way program sponsored jointly each year by the United States Junior Chamber of Commerce and the Mutual Benefit Life Insurance Co.,

Newark, N.J. This essay was written by a young lady from Philadelphia, Miss Jacqueline Schulgen. The purpose of the contest is to promote initiative and self-reliance among the youth of America.

In this contest, a winner is chosen from each State and then the three national winners are honored at the annual awards banquet held here in Washington, D.C. This appears to be a wonderful program for the youth of this country, and accordingly, Mr. President, I ask unanimous consent that this prize-winning essay be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

MY TRUE SECURITY—THE AMERICAN WAY

When God made the oyster, he guaranteed him absolute economic and social security. He built the oyster a house, a shell, to protect him from his enemies. When hungry, the oyster simply opens his shell and food rushes in to him.

But, when God made the eagle, He said, "The blue sky is the limit. Go, build your house." And the eagle built it on the highest mountain crag, where storms threaten him every day. For food, he flies through miles of rain, and snow, and wind. He, not the oyster, is the emblem of America. This narrative serves to illustrate the very basis of our American way of living. No one is given a protective shell, but everyone is given the opportunity to build his own life. What is security? To the father of a family, it may mean financial surety; to the nun, the peaceful solitude of prayer; to the child, the nearness of loved ones. Security, therefore, depends upon an inner feeling of confidence evoked by such qualities as self-reliance, in making one's way; initiative, in seeking avenues in which one may function; perspective, in seeing things in their true value. Security is achieved when one nourishes these inner feelings and develops them fully. Sometimes nature has a way of testing us to see if we possess these inner qualities. Let me tell you a true story about a 17-year-old girl who found a large measure of security.

It was a wet, cold April night. The phone in the doctor's office began to ring. His part-time assistant, Jane, hurried to answer its summons. "Doctor's office." "May I speak to Jane Jones?" "Speaking." "I am very sorry, but your mother just died of a heart attack."

Jane hung up the phone and gazed blankly at the wall in front of her. This was the loneliest moment of her life. Where could she turn? Her mother had been all she had in the world. There were no other relatives to rely upon. Now she was left entirely on her own. This was the crossroads in her life. She had two choices: to succumb to sorrow, or to build a future for herself. Because Jane wanted to graduate from high school, she had a goal, a goal which her mother had not attained, but which she had taught her daughter to cherish. After graduation, she would enter a school of nursing. She chose to fight the storms, and like the eagle, build her own house and security.

Through the aid of friends, she found a comfortable room in a girl's hotel. Her part-time job enabled her to support herself. Her chief concern was making decisions about her budget, about dating and about what was right or wrong. For the most part, she solved these problems by following the pattern and standards set by her mother. At this point in her life, she is still striving for security. Her true security lies in achieving her goal of becoming a nurse. Gradually, she is advancing toward that goal, and somehow, the long hours of study, and work at the office seem purposeful. When she takes stock of what she has accomplished, she expriences a feeling of satisfaction, and is even more eager to forge ahead toward the desired end. I know, because I am that girl.

Mr. SCOTT. Mr. President, I wish to take this opportunity to say that I am particularly proud of the fact that the third-place winner of this national contest comes from my own State of Pennsylvania. I also feel that both the U.S. Junior Chamber of Commerce and the Mutual Benefit Life Insurance Co., Newark, N.J., are to be congratulated on having the welfare and interest of the youth of this country at heart. I congratulate them both.

Celebration of Swiss Independence Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Saturday, July 2, 1960

Mr. MULTER. Mr. Speaker, on August 1 the citizens of that great and free friend of the United States—Switzerland—celebrate their national Day of Independence. This small country can commemorate a longer period of democracy and independence than any other nation in the world.

In the year 1291 the independence of Germanic Europe was threatened by the rise of the Hapsburg dynasty. The strength and might of this new monarchy were overpowering. Yet three small communities, the forest cantons of Uri, Shwyz, and Unterwalden all a part of present-day Switzerland, chose to fight rather than lose their freedoms. Thus, on that historic August 1 so long ago, the freemen of these valley communities took a solemn oath of brotherhood. Here was formed the "Everlasting League" that was to become the foundation for the Swiss Confederation that exists today. While barbarism still ruled most of the world, while Mongol hordes still ravaged much of Asia and Europe, these valiant men pledged mutual defense against tyranny, the peaceful arbitration of disputes, and the establishment of formal processes of law.

This is the great heritage which has never been forgotten by the Swiss people. Indeed, through the centuries since then other free and courageous men like William Tell have helped to keep this tradition ever shining and bright.

Through those centuries this small nation has demonstrated the possibility of a multinational state; for it has successfully combined under a free and democratic government three major cultural and lingual peoples—French, German, and Italian Swiss.

Here in America, we have been greatly benefited by the contributions made by the descendants of these free Swiss. Swiss-Americans have helped to insure our American freedoms from the Revolutionary War to Korea. Men like Albert Gallatin, Jean-Louis Agassiz, John Sutler, Louis Chevrolet, to name but a few, have left their indelible mark on our land.

Thus, we join wholeheartedly with the Swiss in recognition of the unquenchable beacon of freedom which they have held aloft to light the whole world.

May the mountain valleys of that beautiful land never again echo to the march of tyrants; and may the Swiss forever celebrate in their daily free lives that Day of Independence.

Salute to Port Washington, Wis., on Its 125th Anniversary

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, August 10, 1960

Mr. WILEY. Mr. President, across the Nation, progress in stalwart, "solid" grassroots communities continues to provide the foundation upon which to move forward to meet the challenges of the future.

We recognize, of course, that progress—nationally, as well as in each community—depends upon our resources, the successful working of our free system, and, above all, upon creative, ingenious citizens.

At this time, I would like to pay tribute to a splendid community, Port Washington, Wis., which recently celebrated its 125th anniversary.

This historic city, in Ozaukee County, Wis., is making a significant contribution, not only to a better life for its people, but to our whole economy.

Recently, the Ozaukee Press published a salute to Port Washington, on its 125th anniversary. The special articles review the historical progress of the "City on Seven Hills."

Included in the review of progress of Port Washington, the Press printed a splendid thesis by Sister Mary Jane Frances Price, a teacher at St. Mary's School, in Port Washington.

Regrettably, it is not possible—at this time—to present the whole story. However, I ask unanimous consent to have excerpts from the articles—symbolizing the struggle of growth and development of communities throughout the country—printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

PORT WASHINGTON IN THE 20TH CENTURY

The present city of Port Washington covers an area of 908 acres, or about 1.4 square miles. The early spirit of "busy-ness" is still a characteristic of its people; they are industrious, capable, with a tenacity of purpose which pushes to a successful conclusion any enterprise they undertake. Along the lake front they have platted a Sauk Creek

recreation area and farther to the north the winding road of Lake Bluff Park entices many a tourist to stop in admiration of the glorious view of lake and hilly shoreline. Music still has its place in the lives of its people and the Port Washington band gives its weekly concerts throughout the summer months in the new shell at the foot of Lake Bluff Park.

MODERN INDUSTRY

Although this section of the country is essentially agricultural, the little city is intensely industrial for its size. The early flour and grist mills run by waterpower ranked first in production output in the eighties; lumber and timber exports superseded the flour and grist mill production in the nineties, only to make way for butter, cheese, and condensed milk in the 20th century. Fully 80 percent of Port Washington's income comes from dairy products. In the city itself factories produce chairs, office equipment, bent woodwork, rubber goods, clothing, and machinery. The Wisconsin Chair Factory employs about one-half of the town's workers and is the city's largest taxpayer. The relationship between employer and employee at the factory has always been harmonious. An incident which occurred during the rich man's panic of 1907, is indicative of the confidence with which the city regards the chair factory as a vital part of its industrial life. During the 1907 panic, specie was scarce, so the company's checks, made out in small denominations, circulated as money in the city.

Next in size, and the city's second largest taxpayer, is the Gilson Manufacturing Co.—now the Bolens Product Co.—which employs about 200 workers.

The Wisconsin Electric Power Co. maintains that its Port Washington plant is the most efficient steam powerplant in the world. Work on this project was begun May 26, 1930 and the task of removing part of a 100-foot bluff, widening the harbor, building a large coal dock, placing building foundations of concrete, erecting the buildings, constructing tunnels, and installing the equipment was done within 1 year's time at a cost of about $7,500,000.

COMMERCIAL FISHING

At dawn of each day, steel tugs and power launches sail out of the mouth of the artificial harbor and head north toward Sheboygan. In rough weather or in calm, hardy fishermen, clad in their oilskins and rubber boots, go out to gather their harvest of the deep. Six hundred pounds of trout and chubs constitute a fair day's catch. The gill nets used daily by the Port Washington fishermen would span the lake from shore to shore. Whitefish, trout, chubs, herring, carp, perch, suckers, and burbots (lawyers), are caught in the gill nets; an average day's catch totals about 800 pounds although some days the catch may be as large as 2,500 pounds.

The names of the town's financiers have gone out beyond the boundaries of city and State, carrying with them the name of the city on the lake. In the industrial markets of the country the names of O. E. Moeser, president of the Wisconsin Chair Factory; of H. W. Bolens, president of the Bolens Production Co.; of D. H. Smith, president of Smith Bros.; and of several other of the town's industrial leaders have gained not only the personal respect and recognition they have earned, but have made known the name of the city of Port Washington, Wis.

The Literary Chip Basket, the Zeitung, the See Bote have now been replaced by the Ozaukee Press, the Port Washington Pilot, and the Port Washington Herald, published weekly in the city by young, enterprising newspapermen.

The shoreline Indian trail from Milwaukee to Green Bay has developed into Federal Highway No. 141; the Dekora Road now stretches out into a well-paved State Highway No. 33, meeting a maze of other Federal, State, and county highways. The American born sons and daughters of the early settlers drive in comfort over the ghost trails and plank roads of a century ago. The Chicago, Northwestern Railroad, the Milwaukee Electric Railway & Transport Co., and a bus line furnish ample transportation facilities to Sheboygan and to Milwaukee.

SCENIC BEAUTIES

There is a quaint old worldliness about the lovely little city. The buildings of St. Mary's Catholic Church and school on North Bluff seem to dominate the entire site. To the west, another hill, separated from North Bluff by the valley of Franklin Street, is crowned by another but smaller church, the Lutheran. Old Port Washington, the business section of the city, lies in the cupped hollow formed by the bluffs. Here the courthouse—its grey stone solidity reminiscent of the old guild halls—raises its eagle-crowned spire high above the treetops. The roofs of neatly painted homes show reds, blues, and greens through the leafiness of tree-covered bluffs and hills where houses cling tightly to the steep hillsides. Behind the bluffs to the north and to the west, are the new homes, simple and beautiful, surrounded by well-kept lawns and flower beds, and shaded by lovely old trees. The new residential section is typically 20th century suburban America.

At the northwest end of the city one of the most modern and beautiful hospitals of the State has been erected. St. Alphonsus Hospital, in charge of the Sisters of the Sorrowful Mother, has a 70-bed and 12-bassinet capacity. Its 12 acres, the excavating and landscaping of the attractive boulevard approach, were contributed by the city. Port Washington had long wanted a hospital, so when, in 1941, this dream became a reality, its citizens stamped "our own and one of the best" on another of their acquisitions.

TODAY'S HARBOR

The town may not have come up to the expectations of Wooster Harrison, for its harbor has become merely a refueling stop for Great Lakes steamers and a port for a welter of fishing tugs. Seamen call it a fair weather harbor, for whenever a storm threatens, fishermen and shippers still rush the boats out into the lake to keep them from being dashed to pieces against the concrete breakwaters. If it is not the most thriving of cities, it is a city in one of the most beautiful of nature's settings. Harrison's hopes and dreams live on in a modern comprehensive city plan, which has been worked out by the city planning commission of 1939. This worthwhile study maps out possibilities that deserve the earnest consideration and cooperation of the people of Port Washington. As Rome was not built in a day so time and zealous effort may once more develop a great city built on seven hills.

Many of Port Washington's citizens may not want to see the town grow into a large industrial center; too much enterprise and bustle might rob it of its beautiful residential section or push back the homes from the rugged beauty of the shoreline. It is a home city, not an industrial center in spite of its industries; these are just enough to supply interest and employment for the nonfarming groups, and to make possible the slogan, "No city taxes."

One may turn from the smokestacks of the powerplant and the chair factory to the still wild bluffs and gullies, to the quiet pasturelands to the north, west, and south of the city, or out across the wide blue expanse of Lake Michigan—all part of the panorama viewed from the hilltops of the city of Port Washington, Wis.

Plans and Methods of the Urban Progress Association and Downtown Little Rock, Ark., Unlimited

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Wednesday, August 10, 1960

Mr. FULBRIGHT. Mr. President, the progressive business leaders of Little Rock, Ark., have been making a major effort to insure that Little Rock will be in an advantageous position to meet the business needs of a metropolitan area in years to come. Two groups have been formed to insure that Little Rock will be in a position to meet the demands which will be imposed on the urban community of tomorrow. A recent article appeared in the Arkansas Gazette which discusses the plans and methods of the Urban Progress Association and Downtown Little Rock Unlimited. The efforts of these two forward-looking organizations could serve as a model for cities throughout the country which face problems similar to those in Little Rock. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Arkansas Gazette, July 17, 1960]

TWO GROUPS PROMOTE PLAN TO OVERCOME DOWNTOWN APATHY

(By John L. Fletcher)

Dusk settled over the city on January 16, 1960.

The roar of traffic, which had been outshouted by the noises of actual, visible progress—the grumble of machinery, the rat-tat-tat of air hammers and the clangor of municipal construction and planned improvements—had quieted down for the night.

Tradesmen locked their doors and counted the receipts for the week ending that day. Sales for the period turned out to be 13 percent higher than for the corresponding week of 1959.

The increase was considered particularly robust since the volume for the week ending January 9, 1960, had been 20 percent less than that of a year earlier.

The occasion: The second million dollar clearance promotion in the little more than a year since a group of 160 businessmen teamed up to lead Little Rock out of the wilderness.

The first such event, conducted during the week of August 1, 1959, had resulted in sales 16 percent greater than in the similar 1958 week.

For purposes of this chronicle, it is significant to know that Little Rock's increase in department store sales during both of those periods was tops in the entire Eighth Federal Reserve District, which embraces such cities as St. Louis, Louisville, Ky., and Memphis.

These two episodes were important, of course. But they were singled out only as symbols—something new and inspiring in the wake of an era of complacency that had gripped Main Street so long.

Many other bright examples could be cited. Since these business leaders persuaded the community to shuck its timidity (time was when some merchants were self-conscious in the presence of competitors), 10 major co-

operative promotions have sent sales scooting as much as 18 percent above the like year-ago weeks.

Among these occasions: Holiday Watercade, free babysitting movies, Air Base Appreciation Day, Christmas and Easter observances, and First-Saturday-after-the-first-of-the-month sales—all in a period of 13 months.

Each proved how readily the people react to good advertising.

Behind this new deal in Little Rock is a two-pronged offensive which sort of grew up behind the scenes. The 160 businessmen can put their fingers on one prong, but the other one is an accumulation of intangibles which are of wider scope but which may not be counted immediately.

The first—an organization named Downtown Little Rock Unlimited—can be measured because its primary job is to stimulate trade and keep the traffic of people moving into the central business district. It stands or falls on results. As Raymond Rebsamen once said when asked how a man could keep track of so many business ventures without holding office in any of them, members of this group "can read a financial statement."

The second—Urban Progress Association—was formed to promote the physical redevelopment of the city before it decays into slums.

(This is a good point to mention possibilities of decay: A representative of Urban Progress just came back from Akron, Ohio, and Beaumont, Tex., neither of which is thought to be suffering from stagnancy. Yet he counted 64 vacant stores in downtown Akron. He said he was told by the chamber of commerce at Beaumont that 52 business buildings were unoccupied along seven of that city's downtown streets. In comparison, Little Rock's Main Street has only three vacancies—the former quarters of Penney's, the old Kinney Shoe Store at Third and Main and the Ritz Theater space at Second and Main.)

Urban Progress got off the ground when Metroplan began its chain of achievements in 1955. It received impetus when the Arkansas chapter of the American Institute of Architects created the Main Street, 1969, idea and thereby fired the imagination of the man in the street.

Sidetracked by the 1957 school troubles, those 160 businessmen finally chartered Urban Progress and went to work in April 1959. Another organization had been formed—Downtown Little Rock Unlimited, whose goals were of shorter range. Since both groups drew strength from the same business interests, a single membership campaign was conducted. (Downtown Little Rock Unlimited handles the budget details and screening of applicants.)

What is Urban Progress all about? The primary target was to promote a study of the downtown area, which now has resulted in the 490-acre, $14,300,000 central Little Rock urban renewal project, now in the advanced planning stage. This is the core of the city—bounded roughly by the Arkansas River on the north, Roosevelt Road on the South, the capitol on the west and the freeway on the east.

At stake are the business, industrial, residential and public uses of this big district. One main objective is to grow like such cities as Memphis, Atlanta, and Dallas, but to avoid the helter-skelter development of land wherever the builder can find it available. Urban progress leadership warns that unplanned construction of buildings could create community traffic problems requiring new streets and expressways and connectors, and new taxes to pay for them.

Urban Progress is not, in itself, the agency designed to renew Little Rock or even to plan for the renewal. For these functions, the city has Metroplan, the Little Rock housing authority, city board of directors, planning commission, Downtown Little Rock Unlimited, Pulaski County Citizens Council, chambers of commerce.

You might put it this way: The businessmen who formed Urban Progress and contribute to it are helping to make easier the jobs of these other organizations. They are trying to create understanding and support for the city's total $42 million urban renewal and rehabilitation program in eight big areas.

All of the things must stand out sharply in a community of 100,000 or so when it is in daily competition with such cities as St. Louis, Memphis, Kansas City, Dallas, New Orleans, and Oklahoma City for people, trade and industry.

Leading these two stalwart business groups are the officers—Raymond Rebsamen, Sam Strauss, Jr., Arthur Phillips, James Williamson, Dowell Naylor, Jr., Jack East, Jr., Jack Hawkins, and William McLean.

In the background, seeing that the main objectives are carried out successfully, are two capable and hard-driving former newspapermen—Jason Rouby, assistant to the president of Urban Progress, and W. A. Hawkins, managing director of Downtown Little Rock Unlimited.

Commemoration of Captive Nations Week

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, August 10, 1960

Mr. KEATING. Mr. President, during the recent recess of the Congress there occurred the nationwide observance of Captive Nations Week, in the period July 17 to July 23. It was my high privilege to cosponsor in the Senate the legislation which authorized the designation of Captive Nations Week, and I find it a heart-lifting experience to note the profound significance which has been attached to this commemorative occasion.

In this regard, I should like to draw attention to the special Captive Nations Week proclamation issued by Gov. Nelson A. Rockefeller of the State of New York.

Mr. President, in the light of its significance for our times, I ask unanimous consent that Governor Rockefeller's proclamation be printed in the Appendix of the RECORD.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION
STATE OF NEW YORK,
EXECUTIVE CHAMBER,
Albany, N.Y.

The roll of nations held captive by Communist imperialism is one of appalling length.

As the Congress of the United States has pointed out in a joint resolution, the United States, in the eyes of the enslaved peoples, is the citadel of human freedom. They look to us for leadership in bringing about their liberation and independence and in restoring the enjoyment of their Christian, Jewish, Moslem, Buddhist, and other religious freedoms.

We Americans are proud that many refugees from the oppressed countries have found asylum in the home of the free. We have benefited from their coming. They have become valued neighbors, loyal and industrious contributors to our State and national economy.

Now, therefore, I, Nelson A. Rockefeller, Governor of the State of New York, do hereby proclaim the period of July 17–23, 1960, as Captive Nations Week in New York State, and I urge the widest possible cooperation in the observation of this week.

Given under my hand and the privy seal of the State at the capitol in the city of Albany this 7th day of July in the year of our Lord 1960.

By the Governor:

NELSON A. ROCKEFELLER.
WILLIAM J. RONAN,
Secretary to the Governor.

New Scout Head Was Tenderfoot

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, August 10, 1960

Mr. WILLIAMS of New Jersey. Mr. President, only four persons have served as chief executive of Boy Scouts of America in a half-century of Scouting in this Nation.

The latest change occurred only last month, when Joseph A. Brunton, Jr., succeeded Dr. Arthur A. Schuck, of Short Hills, N.J.

Mr. Brunton, of course, now faces a serious responsibility, but I am sure that he will find inspiration from a study of the accomplishments of his predecessors. An editorial in the Daily Home News, New Brunswick, N.J., of August 4, 1960, describes some of those accomplishments, and it gives a welcome to Mr. Brunton and additional recognition to Mr. Schuck.

Mr. President, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the following editorial was ordered to be printed in the RECORD, as follows:

NEW SCOUT HEAD WAS TENDERFOOT

Joseph A. Brunton, Jr., left the National Boy Scout offices in North Brunswick about 2 weeks ago to attend the Jubilee Jamboree in Colorado Springs, as assistant chief Scout executive, and returned to the offices this week as the chief executive of this famous youth movement. On August 1 he succeeded Dr. Arthur A. Schuck, of Short Hills, and became the fourth person to have this challenging job in the 50 years of Scouting in America.

Beneath the shadows of Pikes Peak and under a midsummer Colorado sky, 56,170 Boy Scouts and Scouters marked a half-century of Scouting in this country with a giant birthday party last Thursday evening. In addition, this vast assemblage "hailed the chiefs"—the outgoing Dr. Schuck and his successor, Joe Brunton. It must have been a pleasant event for both men. Dr. Schuck felt good because so gigantic an event as this jamboree had been so sucessful and Joe Brunton knew he could rely on these leaders in Scouting to support him as this vast movement grows.

The first chief Scout executive, Dr. James E. West, a young Washington attorney when the Boy Scouts of America was founded, opened the first Scout office in New York on

January 2, 1911 with seven employees. Thirty-two years later he retired and was succeeded by Dr. Elbert K. Fretwell of Teachers College, Columbia University. Dr. Fretwell retired in 1948, the year Dr. West died, and Dr. Schuck succeeded him.

Dr. Schuck entered Scouting as a volunteer leader in 1913 and entered Scouting professionally in 1917 advancing to the top position. Joe Brunton comes to the post from the lowest ranks. He is the first chief Scout executive to start as a Tenderfoot Scout, reach Eagle Scout, and get his first leadership experience as a patrol leader. Scouters can say "he is one of us."

New Brunswick is proud of having the national offices of the Boy Scouts of America as our neighbor. And we say amen to this proclamation made last Thursday evening in Colorado Springs:

"All of us here at the Jubilee Jamboree join in thanking Dr. Schuck for the dedicated, positive leadership he has given us.

"We assure Mr. Brunton that every one of us, Scouts and Scouters, on our honor, will do our best to carry out Scouting's purposes in the years to come."

Statement Before Senate Appropriations Committee by Justice Marlin T. Phelps, of Arizona Supreme Court

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Wednesday, August 10, 1960

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made before the Senate Appropriations Committee by Justice Marlin T. Phelps, of the Supreme Court of Arizona, and a member of the citizens' foreign aid committee.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman and members of the committee, my name is Marlin T. Phelps. I was graduated from Vanderbilt University in 1909 with the degree of LL.B. I was admitted to the Arizona bar in 1913 and practiced law in Phoenix until 1923. From 1923 to 1949 I was judge of the Superior Court in Phoenix. Since 1949 I have been a Justice of the Supreme Court, State of Arizona, and have twice alternated as chief justice.

I beg leave to present this statement of my views on the proposed appropriation for foreign aid.

United States tax money today is being used, as has been brought forth in hearings, to pay the public debt of other countries. I find no constitutional or other authorization for such application of the public funds. The appropriation also provides funds for "budgetary support," which means providing money to other countries for the ordinary expenses of Government. I find no legal basis for such application of the public funds, either under the general welfare, or the national defense provisions of the Constitution. I fail to see, in any case, how the building of a magnificent crystal and steel dream of a railway station in Rome, as was done with Marshall plan funds, contributes either to the general welfare or the national defense of this country, or deters the spread of Communism in Italy.

It is not evident, for instance, how the general welfare of the American people or the national defense of the United States was advanced by the three quarters of a billion dollars we gave France to defend its colonial interests in Indochina.

It is not clear why we continue to finance the Iranian budget in view of its quarter billion dollar annual income from oil. Last year, Iran obtained through one agency or another, some $200 million additional. It is not clear how the general welfare or the national defense is promoted by the millions we are giving Communist Poland and Communist Yugoslavia.

I object to the enormous domestic propaganda and lobby machine in the hands of the State Department and the President. Congress and the public are flooded with official literature glorifying giveaway. In much of the literature the claim is made that it is our moral duty to help other countries. I find no constitutional support for such a proposition. I find no constitutional support for the expenditure of money to high pressure the citizenship into supporting foreign aid.

The foreign aid program is objectionable on the further grounds that it is in contravention of all standards of accounting and fiscal responsibility. Article I, section 9, clause 8 of the U.S. Constitution prohibits the withdrawal of money from the Treasury except in consequence of an appropriation made by law, and a regular statement and account thereof published from time to time. Has there ever been such a statement and account rendered? Does the Congress know to what purposes this money has been put? Has the State Department published such an accounting? Or has this been classified as top secret matters?

Gentlemen, I recognize that the courts defer to the judgment of the Congress as to the necessity or wisdom of legislation so long as it remains within its constitutional limitations, and the present Court in *United States* v. *City of Milwaukee* (322 U.S. 735), held that it would respect the declaration of Congress that low-cost housing is a public use and sustained the right of the Federal Government to acquire land and build low-cost homes thereon.

Gentlemen, so far as I can determine, the Supreme Court of the United States has never decided the question of the constitutionality of the foreign aid program. It appears to be wholly beyond the constitutional power of Congress to authorize the expenditure of these funds under the provisions of the Mutual Security Act. As you are aware, the power of Congress to act must be found expressly or by necessary implication in the language of the Constitution. I find not a word, a line, a clause, or a provision in the Federal Constitution that authorizes the foreign aid program as it is administered.

If Congress has such power, express or implied, it must be found in article I, section 8, clause 1 of the Constitution, which gives Congress the power to lay and collect taxes, duties, imposts, and excises, so far as here material, for the general welfare and for the common defense. The welfare of whom? The answer is clear: The welfare of the people of the United States. (*United States* v. *Butler*, 297 U.S. 1-88, 80 L. Ed. 477). The framers of the Constitution, were concerned solely with the welfare of the people of the States constituting the Union they were about to form and from the consent of whose citizens the proposed government would derive its just powers.

The decision in the Butler case, discussed at length the "general welfare clause" of the Constitution. This discussion was obiter dictum since it was not necessary to a decision of that case. Nevertheless, it represents a view of the highest court of the land. The dictum rejected Madison's interpretation of the general welfare clause, which restricted its application to the other 17 grants of power enumerated in section 8, and it adopted rather Hamilton's broader interpretation to the effect that the clause conferred upon the Congress a substantive power to tax and appropriate, limited only by the requirement that it shall be exercised to provide for the "general welfare of the United States."

The subsequent decision of the Supreme Court upholding the validity of the Social Security Act, followed the interpretation given the "general welfare" clause in the Butler case. Yet, broadly as the Court defined the term, neither of these decisions tended in the slightest degree to intimate that its operation applies to any people or to any nation other than the United States.

I am unable to see how any man can see hope for world peace through world law as long as the vast populations of Russia, Eastern Europe, China, and southeast Asia are under the rule of overlords who recognize no principle of conduct except force; who recognize no peace except as defined by them; who recognize no moral code, no God; whose treaties are observed only in their breach; whose oft-repeated threat and boast has been that they will enslave our children.

Let us cease to enact socialistic legislation at home. Let us abandon the idea that we can spend our way out of debt. Let us take an inventory of our moral assets and liabilities as a nation. Let us abandon at once the unlawful expenditure of tax money under the pretext of containing communism. Let us use these funds to establish here a center of moral, military, and economic strength that will reassure the free world and hearten the nations to their own defense.

Well-Being of Men and Women in Other Lands

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, August 10, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the Bergen Evening Record of Hackensack, N.J., and the Englewood, N.J., League of Women Voters recently completed an interesting venture in local journalism about international topics. For 15 weeks, in its Week-End magazine, the newspaper ran a series about Bergen County residents who have had a hand in helping peoples of free nations to understand each other better.

Mrs. Fred Thomases explained the purposes of the series in a letter to me this week. She said:

As foreign policy chairman of the League of Women Voters of Englewood, I approached the paper with the idea of printing articles, prepared by us, which would acquaint the readers with some of the fine work done by the United States in developing countries. We were ready to do all the research, interviewing, writing, in addition to supplying photos. The newspaper agreed, with the one stipulation that we hang our stories on Bergen County residents, a requirement which made our work harder but revealed the interesting fact that there actually are many local people involved in oversea assistance.

I have helped with the research but Mrs. Adele Stern, our public relations chairman, has done the major share of the work.

Mrs. Stern, the mother of two children and a former teacher, prepared articles which showed how near-neighbors in Bergen County had, at one time or another, worked somewhere on the international front to help make better lives for people in other lands. Her subjects during the 15 weeks were:

Dr. Tingfu F. Tsiang, an Englewood resident who has served as permanent Ambassador from Nationalist China to the United Nations.

Argo Thompson, manager of an Englewood firm which, through the International Cooperation Administration, has shipped disease-fighting drugs to Korea.

Miss Isabel Murray, of Cresskill, who served with the U.S. Information Agency in Indonesia and the Belgian Congo.

Robert L. Davison, of Edgewater, who came out of retirement to serve as a United Nations representative first in Colombia and now in Iceland.

Mr. and Mrs. Theodore Scarlet, of Bergenfield, who are hosts to Masanori Hashimoto, a Japanese student here under an exchange program.

Nessim Shallon, of Englewood, who spent 10 years with the United Nations, the last 4 as a member of the United Nations expanded technical assistance program.

Dr. S. M. Corey, of Tenafly, and Dr. Clarence H. Kent, of Closter, who have helped to train specialists in the universities of India.

William X. Scheinman, Tenafly, president of the African-American Students Foundation, Inc., which brings qualified African students on a scholarship basis to study in universities of this Nation.

Dr. Maurice Foreacre, of Tenafly, who, as an adviser to the American-Israeli Lighthouse for the Blind, visited Israel recently "to see what U.S. rehabilitation philosophy had done for blind persons who had been reared in depressed situations."

The Reverend C. Melvin Blake, of Dumont, who spent 10 years as a missionary in Angola—Portuguese West Africa—and the Reverend John Thompson Peters, of Ridgewood, who recently studied at firsthand a professional rehabilitation operation for 3 million refugees in West Bengal and Calcutta.

Prof. Harold McNally, of Tenafly, who had worked on technical assistance projects in Burma.

Dr. and Mrs. Gerald Dykstra, of Wyckoff, who went to Afghanistan as part of the International Cooperation Administration's contract with Teachers College of Columbia University.

The Phil Lange family of Tenafly, who were particularly concerned about recent disasters in Chile because Professor Lange had served with a UNESCO project in Latin American countries.

Miss Orrea Pye, of Englewood, who has helped other nutrition experts to improve foods and agricultural habits in the Philippine Islands.

Charles B. Fahs, of Fair Lawn, director for humanities for the Rockefeller Foundation; and Carl Burness, of Ridgewood, who was program associate for south and southeast Asia of the oversea program of the Ford Foundation.

Mr. President, the series gave readers some idea of the extent of interests which this Nation has in the well-being of men and women in other lands. It reminded Americans once more that there are no boundaries on friendly interest and mutual efforts to fight suffering and poverty.

Although the articles are too lengthy for printing in their entirety, I ask permission to include in the RECORD the last two articles in the series.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Bergen (N.J.) Evening Record, June 18, 1960]

FILIPINOS PROVING SELF-HELP WORKS

(By Adele H. Stern)

Bataan, Corregidor, Mindanao—fascinating, mysterious names to most Americans until less than 20 years ago. Potent, stirring names to those who lived through World War II. Vital, living names to the Philippine Republic, once a colony of the United States.

Composed of more than 7,100 humid, tropical islands that extend some 1,150 miles in the Pacific Ocean, the Philippines are inhabited by 24 million people. Mainly of Malay stock, the people absorbed the cultures and traits of three continents to form what is now the Filipino. Asia, in thousands of years of invasions and intermingling of blood lines, contributed the basic physical chracteristics of the people and a close feeling of identity with Asian problems. About 350 years of Spanish rule (after having been discovered by Magellan in his wanderings around the world) left lighter skins and longer faces and Catholicism which is still the main religion of the islands. And at the end of the Spanish-American War, when Spain ceded the Philippines to the United States, the concepts of independence and democracy began to flourish.

When Miss Orrea Pye of Englewood landed in Manila last Christmas Day, she was greeted by a welcoming committee of some 20 people ranging in age from a 90-year-old man to a 14-month-old baby. The nucleus of the committee was formed of four former students of Miss Pye, who is professor of nutrition at Teachers College of Columbia University, and the rest of the people were the students' families. Miss Pye asserts she spent much of her time in the Philippines concerned about her own nutrition, so richly was she wined and dined.

The Filipinos, traditionally kind and hospitable, were intent upon making certain their teacher tasted every type of island dish. Moreover, they planned an extensive tour for her to introduce her to the dietary problems and nutrition projects in the islands firsthand.

Professor Pye was eager to learn about native foods and agricultural habits so that she could return to Columbia with more specific information for future Philippine students (there are any number in her classes each year). One student, who works with a governmental agency, the Food and Nutrition Center, acquired the use of a UNICEF jeep, which provided transportation to citrus orchards, to the College of Agriculture, food markets, health centers, and schools.

In return, the Englewood woman, who has traveled widely in South America, Europe, Australia, New Zealand, and the south seas, always with the view to learning more about the nutrition problems of the people of the world, lectured in Manila on trends in nutrition and recent developments in the field. Moreover, she made herself available for consultation on special problems.

Nutrition is only one field in which the new Philippine Republic is working. It is conscientiously engaged in developing its untapped forests and mineral resources and in increasing the exports of copra, sugar, logs, abaca, coconut oil, chromite ore, iron ore, and pineapple.

Particularly important has been the program of land development and resettlement through a self-help process whereby the rural people with assistance from the government and the U.S. International Cooperation Administration, work with community development personnel to better their living conditions.

A good example of this is the hundred-year-old village of Kalasungay, neglected, poor, disease ridden. With the arrival of a community development worker, changes began to occur. The first of these changes was a campaign against the rats and pests which destroyed half the crops before they could be harvested. Then a recreation center was built, a road was prepared, and vegetable gardens were modernized. Men organized to introduce piggeries to add to the family income and to dig backyard toilets, to build a schoolhouse and health center where a visiting rural doctor now holds office once a week. A community development worker says, "When the villagers realize that they themselves can improve their living conditions with a minimum of government help, their indifference gives way to eagerness and a desire to live better."

In modernizing agricultural methods, joint United States-Philippine programs have included irrigation and agricultural education. Farmers extension clubs and 4-H Clubs have been organized. Through education and new techniques, rice yields have been doubled and an estimated 3 million additional bushels of food have been produced annually as a result of these improvements.

Cornell University, through an ICA contract, has assisted in the rehabilitation of the College of Agriculture which was destroyed during World War II.

In 10 years, the Filipino (who lives in family group units called the barrio) has raised his income from $88 to $220 a year. He is learning English in the schools as well as Tagalog, the national language (many Filipinos speak Spanish as well). He may go to a vocational school after his elementary or high school education. If he is so inclined, he may go to a university or to the United States for special training.

With the Philippine Government, which contributed $5 million and the United States $4 million in equipment, the vocational education program, debilitated during the Japanese occupation, has been reorganized. United States-Philippine cooperation is shown again through the Industrial Development Center, established in 1955 to stimulate industry and business enterprises. IDC activities include industrial financing, training, consultation, and industrial information. Since 1955 a total of 176 industrial firms including textile, cement, plywood veneer, paper, logging, mining, and road construction operations companies have received a total dollar assistance amounting to more than $37 million.

[From the Bergen (N.J.) Evening Record, June 25, 1960]

PATRONS OF PROGRESS

(By Adele H. Stern)

If, as the dictionary says, a commuter is one who travels regularly between a city and his home, then any one of the briefcase-bearing gentlemen who daily board or alight from airplanes, ships, and trains in cities all around the world might be called international commuters.

Private American foundations send these men, their representatives, far and wide to investigate, approve, or oversee the spending of millions of American dollars. Last year, expenditures by the largest foundations for economic, technical, and research abroad was in the neighborhood of $40 million, and this sum is expected to rise this year. The qualified and excellently trained personnel whom the foundations employ in their home offices and in oversea outposts investigate requests for grants that come from institutions at home and abroad.

Two of these men who have made the world their offices are Charles B. Fahs, of Fair Lawn, director for humanities of the Rockefeller Foundation, and Carl Burness of Ridgewood, who was program associate for south and southeast Asia of the oversea program of the Ford Foundation.

Dr. Fahs, born in Brooklyn and a graduate of Englewood High School, has spent much of his adult life as an international traveler. He earned his Ph. D. in political science at the University of Berlin. Then followed a year at the National School of Living Oriental Languages in Paris and 3 years on fellowships of the general-education board of the Rockefeller Foundation; then to the University of Kyoto, University of Tokyo, and to the College of Chinese Studies at Peiping.

Returning to a home in Bergen County and to his work for the Rockefeller Foundation, after teaching in California and working for the State Department in Washington, Dr. Fahs screens hundreds of requests each year for funds from the Rockefeller Foundation for work in any field of the humanities—art, music, education, or literature.

When he has decided a project will be a good one for the foundation to undertake, he makes a recommendation to the board of trustees, which makes the final decision on grants.

The story of the Rockefeller Foundation is a romantic and exciting one. It has been involved with a great many of the sociologic and economic changes in the world since John D. Rockefeller, Sr., established this fund, along with several others for distributing his vast fortune, in 1913.

It has covered such projects as a $45,000 grant to the American Korean Foundation for the development of a theater in South Korea; $250,000 to the University of Sao Paulo, Brazil, for research at its faculty of medicine at Ribeirao Preto; to a grant of $714,135 to the India International Center planned in New Delhi.

Although a great deal of the foundation's funds is still spent in the United States, considerable sums have been granted abroad, for research in cardiology in Mexico City; nitrogen fixation studies at the University of Tokyo; studies in genetics at the University of Naples; and so on.

The Rockefeller Foundation originally pioneered in public-health work, and still remains heavily associated with this field. It has added agricultural research and development, social sciences, and humanities over the years. During the past 4 years, the foundation has dipped into capital to the extent of $20 million to step up the pace of its oversea work.

A commuter between Ridgewood and New York City these days, Burness has been around the world four times. He has visited, for at least 1 or 2 weeks, all of the countries in Asia, except for mainland China, Nepal, and Ceylon.

When he was with the Ford Foundation, as program associate for the south and southeast Asia program, he spent 4½ months in Indonesia, substituting for the Ford field representative to that country while the latter was on leave in the United States. This gave Burness a close view of the workings of the foundation during a period of internal strife, for Indonesia was in the midst of a revolution in 1958.

Established in 1936 by Henry and Edsel Ford, the foundation's main interests have been of an educational nature. Since 1951, the oversea development program of the Ford Foundation has been assisting underdeveloped countries to raise the living standards of their people. By the end of 1958, the foundation had appropriated or earmarked $90 million for the program. Of this sum, the foundation had approved grants and projects totaling $71 million in 19 countries in south and southeast Asia and the Near East, Africa, and Latin America.

The main objective has been helping these underdeveloped countries establish some of the educational and research institutions they need for their long-range growth, complementing other economic and technical assistance agencies that aim largely at meeting immediate economic needs and stress physical projects. The foundation helps the countries' own specialists in training and research. It finances specialized training in the United States, Western Europe, and other areas, for teachers, administrators, and technicians. It helps obtain foreign consultants and, when necessary, imports equipment.

In Burma, for example, through its oversea development program, the Ford Foundation has assisted projects in agricultural and rural development, industrial and business development, education and vocational training, public administration, and economic and social research through grants of $6 million to Burmese schools, universities, government agencies, and private organizations.

In Pakistan, where the government has placed priority on the establishment of a broad range of new institutions devoted to the advancement of individual capacity and opportunity, the foundation has committed $13 million since 1952 for furthering the spirit of self-reliance among the Pakistan people and developing a corps of trained public and business administrators, skilled technicians, teachers, and specialists in economics, agriculture, and public health.

In almost every underdeveloped country in the world, the money of some private American foundation is financing one project or another. The Ford Foundation and the Rockefeller Foundation are only two of many dedicated to uplifting the economic standards of the peoples of the emerging nations. The W. K. Kellogg Foundation, the Near East Foundation, the Asia Foundation, and the Carnegie Corporation (whose grants abroad are restricted to the British Commonwealth) are allotting sums that are being spent in highly diverse manners for a large variety of programs.

Still, the aims of the foundations are similar to each other and similar also to the aims of all the other assistance groups that have been discussed in Bergen International—helping the recipient countries develop their own bodies of technicians and building institutions in these countries to make it possible for them to exist independently.

Most of the time the individual foundations work alone, but there have been projects that have involved several agencies in joint sponsorship. In the Philippines, for example, a new International Rice Institute, to serve as a research and training center for all rice-growing countries, will be built with a $7-million grant from the Ford Foundation on land donated by the Filipino Government and staffed with technicians and advisers from the Rockefeller Foundation.

Burness says that the work of the private foundations is valuable because the money is donated with more freedom, since governmental policies and political changes are not involved. For this reason, the funds are frequently more acceptable to some governments. Moreover, emphasizes Dr. Fahs, it is our Government's policy to encourage benevolent giving through our tax laws; we encourage initiative and at the same time give people who have shown initiative an opportunity to decide where the money is going.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

REA: The Farmer's Friend

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, August 11, 1960

Mr. ROBERTSON. Mr. President, I was privileged day before yesterday to attend the annual meeting of the Shenandoah Valley Electric Cooperative at Harrisonburg, Va., and to address the members briefly. The accomplishments of this, the largest electric cooperative in my State, are truly impressive to me and, I hope, to my colleagues in this body. I ask unanimous consent to have my remarks on that occasion printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REA—THE FARMER'S FRIEND

(Remarks of Senator A. WILLIS ROBERTSON at annual meeting of Shenandoah Valley Electric Cooperative, Harrisonburg, Va., August 9, 1960)

In working as a boy on my grandfather's farm in Culpeper, I learned something about the problems confronting our farmers and a lot about the hard work that goes into the production of the Nation's food supply. Consequently, throughout my public service, first in the Senate of Virginia, and then in the Congress of the United States, plans to promote the welfare of the rural areas of our State and Nation have been for me major goals. Many of you will recall that as a State senator, I advocated better roads, better schools and better conservation of our natural resources. I served on the commission to lay out the State highway system; was a joint patron of the bill to create it; I was an active supporter of the Mapp bill which revised our public school system, and I helped to frame the bill that created the first game department. All of those programs have paid rich dividends. In my opinion, Virginia's highway system, and especially the secondary roads that serve rural areas, is second to none; our school system compares favorably with States of comparable per capita income and few States can surpass the recreational opportunities offered by our State parks and public hunting and fishing areas, our national forests and our marshlands and beaches in the Tidewater area.

In the Congress, two programs which I have supported from their inception, and which I feel have paid the richest dividends, have been soil conservation and rural electrification. Both of these programs have been administered at the local level, both have been voluntary porgrams, the first program being a matching one in which local farmers contributed 50 percent or more of the cost of the program and the latter being supported without cost to the Federal Government except for the loans made available to the REA co-ops, practically all of which have been met at maturity.

One of the distressing aftermaths of World War II was the fact that American farmers were encouraged to greatly expand their production to meet the needs of our allies as well as ourselves for food and fiber and after the end of that abnormal foreign demand for our farm products, no sound and workable plan has been developed under which our farmers could exchange what they produce for what they needed to buy at a fair and equitable price. However, the disparity in recent years between the farmer's share of the national income and that of either industry or organized labor would have been far greater but for the benefits which our farmers have derived from the availability on the farm of electricity. In the 50-year period prior to the rural electrification program, urban communities fully enjoyed the blessings of electric power and light but that advantage of a scientific age reached only 10 percent of our farmers. In 1935, prior to the start of the REA program, only 7.6 percent of Virginia farmers had electricity. Those of us who advocated the REA program argued that lack of modern equipment was keeping American farmers from enjoying a scale of living comparable with their city brethren and lack of modern conveniences was making farm life unattractive to young people on whom we must depend for future food and fiber production.

We said that since the Government had set up the Reconstruction Finance Corporation as a lending agency for business enterprises trying to work their way out of the great depression of the thirties, it was no more than reasonable to provide aid in the form of soundly secured loans for the 90 percent of our farmers who had been denied advantages which most city dwellers had enjoyed for 50 years. Aside from the benefits to the farmers themselves we felt that this program would benefit the Nation generally by promoting more efficient production of food and would create a better balanced economy by encouraging small industries to locate in rural sections.

The REA program has been even more successful than those of us who originally supported it could anticipate. We foresaw that electric lights would make it easier for the farmer to go about his chores and that electric power could reduce manual labor required for moving crops, grinding feed, milking and pumping water. We knew that electricity in the home would save the women from the drudgery of carrying water, standing at the washtubs and enduring the heat of the wood cookstove. We did not fully anticipate how scarce and costly farm labor would become and how essential it would be to substitute electricity and machinery which, it has been estimated, now gives every man, woman and child in our country the work equivalent of 30 hand workers. Nor were we able to imagine that a farmer would find as many as 250 productive uses for electricity, including the innovations which have helped to make the Shenandoah Valley one of the top poultry-producing areas of the Nation.

When I attended the Shenandoah Co-op meeting in 1944 I was able to report that since the start of REA electrification of rural homes in the Nation had risen from 10 to around 42 percent and in Virginia from 7.6 to 30 percent. At your meeting 2 years later I had figures showing that the national percentage was up to 45 percent and the Virginia figure to 35. It is even more pleasing to know today that the latest annual report of the REA showed Virginia had reached the national average, with 97 percent of our farms electrified. As for the Shenandoah Valley Electric Cooperative—it has become the largest in the State, with 11,465 customers to whom it furnished last year 52,083,000 kilowatt-hours of electric power.

The economic implications alone, are impressive enough to warrant considerable attention. Electricity, for its users, is simply energy in its most useable form. Once a farm is supplied with this silent, flexible, versatile means of energy, it automatically becomes a potential market for all the products that have been devised to harness it for useful work.

No amount of persuasive salesmanship on the part of any electrical appliance dealer could transform a farm family into a customer for his products without an available form of electric energy.

Once a farm is electrified, however, it becomes a potential customer for electric stoves and heaters, for lamps and washing machines, for ironers, radios, television sets, milking machines, and modern plumbing operated by electric pumps. The list of products that an electrified farm is in a position to buy is almost endless. The impact on our economy of this still-developing market is directly beneficial to thousands of stockholders and millions of our industrial workers, some of whom may never have been on a farm at all.

Benefits of the program to the farmer can appropriately be listed under the two heads: "Monetary Gain" and "Social Gain."

1. MONETARY GAIN

(a) Grinds feed for all farm stock.

(b) Ten- to twenty-percent increase in egg production by poultry house lighting.

(c) Ten-percent saving on feed by electric brooding and lighting and 2 weeks less finishing time for broilers.

(d) Marked increased efficiency in dairying through electric milking machines, sterilizers and coolers, cream separators and churns, and light in winter months in dairy barns.

(e) Saving in fences through the use of electrified fences.

(f) Electric hay driers especially valuable in curing alfalfa and pea hay.

(g) Workshop, grinding mowing blades and repairing farm machinery.

(h) Pumping water for household use, farm stock, and irrigation.

(i) Labor-saving devices in the home such as washing machines, vacuum cleaners, electric irons, churns, ranges, hot-water heaters—in a word, the full equipment of a modern city apartment designed to be operated by the housewife without servant help.

(j) The development of summer homes for city people.

2. THE SOCIAL GAIN

(a) Radio and prompt news coverage.

(b) Adequate lighting, including study lights for school children and lighting for schoolhouses and churches.

(c) Sanitary facilities made possible by pressure water systems.

(d) Deep-freeze and locker units for winter consumption of fresh fruits and vegetables as the means of a better balanced rural diet and the conservation of perishable foods.

(e) The stimulation of community pride and the accentuation of the advantages of farming as a means of life by reducing the

drudgery and inconveniences involved. The time saved to farm mothers in not having to fill oil lamps and clean lamp chimneys, churn by hand and not having to bend for hours over washboards can now be devoted to the improvement of family relations and to community enterprises.

The electrical revolution that has taken place in the rural home has been even more impressive, in many ways, than the labor-saving equipment installed elsewhere on the farm. A variety of electric kitchen equipment, freezers, refrigerators, electrically controlled heating plants and television and radio sets have all served to make the farm home a more comfortable place to live.

Estimates indicate that the average farm use of electricity has risen from 600 kilowatt-hours per year 25 years ago to nearly 4,000 kilowatt-hours at the present time. In another 15 years, this consumption is expected to rise to the challenging total of more than 10,000 kilowatt-hours annually. This is a figure both of challenge and opportunity, because it indicates that the work of the REA is far from completion.

The challenge will be to provide the necessary power to meet this anticipated need, to hold the cost to a reasonable figure and to assure that REA cooperatives will have their fair share of the giant power pools of the future.

As we meet these challenges one by one, new ones will arise, based on technological changes we cannot now fully appreciate. But we must keep pace with all these changes or else allow our Nation's agriculture, which George Washington called "the noblest occupation of man," slip into the position of a third-rate industry.

It is not agriculture, alone, that looks to the REA to assure its future. Our national security, itself, as well as the general prosperity of our population, depend on our ability to bring to the beneficial use of all our people the electric power network on which all of us depend for communications, for conveniences and for more efficient production.

The REA has made it possible for millions of nonfarmers to make their homes in rural areas and for thousands of industries, small and large, to locate their plants along rural electric lines with such profitable and pleasant results for themselves and for their workers.

But the rewarding satisfaction that I feel over the splendid results accomplished by a program which I supported at its inception 25 years ago and have continued to support ever since, is tempered by the realization of the new problems both at home and abroad which have arisen for our farmers during those years. One relates to the disparity of income, to which I already have referred. One inflation factor which has eroded one-half of the purchasing power of our money is called the wage price spiral. Industry is organized and industrial labor is organized. And over a period of years when the actual cash income of farmers was declining, to say nothing of the decline in the purchasing power of the farm dollar, industry has granted to organized labor many wage increases which were promptly followed by price increases. Our farmers have never been able to control their output in the way that industry can control its output and the always serious problem of a fair and adequate price for farm products has during recent years been greatly complicated by the accumulation of price depressing surpluses, resulting from a poorly managed farm program. One of the major undertakings of the next Congress will be the disposal of those surpluses with a view to the establishment of a freer and more competitive market for our farm products. Another recent development which is going to have a price-depressing effect, is the organization in Europe by six European nations, formerly the best customers for our cotton, tobacco, and wheat, of what is known as the Common Market. We fear that those six nations in order to stimulate their own farm production may discriminate against our farm products.

There also is another European trade organization recently formed called the Outer Seven. That is an organization led by Great Britain of seven nations that were not invited to join the Common Market group. The Outer Seven has organized for the protection of their trade and perhaps to force trade concessions from the Common Market group. All of those 13 European nations, most of whom have been the beneficiary of lavish grants and loans from us since the end of World War II, have become highly competitive with us, especially in the industrial field. But since we are normally dependent on export markets for some 40 percent of our cotton and tobacco and some 20 percent of our wheat, the problem of solving in a satisfactory way our current farm problem can be intensified by trade restrictions that may be adopted against us by these two European groups.

While I know that our farmers are concerned about their economic future, I am sure that they are likewise concerned, as are all the rest of us, over the threat to our survival posed by the rapidly developing military power of the Soviet bloc. We are now devoting, and as long as the cold war lasts, will continue to devote, at least one-half of our national revenue to the development of our Defense Establishment. While the Soviet Union may at the moment possess some slight superiority in the field of guided missiles and in the size and equipment of its land army, we still have overall military superiority. We hope that a continuation of that superiority carrying with it the implications of destructive retaliation in the event the Soviets should start another war, will be sufficient to preserve an uneasy peace. But all of us must recognize that it is an uneasy peace. All of us must recognize that in the event of another world war, the worldwide destruction by nuclear weapons will be so terrific that there can be no victor in the true sense of the word. Therefore, we should daily pray that the same God who befriended the early settlers in this valley against hostile Indians and gave them the strength and courage to overcome the hardships of a wilderness, that the same God who was the ally of the Founding Fathers during our fight for independence from Great Britain, and the same God who has enabled us to develop in a relatively brief period some 13 small and struggling Colonies to a Union of 50 States—the richest and most powerful empire in the world—will continue to be our ally in the fight we are making against the anti-God ideology of communism. For, I am convinced that we labor in vain to build a temple of peace that is not dedicated to the victory of moral force.

A Woodrow Wilson Memorial

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, August 11, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the Senate has already passed a bill which would establish a national commission to study proposals for a Woodrow Wilson Memorial in Washington, D.C. The Commission's recommendations on the form the memorial could take would be submitted to Congress for final approval.

New Jersey, of course, has a particular interest in the proposed memorial. A recent expression of that interest and pride was given in an editorial in the Daily Journal of Elizabeth, N.J. I believe that the editorial also expresses the deep affection felt by Americans for the man who led his Nation at a critical period in its history.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Daily Journal of Elizabeth, N.J., July 5, 1960]

A WOODROW WILSON MEMORIAL

Whether a permanent national memorial to Thomas Woodrow Wilson, who went from the governorship of New Jersey to the White House, is desirable and feasible may be determined after long years of discussion. The Senate has enacted and sent to the House a proposal for an 11-member commission to resolve that question.

The measure was introduced by Senator WILLIAMS, of Westfield. A memorial, if that is the decision, also will be evolved from commission studies.

The Washington Monument, the Jefferson and Lincoln Memorials, the Taft Monolith, are the outstanding instances of this perpetuation of the memories of illustrious Presidents. Washington is flecked with statuary and kindred tributes to greatness, and another, unless of heroic proportions, might claim a distinction less than the proponents of the World War I President desire. His tomb in the Washington Cathedral is simply, but plainly marked and a shrine to many.

Several public works, ornamental and utilitarian are under contemplation for the Federal District, and a combining of the memorial and the functional may be accepted by the commission, if the House concurs in its creation.

This is a proposal that interests the Garden State. Although Grover Cleveland was born in New Jersey, he was far less closely associated with this State than Wilson, a Virginian who was president of Princeton University prior to becoming a power in his party and then Governor. The appropriateness of the action contemplated in Senator WILLIAMS' bill is above dispute.

The Participation of the Private Citizen in the Field of Social Service—Address by Frederick M. Lange

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 11, 1960

Mr. JOHNSON of Texas. Mr. President, a prominent citizen of my State, Mr. Fred M. Lange, executive vice president of the Dallas Community Chest Trust Fund, carried out important work as an ambassador of good will to South America during the summer.

Mr. Lange has devoted his life to welfare work. He has a truly outstanding record in the raising of funds for humanitarian causes. In the course of his visit to South America, he addressed the Brazil-United States Institute on the

subject "The Participation of the Private Citizen in the Field of Social Service."

The Brazil-United States Institute has some 15,000 students who are taught English on the basis of spending some 3 or 4 hours a week in classroom instruction. After 4 years at the Institute and 1 year at a university, the students receive sufficient credits to make them eligible for certificates permitting them to teach English in the schools of Brazil.

The importance of this work to the United States is self-evident, and it is work that is being expanded. The president of the Institute, Dr. Murilo Belchior, is a Brazilian. The U.S. director is a North American, Dr. John P. Wonder.

In giving me a report on his South American visit, Mr. Lange paid particular tribute to several staff members of the U.S. Embassy in Brazil, among them Dr. Leopold Arnaud, cultural attaché; Mr. Lafe Allen, press attaché; Mr. James Parker Lee, publications officer; Mr. James Opsata, deputy public affairs officer; Mr. Roberto Gonzaga, USIS chief editor; and Mr. Rodrigo de Miranda, USIS publications assistant.

"It is to our country's good credit," Mr. Lange writes, "that we have these fine people representing our Government in Brazil."

Mr. President, I ask unanimous consent that the text of Mr. Lange's address before the students of the Brazil-United States Institute be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PARTICIPATION OF THE PRIVATE CITIZEN IN THE FIELD OF SOCIAL SERVICE

(By Frederick M. Lange, L.H.D., L.L.D., D.C.L., executive vice president, Dallas Community Chest Trust Fund)

Based upon the English poor law, which the English colonists brought to America, for roughly 300 years the major source of the necessities of life (food, clothing, shelter, and medical care) for needy residents in the United States, was the local government unit. This responsibility was written into the State constitutions of many U.S. States.

As the population and the welfare problem grew in the United States during the first two centuries, it became more and more difficult for the local governmental units to provide certain social services, such as institutions for the care of the feebleminded, the mentally ill, the criminal, the tuberculous, and institutions for the education of the blind and the deaf. Also, it became more difficult for the local governmental units to provide adequate health services alone. For these reasons, about 100 years ago, the State governments in the United States began to assume responsibility for these services. For many years longer, however, the National Government continued to limit its social welfare activities severely, especially in the area of financial assistance.

The business depression of the 1930's forced a change in this situation. The inability of both the States and the local units of government to provide for the needs of the millions of unemployed made it necessary for the National Government, which had taken over the taxing power with regard to many of the major tax sources, to assume responsibility for most of the financial assistance to needy U.S. citizens. This became a permanent responsibility of the National Government with the establishment of the social security program in 1935.

Early in American history voluntary agencies began to develop, some to do things not considered the responsibility of the governmental agencies, and some out of dissatisfaction with the inadequacies of some welfare services under governmental auspices. Voluntary agencies have continued to grow in numbers and importance throughout American history for these and other reasons. Many times voluntary agencies have closed down or altered their functions when the time came that their former services were no longer needed or were assumed by some level of government. It is some indication of their continuing growth that this fall community chests and united funds in 2,600 U.S. cities and towns will raise more than $480 million to help finance a major part, but only part, of the voluntary health and welfare agencies in the United States.

From the beginning of American history to this hour, there has been an important and indispensable partnership between the Government and the private citizen in welfare matters.

We now have voluntary and government agencies at all levels working side by side, one helping the other. Since 1935, the major role of our private agencies has shifted from providing primarily relief in the form of food, clothing, and shelter, to supporting and carrying on new or pioneer programs, mostly in the prevention field. As newer methods were discovered, or as new services were needed, it was usually the voluntary agencies in the 1930's which experimented and started them. As their value was proved, and as the new programs expanded, they were often incorporated into the methods and services of the large governmental programs. More recently the national governmental agencies, too, are experimenting, pioneering, and carrying on much research. In general, the governmental agencies have taken responsibility for the large mass programs directed toward providing food, shelter, clothing, and medical aid for those who cannot provide these things for themselves. The size of the National Government programs is now far larger than that of the voluntary programs.

This, however, does not mean that the partnership between National and State Government and the private citizen is weakened. Particularly at the local and State levels, the governmental agencies try to keep close to the thinking of private citizens through the establishment of advisory boards and auxiliaries. Most government agencies are anxious to know what private citizens think and go out of their way to explain their programs, invite comments, and provide for citizen participation.

The private citizens, then, not only control the private agencies, but by serving on the advisory boards and committees of the Government agencies, influence and guide them too. Many of these citizens have been active in both kinds of agencies, therefore they know intimately what each does and what each is responsible for. This helps to coordinate the whole pattern of welfare service, keeps it close to the real needs and sees that the total effort is as efficient as possible.

The participation between the Government and the private citizens in matters of welfare in the United States takes many forms. Most tax-supported welfare programs were established because private citizens active in private welfare projects knew so well the need for the programs that they became their spokesmen. After public programs are established, private citizens working in private groups keep in close touch with them, because Government and private agencies cooperate so closely on so many projects. Private groups know well the strength and weaknesses of the total effort. Private groups, through social action, through encouraging helpful welfare legislation, work for changes, expansions, or reductions in the Government effort. These efforts are based on knowledge and facts gathered as results of working together. For instance, improvements in the services of our local Dallas County Welfare Agency was brought about because voluntary agencies working with some of the same families became aware of the severe limitations of the county program. Some members of the advisory board of the county agency were also active in the voluntary agencies. Their firsthand knowledge of the facts made changes possible in the county program.

Another way in which the private citizen keeps in touch with the Government agency is by volunteering his services. Many people in America are members of auxiliaries or voluntary committees whose members visit and donate their time, doing useful work in the agency, ranging all the way from helping to care for children to helping beautify the agencies grounds. This visiting and volunteer service enables the private citizen to become acquainted with the service. Then, he can better influence not only the agency, but the Government which supports and controls it. The most outspoken and influential supporters of our Dallas Juvenile Department are the women and men who donate their time to help in certain phases of the work. In this way they know what the agency needs and can speak intelligently and forcefully to officials who control it.

We, to, have local welfare councils, which bring together all organizations, Government and private, so that local services can be planned and coordinated. Here the Government agencies and the voluntary ones map out who will do what, so that the total effort will produce most benefit. Here the partnership is very close. Some services are too broad and burdensome for voluntary agencies to carry, and Government must be encouraged to assume responsibility.

As conditions change, some new services, never tried before, may be needed. They often must be started with private funds from campaigns such as the Community Chest or United Fund Campaign, or perhaps by funds from a private foundation. America has increasing numbers of private foundations established with gifts from "well to do" persons, who wish to assure that the income from their gifts will be used for beneficial philanthropic endeavors.

In all this the total pattern of welfare services is kept in mind. As needs change, services change, and both Government and private agencies work hand in hand. Each knows what is needed. Each does his part, without duplication. This is possible because the private citizen, working in private agencies, helping to raise money for voluntary causes, donating his help in the work of private organizations, is often the same citizen who serves on an advisory board or an auxiliary, or a volunteer group in the Government agency. He is the same person, who through his activities in the local welfare council, knows who can and should do what.

This partnership with government keeps the government agency close to the people who support it and use its services. This partnership encourages efficiency. It encourages a total welfare system and provides those services which the people are convinced are really needed.

A large proportion of the U.S. giving goes to support what we call prevention programs. By this we mean social services which can help to prevent problems which may require extensive help. When, at the invitation of the Austrian Ministry of Welfare, I spoke in Vienna to welfare leaders, and also when I spoke in Stockholm to Swedish welfare leaders, there was much

interest in this. They asked why Americans support so many services such as Boy Scouts, Girl Scouts, YMCA, YWCA, youth centers, recreation centers, day camps, overnight camps, and so forth. They questioned whether such services could be classed as necessary welfare programs. We believe they are vital welfare programs because through constructive youth activities, they help to build sounder bodies, minds, and personalities. Such youth have a better chance of growing into independent adults who can better cope with life, and therefore be less damaged by problems which require extensive aid. We look upon such programs as an investment in people, an investment which will strengthen them, not only to lessen their later dependence on welfare services, but to increase their ability to live happier, more productive lives, from which they and all people around them will benefit.

Our youth programs are largely voluntarily supported and directed. However, here again we have cooperation with government at all levels, for many of the physical facilities which these voluntary youth agencies use are provided by government. These voluntary groups use public school facilities, public playgrounds, parks, campsites leased for $1 a year from government, and so forth.

While government cooperates, we prefer to leave the direction of such programs to voluntary groups directed by private citizens. This removes the temptation which may sometimes appear, for a particular political group to influence or exploit youth programs for political ends.

We feel that a welfare program which only provides social services to remedy or repair damage after it has happened is incomplete. While we must, of course, give first emphasis to helping people who are in trouble, we must also look ahead and try to help people so that they will not get into serious trouble. Obviously, this is not always possible because of accident, misfortune, etc., but by helping to develop strong minds and bodies we can lessen their vulnerability to trouble. In this way we help to preserve human values, which in the long run, is the objective of a welfare program—to increase the well-being of our people, mental, physical, and spiritual.

Although I have said little specifically about the activities of our religious bodies, they are the backbone of our voluntary effort. Our welfare efforts have grown from religious roots, and spiritual values are the foundation of our whole program, regardless of whether the program is directed by a religious or a secular organization.

While taxes in America provide the bulk of support for welfare activities, the total of American voluntary aid is nevertheless tremendous. In addition, the role of foundations and trust funds is growing. More and more of our people with means are giving large sums of money which are used to finance needed services. Here, too, we have a partnership with Government, since our laws and tax provisions encourage this practice.

I can speak to the role of the voluntary agency and of the trust with some authority, since I now direct such a trust. Also, during my 21 years of experience in social welfare, I have directed the gathering of over $60 million in voluntary gifts for welfare purposes. This could not have been accomplished without the teamwork of the Government which believes that the dignity of every man should be upheld and preserved. Human dignity is enhanced through providing for human well-being. In this vital endeavor there is a place for government and for the private citizen. They complement each other if the job is done right.

Perhaps the most significant research in the welfare field in America in the last quarter century concerns work done by Bradley Buell & Associates in St. Paul, one of our large midwestern cities. Painstaking study indicates that the great variety of problems which plague people can generally be divided into four groups. Also, the great variety of needed services can in general be divided into four groups.

The first of the four categories relates to dependency, or the need for basic living essentials: food, shelter, and clothing. The second category relates to ill health, or the need for necessary medical care. The third category relates to social maladjustments, or the need for counseling or guidance services for personal difficulties. The fourth category relates to recreation, or the need to provide leisure time, adult education, and recreation activities, so that people can refresh themselves and maintain mental health.

I was struck in reading reports of your programs in Brazil that each one of your services could be classified under one of these categories, too. However, there was different emphasis placed on them. Most emphasis in your program seems to be placed on provision of living essentials and providing health and medical services. The other two categories, counseling and recreation, were mentioned less frequently. It is obvious that living essentials and medical services must come first, but I would predict that as needs in these two basic areas are met more adequately, you will become more increasingly aware that problems and services in all four areas are interrelated. Lack of counseling for a personal problem may lead to a more serve problem which needs medical care and basic asistance, just as inability to provide living essentials can cause a health problem, or a health problem can cause inability to provide living essentials.

Much research is being carried on concerning how best to help families who have so many problems that they require help from a large number of specialized agencies, both Government and private. Although most of this research is supported by private trusts and foundations, the results will be of greatest importance to the Government agencies, since they are now giving the most help to these families.

So, here again, we have an example of teamwork. The Government agency, which we call the public agency gets its support from taxes. It is controlled by law. It is set up by a city, county, State or the the National Government. It is administered by employees paid from taxes collected from the people. This Government agency works cooperatively at every turn with the voluntary or private agency. When private citizens join together unofficially and voluntarily to help their fellow citizens in other ways than the Government agencies provide, they do their work through voluntary or private agencies. These private agencies are administered and financed voluntarily by private citizens.

In our system, through the influence and activity of private citizens in both types of agencies, the overall program meshes smoothly, as gears in a machine. There is no competition, little duplication, or waste. We are ever alert to preserve this teamwork, and would not permit a system where the Government agencies could not readily be influenced by private citizen leaders

We believe this sensitivity and response to what our private citizens think is best, is our guarantee that our future welfare services are not exploited for political or undemocratic purposes. We believe that this is the best way to assure that these services will strengthen human dignity through increasing human well-being.

Soviets Tear Down United Nations—Statement by Senator Wiley and Editorial From the Milwaukee Journal

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, August 11, 1960

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared. It is entitled "Soviets Tear Down United Nations." I ask to have printed in the RECORD following my statement an editorial published in the Milwaukee Journal.

There being no objection, the statement and the editorial were ordered to be printed in the RECORD, as follows:

SOVIETS TEAR DOWN UNITED NATIONS
(By Senator WILEY)

The U.N.—serving the interests of peace, order, law, and justice—offers one of the great hopes of the 1960's for creating a world safe for freedom.

Reflecting the will of mankind, the U.N. embodies great moral force. As this can be put into action, the outlook for a global climate in which the integrity of nations shall be respected and in which more people have an opportunity for self-determination will be greatly brightened.

Only a youth 15 years old, the U.N. has taken hold of difficult situations and contributed to solutions of difficult problems which, if unresolved, might spark world war III.

In addition, it offers one of the best hopes for the newly emerging nations to get on their feet without imposition of outside forces stepping in and taking control.

We recognize, of course, that the Communists—both inside and outside the U.N.—specifically the Soviet Union and Red China, will continue their efforts to thwart ways to accomplish peace. The history of the United Nations, in fact, reveals that time after time the Soviets have attempted to block efforts by the U.N. to resolve difficulties. Instead, they have themselves stirred up greater trouble.

[From the Milwaukee Journal, Aug. 9, 1960]
SOVIETS TEAR DOWN U.N.

From the beginning of the present African crisis, Soviet Russia has sought not to join in dampening fires of discord, but to add fuel to them. It has tried to set Africans against Africans, black men against white men, the Congolese against the United Nations. Even Secretary General Hammarskjold, a diplomat of cautious words, has openly criticized the Soviets for their troublemaking.

There is nothing unusual about such Russian activities, of course. From the time the U.N. came into being at San Francisco in 1945, Moscow has sought in every possible way to thwart, discredit, and defeat it.

More than any other nation, Russia used the veto power to frustrate U.N. action. Molotov, Vishinsky, Malik, and Gromyko sought to turn the world peace forum into a hall of deceit, slander, and demagoguery.

The Soviets encouraged the North Koreans to invade South Korea in defiance of the U.N., then long blocked U.N. efforts to win or end the war that resulted. They defied the U.N. in Hungary, after crushing the "freedom revolt," even refusing to let a U.N. investigating committee, or the Secretary General, enter that country. At the time of the Suez

crisis, rocket-hurling threats of Khrushchev were of no help to U.N. leaders in trying to restore peace. Most recently, when U.N. representatives went into Lebanon to help that nation maintain independence, the Russians accused the U.N. of "foreign armed intervention."

Efforts to hinder the U.N. have extended even to the subsidiary organizations, concerned not with peace and war, but with helping mankind live better. Russia has never contributed its proper shares financially to such organizations. When it has participated in activities, the purpose has usually been to confuse or propagandize.

Thus, from the start, the Soviets have tried to hamper the United Nations, even as they paid lip service to the organization and mouthed dedication to its high U.N. principles.

This is most obvious in connection with the very first purpose of the U.N., as set forth in article 1 of the charter. This purpose is "to maintain international peace and security." The Russians signed this pledge, along with all the others, at San Francisco. They constantly talk about peace, but they seem dedicated to blocking the U.N. from effectively carrying out this purpose for which it was created.

Christianity and Capital Punishment

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 2, 1960

Mr. MULTER. Mr. Speaker, with further reference to my bill, H.R. 870, to abolish capital punishment, I commend to the attention of our colleagues the following article by the Reverend Lester Kinsolving, rector of the Episcopal Church of Our Savior, Pasco, Wash. The original article appeared in the June 1960 issue of Pastoral Psychology:

CHRISTIANITY AND CAPITAL PUNISHMENT

(By Leser Kinsolving, rector, Episcopal Church of Our Savior, Pasco, Wash.)

(EDITOR'S NOTE.—Several days after this article went to the printer, Caryl Chessman was executed in the gas chamber after 12 years in San Quentin Prison death row. While the "outer" motivation for this article may seem to be the life of one individual, the issue involved is greater than the life of any one person, important as that one life may be. Caryl Chessman is dead but the issue is not.)

Dr. Joseph Goebbels missed an opportunity to score an important propaganda coup when the Nazis annihilated the entire Czechoslovakian community of Lidice. He could so easily have cited Biblical precedent for this monstrous methodology by quoting Joshua 6: 21. This passage of Holy Scripture discloses the butchery of all living creatures in Jericho (excepting one prostitute's family) after its conquest by the children of Israel.

Such utilization of Holy Writ to defend unholy brutality would by no means be unique. The Bible was used to justify the Salem witch trials. Part of the shame of practically every Christian denomination, including my own, is the pre-Civil War scriptural defense of slavery. If anyone labors under the delusion that the modern era has brought a surcease from such opprobrious Biblical reference, he need only refer to the October 12, 1959, issue of the neofundamentalist, fortnightly magazine Christianity Today.

Dr. Jacob Vallenga, who is an associate executive of the United Presbyterian Church in the U.S.A., has authored an article entitled "Is Capital Punishment Wrong?" Almost the entire substance of his article is based on quotations from scripture. There is ample Biblical material justifying the death penalty. There is also Biblical material justifying polygamy, cuckoldry, and incest for that matter—as well as the familiar concepts of a flat world, a 7-day creation, and a pre-Copernican universe.

Most of the Old Testament proof texts for capital punishment can be discarded as deftly as our Lord disdained the bulk of musty Hebrew legalism—particularly his running roughshod over the sacrosanct Sabbath. Dr. Vallenga, however, cites the commandment "Thou shalt not kill" as an argument frequently advanced by those in favor of abolishing capital punishment. Rarely, if ever, have I heard this specific wording used by abolitionists—who under this circumstance would therefore have to be pacifists as well as vegetarians. A far more accurate translation of the commandment is "Thou shalt do no murder." This commandment applies to the State as well as the individual. Capital punishment is murder—premeditated and with malice aforethought.

Those States which practice legalized homicide usually add the word "unlawful killing with malice aforethought in a premeditated fashion." This is very similar to legalizing adultery—which like premeditated and malicious killing is evil per se—whatever the action of any State legislature. There is nothing more premeditated than an execution. Certainly no other motive than malice can be implied unless the interesting viewpoint of the judge who sentenced an 18-year-old to "hang by the neck until dead—and may this be a lesson to you."

Dr. Vallenga states that murder ("unofficial") is more horrible than an execution. As a former prison chaplain I have studied the details of many murders. Never have I ever heard of any murder which even approximates the extended, calculated and barbaric mental and physical torture as afforded those killed in cold blood by the State (in order to show how much it disapproves of killing in cold blood). I have never heard of any murderer whose crime even approximated the evil ferocity of the following:

1. The victim is confined to a 4 by 12 foot cell for 22 hours a day—365 days per year for an average of 2 years in many States—in California one notable prisoner inhabiting condemned row for 11 years. This technique in San Quentin Pirson produced no less than five suicides in 4 years.

2. While 12 States (Missouri, Maryland, North Carolina, Mississippi, Wyoming, Oklahoma, Colorado, New Mexico, Arizona, Nevada, Oregon, California) use the more humane method of lethal gas, the same slow and savage ceremonial, resembling an Aztec sacrifice, is still present. Victims of the gas chamber have been known to cough, gag, or vomit—before losing consciousness after an indeterminate interval. Utah offers the firing squad as one of two alternatives to be chosen by the victim. In this case, however, the same macabre ceremonial is utilized. Utah demands that its victims be tied to a special chair and covered with black hood and heart-shaped target.

3. The most gruesome and degrading method of execution is that used in my own State of Washington, as well as New Hampshire, Iowa, Kansas, Montana, Idaho, and Utah. The victim is shackled—or if a cripple, or paralyzed with fear, he is strapped to a specially designed sled. A black hood is placed over his face—in order that witnesses be spared the facial effects of hanging: popped eyes, extended tongue, exploded veins, and occasional decapitation. A transparent white sheet now protects witnesses in the Washington State Penitentiary; a large number of witnesses were recently sprayed with blood as the result of a severed jugular vein caused by a semidecapitation.

4. Only slightly less degrading (a soldier, for instance, usually prefers the firing squad to being hanged) is the electric chair, employed by 22 States and the District of Columbia. Electrocution is in reality frying the victim to death. In some cases death is swift. Other such executions have required as long as 4½ minutes. In all cases the body is frightfully mutilated. Attorney Joseph Welch in his excellent TV program on "Omnibus" cited the face mask as necessary to cover the facial effects of electrocution. Dr. Austin MacCormick, one of the world's most renowned penologists, testified to the Colorado Legislature that he had observed an autopsy 1 hour after an electrocution. The physician was obliged to remove the liver with tongs—due to the lingering and intense heat.

I have never heard of any murderer, from Jack the Ripper to Charles Starkweather, being guilty of such methodical precision in ceremonially extended atrocity. If capital punishment is either morally sound or a deterrent then we have no logical right to continue private executions. All executions should be televised—and during school hours. This would be far more "effective" than leaving our youth restricted to detailed newspaper accounts of such items as how a doomed man goes about the difficult process of holding down his last meal, and how a prison chaplain solves the problem of giving the last rites as many as three times in one morning.

Perhaps opposition to public executions might rightfully be based on history. When in last-century England they hanged pickpockets (one of more than 200 capital offenses) the other pickpockets had a field day plying their craft while everyone was looking up. While this has a sort of grim humor there is no humor at all in the hanging of one 9-year-old boy for the theft of a silver spoon. If this seems barbaric, recall the medieval practice of staging trials and execution of animals.

Dr. Vallenga states that "opposition to capital punishment is not for the common good but sides with evil; shows more regard for the criminal than the victim of the crime; weakens justice and encourages murder." It is somewhat ironic that those who sanction state killings should accuse opponents of being calloused toward murder victims. We simply don't want to add to the number of victims. Executions do not compensate the families of murder victims. Far more edifying from a Christian standpoint is the attitude of the parents of 17-year-old, only child, Deena Bonn of Palo Alto, Calif. Mr. and Mrs. Bonn confronting the parents of their daughter's murderer said: "We can't get our girl back, we want to help your boy."

There are nine States which have abolished the death penalty: Maine, Rhode Island, Delaware, Michigan (exception: treason—no cases in history), North Dakota (exception: murder by a "lifer" and treason—no cases in history), Wisconsin, Minnesota, Alaska, and Hawaii. According to the FBI National Crime Report these 9 States have a 1.5 homicide rate per 100,000 or one-fourth of the national homicide average. The State of Georgia, on the other hand, almost invariably leads all other States in the number of murders despite the fact that it almost invariably stages the largest number of executions. Washington, which once abolished the death penalty (1913) and restored it in 1919, is one of nine States which have changed statutes in this regard. Restoration came (as in the other States) not as the result of any spectacular rise in homicide but due to one celebrated murder—of a State

official. One such case can incite lynching, not to mention restoration of capital punishment by an enraged legislature. The result of restoring the gallows: in the next two decades the first-degree murder rate climbed nearly three times that of the rate of population.

If anything, the facts concerning capital punishment establish that executions, rather than deterring murder, so cheapen human life as to incite emulation by those who look to the State and church for moral guidance. Dr. Vallenga is apparently either oblivious of these homicide rates or he is unwilling to discuss them. In this matter of life and death I presume that it is the doctor's incomprehension that prompts his conclusion. It would seem that this incomprehension is not confined to the field of sociology or penology but to logic as well. Within the narrow confines of one sentence he records his conviction: (1) "From time immemorial the conviction of good society has been that life is sacred"; (2) "He who violates the sacredness of life must pay the supreme penalty." Here is a striking example of the gross contradiction of legalized homicide. Murderers are not corpses—they are human beings—until the State kills them, which is hardly a respect for the sacredness of life. Yet Dr. Vallenga opines "the law of capital punishment must stand as a silent (?) but powerful witness of the sacredness of human life." Perhaps here he forgets that criminals are also human, such as the adulterous woman, the murderous Saul of Tarsus and legions of others, categorized in "I was in prison and ye visited me."

As a matter of fact, murderers are among the best behaved of the prison population. Ohio's Governor, Mike DiSalle (who with California's Pat Brown and Michigan's Mennen Williams is strongly opposed to capital punishment) has nine first-degree murderers who staff the executive mansion in Columbus. Among 374 paroled first-degree murderers in California, only 2 committed felonies and not 1 repeated the crime of first-degree murder. Many murderers are not ever paroled—those who are, serve 12½ years average. They have an unblemished prison record and seem to deserve some manifestation of the Christian doctrine of the forgiveness of sins. The average life sentence in Washington for those few paroled is 19 years. Not once has the crime of first-degree murder been repeated. As an act of amnesty one Christmas the young Queen Victoria transferred 10 condemned men to Botany Bay in Australia. Before she died she had knighted every one of them for service to the British Empire.

Dr. Vallenga seems to imply excessive materialism to those who oppose legalized murder. "We who are supposed to be Christian make too much of physical life." May it not therefore be reasonably asked why the doctor opposes murder? "The sentence of death is more redemptive than the tendency to excuse his crime as no worse than grand larceny." This statement evinces an appalling disregard of criminal law, as well as one aspect of church history. Grand larceny in no state evokes a life sentence as does first-degree murder. The argument that capital punishment is more redemptive is almost precisely the justification cited for the terrors of the Inquisition.

Dr. Vallenga does modify his demand for executions by restricting the application: "The supreme penalty should be exacted only after the guilt is established beyond the shadow of a doubt." Such a condition is utterly impossible unless judges and juries become suddenly infallible. While a murder may have numerous eyewitnesses, California still imposes the gas chamber for perjured testimony resulting in the execution of the innocent. Eyewitnesses need not even perjure to bring about this irretrievable miscarriage of justice; they can be mistaken—disastrously so. Without the last-minute confession of a former Chicago police officer, James Fulton Foster, father of seven children, would have been executed—as a result of the sworn (but erroneous) testimony of eyewitnesses. An eyewitness named John Christy caused the 1950 hanging of Timothy Evans in England. Failing, even after Evans' death, to produce the corpus delicti, Scotland Yard acted on a tip and examined the premises of chief witness Christy. Here they discovered the body of Mrs. Timothy Evans, and seven other women. The subsequent hanging of Christy hardly compensated for the mistake in regard to Evans. It did, however, act as one of the principal stimuli to the House of Commons' vote to abolish the death penalty, almost causing England to join the 33 countries who have outlawed executions. While this was negated by the House of Lords, 11 of 13 English Lord Bishops voted for abolition—in marked contrast to the 18th century archdeacon who maintained that "the executed innocent die for their country."

The cases of "executed innocent" are by no means a rarity. Arthur Koestler's book "Reflections on Hanging" has 19 pages of such cases. Professor Borchard of Yale has written "Convicting the Innocent," a study of 146 cases. States have been known to pay a pension to the wife and children of a man executed by mistake. Even incarceration of the innocent is a tragedy. Yet after 30 or 40 years (ask any condemned man if a life sentence is more brutal than execution) delayed evidence may bring about a pardon and an indemnity. It is impossible, however, to reprieve a corpse.

(NOTE.—Since publication of this article word has reached me that this posthumous pardon was not issued—L. Kinnolums.)

I have debated the question of the death penalty with a number of district attorneys and legislators. I have never yet seen one of them that did not seek, like Dr. Vallenga, to avoid this obvious and most desperately conclusive reason why capital punishment is intolerable in a Christian society. While serious thinkers and theologians seriously question whether or not ours is actually a Christian society, it is nominally so. The tragedy of Dr. Vallenga's article in the highly subsidized and, therefore, widely circulated magazine, is that it may have some influence on those who share his views on scriptural infallibility which opposes naturalistic ideas of sociology and penology.

His article will accomplish this through an international or perverted technique in which he has resorted to the most appalling distortion since God was "recruited" by Kaiser Wilhelm. Dr. Vallenga attempts to portray our Lord as an advocate of capital punishment—this despite His being history's most famous victim. The doctor's opinion of murderers contrasts strikingly to the Sanhedrin's and its bloodthirsty mob who considered Jesus' crime worse than murderer Barrabbas'. The doctor makes no mention of Jesus' explicit and explosive views on the "eye-for-eye, tooth-for-tooth" of the lex talonis. He does, however, have the astounding temerity of defending the death penalty with "Blessed are the merciful" and "Beloved, never avenge yourselves." Such vengence-repudiating texts are legion in the New Testament which stresses a gospel of love and forgiveness.

The doctor quotes Paul's famous statement from Romans that the state "does not bear the sword in vain." This is true—if, for instance, in resisting and armed enemy bent on conquest, which would be the greater of two evils. On the other hand, the state has no right to use the sword to execute either helpless prisoners of war (the only resemblance between capital punishment and combat), or to enforce burning of incense to emperors—or to chop off the head of the author of the Epistle to the Romans.

Perhaps the arguments regarding substitutionary atonement will continue ad infinitum. Some people still feel that the cross was the desire of a God who felt the need to placate either Himself or the Devil or an inexorable legalism which demanded the torture and death of the one human guiltless. I cannot believe that the crucifixion was God's will any more than I believe he desired the cowardice of Pilate, the desertion of the disciples, the betrayal of Judas, and the brutality of the soldiers in the common hall. The Gospel according to St. John seems to provide some reasonable explanation. "For this cause came I into the world: To bear witness unto the truth." The truth here meant temple cleansing, violation of Sabbath legalism, attack on entrenched hypocrisy, and assertion of divinity. This was God's will. The result of men's will was the capital punishment on Golgotha.

I suppose that anyone capable of citing the deprecatory Psalms as a defense (as Dr. Vallenga has done) is also capable of maintaining that our Lord approved of capital punishment—because he did not rescue the repentant thief from the cross. This startling and somewhat challenging assertion is so amazingly (even if unwittingly) similar to some of those present on Calvary. They, in similar fashion, concluded that Jesus was not divine because he wouldn't come down himself.

This is still the conclusion of some—and like Dr. Vallenga's opinion as to the Christian efficacy of legalized murder—such opinion probably will remain unchanged. I can rejoice however that even within the Presbyterian Church Dr. Vallenga's opinion has been resoundingly repudiated—by resolution of the Presbyterian general synod this year. This action followed the lead of the Quakers, the Unitarians, the American Baptists, the Protestant Episcopalians, and the central conference of American rabbis. The Methodists took action against the death penalty in 1940.

With the death of Pius XII and ascendancy of John XXIII the Roman Catholic Church too has become increasingly vocal. A 1941 statement of Pius XII seemed to rule out Roman support of abolition. His statement justifying execution if it protects society is now being interpreted with the obvious amendment that it fails to protect society. The auxiliary bishop of the archdiocese of Chicago, Bernard J. Scheil, founder of the Catholic Youth Organization and opponent of Senator McCarthy, is now in charge of the Illinois Committee for the Abolition of Capital Punishment. Father Donald Campion, S.J., has written extensively on the subject and Dean Charles Sheedy of Notre Dame is a member of the American League To Abolish Capital Punishment. Wardens Lawes of Sing Sing and Duffy of San Quentin have served as officers of this organization as have Psychiatrist Karl Menninger, M.D., and Mrs. Franklin D. Roosevelt, who is honorary president.

Public opinion is shifting rapidly—particularly in view of such films as "I Want To Live" and "Compulsion." The psychiatric profession is almost unanimous in its opposition to execution of such as Charles Starkweather, wanton killer of 11 who was a veritable treasure house for psychiatric research. While few would question his medical insanity, he died as legally sane under the archaic McNaughton rules which were established during the early years of the reign of Queen Victoria. These rules establish the knowledge of right and wrong as the criterion for culpability. If such were applied in the case of alcoholism it could never be regarded as a disease.

THE EXPERIMENTAL NEUROSIS OF CONDEMNED ROW

There is one other aspect of this problem that requires discussion, and that is the psychological, or what one might call the

creation of an experimental neurosis of condemned row.

In 1904 Russian physiologist Ivan Pavlov was awarded the Nobel Prize for his monumental research in the physiology of digestion. Perhaps, however, posterity will assign him a niche based on later research, in a different field. No competent student of psychology is unfamiliar with Pavlov's dogs—veritably a byword in the category of the conditioned response. The experimentation whereby Dr. Pavlov was able to elicit salivation merely by introduction of stimulus associated with feeding, established an epoch in the history of psychology.

Perhaps an even more significant, if less known, byproduct of this salivary experimentation came about through the work of one of Pavlov's research assistants, a woman by the name of Krestovnikova. While almost totally obscured in the international fame of her employer-administrator, the work of this lady may some day be recognized as of unlimited importance, since she might be said to be the discoverer of experimental neurosis.

Approaching the experiment with a slightly diabolical ingenuity, Krestovnikova set out to discover the effect of confusing stimulus. This was accomplished by introducing to the dog both a circle and an ellipse, with food provided in the case of the circle; deprivation in the case of the ellipse. After developing the conditioned response to both symbols, she began to introduce a series of ellipses which were progressively similar to circles. As the experiment required more and more acute discrimination on the part of the dog, a strange reaction set in, which Krestovnikova described as a mental breakdown. The dog began to salivate not only at both the circle and ellipse, but at the sight of the experimenter as well as the testing apparatus. Perhaps even more significant than this fairly understandable reaction was the effect on the dog's temperament. He whined and barked constantly, tore at his harness and attempted to escape. The most devastating result, however, was its lasting effect upon the dog. Even after a prolonged rest, the dog, in a repetition of the experiment, was observed to have lost the ability to discriminate between ellipses and circles. Henceforth he was useless as an experimental animal.

Similar experimentation was carried out by other Russians such as Erofeeva, who added the effect of an electric shock as the punishment for a wrong choice—thus adding to the tension and producing even more marked disorganization, neurosis, and inability to recover original powers of discrimination.

As perhaps an inevitable progression, other Russian scientists such as Krasnagorski and Panferov began similar experimentation with young children. In a situation demanding increasingly excessive auditory discrimination to a metronome, Panferov reported, the children became rude, belligerent, disobedient, overly excited and often fell asleep—the reported result of emotional exhaustion. Furthermore, the children, like their animal counterparts, lost even their previous ability to discriminate. Similar conduct was reported by Siriatsky and by Shastin regarding the use of a 15-year-old. Thus we see that human beings as well as animals are liable not only to induced neurosis—but also to a sort of retroactive amnesia, with regard to the recovery of powers of discrimination.

It is beyond our scope here to explore the relation and effect of this Russian-developed experimental neurosis upon the awe-inspiring technique of "brainwashing." On the other hand, Dr. Pavlov lived until 1936. Despite his eminence in the Czarist era as director of the Psychological Section of the Russian Academy of Medicine, he was not removed from his position nor were his conditioning experiments impeded by the Soviet Government. While Professor Anrep of Cambridge has translated many of Pavlov's scientific reports, it is impossible to determine the full extent of Pavlovian influence upon the development of brainwashing. From all reports, however, brainwashing is veritably overwhelming in its effect—which is almost unprecedented in the annals of torture and well-nigh irresistible in its effect.

Our purpose here is not to analyze the Communist practice of brainwashing—but rather to cite it as an example of the devastating effects of mental torture. It is also hoped to indicate a cognitive comparison between the experimental neurosis which was intentional in Russian laboratories, and the perhaps unwittingly induced neurosis of the condemned row aspect of capital punishment.

At the time of this writing, the fate of convict author Caryl Chessman is still in doubt, having created an uproar throughout California as well as an international furor. Perhaps the most amazing aspect of Chessman's recordbreaking 11-year tenure of condemned row is that fact that he is still sane and has not committed suicide. If Chessman were to take his own life, his notoriety would create the same furor as, for instance, the 11th-hour suicide of Herman Goering at Nuremberg. On the other hand, self-destruction on California's condemned row is by no means a rarity. As mentioned earlier, San Quentin Prison death row produced no less than five suicides in 4 years.

I thank God that the church is taking a lead in the campaign to abolish capital punishment. I am also grateful that the majority of Christians and their clergy do not share the obscurantist views of Dr. Vallenga, which he admits are opposed to the prevailing ideas of sociology as well as penology.

As long as any State in this country risks the possibility of executing the innocent, following months or years of the induced neurosis of condemned row, the public conscience well merits the neurosis that should inhabit the thinking of any Christian. Any moral person can sense in the death penalty a ferocious manifestation of what Henry Wiehofen termed "The Urge To Punish."

I am grateful to this magazine for allowing me the privilege of expressing a conviction concerning a subject which I believe should be of tremendous concern to all Christians. While only 48 men were executed last year (as compared to 190 in 1935), these 48 men are children of God and especially sacred in view of His own executed son. My expressed conviction may seem unkind to Dr. Vallenga. My views seek to oppose only his opinions. His views seek to destroy human beings.

HUMAN BEHAVIOR

We should attempt to realize that murderers, and most if not all other criminals, are largely products of their culture and of their interactions with other people. This cultural and social experience determines in great part the unconscious drives of the individual's personality. If that experience is adverse, those unconscious drives are likely to result in seriously negative behavior. In this sense, we must all share in the responsibility for each crime. For we all interact with others and so help to shape them as they do us.—Stuart Palmer, "A Study of Murder," Thomas Y. Crowell Co.

Statement by Man-Made Fiber Producers Association, Inc., in Opposition to Certain Proposed Reductions in Tariffs

---

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, August 11, 1960

Mr. THURMOND. Mr. President, on August 10, 1960, representatives of the Man-Made Fiber Producers Association, Inc., presented before the Committee for Reciprocity Information and the U.S. Tariff Commission a detailed statement in opposition to the proposed reductions in rates of duties on articles covered by paragraphs 1301, 1302, 1303, 1305, and 1312 of the Tariff Act of 1930, as amended, at the forthcoming GATT convention in Geneva. In their statement, the representatives of the Man-Made Fiber Producers Association, Inc., summarized 22 important points which they felt should be given most serious consideration before entertaining any ideas of making any reductions in tariff rates. I concur wholeheartedly with this plea by the producers of man-made fibers in views of the adverse effect which increased imports of man-made fibers and also of cotton and wool are having on our domestic industries and our national and local economies . In fact, this is the reason why I have cosponsored with Senator KERR, of Oklahoma, and others a resolution expressing the sense of the Congress that no tariff reductions whatever be made on the part of the United States at the forthcoming GATT negotiations.

I ask unanimous consent that the summary of these points be printed in the Appendix of the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

EXTRACT FROM STATEMENT FILED AUGUST 10, 1960, BY MAN-MADE FIBER PRODUCERS ASSOCIATION, INC., WITH COMMITTEE FOR RECIPROCITY INFORMATION AND U.S. TARIFF COMMISSION IN OPPOSITION TO REDUCTIONS IN RATES OF DUTIES ON ARTICLES COVERED BY PARAGRAPHS 1301, 1302, 1303, 1305, AND 1312 OF THE TARIFF ACT OF 1930, AS AMENDED

SUMMARY

In this statement we have shown that the estimate by the Tariff Commission of the maximum increase in annual imports, if any, which may occur without causing serious injury to the domestic industry producing like or directly competitive articles, and the decision of the Committee for Reciprocity Information on the question of listing the products of this industry for possible reductions in rates of duties must be based upon full consideration of the following:

1. The present rapidly increasing trend of imports of manmade fibers.

2. The potential production of the present and projected excess productive capacities of foreign nations, particularly Japan and the member countries of the European Economic Community and of the European Free Trade Association, as present and potential

principal supplier areas of manmade fibers to the United States—and to the world.

3. The effect of increased imports of manmade fibers on the cotton and wool industries.

4. The safeguards erected by foreign nations against market disruption caused by increasing imports from Japan and less-developed nations and the lack of comparable safeguards for the United States.

5. The position of the manmade fiber-producing industry as second only to cotton in volume of consumption in this country and as the only domestic textile industry with all its products subject to reductions in duties in the forthcoming GATT negotiations.

6. The effect on the present employees in the domestic industry by displacement of domestic manmade fibers by imports and the effect thereof on prospective employment.

7. The effect of displacement of manmade fiber production on the communities in which the producing plants of the industry are located, many of the communities being small in population and having jobseekers in excess of jobs, some with substantial labor surplus and others on the borderline of serious unemployment.

8. The low labor costs in the fiber-producing industries of foreign nations, especially Japan and Western Europe.

9. The lower prices of imported manmade fibers.

10. The decline in U.S. capacity for the production of cellulosic manmade fibers in the period from 1955 to 1959.

11. The increase in cellulosic manmade fiber-productive capacities from 1955 through 1959 in Japan, the European Economic Community and the European Free Trade Association.

12. The increasing capacities in Japan and the European Economic Community for the production of noncellulosic manmade fibers, far exceeding the rate of growth in the United States.

13. The increases in total manmade fiber productive capacities in Japan, European Economic Community, and European Free Trade Association, far exceeding the growth and rate of growth in the U.S. productive capacity.

14. The following facts relating to world productive capacities for manmade fibers, excess capacities, imports, and exports:

(a) The United States, with 29.1 percent of the world's productive capacity for manmade fibers, has 22.3 percent of the world's excess capacity; imports 24.7 percent of the world's imports (a larger volume than any other fiber-producing country); exports only 9.3 percent of the world's exports of manmade fibers and 21.2 percent of the U. S. capacity is presently idle.

(b) The European Economic Community, with 24.8 percent of the world's productive capacity for manmade fibers, supplies 52.9 percent of the world's exports; and has excess productive capacity equivalent to 19.7 percent of the U.S. productive capacity.

(c) The European Free Trade Association, with 12.8 percent of the world's productive capacity for manmade fibers, supplies 26 percent of the world's exports; and has excess productive capacity equivalent to 9.5 percent of the U.S. productive capacity.

(d) Japan, with 17.8 percent of the world's productive capacity for manmade fibers, has 46.1 percent of the world's excess capacity and has excess capacity equivalent to 32.7 percent of the U.S. productive capacity.

(e) If the European Economic Community, the European Free Trade Association, and Japan each exported to the United States the potential production of the excess capacity of each area to increase exports to the United States, the idle U.S. capacity would be increased to 40.9 percent, 30.6 percent, and 53.9 percent, respectively.

(f) If all three of the principal supplier areas exported the production of their aggregate excess capacity to the United States, the idle U.S. capacity would be increased to 83.1 percent and the domestic manmade fiber producing industry would be in liquidation.

15. The present rates of duty are no barrier to imports of manmade fibers from the European Economic Community, the European Freed Trade Association, or Japan.

16. The research of the manmade fiber producing industry is essential to national defense and can be maintained only if the industry is permitted profitable use of its present productive capacity.

17. It is admitted that Japan can flood the U.S. textile markets at will.

18. Since the domestic markets for the products of our industry can be flooded with low labor cost goods by Japan in its uncontrolled discretion, the manmade fiber producing industry is at its peril point.

19. The Congress did not intend that the determination of peril points should be based on confidence in the self-restraint of any foreign nation not to flood our markets.

20. The balance of international trade has so changed that the present and potential principal supplier areas of manmade fibers are creditors and the United States is a debtor Nation.

21. General imports into the United States from the principal present and potential supplier areas of manmade fibers have increased at rapid rates since 1955.

22. The long-term trend of trade between Europe and the United States suggests a steady shift in Europe's favor. So also in the trade with Japan.

In brief, no reductions in rates of duties on manmade fibers may be made without stimulating imports to the serious injury of (a) the domestic manmade fiber producing industry, (b) the cotton and wool industries, (c) the employees of the industries, (d) the communities in which producing plants are located, (e) the national security, and (f) the general welfare.

Politics in Action in Education

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, August 11, 1960

Mr. WILLIAMS of New Jersey. Mr. President, many Americans are discovering that they can help maintain high standards of government service only if they become thoroughly familiar with the actual workings of government—and that includes direct experience with political processes before, after, and during campaigns.

New Jersey is fortunate in having a unique institute which believes that practical politics is one of the bedrock institutions of American life. The Eagleton Institute for Practical Politics was created to give students of political science and government the know-how which helps to make free government work. Its seminar sessions have attracted much notice not only in New Jersey but in other States, too.

An article in a recent "Report From Rutgers" describes the work of the institute and tells how political persons are at work at Rutgers—the State university in New Brunswick, N.J.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POLITICAL POLO PONIES TRAINING FOR THE FRAY

Every Monday afternoon at Wood Lawn, the stately old residence on the Douglass College campus which houses the Eagleton Institute for Practical Politics, there meets a class that probably has no counterpart anywhere.

Even its title is unusual—"A Graduate Seminar in Practical Politics."

What takes place within the softly lit room that once was the library of the Neilson's ancestral home is a far cry from conventional political science classes. The sharp questions and blunt comments come closer to the after-session discussions in a statehouse pressroom than to the peaceful atmosphere of an ordinary class.

A typical 2-hour session of the 10 students and 2 or 3 faculty members might well begin with a discussion of an assigned current political question. All are expected to take part, their comments grounded upon a substantial list of background references that might range from De Tocqueville to Thomas E. Dewey, from Philip Freneau to Walter Lippmann.

Bringing the classic political theories into present-day focus are its listed instructors, Dr. Neil A. McDonald, professor of political science at Douglass College (and an elected local political officeholder) and Donald G. Herzberg, director of the Eagleton Institute. Dr. Isadore Lubin, holder of the Arthur T. Vanderbilt University professorship in public affairs, admits his fascination with the course and sits in with it regularly.

Second and liveliest part of a typical afternoon's work is joint review of the individual projects students have before them. Right now, the task is to develop with depth and detail a complete election campaign program for a particular Member of Congress.

The students first must familiarize themselves with the election district of their Congressman, learn its political and economic makeup, voting history, current voter attitudes, the power and goals of its organized groups, its mass communication channels and their political outlook, determine the key individuals likely to be major factors in the election campaign.

Interviews with the Congressmen, their staff people and political strategists aid in gathering accurate information upon which to base campaign plans. Details such as the cost of printing and mailing, of newspaper advertising space, radio and television time all are preliminary to the design of materials, the writing of speeches and commercials for the candidate.

Most important of all is the determination of issues to be stressed, the aspects of the candidate's record to serve as campaign foundation, the attacks anticipated upon the record, and the overall strategy and timing to be embodied in waging the campaign.

The interest in the nuts-and-bolts detail of the election process might well be judged extraneous to the time-honored theoretical study of political science. But it is meat and drink to the eight men and two women who are enrolled in the seminar.

Their aim in life is to be what Director Herzberg calls political persons, individuals deeply concerned with the workings of the American bipartisan system and willing to invest their working lives in making certain that it continues to function. Their careers will take them directly into the partisan political arena, as aids to elected officials or aspirants. Some have their eyes upon eventual election to office. But all have learned, and are relearning daily, that the matter of winning elections is a combination of perspiration and inspiration, with the emphasis upon the former.

The process works. Three recent graduates are typical. Penn graduate Jim Percey serves now as assistant to the mayor of Lancaster, Pa. Miss Betty Jackson, a graduate of Douglass, is staff assistant to U.S. Senator HART, of Michigan. Carwin Williams, who came to Eagleton from Brigham Young University, is now a staff member of Governor Rockefeller's "little Hoover commission" in Albany. Other Eagleton graduates have won similar responsibilities within the machinery of political parties in government.

What sort of people does this program draw? What moves them to this career? What sort of person has the best chances for success in this field? What training can help them meet their aims?

The individuals shown on the following page and their brief biographies illustrate the variety of geographical areas and undergraduate backgrounds that contribute students to the program.

The exact ingredients that go to make up "political person" (aside from an ability to write and communicate effectively) are hard to define. Director Herzberg likes to say that he is looking for intellectual polo ponies, swift and nimble, of great endurance, steady under fire and with a highly developed competitive streak.

Involvement in the machinery of American politics as direct participants was what Mrs. Florence Peshine Eagleton had in mind when she bequeathed some $2 million to Rutgers for the establishment of a foundation for practical politics.

Aside from the production of well-trained specialists in the business of politics, she sought also to give to large numbers of Douglass and Rutgers undergraduates a basic understanding of practical politics and an inspiration to undertake a citizen's proper concern with representative government.

The Eagleton programs have won national attention. Their original approaches to problems of government and political science have brought other projects (and outside financial support for them) to Herzberg and his small and tightly knit staff.

Their broadening work has led to a change in the name of the operation from the original Eagleton Foundation to the Eagleton Institute for Practical Politics. The purpose remains the same, but the goal has broadened as increased means have made expansion possible.

No single Eagleton project, however, expresses so well the purpose of the entire program as does the graduate seminar in practical politics.

Desalting the Sea

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 11, 1960

Mr. JOHNSON of Texas. Mr. President, an informative article on one of the most pressing problems facing America—finding new fresh-water resources for our expanding population—appeared in the Wall Street Journal this morning. It deals primarily with research in salt-water conversion. But the U.S. Government and private firms are working to find economic means of converting sea water and brackish water into fresh water supplies for our cities and industries.

Mr. President, it was under the administration of a distinguished Secretary of the Interior, the Honorable Oscar Chapman, that the Government first undertook a sustained research program in salt-water conversion. A Democratic Congress in 1958 provided for five demonstration plants in various parts of the country, where enlarged programs might be put into effect. This year the Senate passed S. 3557—which I was pleased to sponsor, along with the distinguished Senator from New Mexico [Mr. ANDERSON] and 19 other colleagues—in order to put our salt-water conversion program on a continuing basis, subject to annual appropriations, and to permit local communities to construct their own conversion plants with Government loan assistance.

Mr. President, we need every type of research we can get—public and private—to reach our goal of converting salt water economically into usable water supplies. This morning's Wall Street Journal article, by Robert Keatley, is an enlightening account of the state of research in salt-water conversion today, and I ask unanimous consent to have this very fine article by Robert Keatley, a staff reporter of the Wall Street Journal, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DESALTING THE SEA—RESEARCHERS HUNT WAYS TO ECONOMICALLY END FRESH WATER SHORTAGES—GOVERNMENT TO TEST A PLANT IN FREEPORT, TEX.; GE, BLAW-KNOX DEVELOP GEAR—NO TANK CARS FOR COALINGA

(By Robert Keatley)

Starting next summer, Freeport, Tex., each day will pump 1 million gallons of water from the Gulf of Mexico into its water system.

Families in tiny Coalinga and Oxnard, Calif., already are depending on brackish, mineral-laden underground pools for their cooking and drinking water.

Within 2 years, residents of San Diego, Calif.; Webster, S. Dak.; and Roswell, N. Mex., also will get water from salty sources.

These scattered communities are participating in a stepped up attack on an increasingly urgent problem: How to achieve economical conversion of salt water into pure, fresh water that can slake thirsts, sprinkle lawns and satisfy industry's prodigious water demands. Many sections of the country, threatened with future water shortages as populations and water needs grow, are following with keen interest the efforts to find practical conversion methods.

The Freeport salt water plant, along with those of San Diego, Webster, and Roswell, will be part of a federally subsidized program aimed at finding an economical conversion system. The Coalinga and Oxnard plants, with no similar subsidies, are regarded as successful—but as yet offer no solution for the Nation as a whole. Reason: They're located in areas where fresh water always has been costly. Before Coalinga's conversion plant went into operation, the town had to bring in drinking water by railroad tankcar.

Growing numbers of companies, ranging from giants such as Bethlehem Steel Corp. to much smaller firms such as Ionics, Inc., of Cambridge, Mass., are struggling with the salt water conversion problem.

STRESSING THE NEED

An official of Westinghouse Electric Corp., one of the concerns working on conversion equipment, stresses the pressing nature of water worries. "In the next 5 or 10 years, some areas are going to have to build conversion plants despite their cost if they want to have enough drinking water," he asserts.

Water shortages are already a problem for many cities. One utility association expects more than 1,000 communities to ration water this year, while another claims 20 percent of the Nation's 18,000 municipal water systems have supplies too skimpy to meet dry-year demands. Shortages in recent years have had diverse results. They have led Dallas residents to line up to buy pure water at 50 cents a gallon, inspired an Orange, N.J., ordinance providing a fine for a leaky faucet and induced Jamaica, N.Y., to assign inspectors to patrol city streets looking for illegal lawn-watering. "The water industry is the only one which urges its customers to use less of its product," observes one researcher.

Government experts sketch this picture of U.S. water resources and needs: The Nation now has about 515 billion gallons of fresh water "readily available" each day, of which 312 billion are being used. By 1980, daily needs—based on an expected 270 million population—will be 597 billion gallons. The gap between the amount of water available and future requirements will be narrowed somewhat by increased industrial and civic reuse of water. But some new sources will be needed if the increased demand is to be met. The problem will continue to be far greater in some areas than it is in others, because the Nation's available water resources are not evenly distributed. Some areas have more water than they will need in the foreseeable future; others, such as the arid Southwest and the thickly populated mid-Atlantic States, face increasingly severe shortages.

HOMES AND BUSINESSES

Pressure on water resources comes from both homes—which take an average of 150 gallons a day per resident from city systems, up 30 gallons from 1940—and from business, which accounts for nearly 40 percent of the Nation's consumption. Some chemical factories need 17 million gallons annually for each employe on the payroll, while an aluminum plant uses 22 million gallons per man. Turning out a ton of newsprint or rayon may require 240,000 gallons, while 60,000 gallons are needed for a ton of steel.

The prospect of a steady climb in demand for water from both individual and industrial users is stirring the current interest in utilizing salt water, which is available over a large part of the country. Oceans lap at the borders of 23 States, with 65 percent of the Nation's industry and 55 percent of its population, water researches note. Also, there are untapped pools of brackish water available underground in many areas.

Spending is rising for Government and private research on ways to convert water from these sources into usable form. White-haired Dr. A. L. Miller, a physician and former Congressman who heads the Interior Department's Office of Saline Waters, says, "A few years ago only a handful of companies were seriously interested in saline water conversion." Now his office figures 100 research centers and private firms are spending up to $50 million annually on this work, and the figures are rising.

PIPES, VALVES AND COMPRESSORS

The salt water purification plants now under development consist of complex mazes of pipes, valves and compressors which boil, freeze or electrically charge water to separate it from its salt. They're aimed at turning ocean water, with up to 35,000 mineral parts per million parts water (p.p.m.), or brackish water (3,000 to 10,000 p.p.m.) into fresh water with 1,000 p.p.m. or less. By the time desalted water reaches home users, it is little different in taste or appearance from ordinary city water.

Already a market for conversion equipment has sprung up. Ionics, Inc., for example, has sold more than 40 of its small conversion plants. Throughout the world, it's now estimated enough land-based equipment is operating to desalt 20 million gallons of water a day. But most existing plants, such as Ionics' unit which supplies drinking water for the Air Force station near remote Havre, Mont., fill special needs and produce water much too costly to compete where other supplies are available. The companies now getting into the conversion field have something bigger than this on their minds: They're angling for the potentially much larger municipal water system market.

A private water consultant, Louis Koenig of San Antonio, Tex., recently told an industry symposium that, figuring conversion costs at $1 per thousand gallons, some 11,000 communities in the next 15 years will find it cheaper to convert salt water than to pipe in fresh water from distant sources or otherwise boost supplies. And Gordon Leitner, vice president of Clever-Brooks Co. of Milwaukee, which has a subsidiary making conversion gear, sees a sizable market not far off. "There are some communities in the United States today which would find it economical to convert sea water for potable water," he claims.

Among the large companies besides Westinghouse Electric and Bethlehem Steel plunged into salt water conversion research and development, are Blaw-Knox Corp., Fairbanks Whitney Corp., General Electric Co., and Food Machinery & Chemical Corp. Not long ago, Scotland's G. &. J. Weir, Ltd., a veteran maker of distillation equipment, teamed with Chicago Bridge & Iron Co. to exploit the de-salting market.

NEEDED: LOWER COSTS

How successful these and other concerns are in lowering costs will determine conversion's future, industry spokesmen agree. The American Waterworks Association figures most cities now pay from 10 cents to 80 cents per thousand gallons for their water, with a typical mid-Atlantic area town now paying about 40 cents. The lowest proven de-salting cost for sea water is found on the Caribbean oil refinery island of Aruba, where a 2.7 million-gallon-a-day plant built by Weir supplies residents' needs for $1.75 per thousand gallons. Previously, water had to be brought in by barge.

But most companies, including Weir believe they can now beat this figure. The $1.3 million Freeport plant, to be built by Chicago Bridge as the first of five under a Federal demonstation program, is expected to produce one million gallons daily for $1 or less per thousand. Cleaver-Brooks executives believe they can get 90-cent water at some U.S. seacoast locations, while Blaw-Knox projections for its freezing process—based on a 10-million-gallon plant—are about 50 cents per thousand gallons. Most optimistic are claims by Fairbanks Whitney, which says it can produce water for less than 40 cents by a semi-secret method being developed in Israel.

The already-operating Oxnard, Calif., conversion plant, built by Ionics, purifies underground water for only 20 cents per thousand gallons, but this water is far less saline than sea water. Costs at the Coalinga plant, also built by Ionics, are considerably higher because it's an older, less efficient facility and the local water has a higher salt content.

CRITICS OF CONVERSION

Salt water conversion has its critics. California State water officials assert it won't be economically feasible for many years, though an industry executive suggests the State officials are merely fearful enthusiasm for conversion might undermine public support of a proposed $1.7 billion aqueduct system.

In any case, Harvey Banks, California's director of water resources, warns: "I would hate to see any misguided hopes for an early victory in the conversion battle become so widespread as to jeopardize the economically feasible plans we have underway to bring new water to the thirsty acres of the State." California's massive Feather River project would move fresh water from the upstate areas to terminal points in the southern part of the State for only 15 to 20 cents per thousand gallons, with purifying and distribution costs extra. Discussions of conversion costs don't take distribution charges into account either, but no additional chemical treatment is needed.

A wide variety of simple-sounding schemes have been devised to separate salt from water. Most are based on two facts long familiar to high school physics students: Boiling salt water gives off fresh water vapor, which can be condensed; and freezing salt water forms pure ice crystals, which can then be melted to obtain fresh water.

TRICKY PROBLEMS

Though distilling fresh water from salt water by heating sounds easy, many tricky problems are involved. The complex teakettles used need vast amounts of fuel. Another problem is that corrosive salt water eats away at water-carrying tubes, while scale often forms on surfaces exposed to heat, reducing heat transfer and fuel efficiency. New metals and plant designs have helped various companies at least partially overcome these problems.

Prof. Everett Howe, director of the University of California's $500,000-a-year conversion research program, sees this distillation process as the most important conversion method for the near future. "The general prospect seems to be that thermal distillation will continue to dominate the desalting field for the next few years and that the cost of water produced by this means will be somewhat less than $1 per thousand gallons, as compared to about $4 10 years ago," he says.

But partisans of freezing methods disagree. They claim they're overcoming design problems and will shortly take the lead. Freezing techniques have the inherent advantage of consuming less fuel than distillation, though to date plant costs have been higher.

Companies working on freezing have taken different approaches in their research. Blaw-Knox pumps a volatile liquid hydrocarbon, such as isobutane, into salt water. Rather than mix with water, it flashes off as a vapor, leaving an icy sludge behind. Carrier makes ice by flash-freezing sea water in a low temperature vacuum chamber. Each uses a different system of washing ice from brine for melting into fresh, drinkable water. By fall, both will have pilot plants in operation—Carrier's producing 15,000 gallons daily and Blaw-Knox's 35,000.

Still another experimental freezing plant will be constructed under a Government contract by Struthers Wells Corp., Warren, Pa., and Scientific Design Co., New York.

FAIRBANKS' SYSTEM

Most controversial is the freezing system of Fairbanks Whitney, developed in Israel by a Russian émigré, Dr. Alexander Zarchin. The secretive Dr. Zarchin has refused to make public details of his process, but it has prompted Fairbanks' officials to claim they can produce water for less than 40 cents at U.S. locations. The company has joined with the Government of Israel to build a 250,000-gallon plant on the Gulf of Aqaba, with equipment being made by a subsidiary, Fairbanks, Morse & Co.

Though some competitors are skeptical of Fairbanks' efforts and insist the company underestimates the capital costs of its plants, Fairbanks officials say they're ready to make good on their claims. One company official declares Fairbanks can build a 1-million-gallon-a-day plant in the United States for $700,000, including land, capital equipment, interest on loans, labor, and other charges. "We're hoping that a contract for construction of a desalting plant in the United States will be signed before the end of the year," he states.

By way of comparison, Cleaver-Brooks figures it could build a 1-million-gallon sea water distillation plant, producing 90-cent water, for $1 million. The cost of an Ionics 250,000-gallon brackish water plant is about $75,000, but these plants, which use electrically charged membranes to pick off salt ions, would have prohibitive power costs if used on sea water, with its 3½ percent mineral content.

The 8-year-old Federal Office of Saline Water has been largely responsible for cost-cutting research gains, many industry men say. The agency now has more than 40 projects farmed out to university and private laboratories. In addition to the Freeport plant, its five-plant demonstration program will provide conversion facilities for San Diego, Webster, Roswell, and an eastern city. Each plant will use a different process. The aim is to collect reliable operating data, so local water officials can decide whether they can economically build such plants.

Forward Strategy Reappraised

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, August 11, 1960

Mr. THURMOND. Mr. President, on Monday, Tuesday, and Wednesday of this week the Association of the U.S. Army held its annual meeting here in the city of Washington. It was my good fortune to attend several events in connection with this meeting and I was strongly impressed with the atmosphere of forward-looking, constructive thought which pervaded the entire gathering. Particularly impressive for me were the remarks of the able Army Chief of Staff, Gen. Lyman Lemnitzer, delivered at the annual luncheon on Tuesday, August 9. This brilliant military leader gave a carefully reasoned, thoughtful, and penetrating analysis of the doctrine of forward strategy which deserves the careful attention of all individuals interested in improving our national security.

Mr. President, I ask unanimous consent that the remarks of General Lemnitzer be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FORWARD STRATEGY REAPPRAISED

(Address by Gen. Lyman L. Lemnitzer, Chief of Staff, U.S. Army, at the annual meeting of the Association of the United States Army, Sheraton-Park Hotel, Washington, D.C., Tuesday, August 9, 1960)

The annual meeting of this association has always had special appeal for me. I view it as an Army homecoming for members of the Army, alumni of the Army, and friends of the Army. It is a time of reminiscing. It is also a time to appraise the turbulent and fast-moving events of current history which have direct impact on our present and future missions.

We live in a world of ferment and revolutionary change which has no historic counterpart. It is true that past history records periods of dynamic intellectual and economic expansion during which certain nations and cultures displayed extraordinary outbursts of creative energy. The Renaissance of Western Europe, which began in the 14th century, is only one of many examples. However, the Renaissance spanned centuries. Further, it affected only a portion of the world. By contrast, today, virtually the entire world is in the throes of a renaissance during which political, social, economic, and scientific developments evolve in years, or even months, instead of centuries. In this shifting world environment, nations are being born—and nations could die—with awesome rapidity.

In today's world, the basic conflict between free men and Communists—a conflict which emerged from the shambles of World War II—exerts a dominant influence. We recognized the massive and global menace of international communism early in the post-World War II period. To combat this menace, we joined with other free nations in adopting a policy of collective security. In light of the growing power of the Communist empire, it becomes even more compelling that we merge our strength with the strength of other free nations in a common defense against a common danger. In other words, the formula of collective security remains more important than ever.

I believe that most Americans agree on this point. Meanwhile, questions have arisen concerning the means we should employ in contributing to the collective security of the free world. For example, some have called for a reappraisal of our forward strategy, especially in light of recent disorders in some countries where we are maintaining military bases and forces. I would like to devote my remarks today to the subject of forward strategy because it is so important to the country and to the free world and because the Army plays such a key role in its implementation. Sooner or later, this strategy affects all members of the Army and their families as well. This is not to say that the other members of the U.S. Armed Forces do not participate in the implementation of forward strategy because they do. As a matter of fact, some of the best exampels of close teamwork and cooperation between the Army, Navy, Air Force, and Marine Corps, as well as other agencies of the U.S. Government, and with our Allies as well, are taking place daily throughout the free world in the implementation of this important facet of U.S. strategy.

In discussing forward strategy, I intend focusing primarily on the military aspects of this strategy—although I fully recognize the importance of the many nonmilitary factors involved.

Since forward strategy means different things to different people, I'd like first to define what I think it means. By forward strategy, I mean a plan to dispose our military power so that we, together with our allies, could meet and repel promptly Communist military aggression if it occurred along the periphery of the free world as well as anywhere else it might occur. Preparations to execute this strategy include, among other measures, the positioning of military forces overseas together with development of a capability to project our military power rapidly to areas beyond our borders when it becomes necessary. As I have previously indicated, since ground forces—that is, Army forces—would be a basic and essential element of military forces involved in a forward strategy, I believe the debate over this strategy has inherent interest for this audience.

Those who question the continued need for a forward strategy do so for a variety of reasons. However, I believe that the consensus of the objections, made on military grounds, rests on the thesis that a forward strategy is no longer required in light of the current strategic situation. The reasoning behind such a thesis goes like this: One of the principal means of stemming the spread of militant communism in the post-World War II period has been the U.S. capability to deliver long-range nuclear blows against the Communist empire. The establishment of U.S. bases in allied countries close to the enemy's homeland facilitates the development of that capability. However, when the Soviets also developed an ability to bring nuclear firepower to bear against distant targets, our bases immediately became vulnerable and hence—it is argued—less useful. Moreover, the thesis continues, as we developed weapons systems of intercontinental ranges, the original requirement for bases close to enemy targets disappeared, or at least greatly diminished.

It appears to me that the most striking feature of the thesis I have just described is the implicit assumption that military aggression by the Communists would necessarily take the form of long-range nuclear attack. If made at all, such an attack would undoubtedly include an attack against the United States and would precipitate general nuclear war. However, if one is to credit not only repeated statements of Soviet leaders, but also long-established Soviet military doctrine, the Soviets agree with us that neither side could escape widespread devastation in a future general nuclear war. In fact, it appears that the Soviet attitude in this regard may have irked their Chinese Communist allies. Communist China has consistently displayed less respect than the Soviets for the destructive power of nuclear weapons as she continues to threaten the use of military force in pursuit of her aims.

Thus, if we consider the attitude of the Soviets who possess a nuclear capability and the attitude of the Chinese Communists who do not, it would appear that limited war would continue to be more likely than general war.

As you know, limited war raises two major requirements. The first is for quick reaction to enemy aggression so as to limit the extent of his gains. The second requirement is for means to apply that degree of force needed to defeat the enemy without inflicting undue losses on noncombatants or risking expansion of the war into a worldwide conflagration. Versatile, dual-capable ground forces which can fight either nuclear or nonnuclear war are especially well fitted to fulfill this second requirement. This is so because they can employ a variety of types of force against an enemy appropriate to the occasion. In other words, they can exterminate the rats without destroying the neighborhood infested by the rats.

Although modern technology has afforded tremendous improvements in many aspects of our ability to wage general nuclear war, it has not provided comparable improvements in many fundamental aspects of our capability to wage limited war. For example, in general war, the intercontinental ballistic missile can deliver nuclear firepower to distant targets in a matter of minutes. However, the essence of the problem in limited war is to deliver combat forces rapidly to distant trouble areas where they can employ either nuclear or nonnuclear fire. This movement depends on air and sealift and there have been no tremendous improvements in the capabilities of these means of transport. As in the past, their speed of movement is still measured, not in minutes, but in days, or weeks, or months. In other words, the familiar limitations of time and space which we encountered in past wars would be very much with us in future limited wars.

Now I am well aware that when anyone, particularly a general makes this sort of a statement, he leaves himself open to the accusation that he is "preparing to fight the last war." However, I would prefer to regard my statement as recognition of the need to face up to old, but nonetheless real, problems which have not disappeared solely because of the passage of time or greatly improved technology.

The adoption of a forward strategy provides an obvious answer to the problem of decreasing the time lag between an enemy's limited military aggression and our response. Such a strategy provides for the positioning of combat units at or near potential trouble spots throughout the world. There is no substitute in limited war for military forces on the ground who know the ground on which they are to fight, who know the people living on that ground, and who know local allied units which would be serving alongside of them. A forward strategy also provides a means to reinforce such forces rapidly, or to move combat units to threatened areas where we have no forces. It does so by fostering the development of a strategic transport system consisting not only of long-range transport aircraft and ships but also of the forward bases and airfields which are an essential part of that system. It does so also by providing readied mobile reserves of all of the U.S. Armed Forces, like the Strategic Army Corps, which are prepared for rapid movement via the strategic transport system.

Thus, it is apparent that a forward strategy will continue to exert a dominant influence on our ability to conduct limited war—and thus to deter enemy initiation of limited war. The influence of a forward strategy in deterring or winning general war is equally important, if less apparent.

In determining what should be done to deter enemy resort to any type of war, including general war, there is always a tendency to think exclusively in terms of forces which we would need to conduct successfully the type of war which we visualize. However, it is the enemy, not ourselves, whom we are attempting to impress by our military preparations designed to discourage his attack. Hence, in making such preparations, we should consider—at least in conjunction with our own concepts of general war—the enemy's concept and the types of forces which he considers necessary to fight the war successfully. This logic assumes even greater validity in connection with general war. Because such a war completely transcends man's experience, it has inspired an extremely wide variety of opinions concerning the form it would take.

The Soviets have consistently maintained that a general nuclear war would be long and drawn out. They do not discount, for a moment, the profound influence which a nuclear exchange, or exchanges, would have on the course of such war. However, they insist that the ultimate decision would be attained by balanced air, sea, and ground forces, operating in combination.

The composition of Soviet armed forces reflects this philosophy. The Soviets are developing a growing capability to wage intercontinental nuclear warfare. At the same time, they also maintain powerful modernized ground forces and tactical air forces, designed primarily to wage offensive warfare, with or without nuclear weapons. They also maintain a potent submarine fleet. It is noteworthy that, unlike ourselves, they have not attempted to create a strategic transportation system which would permit them to move large forces, on a continuing basis, to combat areas distant from the Eurasian land mass. This would indicate that their major geographic objectives in a general nuclear war would be restricted initially to the Eurasian land mass.

If we consider the Soviet concept of general war, together with the composition of their military forces, we can determine—at least in broad outline—the strategy the

Soviets are capable of following in such a war. Elements of that strategy are:

A nuclear strike against the United States with possible strikes against other portions of the free world.

Concurrently, a massive attack by ground and tactical air forces against free nations in Eurasia. Seizure of the peoples, land, and economies of these nations would be the true objective of the Communist attack. Attainment of this objective would mark the completion of a major phase in achieving ultimate world domination.

An additional element of the Communist strategy would be initiation of a great war at sea as Communist submarines attempted to block reinforcement by the free world of combat areas in Eurasia.

Our ability to defeat this strategy provides a measure of our ability to deter Communist initiation of general nuclear war. It is evident that such an ability must include an invulnerable means to retaliate, in kind, against a nuclear attack on the United States. At the same time, we must also display an evident capability to meet and defeat Communist forces which attempted to attain the Communist objective—seizure of free Eurasia.

In developing this latter capability, the importance of a forward strategy again becomes apparent. It would appear especially important that we maintain, in conjunction with our allies, adequate military forces in Eurasia. This is so because difficulties of reinforcing them in general war would unquestionally be greater than in limited war. Ground forces should constitute a high percentage of these forces.

Earlier, I stated that I would restrict my comments principally to the military aspects of a forward strategy. However, the psychological aspects of that strategy—particularly as they relate to the cold war—are completely intertwined with the military aspects. Hence, in concluding my remarks today, I would like to discuss both aspects together.

The cold war is fought on a variety of fronts—political, economic, sociological, psychological, and military. Yet, at root, it is psychological. Throughout the cold war, the real measure of the ability of free men to withstand communism is what they, themselves, think it to be. In this regard, the power represented by free world military strength makes an indispensable contribution to the confidence of free peoples. However, the existence of this strength must not only be apparent, it must be obviously positioned for use, and there must be a clear indication of a willingness to use it if need be. I believe the contributions to allied military strength which we make, under a forward strategy, meet all of these criteria.

The diametric opposite to a forward strategy is the concept of a fortress America, involving withdrawal of our forces to the United States. We have witnessed an example of such a concept in recent history. During World War II, as Hitler's fortunes waned in Africa and then in Sicily, he began to stress the concept of an impregnable fortress Europe. Actually, this was an exercise in self-deception, if Hitler ever really believed it himself. This myth was designed to obscure the hard reality that he was losing on the fronts where his forces were in contact with his enemies.

A fortress America could prove to be as great a delusion as was Hitler's fortress Europe. That is why I feel that the American people will never accept such a concept. Nor will they permit abandonment of our current policy of forward strategy which still retains so great a military utility today.

To all of you here, I extend—on behalf of the Department of the Army—the most cordial greetings and the hope that you will enjoy the best of all annual meetings of the Association of the U.S. Army.

New Jersey Has Many Faces

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, August 11, 1960

Mr. WILLIAMS of New Jersey. Mr. President, New Jersey apparently has the capacity to surprise visitors who, even momentarily, leave its main traffic arteries and travel for a few miles into other regions of the State. In the Saturday Evening Post of July 16 writer Roul Tunley confesses that he had once believed that there was little more to Jersey than the landscape seen from the New Jersey Turnpike. His article also reports, however, among other things:

I might have gone on sticking to that well-trod path and feeling I knew all about the State if one day I hadn't visited a classmate who had just bought a farm near the Delaware River, a few miles above Trenton. When I saw the area I couldn't believe my eyes. Here were green, rolling hills, heavily wooded and full of game. Here were farmhouses straight out of Currier and Ives. And as I came upon an old covered bridge, six deer vaulted across the road in front of my car. That settled it. I had to have a stake in those hills. Not long afterward I built a cabin as a weekend retreat.

In time, of course, the inevitable happened. The retreat became so irresistible that I made it my permanent home. And as a full-time resident I saw the surprises really start coming. Those forests, for one thing. One tract alone—the famous Pine Barrens in central Jersey—comprise 1,250,000 acres, about 25 percent of the whole State. One can travel for miles in the Pine Barrens without seeing a house. The inhabitants, known as Pineys, are a breed apart. They are primarily of Anglo-Saxon origin, and their isolation has been so complete for centuries that even their language, like the Kentucky mountaineers', is a throwback to other days. Not long ago I was traveling in the Pines with the State forester, Alden Cottrell. We stopped at a remote general store not far from Batsto to ask the way to a certain charcoal furnace.

"Follow down the road a piece and go to the second pair of banisters," said the man. "Take the sand road to the right, but look out for the cripple or you'll get set. You'll come to the pit in a half mile."

As far as I was concerned, I might have been on the moon. However, my guide, who understands the Pineys' language, translated for me. "Banisters" are guardrails; "cripples" are low, wet places; "get set" means to get stuck, and a "pit" is a charcoal furnace. As surprising as the Jersey forests are the Jersey farms. They still comprise 35 percent of the State's land area, though you'd never know it when speeding along the corridor. From a train window or U.S. Route 1, the whole State looks urban—sleazily urban. What I learned ultimately, however, was that the corridor is, in reality, a narrow, concrete-laced strip of land only 15 miles wide. It looks the way it does because 60 percent of the State's population and the vast majority of its factories have crowded into it for convenience's sake. Actually, the slender strip is a kind of false front, like one of those western movie sets.

And behind the front are some of the stubbornest farmers in America. Stubborn because they are determined to stick to the soil and have refused as much as $25,000 an acre along the main highways. Consequently, in order to survive at all when faced with soaring taxes and the encroachment of industry and split-levels, they have been forced to become the most mechanized and efficient farmers in the Nation. And they have done just that. In 1958 they achieved the highest income per acre in the United States—$195.

No one will deny that New Jersey is highly industrial too. Although it's the fifth-smallest State, it's the fifth-largest in per-capita income. And much of this is because of its industrial virtuosity. New Jersey makes everything from girdles to electronic brains. In chemicals it leads the Nation. And in research it also holds the first position: 10 percent of all U.S. industrial research money is spent in New Jersey.

One of the secrets of the State's astonishing material success with so few natural resources is, of course, its strategic location. Its industries are within an overnight truck drive of one-third of the Nation's population.

Cameramen are also finding out about New Jersey. Brett Weston, famed photographer from California, visited Cranbury, N.J., recenty. The July 1960 issue of U.S. Camera carries his photos of idylic small town scenes—the front porch, the variety retail store, the quiet corner of an old cemetery.

Mr. President, to hasten the growing realization that New Jersey is a State rich in quiet beauty, I ask that the article be printed in the Appendix of the RECORD.

There being no obection, the article was ordered to be printed in the RECORD, as follows:

CRANBURY BY WESTON—THOUGH JUST A SHORT WAY FROM THE WORLD'S LARGEST CITY, THIS HISTORIC VILLAGE IN NEW JERSEY SEEMS UNCHANGED BY PASSING TIME

Not many people have ever heard of Cranbury, N.J.—a village that history remembers but time forgot. Not 2 hours from Manhattan, not 2 miles from the sweep of the great turnpike down New Jersey, surrounded by lush potato, wheat, and barley fields and by an increasingly number of industrial research plants, Cranbury dozes quietly in its white houses, its dark shutters asleep against the sun.

Go through it by car and you drive along the past. Main Street was once a section of the old King George's Road, the chief link between New York and Philadelphia. There in some talk that Benjamin Franklin once walked the road. Today it is green and peaceful, lined with great elms.

Drive past the inn, or stop—it's open still. Yet it quartered Washington's troops on the eve of the Battle of Monmouth. Across the street is the First Presbyterian Church, founded in 1734 by men who, "being steadfast believers in a free church and the privileges of civil liberty, here sought a refuge from religious persecution."

Cranbury isn't far from where Washington crossed the Delaware, and Revolutionary battles raged even closer by at Princeton, only 6 miles to the west.

Yes, it's an old village, liking the old ways. And quiet. Television aerials, but no movie theater. Church socials. The undertaker's is the oldest firm in town. And prosperous enough. Just one industry—a great rose farm that ships 10,000 blooms a day. For the rest, each family knows the others, and most feel it's a good life.

And that's the way its citizens want to keep it. If you covet a plot of land or one of its houses, you'll pay New York prices—if you can find a house for sale. If you build, you'll dig your own well for water so as not to deplete the town water supply from Cranbury Brook.

A host of discouragements will hedge your notions to change the town by so much as one new house or citizen. If a building of Victorian vintage is after all razed or

altered, no modern structure will replace it: a building in Colonial style will appear—white clapboard with black trim. As one teenager put it, "We're against change, against building, and against tourists."

Address by Hon. Robert A. Lovett, Former Secretary of Defense

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, August 11, 1960

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the speech of the Honorable Robert A. Lovett, former Secretary of Defense, at the George C. Marshall memorial dinner, August 10, during the annual meeting of the Association of the U.S. Army.

Mr. Lovett's speech is a stirring document, one filled with warm tribute to a great soldier-statesman, General Marshall, and one containing sound advice on vital defense matters. I commend Mr. Lovett's speech to all of my colleagues and to the American people.

Appropriately, the Association of the U.S. Army awarded to Mr. Lovett its first George Catlett Marshall medal "for selfless service to the United States of America." I know of no living American more deserving of this recognition.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. ROBERT A. LOVETT, FORMER SECRETARY OF DEFENSE, AT GEORGE C. MARSHALL MEMORIAL DINNER DURING ANNUAL MEETING OF ASSOCIATION OF THE U.S. ARMY, WEDNESDAY, AUGUST 10, 1960

If a man is very fortunate he may have, once in a lifetime, the opportunity to work in a cause he believes in with all his heart and soul and under the leadership of a man whom he admires, respects, and comes to love. I have had that great privilege three times: Once, with Henry L. Stimson and, twice, with General Marshall, and, until the day I die, I will be grateful to them for letting me see, at first hand, the qualities of greatness and true leadership. Both these extraordinary men had much in common. The strengths of both stem from the fundamentals of sterling character. Both had unshakable integrity. Both were fearless of the consequences of a course of action they felt in duty bound to take. Working close to them was, therefore, a stimulating and inspiring experience, in part because their own personal standards were so high that, unless you were a hopeless clod, you had to raise your own. Service with them could not fail to refine and add balance to one's sense of values.

Since October 1959 I have wanted to share with General Marshall's old comrades in arms some memories of him and to reminisce about the little-known man, behind the serious and dignified exterior, whom the world regarded with respect, admiration, and something akin to awe. The first of the memorial dinners seems to me to be the proper time and place to do so and to show you one or two vignettes of this remarkable man whom you honor tonight and to remind you of some of his characteristics which made him so inspiring a figure.

I have no words to express my own feeling of admiration, gratitude, and affection for this noble man. Perhaps it is as well, for what could my words—or indeed, any words, add to the stature of General Marshall—Chief of Staff, General of the Army, Secretary of Defense, Secretary of State, citizen and recipient of the Nobel Peace Prize.

The whole world has recognized his magnificent accomplishments in the service of his country and the civilized world has sought to honor him. His public virtues have been extolled by the great of every country who have paid him homage and, in almost unmatched eloquence, have expressed their gratitude.

Consider, for example, the moving testimony of the value of his services to his country from the two Presidents whom he served.

President Roosevelt stated simply, "I feel I could not sleep at night with you out of the country."

President Truman, whom he served twice as Cabinet officer after his brilliant service as Chief of Staff, has called him "the organizer of victory, the greatest of the great in our time," and has said "he takes his place at the head of the greatest commanders of history."

Or, hear what his British colleagues in the Combined Chiefs of Staff, said to him in a message on his retirement as Chief of Staff in November 1945. It is a document almost without parallel.

It reads, in part:

"On your retirement after 6 years as Chief of Staff of the U.S. Army, we, your British colleagues in the Combined Chiefs of Staff, send you this message of farewell.

"We regret that Field Marshall Sir John Dill, and Admiral of the Fleet Sir Dudley Pound, two of your greatest friends and admirers, are not alive today to add their names to ours. As architect and builder of the finest and most powerful Army in American history, your name will be honored among those of the greatest soldiers of your own or any other country.

"Throughout your association with us, in the higher direction of the Armed Forces of America and Britain, your unfailing wisdom, high principles and breadth of view have commanded the deep respect of us all. Always you have honored us by your frankness, charmed us by your courtesy, and inspired us by your singleness of purpose and your selfless devotion to our common cause. * * *"

Few examples of simple gratitude surpass that brief and moving ceremony on May 8, 1945, in Secretary Stimson's office. Some of you here tonight may remember, as vividly as I do, that General Marshall was summoned to the office of the Secretary, where Mr. Stimson had invited 14 senior generals and his own assistants to be present. The Secretary asked General Marshall to stand beside him, facing the rest of us who were formed in an easy semicircle in front of the Secretary's desk. The Secretary, then 78 years old, took off his old-fashioned spectacles and, holding them in his hand, faced General Marshall, bowed slightly, and said:

"I want to acknowledge my great personal debt to you, sir, in common with the whole country. No one who is thinking of himself can rise to true heights. You have never thought of yourself. Seldom can a man put aside such a thing as being the commanding general of the greatest field army in our history. This decision was made by you for wholly unselfish reasons.

"But you have made your position as Chief of Staff a greater one. I have never seen a task of such magnitude performed by man.

"It is rare late in life to make new friends; at my age, it is a slow process, but there is no one for whom I have such deep respect and, I think, greater affection. I have seen a great many soldiers in my lifetime but you, sir, are the finest soldier I have ever known."

Much has been said of General Marshall as a great public figure but not nearly enough about him as a very great human being. This is not surprising since the general permitted no intrusion into his private life, except by his Government, for he treasured the brief periods of time that he had with his wife. He found solace, encouragement, and refreshment of spirit in them.

So I would like tonight to speak of the warmhearted, considerate, generous, and modest man, whom many of you knew so well, and I think the general will forgive me and realize that it is a comfort to speak of those we miss.

One of the pictures of General Marshall, that I relish, reminds me of his wry, quiet form of humor and his expertness at kidding you while he maintained a straight face and a fairly solemn air. He used to have the barber, Joe Abbate, come up to his room and cut his hair at least once a week. He found the interlude refreshing, the conversation relaxing, and the results becoming. Now, I must confess that I regarded these weekly shearings with amazement and envy, as nature had so scantily endowed me in hirsute gifts that a trip to the barber was a major occasion for me.

When we were in the Department of State, the operation was performed in a blue-tiled bathroom, with the general ensconced in a leather chair, and Joe, a trusted friend, busily engaged in snipping away with appropriate flourishes. General Marshall left strict instructions, regardless of the haircut, that I was to come in and discuss any matters with him which were not highly classified.

Time and again I would go in to clear something with the general and I began to look forward to it after a while, because I could see a plot was developing. I rather suspected that the general's aide, Jim George, was involved in it. I would customarily knock on the door and ask if I might interrupt him. He would say, "Certainly, come in, Lovett." I would ask him if he would take a look at this particular piece of paper. He would reply he didn't have his glasses; read it to him. I would do so. He would think it over; he might discuss it a bit; then he would give me my instructions, and I would gather up the papers and get ready to go.

At this point I remember seeing the general looking at me out of the corner of his eye, with his head dropped down, and the barber working on the back of it. I knew a trap was about to be sprung. He said, "Lovett, do you want Abbate to wait for you?" I said, "No, thank you, sir; I think I had better get on with this job." I started from the room and, just as I got to the outer door, the general said, "Lovett, you're an ex-banker. Why don't you try negotiating with Abbate for half price?" And I left the room with the general and Abbate looking at each other in the mirror and chuckling with delight.

Observing General Marshall at close range under all manner of difficult circumstances, it seems to me that his greatness stems from a number of traits and talents which have not been fully recognized or adequately mentioned. Some were exceptional gifts. His eminence in leadership, it seems to me, was a talent bestowed by a divine providence and heightened by use and experience, as is the case in any great talent, whatever the field.

His greatness, however, was enriched by personal traits which, like ardor, spring from the heart. He was a man of extraordinary compassion, of most sensitive and discriminating instinct, and there was an air of natural elegance about him which was unassuming and added enormously to his calm dignity. Dean Acheson, who worked closely with General Marshall over a period of years, found the precise word to describe this quality I speak of. He says, "The moment General Marshall entered a room, everyone in it felt his presence. It was a striking and communicated force."

There were two qualities which seemed to me to have had deep, perhaps even controlling, influence in lifting him to the heights of true greatness; first, his sincere concern for others; and secondly, his acceptance of change as a law of nature. Perhaps you'll permit me to explore these traits with you tonight and to draw a lesson from the second.

His concern for other people was something more than consideration or courtesy. It stemmed from a genuine interest in people and particularly those for whom he felt some responsibility. It was shown in many ways and on many occasions—some touching and a few amusing.

It comes through clear and strong and heartwarming in his attitude toward the Army which, I often thought, approximated the worried affection you see when a mother, on a street corner, with her very dear, small son beside her, sees him rather vaguely step off the curb into a street filled with speeding traffic. She reaches down, snatches him by the arm, yanks him back onto the sidewalk, hands him a resounding whack on his dumb little head and, while he howls at the top of his lungs, she bawls him out for having scared the living daylights out of her. In many things, the "Old Man," to give him that wonderful, privately used title in the Army felt compelled to do, there was definitely that attitude. And in it, I found comfort and delight.

But this quality of concern for others is most evident in his deep feeling for the individual soldier. We can hear the understanding and the blunt ring of strong conviction, when in his third biennial report in 1945 he has this to say: "It is impossible for a nation to compensate for the services of a fighting man. There is no pay scale that is high enough to buy the service of a single soldier during even a few minutes of the agony of combat; the physical miseries of the campaign, or the extreme personal inconvenience of leaving his home to go out to the most unpleasant and dangerous spots on earth to serve his nation."

There was an incident in 1948 which, I think, is not only very revealing about many of General Marshall's traits of character but also shows a most engaging quality of President Truman. I have obtained permission to tell this story in detail.

A meeting of the Organization of American States was scheduled to be held in Bogotá, Colombia, beginning April 9, 1948, a little over a year after General Marshall had taken over the difficult job of Secretary of State, to try to reorient our foreign policy in the light of new conditions in the world.

We had been forewarned that international Communists had selected the occasion as a time for a demonstration and that the United States and General Marshall might be used as symbols to attack. We felt some apprehension about having a substantial number of Americans attend in a mission headed by our Secretary of State.

Just before the mission took off, the general called me in and asked me if there were any last-minute matters that I wanted to take up with him. I said there were not. I then asked him if he had any final instructions for me and he said, "Yes," he had. Using his expressive hands to emphasize his points, he said something like this: "Lovett, I don't like the sound of that chest cold you've got. You've had it for a week and it doesn't seem to be getting any better. I want you to go to see a doctor right away, act on his advice, and be over it by the time I get back next week." I said, "Yes, sir," and bade him goodby.

Not long after the start of the meeting in Bogotá, a carefully planned and well-led major riot broke out, during which many of the city's buildings were burnt down and the radio stations and local phone exchange were seized by the mob. It was clear the situation was getting rapidly out of hand and concern for the safety of the U.S. delegation mounted. I stayed at the Department most of the night of April 10–11 and went home a little bit after 3 o'clock in the morning to get a couple hours' sleep, from which I was awakened by the watch officer calling to say that we had a message in, indicating that the roof of the section of the Embassy, which housed the communication and code room, had been set on fire and that the codes and equipment might have to be destroyed for security reasons. I went back to the Department and, as we were not able to maintain reliable contact by normal radio means, my apprehension grew.

It was clear from an earlier massage that General Marshall was staying at a villa located in a large property about a block in size. We decided to try to get through to him by a telephone circuit which was the sole remaining method of communication. After considerable delay we did reach the house which had been assigned to General Marshall. Jim George and Pat Carter answered the call. I asked how the general was and they said "fine"; I asked how the mission was, and they said that so far as they knew, "everything was OK; nobody had been hurt; some had had narrow escapes." I asked Carter if there was any particular danger. He said he thought not at the moment.

To my question as to how the general was getting along, he said—and this is a reasonably accurate quotation—"The old man is fine, he is untroubled, to tell you the truth, I think he is having more fun than he has had since he was a young lieutenant in the Philippine insurrection. A little while ago he was out in the garage instructing a young lieutenant of the Colombian Army as to how to dispose his men, telling him to bring most of them in out of the rain to shelter, where they could be warm and get some coffee, and to leave on duty only the minimum required to sound an alert if necessary, so that the others, warm and rested, could come out fighting mad and repel any attacks if needed." Carter said "the old man" wanted to talk to me and in a moment or two, the General's calm voice came on the line. To the best of my recollection, the conversation went something like this: The general said, "Can you hear me, Lovett?" I said, "Yes, sir," and started to say, "General, how are you?" when he cut in with, "Lovett, how's your cold? Are you doing what I told you to do about it?" At that point, my gaskets blew and I think, in a sanitized version, I said, "Holy smoke, General, never mind about me. How are you and the delegation?" He said, "Everything's fine at the moment. We've had a little excitement down here" but he felt the situation was beginning to stabilize, or would shortly; that the Colombian Government had tried to provide protection, which he thought was going to be adequate but that the riot was going to pretty well break up the meeting unless other delegations could be assured of being evacuated if necessary. I asked him what we could do to be helpful and told him the President had instructed me to tell him that he could have anything he wanted to insure the safety of the delegation or for any other purpose.

General Marshall said he thought that the meeting could be held together if positive assurance of air transportation could be given. He said at last report the government still held the airfield and that he felt that some troop-carrier planes of a squadron from the Panama Canal Zone would do the job if they could be held on alert in Panama subject to his call. I asked him if he needed any particular supplies, emphasizing the word "supplies" in such a manner as to make me feel sure he realized that I meant small arms or other defensive equipment. The general said, "No," all he wanted was a gross of candles, some evaporated milk, some karo syrup, and several thousand ponchos. I remember hanging onto the desk while I digested this weird list and wondering who was going to hold a taffy-pull at night in a rainstorm. I said that I would see about having them flown in at once with some emergency rations from the Canal Zone.

It was a little after 7 o'clock in the morning by now and I called the White House operator and asked her to try to locate the Secretary of the Army at his residence in Washington. She reported shortly that he was out of town on an inspection trip. I then tried the Chief of Staff of the Army, who was away on official business at some Army post. The operator was then asked to try to get hold of the Deputy Chief of Staff.

I was feeling a bit frustrated by this time and, in a rather self-pitying voice, I said to the operator, "Good gosh, isn't there anybody in Washington on this bright April morning except you and me?" The reply came promptly back, "Yes, Mr. Secretary, President Truman is here. Would you like to speak to him?" I said, "Isn't it a bit early?" and the answer was, "No, he has been up over an hour; I'll see if he's available to take the call."

In a moment President Truman's voice came on the phone and he said, "What's the news, Bob?" I gave him the reassuring report from General Marshall about our delegation and included a report on the request for supplies. The President asked what I was doing about getting them down to him promptly. I told him that I was having a little trouble digging out someone early on Sunday morning who could issue the necessary authority to the commanding general in the Panama Canal Zone to make delivery of the requested supplies. He said, "Well, Bob, you've found him." Rather startled, I said, "I beg your pardon, sir"—and heard laughter from the other end of the line, followed by the question, "Have you forgotten that the President is also the Commander in Chief?" I said I was sorry that I had for the moment, and the President said that a heck of a lot of other people around town had, too, with less excuse than I had. He then asked me to tell him what General Marshall had requested. I read him the list and said, "Mr. President, have I your authority to send a message to General Crittenberger and tell him that you have approved the shipment of these items immediately?" He said, "No, I'll call him on the phone myself and tell him that I want them shipped at once and to have those troop carriers warmed up and ready to go on General Marshall's call." The President called back in about 20 minutes and said that he had talked to General Crittenberger and that everything was being taken care of.

My embarrassment at the episode with the President was eased by two things: the President never told on me and our people got home safely. But my curiosity about the ponchos almost killed me until I got the story from Carter and George. It appears that the Colombian troops came up from the jungle heat to the high altitude of Bogotá, with the temperature about 50, in thin cotton uniforms and the general realized that standing around in the drizzle and cold would make them miserable and, therefore, not as reliable in facing a mob as if they could be dry and warm. The ponchos were issued, the troops were enthusiastic about them, and the delegations got on with the business as soon as they knew they could be airlifted out if necessary.

If you will reflect on this incident a moment, you will recognize that calm, steadfastness, instinct about a soldier's needs and concern for them, in addition to ability to inspire confidence turned something that might have been a shameful disaster into a minor, irritating event.

I mentioned earlier that one of General Marshall's most unusual attributes—and one,

I think, which added a great deal to his stature—was his recognition of the fact that Nature never stands still and that change is, indeed, one of the primary laws of life. His receptiveness to new ideas, which you have seen, for example, in the use of airpower and in the Marshall plan, was made easier by this philosophy, for he was not burdened with the attiude of mind which regards any change as a threat to the established order—or vested rights, if you choose—which must, therefore, be automatically, even blindly resisted.

About 6 months ago I testified before a Senate committee regarding policymaking machinery in the special field of the Department of Defense. I expressed the opinion that the essential military attribute of close relationship between planning and operational responsibility existed and that proved operations machinery was currently in being; and, finally, that the departments were staffed, for the most part, with competent, specially trained officers whom we were fortunate to have in good supply. I suggested, however, that it seemed to be increasingly difficult to fit new feet into old boots; that there was, I thought, excessive staff layering and, obviously, far too many committees with the resultant trend toward a reduction in the authority of the individual which I greatly deplored.

It may be that I place too much importance on men and not enough on the machine. I do not think so. But it is of no consequence anyway because events in the world are building up forces which will inevitably raise again the question of the proper organization of the services to meet the new situations which face us. The world is full of dangers, and the attitude toward change will be even more important than in the past.

Wherever you look in the world today you find one great common denominator the increasing role Government is playing in every aspect of every man's life, everywhere. We do not like to admit it, but Government is getting bigger all the time—partly because big government is necessary to deal with big labor and big business; partly because our people are asking the Government to do more for them each year; and, partly because Government by its very nature is a glandular grower.

Now, to oversimplify things a bit, this means more Government expenses. More Government expenditures mean more taxes; or more economy and efficiency; or a mixture of both. Looking at the problem of national security with such calmness as I can muster, I cannot avoid the conclusion that world change has overtaken us and that, in a relatively few years, economic pressure alone will force us to reexamine our current organization and procedures.

When that time comes, and I think it will come sooner rather than later, we will need the detached approach to the problem of what is best for national security that General Marshall exemplified and which won him universal respect. National security seems to me to be more complex than ever. I feel it is a problem we will have with us for generations to come and it is not helped in an open society by either an open mouth or a closed mind.

It will most certainly not be solved by trotting out those tired old slogans of warnings about "reduction of civilian control" and the "man on horseback" that have been used to divert attention for generations. When you hear them just remember that the chiefs of the branches of the Army used the same "man on horseback" argument against Secretary Elihu Root's reorganization plan which established the position of Chief of Staff of the Army.

Nor is the problem likely to be solved by appointing several committees of distinguished citizens from remote walks of life. Such groups normally come to Washington ignorant of the problems and ways of Government and, by dint of concentration on committee procedures, remain in that happy state. Some may even be attracted by the title "ad hoc committee" little realizing that it is merely a device used ad infinitum to obtain snap judgments ad nauseam.

The solution will be found, I suppose, when necessity or good judgment make it abundantly clear that in national security the whole is more important than its parts.

Having spoken in behalf of receptiveness to good new ideas or changes for the better, let me identify an area in which I hope you will permit no change to occur. Part of my inheritance from General Marshall is a feeling of real affection and admiration for the Army and the way it performs its manifold duties. The great traditions, which are handed down from generation to generation in the armed services, of duty, honor, loyalty, and dedication to the service of one's country are among the most admirable virtues of mankind. These have been kept alive by a dedicated and skilled group of officers who realize that self-discipline is one of the higher attributes of man. We simply cannot afford to lose these virtues. Our great schools and their standards must be nurtured and strengthened so that the code of excellence may be carried forward in a world which seems to have an increasing taste for the mediocre.

My strong conviction about this results from my experience with you, of which I am proud, and because it was these traditions, training, and discipline, which I have just mentioned, that produced the young Army officer who became one of the greatest generals and greatest men of his time.

Since I spoke at the outset of certain basic characteristics shared by General Marshall and Secretary Stimson, it is fitting and proper, I believe, that I should close my comments by letting the venerable and distinguished Secretary of War be heard again, through me, in his valedictory remarks made at a press conference in September 1945.

Hear Mr. Stimson's words: "General Marshall's devotion to the Nation he served was a vital quality which infused everything he does. During the course of a long lifetime, much of it spent in positions of public trust, I have had considerable experience of men in government. General Marshall has given me a new gage of what such service should be. The destiny of America at the critical time of its national existence has been in the hands of a great and good citizen. Let no man forget it."

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D.D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Schoeppel, and Cooper.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long of Louisiana, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Curtis, and Morton.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long of Louisiana, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Aiken, Capehart, Carlson, and Williams of Delaware.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Javits.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Carroll, Church, Gruening, Moss, Long of Hawaii, Lusk, Dworshak, Kuchel, Goldwater, Allott, Martin, and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Dirksen, Hruska, Keating, and Cotton.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Dirksen, Case of New Jersey, Javits, Prouty, ———.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Yarborough, Clark, Jordan, Randolph, Carlson, Fong, ———.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Long of Hawaii, Lusk, Case of South Dakota, Martin, Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Keating, ———.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Progress in Cleansing the Clearwater

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Friday, August 12, 1960

Mr. CHURCH. Mr. President, the people of the north central region of my State of Idaho are proud—as am I—of a remarkable river which flows westward from the Bitterroot Mountains to join the Snake River at the bustling city of Lewiston. This picturesque stream is the Clearwater, a name given it by the Nez Perce Indians; in their own language, the Kooskooskie.

Along this river was the ancestral home of the tribe. Down it in 1805 came the famous explorers, Lewis and Clark. On a tributary to one of its forks, Orofino Creek, gold was discovered in 1860. This significant strike, which drew the first population to Idaho and resulted in the creation of Idaho Territory 3 years later, is being celebrated this weekend at Pierce.

Of course, with the establishment of pioneer settlements along the river, the stream became a receptacle for waste, and as the communities grew, the river began to lose its purity. I well realize this is not an isolated problem. However, a major point is that Federal assistance, so often under attack, has provided a lever by which these communities have raised the financing for projects now building or projected to assure that this beautiful river will soon be returned to its original pure state.

This is a magnificent mountain watershed which abounds with wildlife, fish, scenery, and vast timber resources. Its contributions far exceed the boundaries of Idaho. Thus the proceeds from the decision to clean up the river are not limited to the immediate region. Perhaps most important is that the communities along the river have moved, under their own power, to end the pollution. They are to be commended.

Two significant editorials on this subject recently appeared in Idaho newspapers, one in the Lewiston Morning Tribune and the other in the Alameda Intermountain. I ask unanimous consent they be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Lewiston (Idaho) Morning Tribune, July 31, 1960]

PROGRESS IN CLEANSING THE CLEARWATER

The approval Friday of a $122,000 loan and a $18,900 grant from the Federal Government to help Kooskia build a sewage disposal plant provides cause for celebration all along the Clearwater River.

Just 5 years ago communities adjoining the river were using this beautiful stream as a sewer line in reckless and almost unanimous disregard of the health hazards thereby created. Since then, most of them have completed or initiated sewer disposal plants. When Kooskia's projected plant is built and others now under construction are finished, Orofino will be the only major community along the river still dumping raw sewage into the stream. We are confident that Orofino will follow its neighbors in building a disposal plant as quickly as feasible.

The worst offender for many years, of course, was the city at the mouth of the Clearwater—Lewiston. A $350,000 disposal plant was finished at Lewiston 3 years ago, but it has remained a useless investment because contractors thus far have proved unable to run a sewer line to it under the Clearwater River. A third crossing attempt is under way this low-water season on a more vigorous basis (though with weekends off, apparently), and the job surely will be finished this time.

Meanwhile, Grangeville, and Cottonwood have built sewage disposal plants to stop polluting streams tributary to the Clearwater, and Kamiah has a collection system under construction. Progress toward cleaning up the Clearwater has been remarkable in the last 3 years, and the region can be proud of this achievement.

It should not be forgotten that one of the major incentives to accomplish this task came from a bit of Federal legislation which was widely denounced at the time of its introduction as another piece of Federal "encroachment." The law providing Federal matching funds and loans to help cities build sewage systems is proving to be one of the soundest of the newer Federal powers. In this region and over the Nation cities which couldn't quite bring themselves to tackle the full task of sewage disposal decided they were willing and able to do so if they could get some Federal help.

As the example of this region illustrates, stream pollution is a proper concern of the Federal Government. The sewage dumped into the Clearwater is a problem for Washington and Oregon as well as Idaho. Despite strenuous efforts in many quarters to devise interstate compacts and commissions to discourage the Federal Government from handling interstate problems, the pollution of interstate streams is clearly a proper concern of the whole Nation.

Federal assistance for community sewage disposal also has qualified to a noteworthy degree the familiar argument that cities might as well finance these projects directly and at home rather than paying the Federal taxes which supply the Federal matching funds. That conclusion is basically correct—except that financially hard-pressed cities usually just don't have the funds to handle the full chore themselves. Federal aid provides a form of equalization—providing for one community the help it needs at the time it is needed to get the job done. Taxpayers in more fortunate communities may be helping to subsidize this work through their Federal taxes, but that situation is not destined to overthrow the Republic.

Federal aid, of course, did not clean up the Clearwater River to the degree that it is being cleansed. The communities adjoining this stream had important help from their Government, but they provided the energy and impetus themselves. The region can well be proud of their efforts. A few more such performances will guarantee that the stream of visitors soon to be following the Lewis and Clark Highway down the Clearwater River can be assured that the river of the "shining waters" is just as clean as it looks.

[From the Alameda (Idaho) Intermountain, Aug. 5, 1960]

CLEARWATER

Idaho's second most popular river system, the Clearwater drainage, is far ahead of the Snake and the Bear River Basins in the war against pollution. There is something in the name.

The Lewiston Morning Tribune has proudly ticked off the projects: A $350,000 disposal plant at Lewiston completed 3 years ago at the river's mouth; Grangeville and Cottonwood plants on Clearwater tributaries; a collection system under construction at Kamiah, and a $31,000 project voted last week by Kooskia.

That leaves Orofino, about 45 miles upstream from Lewiston, the only sizable town on the Clearwater without a treatment plant. "We are confident," says the Tribune, "that Orofino will follow its neighbors in building a disposal plant as quickly as possible."

Only serious hitch in the cleanup was that contractors weren't able to get a line across the river from Lewiston to that expensive plant. With streamflow unusually low and better engineering this time, a third attempt is expected to succeed this month, and the idle plant will finally go into service to the relief not only of Lewiston but the Washington and Oregon communities downstream.

The Federal grants in aid have given impetus to pollution control across the Snake River plain, but southern Idaho still has a long way to go. Twin Falls and Blackfoot are still big polluters, and booming Alameda long ago outgrew its primitive plant. Idaho Falls, Boise, and Pocatello are newly out of the pollution business, thanks to new or enlarged disposal systems, but at least two dozen Snake River communities and a dozen industries are still peeing in the creek. Rupert approved a $210,000 project in June; Twin Falls voted Tuesday.

At extreme ends of the State, the panhandle and the Bear River drainage are a jumble of a few treatment plants, some planning by cities worrying about financing (the smaller the town the greater the per capita cost), and no action at all.

Idaho's highly manageable water courses are justifiably described as our greatest natural asset. The rest of the State, especially the south where reuse is so vital, should work away until the clear water appellation may be applied to every Idaho stream.

Antarctic Treaty

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Friday, August 12, 1960

Mr. HARTKE. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an editorial entitled "Antarctic Treaty," published in the Indianapolis, Ind., Times of August 10, 1960. The editorial is in favor of the ratification of the treaty.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Indianapolis Times, Aug. 10, 1960]

ANTARCTIC TREATY

The Antarctic Treaty, now under debate in the Senate, is an imaginative venture in international affairs—an effort to insure that a whole continent, the size of the United States and Europe combined, shall never be used except for peaceful purposes.

In it the United States and the U.S.S.R. agree for the first time on principles which are the heart of the U.S. policy and are essential to the preservation of world peace.

The Senate should ratify this treaty promptly.

Support is bipartisan. Opposition apparently is based on fear of recognition of Soviet presence in the area.

But Soviet scientists are there now and have been for years, whether we recognize it or not.

It is argued that military importance of the frozen continent is increasing. One purpose of the treaty is to demilitarize the area before science makes it worth a war.

The treaty forbids military activity including nuclear explosions and authorizes full inspections to insure these restrictions are observed—something the United States consistently has demanded and which the Soviet Union has previously refused.

American observers are permitted to go anywhere in Antarctica, or fly over any part of the continent, at any time.

As Senator MIKE MANSFIELD said, in Senate debate, "It would certainly be unfortunate if we should fail to ratify the first international agreement which provides such an unlimited right of inspection."

Some argue the United States should claim the whole of Antarctica. We never have claimed any part and neither has Russia.

On the other hand, seven nations, all friendly to us, have made such claims, some conflicting. The treaty avoids recognition of any of these claims, leaving our scientists free to continue research over the whole continent.

But most important is the peaceful precedent being set, applicable to the coming problems of space and perhaps eventually even to the presently dangerous race in world armaments.

Interstate Fair, Unique in Many Ways, Celebrates 70th Anniversary This Year

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, August 12, 1960

Mr. WILEY. Mr. President, traditionally, "Come to the Fair" time symbolizes a significant custom in our way of life.

Currently, the fair season is just getting underway in Wisconsin, and across the country.

Overall, fairs offer both urban and rural folks a chance to get together, to review the accomplishments of the past and preview some of the promises of the future.

The civically oriented individuals, groups, and public officials who are carrying forward such programs are to be warmly commended for their splendid work.

In 1960, the La Crosse Tribune published an informative editorial reviewing the uniqueness and significance of this fair.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the La Crosse Tribune, Aug. 9, 1960]

INTER-STATE FAIR, UNIQUE IN MANY WAYS, CELEBRATES 70TH ANNIVERSARY THIS YEAR

The La Crosse Inter-State Fair will celebrate its 70th anniversary this week, and its fourth season at the new fairgrounds near West Salem.

The interstate fair is unique in several respects. It is one of the largest of its kind in the State and one of the few to accept entries from two other States in the open classes.

It is both a county and district fair, since the junior fair is restricted to only La Crosse County exhibitors.

It is independently operated, receiving some State aid for premiums but no county aid. It is operated principally on income received from the gate, grandstand, exhibit space, and concession rentals.

A program of continued enlargement and improvement was started when the move was made from La Crosse to the present grounds, but it has been somewhat held down by lack of funds. Some work, nevertheless, has been done each year.

A novel experiment started 2 years ago has met with success, giving the 4–H cattle exhibitors use of the barn for the first 3 days, and the open class the final 3 days. The program has eliminated the need for open tents for 4–H animals and the resulting mess of mud brought on by rains.

The board of directors should be congratulated for its progress and planning which has resulted in the fine exposition we have today.

Residents of the area should support the efforts with their attendance during the week. This year's fair will offer one of the largest displays of livestock in its history, plus an exhibition building full of home economics, crafts, culinary, garden, crops, flowers, and other displays.

Commercial displays again will be many and diversified. A full week of entertainment features will include large and small car racing, a country and western jamboree, horse show, horsepulling contest, antique car show, and many others.

The dairy building will house what may be a record display of butter, cheese and other dairy products.

All-in-all the Inter-State Fair is one of the largest and finest in the State—the finest in this part of the State and well worth the nominal price of admission.

So, let's go to the fair.

Repeal of the Connally Reservation

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, August 12, 1960

Mr. JAVITS. Mr. President, one of the leading groups in this Nation supporting the President in urging the repeal of the Connally Reservation to the Statute of the International Court of Justice is the Committee for Effective Use of the International Court. This group of distinguished Americans has at its head one of the most respected judges on the Federal bench, Judge Learned Hand of New York, as honorary chairman, and the former general counsel of the Department of Defense, Robert Dechert, as chairman. The sponsors include David K. E. Bruce, Ambassador to Germany; James B. Conant, former Ambassador to Germany and former president of Harvard University; Thomas K. Finletter, former Secretary of the Air Force; Jefferson B. Fordham, dean of the University of Pennsylvania Law School; Erwin N. Griswold, dean of the Harvard Law School; Alfred M. Gruenther, president of the American Red Cross; Edward C. King, dean of the University of Colorado Law School; Grayson L. Kirk, president of Columbia University; Henry R. Luce, editor in chief of Time, Life, and Fortune; John J. McCloy, former High Commissioner for Germany and chairman of the board of the Chase Manhattan Bank; Mrs. Millicent C. McIntosh, president of Barnard College; Robert D. Murphy, former Under Secretary of State; George N. Shuster, former president of Hunter College; Arthur K. Watkins, president of International Business Machines; Henry M. Wriston, former president of Brown University and chairman of the President's Commission on National Goals; and such distinguished members of the American Bar as Harrison Tweed, Joseph N. Welch, and Bethuel M. Webster.

I ask unanimous consent that there be printed in the Appendix of the RECORD the statement of position of this organization, eloquently stating the arguments for repealing the Connally Reservation, and an article from the Reader's Digest entitled "The United States Is Impeding World Law."

There being no objection, the article and statement were ordered to be printed in the RECORD, as follows:

THE UNITED STATES IS IMPEDING WORLD LAW

(We believe in the "rule of law." Yet, one short phrase added by the Senate to a recent treaty effectively prevents this country from leading the world toward that goal.)

(By William Hard)

I write this frankly to advocate the repeal of six words in a treaty of the United States having to do with the operations of the International Court of Justice of the United Nations. The six words are: "As determined by the United States."

In advocating their repeal I tread in august footsteps. President Eisenhower wants them repealed. So does Vice President NIXON. So does Secretary of State Herter. So does Attorney General Rogers. So does the American Bar Association under the leadership of one of its most eminent ex-presidents, Charles S. Rhyne of Washington, D.C.

But there is vehement opposition. It includes distinguished men like Frank Holman, another ex-president of the American Bar Association, Clarence Manion, ex-dean of the Law School of Notre Dame University, and Raymond Moley, columnist for Newsweek.

Some extreme opponents to the repeal of the six words even say that President Eisenhower and all the other leading advocates are engaged in a sinister plot against the Constitution and against the independence of the United States. It is a fierce fight. Let us see how it began.

In 1946 the U.S. Senate was considering the acceptance by the United States of the compulsory jurisdiction of the International Court of Justice. Some 40 countries have accepted that jurisdiction. They agree to submit all their international-law disputes with other countries to the Court if those other countries have similarly agreed to do so. The United States is one of them. But with a catch.

The catch is in the word "jurisdiction." The United Nations is forbidden by its charter to intervene in matters within the domestic jurisdiction of its members. So, consequently, is its legal organ, the International Court of Justice. Therefore, to hammer the nail completely down, the resolution before the Senate in 1946 specifically warned the Court to keep its hands off disputes "with regard to matters which are essentially within the domestic jurisdiction of the United States." The Senate Foreign Relations Committee thought that this act of caution was enough.

Senator Tom Connally of Texas did not agree. On August 1 of 1946 he took the floor and made a motion. It was overwhelmingly adopted. To the resolution before the Senate then were added the six words "as determined by the United States." This Connally reservation is called by its opponents "our American self-judging reservation."

What were its practical international consequences? The Connally reservation was adopted, in varying words, by eight other countries. One of them was France. Let us see what happened to France as a result.

France went to the International Court of Justice with a case against Norway. The Norwegian Government and certain Norwegian banks had borrowed large sums of money from investors in France. When the French Government undertook to press the claims of those investors against Norway, the Court pointed out that France, in declaring its acceptance of the Court's "compulsory jurisdiction," had excluded disputes within French domestic jurisdiction "as determined by the government of the French Republic."

"Well," said the Court, in effect, "if France can make such a reservation, Norway may now reciprocally make a similar reservation. Accordingly there is no case before the Court." So France was left holding the bag for its aggrieved investors.

The International Court of Justice does not seek political compromises. It seeks law. There are 15 judges, each serving for 9 years. Nominations for judgeships are made by the "national groups" in the Permanent Court of Arbitration (established in 1889) at The Hague in the Netherlands. These national groups, including one from the United States, send their nominations to the United Nations in New York, which acts upon them through majority votes. A vigilant effort is made to spread the judgeships among the principal legal systems of the world. This effort, to date, has been very successful.

The present judges include one from the United States, four from Latin America, four from Western Europe, one from the Arab world, one from south Asia, one from Australia, one from Nationalist China, two from Communist countries (the Soviet Union and Poland). Certainly a wide spread.

No one has yet been able to show that international politics enter into any decisions of the Court. On that point a case worth reciting is the case of Britain against Iran. Iran had shaken the whole world, including the United Nations, by expropriating the properties of the Anglo-Iranian Oil Co. Britain went to the Court, seeking redress. Thereupon Iran gave some international legal education to Britain—and incidentally to the United States—by claiming that the matter was entirely within its own domestic jurisdiction. The Court sustained Iran, dismissed Britain's case. On the Court there was a British judge, Sir Arnold McNair. Did he denounce the Court. He did not. He voted on the side of Iran. That's being a judge.

The record of the Court clearly indicates that it deserves international moral confidence in its field—the field of law. But some of its American friends grossly exaggerate what it can do in the world. They say such things as: "The world no longer has a choice between force and law. If civilization is to survive, it must choose law."

This sounds as if the Court could reach out and impose its decrees on every international problem in the world. Such talk naturally scares a lot of American patriots half to death. I assure them that the Court deals only with problems of an international legal character.

Consider the following questions:

Should the United States recognize Communist China? Should the United States increase its loans and grants to India? How many refugees from oppression should the United States welcome to its shores? How many yards of British woolen goods should the United States admit to its domestic market?

There is not a shred of international law on any of these and similar questions unless and until the United States voluntarily makes them international questions by signing treaties about them.

But the Court can promote and confirm world peace in many large ways. There are scores of contentious treaty disputes in the world it could deal with. One involves the United States and Switzerland. Under an old treaty Swiss citizens resident in the United States are exempt from military conscription here. The Swiss Government claims—with much alleged proof—that we nevertheless are today conscripting Swiss citizens into our Armed Forces. Swiss governmental officials express the view that it would be of no avail to take their claim to the International Court of Justice because the United States, upon arriving there, would simply say, under the Connally reservation, that the matter was solely a domestic matter, "as determined by the United States."

I inquire: Is the United States an honorable nation? I profoundly believe it is. Therefore, I think that we should earnestly request the Swiss Government to take us to the International Court of Justice, there to plead our cause without benefit of any Connally-reservation subterfuge.

In maintaining our Connally reservation, we are now rather lonely. France, after losing its case against Norway, repealed its "Connally reservation." Similar reservations have also been repealed by Britain and by India. According to Secretary of State Herter there are now only six countries which, having gone through the form of accepting the court's compulsory jurisdiction, have nullified their acceptance by reservations. These countries are: the United States, Mexico, Liberia, the Sudan, the Union of South Africa, Pakistan.

But who can tell? Treaties are multiplying. Many countries, influenced by the example of the United States, might adopt "Connally reservations," if they find that compliance with those treaties begins to be inconvenient.

Every treaty is international law between and among the countries signing it. Our treaty of 1903 with Panama, for instance, giving us sovereignty over the Panama Canal Zone, is international law between Panama and the United States. We should not, by our example, give Panama any justification for suddenly declaring the Panama Canal Zone question a question within Panama's domestic jurisdiction "as determined by Panama."

It is to our interest, as well as to our honor as a law-respecting people, to support the sanctity of treaties and to uphold their binding force upon all signatories, including ourselves.

Vice President NIXON has pointed out the constantly expanding network of treaties regarding American investment and American trade in foreign countries. Those treaties need protection, the most authoritative protection possible. Mr. NIXON has thereupon wisely proposed that the United States and every country with which it makes any such treaty should pledge themselves jointly to take the interpretation of that treaty to the International Court of Justice for final and binding judgment.

We can start toward that end by adopting the current U.S. Senate Resolution 94. It leaves our 1946 acceptance of the International Court of Justice completely intact in all its terms about "domestic jurisdiction" but eliminates simply the "self-judging" six words.

Resolution 94 was introduced by Senator HUMPHREY of Minnesota, who is a determined Democrat, but it is earnestly supported by the present Republican administration. Its passage requires a two-thirds majority. Much public support will be necessary to get that two-thirds. It is not a partisan matter. Write your Senators, Democratic or Republican.

If the resolution is passed, we shall then, and only then, be in a position to address some cogent remarks to that apparently total disbeliever in world law, the Soviet Union.

On October 7, 1952, a U.S. military airplane was shot down by Soviet gunfire in the vicinity of northern Japan. We summoned the Soviet Union to the International Court of Justice and demanded damages. We claimed that our plane was flying legitimately over Japanese territory. The Soviet Union claimed that it was flying unlawfully over Soviet territory. But the Court did not proceed to public hearings in which the contestants could face each other. Why? Because the Soviet Union flatly refused to accept the Court's jurisdiction. We got no verdict and no damages.

Yet it was difficult for us, I think, to complain. The Soviet Union, in asserting that the incident took place over its own territory, was in effect asserting that the matter was within its own domestic jurisdiction—as determined by itself. Under reversed circumstances might not we have been tempted to assert that the matter was within our own domestic jurisdiction—as determined by the United States?

The Soviet Union, nevertheless, is farther away from accepting the reign of law than we are. As a member of the United Nations, it is a party to the statute of the International Court of Justice and is eligible to have—and does have—a Soviet jurist on the bench of the Court. But it has never accepted the Court's compulsory jurisdiction even under such limitation as our Connally reservation.

At Geneva, Switzerland, five anti-Communist countries (headed by the United States) have been confronting five Communist countries (headed by the Soviet Union) in a great debate. The anti-Communist countries have presented a plan leading toward total, permanent disarmament. At the end of their plan they make a couple of obscure allusions to international law. I venture a humble suggestion.

Let us put "international law" at the very beginning of our plan. Let us give "international law" a primary place in the negotiations at Geneva, and then let us say to the Soviet Union: "This treaty, if signed and put into operation, will be the most momentous treaty in the history of the world. It will inaugurate a new era for mankind. And it will be international law among all the countries that sign it. This has been the recognized rule ever since there have been treaties in existence.

"Now: Inevitably, when this treaty has gone into practice, there will be complaints of violations. Human nature remains imperfect and quarrelsome. What to do with these complaints? We shall have sworn not to settle them by force. The only alternative is to settle them by law.

"So: Will you and the countries allied with you pledge yourselves to let all such charges and accusations go to the International Court of Justice? Will you pledge yourselves to accept its decisions? You declaim against war. Will you accept peace? In the interpretation of this treaty will you accept law? If not, then all your oratory about the enactment of this treaty and about the observance of it is a web of elaborate mockery."

Such, I think, should be our language to the Soviet Union at Geneva. But we should remember the old legal maxim that he who seeks redress in a court should go there with his hands clean. Ours, in this matter, are considerably soiled. We have accepted the "compulsory jurisdiction" of the International Court of Justice with a reservation which, on many occasions, could impede justice. We have made ourselves our own judge as to whether or not the questions bound to arise under any disarmament treaty are within our own domestic jurisdiction—"as determined by the United States." I continue to contend (with deep respect for Senator Connally) that we cannot effectively lead the world toward world law until we repeal the Senator's six words.

STATEMENT OF POSITION

At the very time the United States is trying to win and hold the respect of uncommitted nations outside the Iron Curtain, it is continuing its recorded distrust of the International Court of Justice. At the very time the United States is trying to foster the rule of law among nations as the ultimate substitute for the rule of force, it is continuing its "self-judging" limitation on its adherence to the Court. Our committee believes this limitation should be repealed.

THE BASIC TERMS OF ADHERENCE

Our country's adherence to the Court was pursuant to a 1946 Senate resolution. The resolution repeated the provisions of the statute creating the Court (part of the United Nations Charter) under which any country may accept the Court's jurisdiction as compulsory in disputes meeting these requirements: the dispute must be with another state accepting the same obligation, it must be a legal dispute, and it must concern either the interpretation of a treaty, or a question of international law, or the existence of any fact which would constitute a breach of an international obligation, or the reparation to be made for such breach.

In addition the Senate resolution, as introduced and unanimously approved by the Foreign Relations Committee, provided that the adherence should not apply to disputes on matters essentially within the domestic jurisdiction of the United States. This principle is implicit in the nature of international law and in the text of the Court statute, and was already expressed in the United Nations Charter. It is just as important to other nations as to the United States. Its restatement in the resolution may have been unnecessary, but of itself would not have impaired our adherence to the Court in any way.

THE "SELF-JUDGING" RESERVATION

During the debate on the Senate floor, however, this provision was amended by adding eight final words, so that, as filed, our adherence to the Court did not apply to disputes with regard to matters which are essentially within the domestic jurisdiction of the United States of America "as determined by the United States of America." In other words, for deciding whether a matter is essentially within the domestic jurisdiction of the United States (and thus outside the jurisdiction of the Court), the United States substituted itself for the Court. By adding this self-judging reservation the United States reserved the power to prevent the Court from passing on the matter, and thus reserved to itself a complete veto as to what cases could be brought against it.

THE BOOMERANG

The existence of a self-judging reservation in the adherence of any plaintiff country creates a like right for the defendant country (even though the defendant's own adherence contained none), because of the statute's requirement that adhering nations accept the same obligation. Thus when France (which had a self-judging reservation) sued Norway (which did not), the Court held that Norway could deny jurisdiction simply by announcing that in Norway's opinion the dispute was within Norway's domestic jurisdiction. Two years later (1959) France withdrew its self-judging reservation.

This boomerang effect of the self-judging reservation is probably its most serious aspect from the viewpoint of immediate economics. Thus foreign countries, despite their adherence without a similar reservation, can prevent the Court's passing on the validity of their taking of U.S. citizens' property or on the adequacy of any compensation proffered. The United States and the citizens it protects, who have a larger stake in foreign investment than any other country, can thus be deprived of their day in an international court.

OUR COMPANIONS IN DISTRUST

After the United States filed its adherence to the Court with a self-judging reservation, seven other countries adopted such self-judging reservations. France and India later dropped theirs, leaving such reservations now in effect by Mexico, Liberia, Union of South Africa, Pakistan, the Sudan, and the United States. Including these, 38 nations have now accepted the Court's compulsory jurisdiction.

The Court is well constituted to earn respect. It has 15 judges, each elected for 9 years, with five elected every 3 years. No two can be nationals of the same state. They are nominated by members of the Permanent Court of Arbitration, and elected by the United Nations General Assembly and Security Council (without any veto power). The Court has conducted itself conservatively, and given no indication of a desire to extend its jurisdiction. We may terminate our adherence to the Court by 6 months' notice.

Speaking of the Court in his state of the Union message of January 8, 1960, President Eisenhower said: "There is pending before the Senate a resolution which would repeal our present self-judging reservation. I support that resolution and urge its prompt passage." The Senate Foreign Relations Committee held hearings on this resolution (S. Res. 94), but deferred action.

LITTLE TO LOSE

This committee believes that the United States should withdraw its self-judging reservation, at once. The Court's compulsory jurisdiction would still not include disputes on matters essentially within our domestic jurisdiction, but the determination of whether a dispute involved such matters would be by the Court. Assuming that the United States would exercise the self-judging reservation only in good faith and not as an excuse to avoid defeat, our only risk in withdrawing the reservation would be that the Court in some future dispute would decide that the matter was not essentially within our domestic jurisdiction when we considered that it was. Based on the structure, history, and prospects of the Court, this committee believes that any harm to the United States from the acceptance of such a risk is most unlikely.

MUCH TO GAIN

The gains to the United States, however, from withdrawing the self-judging reservation, would be substantial and in the long run could be tremendous. With the reservation still on file, giving our country a veto power to prevent a decision of the Court, other countries are not prepared to assume that we will exercise the veto only in good faith. From their point of view our support for the Court is little better than that of the Iron Curtain countries, none of which has filed any adherence. We have put ourselves in the posture either of expecting to break our international obligations, or of being afraid to defend our conduct in court. We have prevented ourselves from showing the world the stark contrast between bona fide suport of the Court, and the Iron Curtain countries' rejection of it.

If we Americans wish the governments of other countries to follow our lead in the arduous search for a way to the rule of law among nations, we must renounce the self-judging reservation. We must strike from the rolls our recorded distrust, and become a true adherent of the International Court of Justice.

Corpus Christi Caller-Times Warns America Cannot Afford Second-Rate Education

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, August 12, 1960

Mr. YARBOROUGH. Mr. President, with each passing day we are given additional evidence that building America's brainpower is just as vital to the protection of our Nation and the free world as developing nuclear weapons.

With both the free world and the Communist slave world armed to the teeth, it seems very clear that brains, not bombs, will decide whether mankind will finally exist in freedom or slavery or perish.

Education has been the hallmark of freedom, yet we find ourselves at a point in history where totalitarian Russia devoted 12 percent of its productive wealth to education while we are only investing 4½ percent of our gross national product in the pursuit of learning.

Most Americans seem to be in agreement that there is strong need to substantially strengthen our national educational system. But there is considerable disagreement in some quarters over whether the additional funds for the program should come from the local level, the State level or the Federal level.

My belief is that the need is so great and so immediate that additional investment in the national educational program should come from all governmental levels—local, State and Federal—

with local control of schools strictly reserved for the local board.

Recently the Corpus Christi Caller, one of Texas' finest daily newspapers, published an editorial which is worthy of the thought and consideration of all Texans and all Americans, particularly those of the South. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the August 9, 1960, issue of the Corpus Christi Caller entitled "America Cannot Afford Second-Rate Education."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AMERICA CANNOT AFFORD SECOND-RATE EDUCATION

This and succeeding sessions of Congress will be troubled by America's commitment to education. The concern of educators and Government officials with our educational posture goes to the very heart of our democratic system and its ability to survive in relentless competition with the Communist world.

As with most issues of substance, both the nature of the educational problem and the means used to solve it are subject to wide differences of opinion. A host of critical questions arise in any discussion of the subject. Here are but a few of those questions.

How can we have true equality of educational opportunity in the United States? How can we be sure that the pupil in Blanket, Tex., is assured the same standard of educational excellence (in instruction, if not in pretentious buildings) as that afforded, say, in Austin, Tex.? How can we offer the same educational opportunity to the school children of Mississippi and Georgia as in California or New York?

There is no lack, of course, of excellent school systems in most of the States of the Union. The problem does not lie in this field at all. It lies in the great majority of school systems scattered throughout the United States that are unwilling or are unable financially to support an adequate school program. This is the heart of the problem.

Texas, as with other States, has approached the problem through State aid. But even a cursory examination of the school systems of the State reveals that State aid does not bring a level of equal opportunity for a good education to Texas children—some can afford to hire only mediocre or inexperienced teachers while some can afford to air condition school buildings and attract the best teachers. The solution would appear to be more State aid to poorer schools. Lacking such aid, it is inevitable that Congress will be urged by this and other States to shoulder responsibilities being shirked by States and local communities.

If Americans do not already know it, they should be told in clear, strong language that second-rate education cannot support or maintain their Nation in a role of leadership. Increasingly complex machines and growing political, social, and economic problems make first-rate education imperative.

The Russian challenge in the educational field has been noted by Dr. Alvin C. Eruich, vice president and director of the Ford Foundation for the Advancement of Education, following extensive travels and study in Russia. He found that teachers were highly regarded and highly paid in the Soviet Union. He found that students in the 9th and 10th grades went to school 12 hours a day, 6 days a week for 10 months of the year. He found that the Russians were spending approximately twice as much per capita on education as the United States is.

"To me the accomplishments in the field of education which Russia has made in a relatively short time are much more frightening than announcements that come from Russia concerning atomic or hydrogen bombs or guided missiles," Dr. Eruich said.

Upon whose shoulders will be placed the burden of a first-rate educational system? It will most certainly be borne by all the people of the United States and administered by the Federal Government if States and local school districts are unable or unwilling to accept their responsibilities. For the stake is survival and leadership in a free world, not just the increasingly irrelevant question of "local control" of schools.

U.S. Public Favors U.N. Standing Army

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, August 12, 1960

Mr. WILEY. Mr. President, yesterday the distinguished Senator from New Jersey [Mr. CASE] introduced a resolution supporting the establishment of a Permanent United Nations Police Force.

In the past, I have cosponsored a similar resolution in the Congress.

Today, perhaps as never before, there is a very urgent need for establishing such a force to help the U.N. fulfill its obligations and attempt to iron out difficulties that threaten world peace.

Now, what do the American people think about such a program?

Recently, I was privileged to review a Gallup poll, published in the La Crosse Tribune pointing out that 72 percent of the Americans interviewed said that they would like to see the U.N. with a big enough army to deal with the brushfire wars throughout the world. Reflecting broad U.S. support for such a force, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GALLUP POLL—U.S. PUBLIC FAVORS U.N. STANDING ARMY

(By George Gallup)

PRINCETON, N.J.—As a hastily assembled U.N. Emergency Force moves to restore order in the Congo, the American public is highly in favor of the United Nations having its own standing army large enough to deal with trouble like that in the new African state.

In the latest Gallup Poll survey—conducted while troops from 14 nations were arriving in the strife-torn Congo to take up U.N. police duty—72 percent of Americans interviewed said they would like to see the U.N. with a permanent army big enough in size to deal with small, "brush fire" wars throughout the world.

When this proposal was last put to the public—in March, 1958—66 percent were recorded in favor of a permanent international police force.

If such a force were created, the public would like to see it made up of troops from both small and large countries—including the United States and Russia.

The U.N. forces presently in the Congo are drawn largely from other African nations. None of the troops come from major world powers, although both the United States and Russia have sent supplies and planes to help transport the U.N. forces.

The American public was first asked this question by Gallup Poll reporters:

"A proposal has been made to build up the United Nations Emergency Force to a size great enough to deal with 'brush fire,' or small, wars throughout the world. Does this sound like a good idea or a poor idea to you?"

The vote at present and in March 1958: Permanent U.N. army?

[In percent]	*Today*	*March 1958*
Good idea	72	66
Poor idea	12	15
No opinion	16	19

In the current survey, voters were also asked:

"At present, the U.N. emergency force is made up of volunteers from small countries. Should it continue this way or should it include volunteers from such large countries as the United States and Russia?"

Te vote: Makeup of U.N. army?

	Percent
Include large countries	46
Small countries only	29
No opinion	25

Behind much of the minority opposition to including volunteers from the larger nations is a fear that Russian troops—if once established in a country under the U.N. flag—might create trouble and lay the groundwork for a Communist takeover once the international force had quit the country.

The U.S. public has long been in favor of establishing a U.N. standing army—a move which many observers believe might revolutionize present military planning. They point out that it might well mean a substantial reduction in the number of troops now maintained by each nation—including the United States—to take care of such "brush fire" conflicts as the Korean war.

At a time when U.N. forces were fighting in Korea, in the fall of 1950, the Gallup poll found more than 8 out of 10 persons in favor of U.S. participation in a standing U.N. army which would be kept in readiness at all times.

When the first U.N. emergency force was dispatched to the troubled Sinai Peninsula and Gaza strip in the late fall of 1956, surveys found 7 out of 10 Americans supporting such a move.

A Mortgage on America's Future

EXTENSION OF REMARKS
OF
HON. HENRY DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Friday, August 12, 1960

Mr. DWORSHAK. Mr. President, recently the Director of the Bureau of the Budget called attention to our country's nearly $750 billion debt obligations. In that connection I ask unanimous consent to insert in the Appendix of the RECORD an article entitled "A Mortgage on America's Future," written by Ernest A. Tupper, manager, Government Relations Department, American Can Co.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A MORTGAGE ON AMERICA'S FUTURE

(By Ernest A. Tupper)

The headline quoted above is what Maurice Stans, Director of the Budget Bureau of the Federal Government, calls our country's

nearly $750 billion of debt and obligations. A little over a third of that, some $290 billion, is our present national debt. The remainder represents the obligations to which the United States has already committed itself. Briefly they are: $98 billion for defense, housing, public works, highways and similar projects; $27.5 billion of unfunded retirement pay for civilians in Government; $30 billion of accrued liability for military retirement; and $300 billion for future pensions and compensation for veterans.

How quickly these amounts increase in a short period of time is reflected in a few examples of expenditures in the past decade. Shown here are five areas in which Federal spending has increased significantly since 1950:

	1950	Today	Percent increase
(1) Agricultural program billions	$2.8	$5.1	85
(2) Natural resources ..do	$1.2	$1.8	50
(3) National security ...do	$13.0	$45.6	250
(4) Public debt interest ..do	$5.7	$9.3	60
(5) Public health ...millions	$244.0	$850.0	250

During this same period of time Federal taxes and receipts increased from $36.5 billion to $78.6 billion, or 115 percent.

The cost of Government operation is great. Presently some 11 million persons are employed by Federal, State, and local governments with annual payrolls equalling some $120 billion. The total expenditure of these governments equals nearly 27 percent of our total income. Put another way, it means that every working person spends, on the average, 2 hours and 16 minutes per 8-hour day providing the income spent by the Government.

The great tragedy, perhaps, is that so many people fail to realize just how big a tax burden they are carrying. Most of their tax burden is hidden. While the income, sales, excise, and gasoline tax are readily recognized, the hidden taxes on everything people buy, whether it be produced by a corporation, partnership, or an individually owned business or company, are not recognized. Nor is it apparent that there are also hidden taxes in the bill of the doctor, dentist, serviceman, or the monthly rent bill. The purchase price of a loaf of bread is estimated to contain some 151 separate taxes.

All of these taxes, and our present debt and obligations of nearly $750 billion, have resulted from the willingness of the people—you and me—to have the Federal (and local and State) Government provide services which we might better undertake on our own—or do without.

The trend continues. During the last session of the present Congress 20 major spending bills were introduced in the House and 20 others in the Senate.

If these bills were enacted into law another $55 billion per year would be added to the cost of Government. This would raise our annual budget from $80 billion to $135 billion.

Of particular interest at the moment are the following legislative proposals:

Federal aid to education to provide funds for school construction over a 3-year period. Minimum yearly cost $325 million.

Health care for the aged to provide hospitalization and medical care for those over 65. Minimum yearly cost estimated at $1.2 billion.

Housing to provide for Government purchase of FHA and GI mortgages on new houses. Yearly cost $1 billion.

Federal pay raises to provide pay raises for civil service and postal employees. Yearly cost $810 million.

Veterans' benefits to provide peacetime veterans with benefits comparable to those who served during World War II and the Korean conflict. Yearly cost $300 million.

Somewhere, sometime, somehow, and probably soon if it is going to be done at all, the majority of us in this Nation who have the right and privilege to vote must come to accept the hard fact that we, the people—every one of us—pay the whole cost of these big spending programs. If we fail or refuse to face up to this fact, and unless we speak and vote our convictions, we may well wake up some day to find that Government, after promising us everything we want, has taken away everything we had.

I believe that none of us is willing to see that kind of a mortgage on America's future foreclosed on us all.

World Markets Open for U.S. Milk

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, August 12, 1960

Mr. WILEY. Mr. President, confronted with ever-growing stockpiles of agricultural commodities, our Nation continues to face the need for increasing consumption, expanding utilization, improving distribution, and generally establishing a supply-demand balance.

In recent years, we have employed a kind of food-for-peace program. In a great many countries, this has filled a great humanitarian need. In addition, it has elicited good will for the people of this country.

In Congress, as well as in the Executive Branch, a great deal of thought has been given to further improving this distribution of surplus foodstuffs—now amounting to about $9 billion.

Distributed among our people, this would mean that every man, woman and child in the country would own about $131 worth of food. If equally distributed, a family of 5 would get, for example, 70 bushels of wheat, 105 bushels of corn, 1,500 pounds of grain sorghum, 5 bushels of barley, and more than a bushel of soybeans.

With about one-third of the nearly 3 billion people in the world still existing on inadequate diets, it must be difficult to understand why more roadways cannot be opened to channel the food from surplus stockpiles to the stomachs of hungry people.

Practically speaking, the route, of course, is not so direct. Yet, I believe one of the great challenges of our time—the accomplishment of which could do the American people immeasurable good, in terms of better relations with other countries, as well as in meeting a humanitarian need. Also, there is a great opportunity to create and benefit from commercial markets for our great, food-production plant.

Recently, the Wisconsin Agriculturist published a splendid article entitled "World Markets Open for U.S. Milk."

Reflecting the ways in which efforts are being made—and should be expanded—to find new and more effective ways of distributing our rich agricultural output—I ask unanimous consent to have the article printed in the Appendix of the RECORD. I also ask unanimous consent to have an editorial from the Milwaukee Journal—illustrating the size of our surpluses—printed in the Appendix of the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Wisconsin Agriculturist, July 16, 1960]

WORLD MARKETS OPEN FOR U.S. MILK

The next customer for U.S. milk and milk products may be living in Asia, Africa, or in Latin America.

World markets in dairy products are worth a closer scrutiny and that's just what Dairy Society International, a nonprofit, educational organization is doing in its farflung market expansion programs. Here's a picture of that society and its achievements.

It was chosen in 1956 by the dairy industry and USDA work with Foreign Agricultural Service in oversea market development for dairy products under Public Law 480. In this capacity it has introduced top quality U.S. milk to more than 5 million persons—in many widely separated countries throughout the world—and has demonstrated ways in which these people can obtain quality milk products through modern technology and enterprise.

WORK IN THREE CONTINENTS

In 17 international trade fairs, manned by top dairy experts, it has discussed milk product promotion with dairy leaders in Latin America, Europe, and Asia.

In seeking to widen markets, DSI has avoided disrupting international trade routes of the United States and of friendly milk producing nations. It works in milk-short areas where the need is great—where dairy diets are below standard and where the nutritional value of milk is not yet fully realized.

Funds for this work come from three main sources: (1) Foreign Agricultural Service (local currencies from Public Law 480 sales of farm products); (2) from Dairy Society International members, who represent all segments of the dairy industry; and (3) from cooperating groups in the host countries.

Four main types of programs are used:

1. Surveys to determine the potential market for milk and other dairy products in a particular country.

2. Research to find new ways of combining milk with local foods to provide better nutrition economically.

3. Demonstrations to show how dairy products can be made available to entire populations thousands of miles from the place the milk was produced.

4. Long-range educational programs to teach the value of milk in the diet, and to build confidence in milk as a wholesome food.

DSI has 14 years experience in international cooperation. The group today counts its membership in nearly 50 countries. The basic aim has always been to help solve the problem of dairy surplus in one world area and hunger and need in another.

This is no giveaway plan. It is a program to develop permanent commercial markets for dairy products.

Within the current year activities have included surveys in India, Spain, Iran, and Greece. Information was given to importers and dairy-minded persons in more than 30 countries.

Trade fair demonstrations during the last few months include four in India and one in Spain. These resulted in the sale of three and possibly four dairy plants.

The year 1959 marked the completion of 3-year educational programs in Colombia and Thailand. As a result of this program both countries saw substantial improvement in quality milk production—and an increase in milk consumption.

WORK WITH LOCAL GROUPS

The search for new products finds the society working on a better breakfast campaign for Brazil—where the traditional breakfast is coffee and a hard roll, and where there is not even a word in the language for "breakfast."

They are also working with two leading research institutes in India to find means of combining milk and its products with local foods that are plentiful.

Research on an inexpensive milk wafer in Pakistan is another project.

Interest in the potential widening of the world's use of milk is gaining. With industry awake to the possibilities of oversea trade, the course is clear.

[From the Milwaukee Journal, Aug. 5, 1960]

YOUR SHARE OF FARM SURPLUS

Every man, woman, and child in the country owns $131 worth of food that has been paid for but which he is unlikely to ever see or use. At least that represents the value of his proportionate share of America's mammoth farm surplus.

If the stuff were equally distributed here's what a family of five would get, according to a report just issued by the Uhlmann Grain Co.: 70 bushels of wheat, 105 bushels of corn, 1,500 pounds of grain sorghum, 5 bushels of barley, and more than a bushel of soybeans.

That would mean some pretty full pantries and fruit cellars. A lot of us have forgotten how to grind our own flour, bake our own wheat bread, or make our own corn whisky and homebrew. Still, if we could only find some way to get rid of our $131 worth it would save the farmers a lot of grief, deprive the politicians of much campaign fodder and save ourselves about $500 million a year in storage costs.

Letter Carriers Express Appreciation for Pay Raise

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Friday, August 12, 1960

Mr. ENGLE. Mr. President, the Oakland, Calif., branch of the National Association of Letter Carriers recently passed a resolution expressing its appreciation for favorable action on the postal employees pay raise bill.

In response to that organization's request, I ask unanimous consent to have the resolution printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION COMMENDING THE MEMBERS OF THE U.S. SENATE

Whereas the Honorable Senators are to be commended for their earnest and wholehearted support of the letter carriers request for economic equality; and

Whereas according to law the letter carriers are not allowed to the bargaining facilities enjoyed by the majority of unions; and

Whereas after furnishing the Honorable Senators with facts and figures on how we stand economically we have to look to the Members of Congress to understand our needs; and

Whereas this year we are all very proud of the way Congress united in cause even in the face of the Presidential veto and brought our struggle to a most gratifying conclusion: therefore be it

Resolved, That branch 76, N.A.L.C., of Oakland, Calif., go on record as commending the Members of the U.S. Senate for their courageous passage of H.R. 9883 and the overriding of the veto that followed.

Adopted at the meeting of July 19, 1960.

MARTIN P. SGLAV, *Secretary*.

Students' Challenge

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, August 12, 1960

Mr. HUMPHREY. Mr. President, I want to highly commend the College Student Association of Carleton College in Northfield, Minn., and its past president, Bob Fliegel, for the institution of "Challenge," a program in which significant political and social problems are discussed and debated.

Public issues must be ventilated, especially in our colleges and universities. This new program at Carleton allows an opportunity for the students to hear speakers with opposing views on the current political and social issues. It will enable students to appraise critically the burning issues before our country.

Mr. President, I ask unanimous consent to have the article, "New CSA Standing Committee Challenges Unquestioned Views," which appears in the March 12, 1960, issue of the college newspaper, the Carletonian, to be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW CSA STANDING COMMITTEE CHALLENGES UNQUESTIONED VIEWS

Several weeks ago in a chapel address, Denis Baly raised the question, "What is a student's vocation?"

To Dr. Baly a student is a representative of a specific group with responsibilities and rights which are clearly marked. He reminded the Carleton student body that there were two universal duties which it was their privilege and responsibility as students to fulfill.

The first, the assimilation of knowledge and intellectual development leading to the formation of "acceptable" ideas and concepts, is the one which the Carleton student body pursues excellently.

The second, the constant critical appraisal of these ideas and concepts and the refusal to unquestionably accept the "obvious" assumptions underlying them, is the one which pursues the excellence of the Carleton student body. This is the challenge.

For the past few years various student groups in colleges across the country have formed organizations in an attempt to solve this problem. The questioning student, the student actively concerned with the significant and timely social and political questions, and the student actively involved in doing something about these questions had become scarce.

At Carleton this student is still scarce. One of the reasons this situation exists is that the student's views are not questioned—are neither vigorously attacked nor defended. The speakers he hears on Friday and Sunday morning, the newspaper he reads, and the people he talks with on campus too often work from the same premises, the same accepted principles as he does.

This can only result in intellectual atrophy, the forfeiture of the privilege unique to the student, and a reinforcement of the status quo for better or for worse.

Numerous intelligent and committed individuals who hold dissenting views on political and social principles, views which are not heard by the Carleton student body, will be brought to campus by the new CSA standing committee, "Challenge."

Debates between speakers with opposing views, views which force us to examine and justify the basic assumptions underlying our beliefs and ideas, will be provided. A Great Hall student audience had seldom seen such programs as an NAACP-White Citizens Council debate, a leading American industrialist defend his views against a Marxian economist, or a militant trade union leader challenge the opinion of a Carleton audience.

"Challenge" will initiate stimulating and controversial speaker and debate programs, will precede these programs with the publicity and information necessary to give the students an adequate background, will follow these programs with discussion and seminar groups led by faculty and students, and will be a focal point for student action in the political and social spheres.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D.D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Schoeppel, and Cooper.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long of Louisiana, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Curtis, and Morton.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long of Louisiana, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Aiken, Capehart, Carlson, and Williams of Delaware.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Javits.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Carroll, Church, Gruening, Moss, Long of Hawaii, Lusk, Dworshak, Kuchel, Goldwater, Allott, Martin, and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Dirksen, Hruska, Keating, and Cotton.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Dirksen, Case of New Jersey, Javits, Prouty, ———.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Yarborough, Clark, Jordan, Randolph, Carlson, Fong, ———.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Long of Hawaii, Lusk, Case of South Dakota, Martin, Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Keating, ———.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

A Negro's Life in Russia

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, August 13, 1960

Mr. WILEY. Mr. President, I have in my hand an article from the U.S. News & World Report of August 1, 1960. It is entitled "A Negro's Life in Russia: Beatings, Insults, Segregation." I feel that the article is one which should be placed in the RECORD. All our friends of the Negro race might well read it and realize that what is happening around the world in relation to offsetting the livableness and the economy, such as is happening in Africa, is due to the very happenings which the author of this article, S. Omor Okullo tells about concerning the treatment which Negroes have received in Russia.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A NEGRO'S LIFE IN RUSSIA: BEATINGS, INSULTS, SEGREGATION—INTERVIEW WITH A YOUNG AFRICAN WHO STUDIED AT THE UNIVERSITY OF MOSCOW

(Soviet Russia, right now, is posing as a friend and protector of Africans. What is the Soviet attitude toward Negroes? Is there racial discrimination in Russia? Some answers to such questions were discovered by S. Omor Okullo, a 26-year-old African from Uganda who spent 2 years studying at the University of Moscow on a United Nations scholarship. Recently he was expelled by the Soviets after protesting the way Russians treated African students. Mr. Okullo describes that treatment in this exclusive interview with a member of the U.S. News & World Report staff in London.)

LONDON.

Question. Mr. Okullo, you have written a letter to Soviet Premier Khrushchev protesting the treatment of African students at the University of Moscow. Why? What sort of treatment were you protesting?

Answer. We informed the Soviet Government about a Somali student who was attacked and beaten up and left unconscious by four Russian students.

Question. Why was he beaten?

Answer. His crime consisted of dancing with a Russian girl.

Question. Were there other incidents of this sort?

Answer. Well, one day the Russian students distributed a typed circular in the Russian language saying that the African students were getting too big for their boots in Moscow. What they meant really was that we came from poor homes and were getting big in Moscow and becoming an anti-Soviet group.

And one day one of the African students was insulted and called a "monkey." He was going in a lift, and merely asked them to stop for him on a certain floor.

These are a few incidents which we brought to the notice of the authorities. There were some other incidents which we did not like to bring up. We left them out.

Question. Were they similar incidents?

Answer. Yes; many of them involved African students with Russian girls. We told the Soviet Government that some Russian students have been dismissed from the university for being in the company of African students. And we further stated that, as we had come to the Soviet Union to study and not as refugees, we considered it right that we should be accorded more human respect.

Question. What was the result of your protest?

Answer. By appealing to the Soviet Government, we felt that something could be done by the Government to prevent what we did not wish to call racial discrimination.

But, instead of bringing cooperation between both sides, the Soviet authorities have been throwing African students out of the university.

Question. Did you feel there was much racial discrimination in Moscow against African students?

Answer. Well, that does not exist much. It has existed up to a certain limit. But I think it will change, because the Russians will realize that African students are not prepared to cooperate with them if they do not respect us as human beings in their country.

Question. How many African students were expelled from the University of Moscow?

Answer. I and two other students, both Africans.

Question. Why were you expelled?

Answer. Actually, there was no clear reason given to us. But what we understood was that we were accused of being leaders of the anti-Soviet group.

Question. How many African students are now studying in Russia?

Answer. There are roughly 600 students, but some are going in and others are leaving.

Question. How many have left because they were dissatisfied?

Answer. Well, 15 at least left recently, and 300 were withdrawn from the Soviet Union by the United Arab Republic.

Question. Do you think many more African students will leave?

Answer. I think if they have the means, financially, many are bound to leave—maybe most of them.

Question. Why are so many African students so unhappy in Moscow?

Answer. One problem is that living conditions are very unsatisfactory. Also, there is not any relationship between the Soviet students and the African students. Many times, when Russian students are discovered in the company of African students, the Russians are summoned and reprimanded by the Komsomol [Russian youth organization].

Question. Why do you think Russians are discouraged from associating with Africans?

Answer. I think mainly because of political reasons.

Question. What do you mean?

Answer. Well, because, in Moscow, Africans are treated as capitalists. And the Russian Government is aware that, if we are allowed to associate freely with Soviet students, probably that would have a deep influence on the Soviet students. You see, many of the Russian students are very primitive, socially, and some of our African students are more advanced than they are.

Question. Why were you accused of being a leader of the anti-Soviet group?

Answer. Because I have been a vice president of the African Students Union in the U.S.S.R. for 2 years, and they discovered our union was not a political one and was not prepared to be used for any political propaganda.

Question. Did you get the impression they wanted to use you for political propaganda?

Answer. Yes, they did. That's quite true.

Question. Did they try to indoctrine you politically?

Answer. In class, the teachers of Russian language try to find out the political views of the foreign students. If they find the student is really neutral—that he is unwilling to commit himself—then he is regarded as a dangerous man and politically undesirable.

For example, they asked us about our views on the U–2 and were very unhappy when I did not immediately take Russia's side.

Question. Do you think that many of the African students who now are studying in the Soviet Union are greatly influenced by Communist propaganda?

Answer. Well, I think most of the African students, say 95 percent, would like to remain African. By this I mean, if there are a few who have been influenced by the Eastern ideology, I think they will have no effect on Africans and African States.

Question. You mentioned that living conditions were poor. Could you give more details on that?

Answer. Well, you find a small room occupied by four students, and in winter there is no warm water provided in most hostels, and the country is extremely cold in winter. So I think from our point of view it is very uncomfortable for African students who are used to a warm climate. In the student's dining room the food is very poor.

Question. Did the Russians give you any financial help at all?

Answer. You get 900 rubles a month ($225 at the official rate of four rubles to the dollar), and they deduct 36 for your accommodation. So you have 864, out of which you must pay for food, transportation, books, and so forth, and the cost of living is extremely high. A pair of shoes would cost 300 rubles. They give you money for clothes only once, when you first get there—about 3,000 rubles. You spend about 2,000 of that on an overcoat and the rest for winter boots and a fur cap.

Question. Did you find the Soviets provided you with necessary facilities for study?

Answer. No; the Soviet Union deliberately violated their promise to the United Nations. Before going to the Soviet Union we were promised money for books, equipment, and other supplies. But, when we brought the matter to the Soviet Minister for Higher Education, he denied it and said the United Nations was not correct. I wrote the Secretary General, but before I got a reply the Soviet Union accused me of being as dangerous as the Americans and leader of the anti-Soviet group.

Question. What about recreation and amusements for African students?

Answer. Conditions for that are very limited.

Question. Can the African student go to dances with Russian students?

Answer. There are dances organized by the students, but they are limited to each country. They don't mix. The authorities frighten Russian students out of mixing with foreign students. By foreign, I mean those who don't come from Socialist countries.

Question. Were you African and other foreign students in class with the Russian students?

Answer. Yes; we were all together. But this year the Russians are starting a "friendship university" for African students, where we will be separated from Russian students.

From my point of view I disagree with that, and I tried to explain it to many Soviet authorities that, if the Russians really want African students or African people to understand the Russian way of life, it is better to invite African students to mix with the Russian students and study with the Russian students in the same universities. I explained to the Russian authorities that the "friendship university" is not different from universities in South Africa. It is different only in the ideology applied to it.

Question. Mr. Okullo, what was the main thing you learned from your experience in Russia?

Answer. What I gathered in a short time was that the Russians are different from what they are preaching about friendship with African peoples and African freedom. What I discovered was that most of these preachings are applied materially.

Question. How do you mean, materially?

Answer. They are not sincere about preaching friendship with African peoples. Africa now is the balance of power in the world. They know if they lose Africa they are lost.

The Great Debate

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Saturday, August 13, 1960

Mr. MONRONEY. Mr. President, I am sure that all of us are looking forward to the great debate which the television networks have promised us for the presidential campaign, cognizant that it depends on legislation relieving equal time requirements on a trial basis for 1960 in regard to the two top offices. This legislation has been passed by the Senate, and now lies on the Speaker's desk in the House.

The bill which will make a serious debate on issues possible is the outgrowth of an article by Gov. Adlai Stevenson, of Illinois. He proposed last spring that the presidential candidates in this election be permitted to talk sense to the American people through the medium of a great debate on television, stripped of the hoopla and professional political trappings which usually characterize commercial political broadcasts.

I ask unanimous consent to insert in the RECORD Appendix two discussions of the subject: Editorial from the Washington Post of Sunday, July 31, 1960, entitled "Unfinished Business," and a column by Roscoe Drummond for the same date, entitled "A Break for the Voter: Great Thing, The Great Debates."

There being no objection, the editorial and column were ordered to be printed in the RECORD, as follows:

UNFINISHED BUSINESS

The urgency of amending the so-called equal-time requirement for presidential candidates on public-service radio and television programs becomes the more apparent as the 1960 politicking warms up. For millions of people television will be their closest contact with the candidates. Almost everyone agrees that TV debates and speeches on the issues of the campaign can make an immense contribution to the democratic process. Yet the law still forbids the networks to present election-year programs of this kind on their own time without giving equal privileges to the candidates of the fringe parties.

The absurdity of this requirement was demonstrated recently when Lar Daly, who represents a mere handful of fanatics, demanded and was given equal time on the Jack Paar show because Senator KENNEDY had appeared on that program by invitation. Serious debates and discussions among the major candidates are obviously impossible so long as any windbag who can assemble a few followers and organize a party must be included in it. Fortunately, the Senate has passed a resolution that would suspend the equal-time provision as it applies to presidential and vice presidential candidates in 1960. Enactment of this measure ought to be one of the first undertakings of Congress when it reassembles in August.

A BREAK FOR THE VOTER: GREAT THING, THE GREAT DEBATES

(By Roscoe Drummond)

The prospective face-to-face television debates between Vice President NIXON and Senator KENNEDY should make this the most vibrant, engrossing, dramatic presidential campaign in memory.

Senator KENNEDY has already accepted. Vice President NIXON is agreeable and is making two suggestions designed to make the debates more meaningful and revealing to the public.

It seems to me that NIXON is right in proposing that the nominees speak extemporaneously—rather than read prepared speeches at each other—and that they be free to question each other on the spot.

This should be satisfactory to KENNEDY, who knows his own mind, has his subject matter at his fingertips and can speak off-the-cuff coherently and brilliantly.

Such a series of meetings between the nominees would be in the best tradition of the Lincoln-Douglas debates.

Something like them has long been desirable. It is now virtually certain that the KENNEDY-NIXON debates will take place.

This will not be just a show, not a stunt. Neither of the nominees wants to make it that way at all. Neither will be disposed to do so. These debates will be far more valuable than just a trial of wits. The results which would flow from them would be these:

They would enable the voters to measure and compare, much better than otherwise, the fiber and fitness of the nominees. Such face-to-face debate, with the candidates speaking their own minds in their own words, would relegate to the sidelines the Madison Avenue imagemakers and mimeograph machines.

They would vastly enliven and increase public interest in the campaign. More people would listen more attentively to lively debate than to the usual campaign oratory.

They will sharpen and deepen public interest in the issues of the election. These debates will not only stimulate us, they will educate us. They will help immeasurably to develop a public opinion which will better support the next President in measures he will want to carry out.

How much sharply focused, penetrating and fairminded discussion usually gets into a presidential campaign? It is very limited and far between. One of the reasons is that most presidential campaign speeches are delivered to the converted, for the converted and by the converted usually at intensely partisan, super-heated party pep rallies.

The prospective Kennedy-Nixon debates will be primarily directed to voters who haven't made up their minds and to voters who need better reasons before making up their minds. Others can listen in. Most campaign speeches are delivered to those who have already decided their vote and they are not often of a character to induce many to listen in.

Fortunately, circumstances conspire to make it natural and easy for Nixon and Kennedy to accept the debate idea this year. Wendell Willkie challenged F.D.R. to radio debate in 1940 but the President refused because he knew that he would be just making big audiences for his opponent. Nixon and Kennedy have about the same audience appeal. Each is alert and articulate.

Religious Exhibit at World's Fair

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, August 13, 1960

Mr. WILEY. Mr. President, in our widespread efforts to counter the Communist ideological, sociological, economic, and military offensive, we have given considerable time and thought to blockading the outspreading of Communism in such fields.

However, we may well have ignored—or at least too little stressed—a major strength of our way of life: That is, the right and privilege to be spiritually free.

Perhaps no one appreciates this great heritage so much as those to whom it has been denied.

Recently, I was privileged to receive from Mr. Leslie J. Schlax, State secretary of the Wisconsin State Council, Knights of Columbus, a resolution adopted by its supreme council.

Basically, the resolution proposed the importance of stressing the significant role which freedom of religion—including all faiths—has played in the lives of our people and the history of the country.

I ask unanimous consent to have the resolution printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION 23 IN RE WORLD'S FAIR RELIGIOUS EXHIBIT

Whereas the consensus is that there has been an inadequate recognition of our religious heritage at recent U.S. national and international exhibitions; and

Whereas the Christian religion has played such an important part in the history of our country and greater emphasis should be given to such fact in future national and international festivals and exhibitions: Now, therefore, be it

Resolved, by the Wisconsin State Council Knights of Columbus in annual convention assembled at Green Bay, Wis., That those planning all future U.S. national and international exhibitions, festivals and fairs be, and they are hereby urged and requested to give greater and more emphatic recognition to our religious heritage to such displays; and be it further

Resolved, That copies of this resolution be forwarded to our Wisconsin U.S. Senators and Representatives and to the U.S. Department of State by our state council secretary; be it further

Resolved, That a copy of this resolution be furnished the supreme council and it is recommended that said resolution be acted upon favorably at the supreme convention this year.

LESLIE J. SCHLAX,
State Secretary, Wisconsin State Council, Knights of Columbus.

Farm and Bank Cooperation

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Saturday, August 13, 1960

Mr. KEATING. Mr. President, the agricultural community and the commercial banking community of New York State have long enjoyed a close working relationship that can well be a model to other States.

The annual Bankers School of Agriculture conducted at Cornell University has played an important role in fostering this cooperative relationship. For that reason, Mr. President, I ask unanimous consent to have the following editorial from American Banker printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A PROVEN SUCCESS FOR 15 YEARS—NEW YORK BANKERS SCHOOL OF AGRICULTURE AND WHAT IT TEACHES

Every summer for 15 years, 60 or more New York State bankers interested in farm loans have gathered for a week at the State Agricultural School at Cornell University. There they have learned the essentials of farm management in relation to agricultural credits. Their assemblage is the Bankers School of Agriculture, sponsored by the New York State Bankers Association.

In the 15-year period, graduates of the school's 2-year course—1 week for two consecutive summers—have numbered several hundred. Practically every rural bank in the State has had at least one man in this school. Some small banks have had more, while certain larger banks have had a dozen or more men take the course.

Perhaps it is different in some States, but in New York a practical farm background is possessed by few men coming into banking. Even small town education is more citified than countrified.

Most of the young men, therefore, who are cast in the role of farm lending officers need an understanding of the farm situation which their educational background and experience has not given them. Even those with some knowledge of farming need to sharped their perception and broaden their knowledge of modern farming to keep up to date.

And so this week at Cornell, 70 bank men—a majority of them younger, junior executives—are spending 5 days in classrooms listening to agriculture professors, and in the field visiting typical farms to study their management problems and consider the role of credit in production and efficiency. Concurrently with the first 2 days of the school, a graduate seminar for bankers who previously have attended the school is conducted as a sort of refresher course. The value of the school's courses is attested by the fact that 40 or 50 come back annually for the seminar.

Dean C. E. Palm, of the New York State School of Agriculture, in welcoming this year's school and seminar, pointed to one important fact in modern day farming that reinforces the importance of the bankers' agriculture school. So great and swift has been progress in agricultural science, he said, even the universities have difficulty in keeping abreast of the techniques of the upper 10 percent of farm managements. How important, therefore, that bankers allot time and assign their executives to spend a week making themselves aware of the fundamentals of farming in a changing agricultural community.

Educational work of this sort has been a touchstone of the work of the New York State Bankers Association for nearly 20 years, under the administraiton of Albert Muench, executive vice president. For senior executives, management school courses are available every year. For juniors, accelerated American Institute of Banking study and other courses are offered in summer sessions. Bank public relations is taught at a special NYSBA summer term. Attendance year to year in these schools evidences their accepted value among bankers of the State, and the practicality of their organization and development.

Thus the current week's agricultural school for bankers typifies for the country banker the education policy of the New York State Bankers Association and the recognition among New York State's bankers of the need for self-education.

The exchange of ideas, between professors and other bankers attending this school, constitutes a sharing of experiences which is making New York's farm lending more constructive and productive. Its students learn when to say "Yes" as well as when to say "No" in an area where sums at risk at loans now are ranging into many tens of thousands of dollars and over long terms of years.

Farming is a business today, and management has become all important. Why and how much a farmer borrows—too much or too little—too soon or too late—are questions which must be answered wisely and well by both banker and borrower. A school such as the New York Bankers School of Agriculture adds immeasurably to the lending sense of the men who attend it. We wonder why more States, where farming is still a major field of bank borrowing, do not emulate this New York State venture, a proved success now for 15 years.

Weaknesses of the U.S. System

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Saturday, August 13, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Weaknesses of the U.S. System," written by David Lawrence and published in a recent issue of the Washington Evening Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WEAKNESSES OF THE U.S. SYSTEM—RESPONSIBLE GOVERNMENT SEEN LACKING IF MAJORITY PARTY CAN'T ENACT PLATFORM

(By David Lawrence)

A different type of national political convention assembles here this week under circumstances that reflect seriously on the prestige of the United States throughout the world.

At a time of crisis, at a time when America boasts of her democratic institutions, the fact is that, among persons abroad schooled in the science of government, the term "responsible government" is not applied to the system in effect in this country. It is more often described as irresponsible government.

Thus, in the elections 2 years ago, the American people chose the Democratic Party to control and rule the Congress of the United States. Since its Members in the House and Senate comprise a majority of virtually two-thirds and since a few additional votes are usually available from the opposite party, even the veto of a President can be overridden. Why then cannot the major planks of the platform of the Democratic Party be put into effect by law—or rather, why haven't they been enacted in the last 2 years?

The truth is that, in actual practice, the Democratic Party does not command a majority because it is divided on such issues as civil rights and on many economic questions. There is no such thing as party discipline. A Member of Congress can desert his own party and suffer no penalty—not even the loss of a committee chairmanship, which his party can at will withdraw from him.

Theoretically, as Congress reassembles this week after a recess taken primarily to allow Members of both parties to attend their national political conventions, there is every opportunity to pass the most important provisions of the Democratic Party platform. If there is economic discontent or dissatisfcation among the American people with anything that can be cured by law, the party which has been in control of Congress for the last 2 years is responsible for failure to provide the remedy.

If the Members of the party in power do not face up to their obligations, the people presumably have a right to choose another party at the polls. But in virtually all the Southern States there is no active or organized Republican Party which puts up candidates for Congress. This, too, impresses foreign observers as a weakness.

The Democratic Party, moreover, needs to win something less than a majority of the seats in the Northern States and yet, by adding its Southern Democrats, can still control both Houses of Congress.

This week, as Congress reassembles, there is a novel situation which serves to reemphasize the irresponsibility of the present system. LYNDON JOHNSON, nominee of the Democratic Party for the Vice Presidency of the United States, is also the majority leader of the Senate. His sponsor at the Democratic National Convention at Los Angeles, SAM RAYBURN, is still the Speaker of the House of Representatives. Yet, for the action or inaction at the session beginning this week, there is no way at present by which the American people can fix responsibility on the Democratic Party.

Senator KENNEDY, the Democratic nominee for the Presidency, already has brushed aside the role of Congress at the current session. He says publicly that little can be done to fulfill the provisions of the platform because

the Democratic Party does not control the executive branch of the Government.

To observers, however, from other countries where parliament systems are in operation, this will appear to be a sweeping admission of the failure of the American system. For if a party commands virtually two-thirds of both Houses of Congress—enough to assure an overriding of the Presidential veto if the public desires a piece of legislation—it seems strange that the fault should be placed on the Chief Executive, who has no vote in Congress and has no right of participation in the actual writing of legislation. All he can do is appeal for the passage of needed legislation, which Mr. Eisenhower is doing in his message today.

Abroad the Prime Minister is chosen from and remains a Member of Parliament.

If there is something wrong with America for which the Republicans are to blame—and the speakers at the Democratic National Convention seemed to think so—then, it will be asked, why isn't it more important for the Members of Congress who belong to the ruling party to begin passing the corrective legislation at once? Why will they engage instead in maneuvers at this current session, which promises to be a continuation of the same political farce that characterizes the system of choosing party nominees at national conventions? Do the people really have a say, or do the political cliques and blocs that blame everything on each other actually run the country? And when will the people become sufficiently aroused to demand a system of responsible Government?

Mr. Khrushchev's Buttinsky Tactics

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, August 13, 1960

Mr. WILEY. Mr. President, in the days ahead, we will be witnessing some sharp challenging and counterchallenging in the political campaign.

As the battle for our election gets hotter at home, however, it's constantly necessary not only that we, as U.S. citizens—but also the political candidates—be careful not to give aid and comfort—and illusions of disunity—to the Communists.

As we know, Soviet Premier Khrushchev has gone on an extraordinarily reckless campaign of freelance trouble-making in the Congo, Cuba and elsewhere around the globe, including this country. The targets for Communist propaganda include efforts to create dissension among nations of the Western World, as well as to encourage disunity in the internal affairs of countries, including the United States.

As we know, the major differences between our parties arise not so much on ultimate objectives, I believe, but on ways and means of attaining these goals. Generally, these objectives include dedication to peace, providing a better living for our people, and cooperating with other countries to create a better world, safe for freedom.

Apparently, however, Mr. Khrushchev has the illusion that he can poke his nose into our internal affairs to create dissension and disunity.

To limit—if this is possible—his reckless efforts of attempted interference, I think it is appropriate that we remind him that our people are on to his game and will not be swayed by such buttinsky tactics.

Recently, the Christian Science Monitor published a most useful, thought-provoking article entitled, "Think Again, Mr. K.," written by Roscoe Drummond. The article reflects the way in which our Government is moving ahead on general objectives—even while the campaign is underway. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, Aug. 10, 1960]

THINK AGAIN, MR. K.

(By Roscoe Drummond)

WASHINGTON.—No one is better able to misread American public opinion than Soviet Premier Nikita S. Khrushchev.

When he was the guest of the United States last fall he apparently thought he could so soften up the American people with a combination of bonhomie and bluntness that President Eisenhower would have to give up West Berlin.

When he discovered that his calculations had been wrong and that the Paris summit was not going to yield him any one-sided agreements, he was sure that he could so vilify Mr. Eisenhower over the U–2 plane incident that the President would be immobilized at home and abroad for the rest of his term.

Mr. K. is still proceeding on this theory. There is good evidence that he is going to be proved wrong again.

It is obvious that the Soviet Premier now is acting on the premise that because of the presidential election and because the leadership of the United States is in process of changing there will be a political vacuum which he can exploit.

He is going to be wrong again.

I am convinced there is going to be no political vacuum, no passive, do-nothing marking of time in foreign policy during the remaining 5 months of the outgoing Eisenhower administration. There are two reasons:

1. Mr. Eisenhower is no ordinary lame-duck President. In fact, he isn't a lame-duck President at all since a lameduck official is one who is holding office after he has been defeated at the polls. He is retiring from the Presidency despite the fact that, as Senator JOHN F. KENNEDY has candidly said, he could be overwhelmingly reelected. He wouldn't run again even if the 22d amendment did not bar him. But what is important, as far as any political vacuum is concerned, is that Mr. Eisenhower remains steadfastly popular and politically powerful. These circumstances combine to enable him to function effectively even though another will be taking his place in January.

2. No significant change in the substance of American foreign policy is at stake in this election. There is no divergence in the main outlines of foreign policy between the two parties, between the two platforms, or between the two Presidential nominees. The choice between Vice President RICHARD M. NIXON and Senator KENNEDY will turn, not on policy differences, but on the voters' judgments as to who is more experienced, better trained, more mature and, therefore, better able to carry forward the foreign policy objectives on which the Nation is united. This means that President Eisenhower is free, within this broad area of agreement, to take whatever initiative he deems necessary without our friends and allies abroad having any fear that his actions will be reversed by the new President.

Mr. Eisenhower certainly does not find himself sealed into any political vacuum. There is considerable evidence that he is ready to move, indeed is moving, on several fronts.

Following consultation with the legislative leaders this week, he is moving to increase defense spending at some points. This is in part a response to the bellicose speeches of Premier Khrushchev and his threats to punish the nations with whom we have security arrangements. It is also due to the successful testing of the Polaris medium-range missile from submerged submarines. The President will authorize the building of five, instead of three, Polaris-firing submarines and will speed up the production of Polaris missiles.

To counter other Khrushchev moves, including his threats against U.S. bases abroad, Mr. Eisenhower and British Prime Minister Harold Macmillan are expected to meet shortly in Washington.

The State Department has informed the Kremlin that the United States will not tolerate any unilateral Soviet action against Western rights in West Berlin.

The President has submitted to the recess session of Congress an enlarged program of economic aid to Latin America.

The administration is participating in two meetings of the Organization of American States this month, one in Washington and another in San José, Costa Rica, to deal with the danger of a Communist takeover in Cuba.

This doesn't look like a political vacuum to me. It probably won't look like one to Mr. K. for very long.

Report From Congress

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Saturday, August 13, 1960

Mr. MUNDT. Mr. President, with the resumption of Senate activities, I am again issuing my periodical reports to my constituents in South Dakota. I would like, at this point, to make this report a part of my remarks.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

CONGRESS, THE CONVENTIONS, AND THE BIG CAMPAIGN

The three words "Congress," "conventions," and "campaigning"—added to the ugly word "communism"—pretty well totalize and typify the activities occuping the minds of most thoughtful Americans today when they permit their thoughts to stray beyond their own immediate problems and their home environments.

Incidentally, the usually slow-moving Senate is off to a fast start with four rather significant rollcall votes during the first 3 days of the session beginning August 8. The first vote tested the sentiment but did not decide the issue of whether this Congress will do anything to redeem the promises both major party platforms made about civil rights in their July conventions.

Of greater immediate concern to South Dakota, of course, is the question of farm legislation. Both political conventions pledged themselves to develop new comprehensive farm programs designed to expand

net farm incomes and to promote agricultural prosperity. Few expect that in this short session of Congress, an entirely new approach to farm legislation can be evolved and adopted. But many had—and some still have—high hopes some corrective action would be taken on our most urgent farm problem, that of mounting wheat surpluses and inadequate prices for annual wheat crops. Action may still occur, but the fact the House Agriculture Committee is not meeting and that indications point to a delay in recruiting a quorum of that committee prior to August 22, place a damper on optimistic hopes for effective wheat legislation during this short extra session of Congress, now planning to adjourn September 3. In all events, inaction thus far has deferred correctives too late for the current crop year. It is imperative that something helpful be done, however, in time for the crop year of 1961.

Communism never rests and seldom sleeps. The men in the Kremlin continue to stir up or sponsor trouble in Cuba, in the Congo, at the United Nations, by threats about Berlin, and in a dozen different ways and places. Firmness by America and the consistent Eisenhower policy of nonappeasement of the Communist overlords, however, continue to perpetuate peace and circumvent new Communist successes while our military might stands as a formidable warning to all those who would wage war to win friends or intimidate people.

Now, with regard to the big campaign. Thus far, politics have been present in all sessions of this extra session of Congress but not to the extent that some had feared. It may get better—or worse—time will tell. But up to now the public business has had prior consideration. After vote one on civil rights, the second and third dealt with the ratification of the so-called Antarctic Treaty which required the necessary two-third vote. The fourth vote, on August 10, gave approval to the recommendations of the Senate Appropriations Committee (of which I am a member) on civil works. It contains several very important projects and items for South Dakota on which much work was done in committee, and I am happy to report all of them were accepted by the Senate action last Wednesday.

Naturally, like any other candidate, I would much prefer to be back home in South Dakota visiting your communities, shaking hands, attending meetings, and "shaping up the fences" instead of being back here for my duties in connection with this recessed session of Congress. However, as a member of the Appropriations Committee, for example, I felt I should be here to protect our South Dakota projects and interests as, after all, this is the job I am paid to do. Whenever opportunity permits during the session, I shall return home to South Dakota but so long as there are important decisions to be made here, I shall have to leave campaigning to my friends and others and strive to represent your views and protect your interests on the Senate floor and in committee.

Fortunately, during the recent recess, I was able to get around in a good bit of the State, bringing to 217 the towns and cities I have personally visited since September last, when Mary and I made our annual tour of the State, including visits in every county of South Dakota. Actually, these annual visits which I have made each year during the congressional recess are among the most enjoyable and interesting phases of a Senator's job. "Shaking hands with the folks back home" and holding conferences around the coffee cups is well worth the travel and the time, and I shall be at it again as I have always done in the past, when this session of Congress finally adjourns. In the meantime, I recognize the importance of pending problems here and the protection required if our taxpayers and our opportunity system are not to be crippled or curtailed by excesses and extremes which can so easily be enacted by a Congress on the eve of a presidential campaign and in the heat of August in Washington, D.C.

Statement of Policy Concerning Postal Delivery Service

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, August 13, 1960

Mr. WILEY. Mr. President, the creation of a more effective postal delivery service is essential—if we are to meet the needs of ever-expanding population for the future.

In changing the patterns to meet new conditions, we recognize that serious problems often emerge involving management, transportation problems, interests of employees, service for the public and other factors.

As we know, there are legislative proposals currently before Congress relating to improving postal service, including the problem of how mail is to be transported.

Recently, I received a resolution from Clive B. McBain, branch secretary of the National Postal Transport Association. To give my colleagues the benefit of the "statement of policy" resolution adopted by the association, I ask unanimous consent to have the letter printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

LA CROSSE BRANCH,
NATIONAL POSTAL TRANSPORT ASSOCIATION,
La Crosse, Wis., August 9, 1960.

Hon. ALEXANDER WILEY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR WILEY: I was a delegate to the recent 10th division convention of the National Postal Transport Association meeting in Madison, Wis., on July 20, 1960, and the following is a report of a special committee for statement of policy.

We recommend as a statement of policy by officers and delegates of the 10th division NPTA meeting at Madison, Wis., July 20, 1960, that resolution 3 of legislative committee No. 1, which is as follows: "We favor that Congress establish an independent postal transport structure within the Post Office Department, supervised and manned by postal transport personnel, and that all dispatch of mail be put under postal transport supervision, free from interference by outside parallel authority, to eliminate confusion and duplication, and to place unhampered management of postal transport in the hands of experienced employees, and that we further demand that the NPTA adopt the idea of exerting positive effort toward this end," comprises the statement of policy as recommended by this convention, and we further recommend that resolution No. 5 be revised to read as follows and be included as part of our statement of policy:

"We demand that the National Postal Transport Association exert positive effort with Congress to have mail in transit redefined to be all mail other than addressed to office of origin and until it arrives at destination."

The above statement of policy was approved by the convention. We certainly would appreciate your efforts in promoting this policy. Thank you and we appreciate your many efforts in the past on our behalf.

Sincerely yours,

CLIVE B. MCBAIN, Sr.,
Branch Secretary.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Daily Digest

HIGHLIGHTS

Senate debated minimum wage bill.

Senate committee approved Social Security Amendments of 1960.

Senate

Chamber Action

Routine Proceedings, pages 15139–15140

Bills Introduced: 4 bills were introduced, as follows: S. 3842–3845. Page 15139

Minimum Wage: Senate continued consideration of S. 3758, proposing amendments to the Fair Labor Standards Act.

Pending at recess was Holland amendment to limit the powers of the Secretary of Labor to regulate wages, hours, or other conditions of employment to those specified by the Fair Labor Standards Act of 1939, as amended. Pages 15140, 15153–15157, 15161–15177, 15187–15188, 15188–15192, 15195–15200, 15203

Quorum Call: During Senate proceedings today one quorum call was taken, which appears on page 15156.

Program for Monday: Senate met at 9:30 a.m. and recessed at 6:44 p.m. until noon Monday, August 15, when it will continue on S. 3758, minimum wage bill. Page 15203

SOCIAL SECURITY

Committee on Finance: Committee, in executive session, ordered favorably reported with amendments H.R. 12580, Social Security Amendments of 1960.

House of Representatives

Chamber Action

The House was not in session today. Its next meeting will be held on Monday, August 15, at 12 o'clock noon.

Committee Meetings

No committee meetings were held.

Congressional Record The public proceedings of each House of Congress, as reported by the Official Reporters thereof, are printed pursuant to directions of the Joint Committee on Printing as authorized by appropriate provisions of Title 44, United States Code, and published for each day that one or both Houses are in session, excepting very infrequent instances when two or more unusually small consecutive issues are printed at one time. ¶ The Congressional Record will be furnished by mail to subscribers, free of postage, for $1.50 per month, payable in advance. Remit check or money order, made payable to the Superintendent of Documents, directly to the Government Printing Office, Washington 25, D. C. For subscription purposes, 20 daily issues constitute a month. The charge for individual copies varies in proportion to the size of the issue. ¶ Following each session of Congress, the daily Congressional Record is revised, printed, permanently bound and is sold by the Superintendent of Documents in individual parts or by sets. ¶ With the exception of copyrighted articles, there are no restrictions on the republication of material from the Congressional Record.

Appendix

Problems of Wabash Valley, Ind.

EXTENSION OF REMARKS
OF

HON. VANCE HARTKE

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, August 15, 1960

Mr. HARTKE. Mr. President, during recent weeks I made an extensive tour of the Wabash Valley in Indiana. This area covers over 80 percent of the State of Indiana and is constantly plagued with floods. I reported to the Senate last week, during the consideration of the public works appropriations bill, on the results of this tour.

Mr. Paul L. Hillsamer, editor of the Marion (Ind.) News Herald, has a real understanding of the problems of the Wabash Valley. In a recent column he discussed my tour of the valley and made some excellent comments which I believe are the feeling of the people of this area.

I plan to appear before the Appropriations Committee tomorrow to request additional funds for Indiana flood control. This is one further step we are taking in an attempt to provide flood control in Indiana in this generation.

I ask unanimous consent to have Mr. Hillsamer's column, "The Editor Says," of August 12, 1960, printed in the Appendix of the RECORD for the benefit of my colleagues. This is what we are trying to do for Indiana.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

THE EDITOR SAYS

With the aggressive support of U.S. Senator VANCE HARTKE and civic leaders from a score of Hoosier towns, a project pushed by Marion's Ralph Roessler for 21 long years seems "ready to go."

That project is flood control measures in the huge—and often flooded—Wabash Valley.

The Wabash River and its tributaries have rampaged a score of times since Indiana's greatest flood in 1913. On five or six occasions, the damage has run into huge sums. Lives have been lost.

Responsible individuals estimate flood damage in the valley, during only the decade of the 1950's, at scores of millions of dollars.

Indiana is 20th among the States in receipt of Federal funds and financial assistance for flood control, but 5th in flood damage.

Senator HARTKE, in bipartisanship cooperation with Senator CAPEHART and Hoosier Congressmen from affected districts is determined that this situation be eliminated.

Marion's Ralph Roessler can and should be honored as the one man who awakened Indiana to the constant flood menace and who spurred and spurred and spurred public officials until, finally, something is going to be done.

Roessler, now retired, dined at Fisherman's Paradise, on Shaffer Lake, on May 21, 1939.

Admiring what had been done in the way of water control in that area, he conceived an idea—

Why not dam the Mississinewa (perhaps near old Connor's Mill) and not only control its waters but also create a State park in that rich historical area?

Roessler returned home and the next day presented his ideas to the Marion Kiwanis Club.

The Kiwanis immediately swung behind Roessler's thinking.

One of the most enthusiastic proponents of Roessler's project was the late Ed Camp, general manager of the Chronicle Publishing Co.

A steady drumfire of publicity on the matter commenced.

The years passed—including the years of World War II during which such projects could only be thought about, mulled over, and delayed until after war's end.

Flood control became Roessler's consuming passion.

He accepted appointment to various commissioners, including the Indiana Flood Control and Water Resources Commission, of which he has been vice chairman for a decade.

He traveled extensively in promotion of his ideals and spent many dollars of his own money.

Whenever Mr. Roessler found one or more persons to listen he made a speech.

Most important of all, he demanded and ultimately received the attention or the U.S. Army Engineers.

The three dams planned north of Marion are the first portion of the results of Roessler's long labors.

The principle is the same but the locations are different than first envisioned by Roessler, that long-ago day at Shaffer Lake.

Roessler originally thought of the Conners Mill area—and not of flood control for the whole valley.

After years of study and planning, the U.S. Army Engineers recommended three dams, located (in general) north of Marion.

Despite scattered opposition, flood control for the whole valley will start with these three dams—at Dora, Peoria, and east of Wabash.

And then, if HARTKE can push through the necessary legislation, the Engineers will go through the valley—at accelerated speed—and solve the flood problems of the whole valley, from Peoria to Portland to Mount Vernon.

"The Army Engineers' present plans are too leisurely," HARTKE says. "It would take 100 years to do a complete job at the pace contemplated.

"We must have a crash program to rid Indiana of the flood menace. The job can be done during this decade—in other words, over a 10-year period. It will cost perhaps $150 million.

"It will pay for itself in the savings of scores of millions of dollars of flood damage, every year or two, and in the saving of human lives.

"There will be byproducts such as tremendous recreational advantages. But the real purpose will be flood control."

HARTKE recently made a 5-day tour of the towns in the Wabash Valley.

Everywhere he met and talked with scores of people, nearly all in agreement that the time to do the job is now.

In Marion, high-ranking Army engineers publicly offered to stake their personal reputations that the dams at Dora, Peoria, and near Wabash would not "back up" and cause more flood damage in Marion and Grant Counties.

Nearly every newspaper in the area visited by Senator HARTKE has thrown its support solidly behind a comprehensive program—now.

Support of flood control in this valley area is completely nonpartisan and bipartisan.

There is reason to hope that, within 10 years, flood destruction will be as antique in the Wabash Valley as, for example, the museum at Matter Park in Marion.

News Herald has one suggestion to offer. The dam at Peoria should, as a matter of common justice, be named for the man who for 21 years has thrown his energy, personal magnetism, and every spare hour into the fight to make Indiana conscious of the fact that raging floods are not inevitable and can be prevented.

That man is Ralph Roessler.

The dams and reservoirs planned at Dora, Peoria, and in Wabash County will cost approximately $50 million.

Indiana will pay 1 percent of the cost, the Federal Government the balance.

The first reservoir will be just north of the village of Dora, damming the Salamonie River.

The Mississinewa Reservoir will be the second of the three located 1,000 feet south of the bridge at Peoria, in Miami County.

(This is 7 miles upstream from Peru, 23 miles downstream from Marion.)

An earthen dam 9,800 feet long will be constructed at Peoria, with a top 40 feet wide.

The depth of the dam at pool level will be 53 feet.

It will handle a runoff of 8.5 inches of rainfall from a drainage area of 810 square miles.

A permanent lake will thus be created extending some 10 miles upstream from Peoria.

The Salamonie Dam at Dora will create a permanent pool covering 950 acres and draining 552 square miles.

The dam will be 6,500 feet long and 46 feet deep and the 950 acre pool will be 800 feet wide.

Runoff water to the extent of 8.11 inches will be handled.

The villages of Dora, Monument City and New Holland will be eliminated and several houses will have to be moved from Mount Etna.

East of Wabash and West of Indiana State road 5, the third reservoir will be constructed. It will drain 708 square miles and handle 4.08 inches of runoff water.

The construction will be dry dam type with no permanent pool. The dam will be 6,000 feet long.

These three dams will be only the beginning, if Senator HARTKE can get a complete and integrated proggram for the whole valley off the drawing boards and into production.

The Senator's first step will be introduction of legislation establishing a Wabash River Basin Interagency Water Resources Commission.

Within such a commission will be representatives of all interested agencies, commissions, and committees and affected areas.

This type commission already exists in other river basin areas. Such procedure has been recommended by the Hoover Commission, President Truman's Water Resources Commission and President Eisenhower's Water Resources Commission.

With a new administration in Washington next January, a more aggressive and sympathetic White House attitude toward conservation, food control, and other such projects may be expected.

Inasmuch as flood waters in the 1959 flood alone caused more than $50 million damages in the Wabash Valley, it would appear that a soundly engineered program of valley flood control is long overdue.

The work at Dora, Peoria, and Wabash County is only the beginning of the complete program advocated by HARTKE.

Details on work which should be done west and southwest of Marion will be published at a later date.

The flood control program in whole and part has been criticized because it will provide a bonus of recreational facilities.

That is true.

It will also stabilize the water supply in the huge Wabash Valley—which includes 61 counties in Indiana and 27 counties in Illinois—33,000 square miles.

It will save our Hoosier soil—and nature takes 400 years to replace 1 inch of topsoil.

There will be other "side" or "bonus" benefits.

But the whole purpose of this project is flood control.

A State flooded as often and severely as Indiana during years past, should certainly be interested if the expenditure of $150 million (or even several times as much) would eliminate this annual hazard to life and property.

The proposals for dams at Dora, Peoria, and Wabash County have received some opposition, a natural development.

We have the word of highly skilled and qualified men that they are the first necessary steps in the solution to this expensive Hoosier hazard.

These Army Engineers agree that damage to Marion by back water is not a danger, or even a possibility.

Marion should not be the only city in the affected area to storm and complain.

The Marion Chamber of Commerce's members will soon have an opportunity to vote their convictions on the matter.

Let's hope that as in many other conflicts the local chamber stands squarely in favor of the right—which, in this case is flood control.

It is time to tame the Wabash.

Radio Address of Dr. Carsun Chang

EXTENSION OF REMARKS

OF

HON. FRANK J. LAUSCHE

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, August 15, 1960

Mr. LAUSCHE. Mr. President, just recently, I had the pleasure of reading the transcript of a radio address by Dr. Carsun Chang, of San Francisco, Calif., given over a west coast station, and later published in the Chinese World.

In his address, Dr. Chang provokes some serious thoughts and suggestions relative to aid to Asian countries, and the present effect in relation to the ultimate objective, which is democracy.

In order that my colleagues and others may have an opportunity to read and study the words of Dr. Carsun, I ask unanimous consent that his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Recently some significant pronouncements were made by the two pillars of the Communist bloc: the U.S.S.R. and Communist China. Khrushchev, on his recent trip to Vienna, threatened that the Soviet Union might take reprisal if U.S. rockets stationed in Italy were fired over Austrian territory. After his return to Russia, he made another threat, saying that if aggressive forces in the Pentagon dared start an intervention in Cuba, Soviet artillerymen would support the Cuban people with their rocket fire. In regard to the riot in the new, independent Congo, Khrushchev said that the Soviets would not hesitate to take resolute measures to cut short aggression. These pronouncements of Khrushchev directly involve three continents namely Europe, America, and Africa, whereby the U.S.S.R. threatens to take reprisal or intervene.

At a reception in commemoration of the second anniversary of Iraq's revolution, the Foreign Minister of Communist China, Chen Yi, appeared. He said that the Chinese Government and people have always stood for peaceful coexistence among nations with different social systems. These seemingly obliging words were then followed by charges against the United States and affirmation to support (1) the Cuban struggle against the United States, (2) the Algerian war of national liberation, (3) the Congolese people's struggle in defense of national independence, and (4) Japanese opposition to the Japan-United States military treaty.

With the above pronouncements in mind, one may ask the following question: Is coexistence a possible policy between the Communist bloc and the free world? If nations with different social systems are going to live side by side, then a boundary line must be drawn according to which one bloc remains on one side while the other should never interfere. It also means one kind of government may prevail without fear of subversion by the other. Yet these pronouncements plainly show that the Communist bloc really has no intention to observe any boundary line whenever and wherever there is a chance for the infiltration of communism.

It is further to be remembered that the Soviet and Chinese Communists hold a strong belief in world revolution advocated by Marx and Lenin, even after a new policy of coexistence has been declared in the postwar period. We have been facing a most critical situation since Mao Tze-tung and Khrushchev came into power. The foreign policy of the United States has so far taken the following directions: containment policy, NATO, SEATO, military and economic aid as counter measures against communism. Her role in the postwar period consists of many aspects, such as military alliance, world leadership in democracy, economic aid and development funds. Such a multipurpose policy cannot be dealt with within a short time, therefore I shall restrict myself to one region, that is, the Far East.

Within the limits of Far Eastern problems, I have chosen to discuss with you tonight the correlation between American aid and democracy.

The idea of democracy can be traced as far as the recent period is concerned, to Wilson's motto—to make the world safe for democracy. If one goes farther back, one can trace its foundation to the Founding Fathers, who built this country on the basis of the doctrine of natural rights.

The idea of democracy is a political conviction; it transformed Europe since the French Revolution down through the 19th century. Democracy gives new hope to the Asian nations, which suffered from despotism in the past.

This fight for democracy must be carried on by a pure conscience, and a real enthusiasm akin to that of Paine, Jefferson, and many others. The people of the world will definitely be disappointed if they find democracy mixed with a policy of expediency, in which case, it will become a label or an ornament.

However treacherous and ruthless Soviet Russia may be, it is remarkable how persistent, thorough, and vigorous a program they have of promoting communism. This is the secret of their success. How does the United States compare with them in this respect? In what spirit is the United States defining democracy? The Asians are longing for a new movement, out of which a new form of government may take place in peace and order. The United States is opposing Communist dictatorship in the name of freedom and democracy.

Nevertheless we find that among the allied friends there are a number of dictators. Though it may be argued that there was no choice but to accept those who were already in power in these Asian countries, the fact remains that such a policy has produced not a few corrupt governments which will have no future to speak of in this fast changing world. This tolerance with dictators certainly gives the oppressed people both under Communist and non-Communist dictators very little hope of a new life and a new form of government.

It cannot be denied that the best use of the billions of dollars of American aid was made by Great Britain, Germany and other NATO powers. The evident reason was that these Atlantic countries which always had a democratic tradition, were able to use the American aid in a constitutional way. But the Asian countries with no such tradition merely looked upon the assistance as a sort of windfall that could be spent with no parliamentary control. Even though we know there have always been American directors appointed to keep in check the proper use of the aid in the respective countries, it has not been the custom for the respective governments to submit an estimate and an account to its own legislative organ for approval.

They are only too glad not to be dependent on the consent of parliament for the use of this revenue. What actually happens in so many cases is that the Asian dictators succeed in organizing a powerful army as their weapon with which they can suppress their people and disregard the parliamentary control. The U.S. military aid makes a dictator so sure of his power and his income that he can transfer the other sources of revenue for other self-protective purposes, such as a strong police force, intelligence services and party expenses and his economic policy subsequently is directed to the building up of his own party interests instead of increasing wealth for his people's welfare.

One cannot help noticing the signs of political instability impending everywhere when one follows the recent major events in the Far East.

Syngman Rhee's fall is a clear example of illegality and the misuse of American aid. Everybody knows that the control of the purse is the most important function of a parliament and of the democratic procedure.

When such a big item as military expenditure is paid by foreign sources, the natural consequence is that it gives much more independence to the dictator who feels that he no longer needs to fear any control by parliament and public opinion.

To all appearances then we must say that the American policy of leading the world towards democracy has only created a situation in which dictatorships are permitted to grow up more speedily. Thus the military aid policy and democracy are actually

going in opposite directions. This is a great dilemma which faces the American public.

As a friend of the United States and as a believer of democracy, I would like to offer some suggestions which may bring about a readjustment of the present situation in the Far East.

First of all we all agree that democracy must be the guiding principle for the governments of the Asian countries. Then it is necessary that these government be placed on a constitutional basis from which a better way of life may evolve to be shown to all the oppressed people. Any ruler who is anti-communistically inclined, yet not a believer of democracy, cannot be expected to lay a foundation or to build a tradition of democratic government. As a remedy against the excessive power of such a ruler, he must be asked to render a detailed account of the money spent on military forces and personnel, to be passed by parliament.

The military power which has been created by the U.S. taxpayers' money is not the personal property of such a ruler or his party, but involves the destiny of the people for whose benefits the aid has been given. Only by following the democratic procedure can the people understand that this aid is for their protection and not for the ruler or his party's interests. The people then can see for themselves that a better government is provided for them. Only such a government can have a legal and stable basis that will last. Only such a government can provide the proper training of a younger generation, to grow up in a democratic way of life. It can also be a rallying point for the 15 million overseas Chinese living in Hong Kong, Singapore, Indonesia, and Thailand, etc. Once a stable, democratic government is secured in Formosa, not only will the pro-West liberals in Japan feel much strengthened but South Vietnam and Korea will also be glad to have her as an ally.

Thus we see that the actual establishment of democratic governments in the Far East is an urgent and serious need to be met immediately. If the United States, Great Britain, and the other NATO powers really believe in giving such guidance, they must give it their clear-cut and full-hearted support as a fundamental policy in their realings with the Asian nations. Attitudes of indifference or fluctuation at this hour can be interpreted by the Asians that the United States and Great Britain are only making use of their countries as a bulwark of defense against Communist invasions but are not genuinely interested in giving a new political life to them.

In the same way these Asian nations are likely to believe that the Western Powers are not really sincere in their advocacy of democracy and in their denunciation of dictatorship. That would certainly be against the expectation of the whole world which looks upon the United States and Great Britain as leaders of the free world.

Furthermore, the aid is not merely a question of finance of economic goods and techniques. It is a part of government function. This kind of money can only be rightly spent by a well-ordered and clean-handed government. We may use a simile to say that the financial assistance given to a country can be compared to a house just being built. If it were built on solid ground, it would stand firmly. But if it were built on sandy ground, it would soon fall apart. Examples of such quick falling apart have already been seen in the cases of Syngman Rhee in Korea and Menderes in Turkey and may be followed by other Asian countries.

In the last 2 years after a number of dictatorships had been established in Asia, some Americans have expressed doubts as to whether the democratic form of government in Asia would really work or not; yet there were the Meiji Reform based on a constitutional system and the Indian Republic as evident proofs against such doubts.

I firmly believe that a democratic government can be operated with good results in any country of Asia if a liberal leader who does not like arbitrary methods is given a chance. The Western World need not doubt the Asians' adaptability to the democratic form of government.

The vital question now is how to put into practice the democratic form of government among the Asian nations. Two things should be done in the undertaking of such a task. The first to give aid and advice are responsible government authorities such as the Pentagon, the State Department and the U.S. Information Service, because aid can only be given from one government to the other.

The second involves the questions of party politics, election, parliamentary procedure, free press, party platforms, and political education of the people. The latter could be assigned to an advisory council for democracy a private organization put on a bipartisan basis, which may consist of trained leaders of both the Republican and the Democratic parties and also of constitutional lawyers. They are to see that the deemocratic processes are functioning rightly in the Asian countries; and they may speak to the party leaders of the Asian countries to give their advice when needed. Representatives may be sent to these countries to observe the actual operations in central governments, local organs and trade unions. It is expected that they should take an impartial attitude towards all parties and all classes in these countries. These two kinds of organs, the government authorities and an advisory council for democracy, can work together like the Soviet Russian Government and the Communist International.

As democracy is not something that can be delivered as goods in a number of days, therefore such a council is needed to give encouragement and inspiration for the training of the Asian countries towards democracy. It is set up to help them to be ready for the democratic processes.

I can assure the people of the United States that besides the 15 million overseas Chinese scattered all over the world, all the people on the mainland of China, except the ruling Communist Party in Peiping, will be ready to welcome such a change.

If the United States is determined to carry out this fight for democracy, the Chinese on the China mainland and in Southeast Asia will see for themselves the advantage involved and will certainly contribute their share without hesitation.

What is often overlooked is the fact that American aid, while it is a part of American foreign policy, works out as an integral part of the domestic affairs of another country which receives the aid. It is hoped that the U.S. Government will make a reappraisal or reexamination of this aid policy in the light of both sides: the donor and the receiver.

With the aid, the United States expects to strengthen the military and economic forces of the receiving country in the fight against communism, but instead, the aid is actually freeing the arbitrary leaders from parliamentary control. Thus it happens that the results achieved are contrary to the original idea of America's policy of realizing democracy in the world. By such reexamination, I trust that the United States will not refuse to revive the idea of democracy in the Asian countries with a new vigor, a new determination and dedication. Who knows but that another Mazzinni, another Masaryk, another Paderewski, another Gandhi and another Sun Yat-sen will arise as an answer to this call to bring about the liberation longed for by oppressed people everywhere.

Desegregation of Eating Facilities in Stores—Lessons From the Sit-Ins

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, August 15, 1960

Mr. JAVITS. Mr. President, there have been some very important results from the use of wise and forthright preventive activity in connection with equal opportunity in respect of eating facilities in stores. I ask unanimous consent to have printed in the RECORD a statement by Attorney General Rogers, issued August 10, 1960, and an editorial praising the results, from the New York Times of August 14, 1960.

There being no objection, the statement and editorial were ordered to be printed in the RECORD, as follows:

Attorney General William P. Rogers announced that officials of major variety chains reported to him today that the initiative and cooperation of local public officials, citizens' committees, and merchants, have recently resulted in desegregation of eating facilities in their stores in some 69 southern communities. It was further reported to the Attorney General that in over 70 percent of these 69 communities, desegregation of eating facilities in the stores was accomplished without prior demonstrations or "sit-ins" and that similar progress in other cities is anticipated in the near future.

On June 1, 1960, the Attorney General and Assistant Attorney General Harold R. Tyler, Jr., invited these representatives to discuss informally appropriate means whereby southern communities could voluntarily work out desegregation of lunch counters and eating facilities. It was agreed that the most effective method of accomplishing this objective would be to approach the problem community by community with the assistance of interested local groups and merchants. Noting that local ordinances requiring racial segregation in certain establishments raised serious constitutional questions, the Attorney General emphasized that progress in this area was necessary in the national interest and because the standing of the United States as a leader of the free world suffers as the result of acts of racial discrimination.

In commenting upon this report, Mr. Rogers said:

"It is heartening to know that private initiative and cooperation have been instrumental in assuring equal treatment of all citizens in so many communities in such a comparatively brief time."

In complimenting the company officials on the progress made, the Attorney General added:

"It is significant that where responsible local citizens take the first steps, the necessary transition to desegregation of eating facilities in stores can be accomplished without disruptions and loss of business. The results to date are most gratifying and it is to be hoped that, in the light of this experience, responsible leaders in other communities will initiate similar programs."

Among those at the meeting were representatives of F. W. Woolworth Co., S. H. Kress & Co., W. T. Grant Co., and other major variety stores.

[From the New York Times, Aug. 14, 1960]

LESSONS FROM THE SIT-INS

Lunch counters in department stores in 69 southern communities have been desegre-

gated. In 70 percent of the communities the desegregation was a voluntary arrangement with neither demonstrations nor publicity. This announcement came the other day from Attorney General William P. Rogers after a conference with executives of the stores, in which he suggested that putting an end to demonstrations would be in the national interest "because the standing of the United States as a leader of the free world suffers as a result of acts of racial discrimination."

The voluntary desegregatoin of southern department store lunch counters suggests that greater progress can be made in ending racial discrimination in a quiet and effective manner than some of the more pessimistic think possible.

Another conclusion to be drawn from the quiet adjustment of racial relations at some southern department store lunch counters is that in important areas communication between the races is being reestablished in the South. Communication was blocked for a time in the period of tension that followed the Supreme Court's decision in the school desegregation cases.

Business is taking a new lead in southern race relations. The Negro did not sit-in on the South. He came early to help build southern agricultural economy and he is an important producer and consumer in the contemporary South of increasing urbanization and rising industry. This fact is getting fresh recognition.

The Arms Control Challenge

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, August 15, 1960

Mr. PROXMIRE. Mr. President, there are far too few voices raised to plead for an intelligent and wholehcarted effort for peace by our Government, especially in the crucial negotiations over the suspension of nuclear testing. Those who favor immediate, unilateral resumption of underground testing at least for the purpose of refining detection research, are numerous, powerful, and articulate. It may be that this Nation sadly and reluctantly will have to follow that course.

Yesterday's lead editorial in the Washington Post and Times Herald hit this argument hard in a powerful final paragraph, which I quote:

Perhaps the most skilled and enlightened and sustained American efforts in this field would not prevail against Soviet intentions. But this can only be conjecture until such efforts are put forth. The Soviet position has yet to be tested in depth; a comprehensive long-range American position has yet to be formulated. The next administration faces this double challenge, and nothing else that it undertakes will be more vital.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE ARMS CONTROL CHALLENGE

We do not envy Ambassador Lodge what apparently is to be his last assignment at the United Nations, the forthcoming meeting of the Disarmament Commission, to which all U.N. members belong. His task is to get the Commission to blame the Soviet Union for failure of the 10-nation Disarmament Conference at Geneva. This he may well be able to do, for whatever the final posture of the negotiations, it was a crude walkout by the Soviet delegation that ended the meetings.

But who will thank him, or this Government for "proving" what many already believe and what others are forbidden to believe? And who, among the peoples of the uncommitted nations particularly, is really interested in blame-fixing? Will this help to reduce tensions, or increase them? Will it pave the way for a resumption of talks, or make the way more difficult? The Soviet total disarmament plan, to be sure, has so far been presented in unrealistic generalities, and there is little to suggest that adequate controls are contemplated. But at the same time, American preparation for the Geneva conference was belated and superficial. The nonnuclear powers will be in no rush to conclude that America alone is serious and sincere about arms control.

While Mr. Lodge labors in New York, his hapless deputy, Ambassador Wadsworth, will be trying to keep the nuclear test ban talks alive in Geneva, lest the efforts for arms control disintegrate altogether. But at Geneva the United States is now in the uncomfortable posture of being seemingly unable to agree to Soviet inspection of the forthcoming American underground tests designed to improve detection methods, whereas all along it has been the Russians who had seemed to be the holdouts on inspection. Meanwhile, the Soviet delegation has made some concessions on the details of a permanent inspection system, concessions by no means adequate but important enough to make continuation of the talks essential. Only Congress could rescue Mr. Wadsworth from his predicament, by authorizing disclosure of some of our obsolete nuclear weapons data, and this is unlikely to happen.

Mr. Wadsworth may find his new job, as successor in the U.N. to Mr. Lodge, a welcome respite from the 2 years of haggling at Geneva. But he may return just in time to face Prime Minister Khrushchev in the General Assembly next month in a broad disarmament debate, if the Soviet leader comes to New York as he has hinted. Will the prospect of this confrontation doom the test ban talks, too? Will a new man in the Wadsworth post at Geneva be able to unsnarl the tangled threads and save what measure of agreement has been won? Or will the strong forces within the administration that have sought to undercut Mr. Wadsworth and torpedo these talks ultimately prevail?

As President Eisenhower conceded the other day, we are getting nowhere in this complex and intricate field, and the prospect is not encouraging. It is altogether likely that Mr. Khrushchev is more interested in propaganda than in accommodation at this point. Yet each day that Russian missile prowess increases, each day that China progresses toward membership in the nuclear club, each day that outstanding political problems remain unsolved and the cold war goes on, the need grows for a beginning on arms control that would reduce the risk of actual war and restore some measure of East-West confidence and understanding.

Perhaps the most skilled and enlightened and sustained American efforts in this field would not prevail against Soviet intentions. But this can only be conjecture until such efforts are put forth. The Soviet position has yet to be tested in depth; a comprehensive long-range American position has yet to be formulated. The next administration faces this double challenge, and nothing else that it undertakes will be more vital.

More Federal Judgeships

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, August 15, 1960

Mr. WILEY. Mr. President, a major feature of our free way of life is the maintenance of a judicial system that we believe provides the maximum justice under law to our people.

As a Nation, we are growing by leaps and bounds. Unfortunately, however, our judicial machinery has not been expanded adequately to assure speedy justice for disposal of cases that arise in the U.S. courts. Between 1941 and 1959, for example, the population increased 36 percent and the gross national product 376 percent. The number of cases filed in Federal courts increased about 50 percent during the same years; unfortunately, the number of judges on the Federal bench increased only about 25 percent.

Three years ago, the Judicial Conference of the United States, which is the governing body of the whole Federal judiciary and which includes the Chief Justice of the U.S. Supreme Court and the chief judges of all Federal circuit courts of appeal, recommended over 40 additional judgeships be distributed among the districts and circuits with the most crowded calendars.

As yet, regrettably, no effective action has been taken to fill this very great need to strengthen our judicial system.

Recently, President Eisenhower again urged overdue action by Congress for creating additional judgeships. Will this voice for justice—and the needs of our people—again go unheeded.

I well recognize, of course, that efforts are being made in this so-called "bobtailed" session of Congress to handle only major legislation. In my humble opinion, however, the need for adequate judges for our people is a timely and essential need and should be acted upon by Congress. Recently, the New York Times published an editorial again stressing the need for additional judges. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MORE FEDERAL JUDGES

An adjournment of Congress before passage of a measure to increase the number of judges on the Federal bench would be an inexcusable dereliction of duty. The record of congressional inaction to date on this desperately needed legislation would be unbelievable, except that it happens to be true.

In the face of the staggering increase in the number of cases flooding into the Federal courts Congress has failed for 6 years to make any increase at all in the number of judges to deal with them. During this period the Judicial Conference of the United States, highest official nonpartisan authority on Federal court administration, has been calling for new judgeships, in increasing numbers as the years have gone by, to meet the

mounting crisis. The last Conference appeal called for 54 new places on the Federal bench. It is said that with the present judicial strength nearly half of the civil cases will have to wait from 1 to 4 years to come to trial.

Since the present Congress began work several bills for new judgeships have been introduced, but not one has come to a vote on the floor of either House. Now the one that seems most worthwhile to support is the bill of Representative CELLER (H.R. 12552) for 35 new judgeships, 19 fewer than the Judicial Conference thinks are necessary. Last January the House Committee on the Judiciary approved the Celler bill and the Rules Committee has cleared it for action on the floor, but without any further results. A Senate bill for 25 new places was reported out toward the end of the last session of Congress but did not get any closer to passage than that.

Now Senator JOHNSON, Democratic vice presidential candidate and Senate majority leader, has apparently decided to oppose any action on the judgeships at all in the present session on the ground that there isn't enough time before the end of the year to create and fill the new positions. This is certainly not convincing to the public.

Atascosa Soil Conservation District Passes Its 20th Year of Progress

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 15, 1960

Mr. YARBOROUGH. Mr. President, some of the most vital work in the field of agricultural progress and development in the Nation is being done in our soil-conservation district organizations. It is vital if we are to save the family farmers and rural life in America.

In many areas, the SCD leaders have done a remarkable job of making America a better place to live, a more productive land. One of the most noteworthy of these is the Atascosa Soil Conservation District with headquarters in Pleasanton, Tex. Leaders in the Atascosa district have done outstanding work in this program which is passing its 20th year of progress. I know the people in this area; they are self-reliant, hard-working, God-fearing people who are determined to save their soil and their habitat and heritage.

I ask unanimous consent to have printed in the appendix of the RECORD an editorial on this subject from the August 3, 1960, issue of the Pleasanton Express entitled "More Conservation Needed."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MORE CONSERVATION NEEDED

Soil conservation is now 20 years old in the Atascosa SCD.

It has accomplished a great deal, but it hasn't accomplished enough. Census figures shows that Atascosa County lost 2,000 of its rural folk in the last 10 years.

You can rationalize this, if you like, and say that the prolonged drought was responsible for this wholesale migration from the soil. That would be partly true. But the trend was established before the drought.

It is our conviction that, through soil conservation, the Atascosa SCD is capable of supporting profitably those 2,000 persons that we've lost plus those who are now on the land.

Soil conservation is truly everybody's business in the Atascosa SCD. It could be the lifeline of survival for the small farmer, the small rancher, and the small town.

This cold fact is apparent: Every businessman in Atascosa County lost 2,000 potential rural customers from 1950 to 1960. It is equally apparent that every small town in Atascosa County, like those the country over, was established to serve a rural population. None has much other reason for existence.

Businessmen, we feel, are keenly aware of this situation. The overwhelming amount of advertising support for this conservation edition indicates it.

The soil conservation problem in this district is to turn nonproductive land into profitable production and to increase the profits on land already in use. After touring a considerable part of the district—after talking to many conservationists—we firmly believe that it can be done. But it won't be easy.

We still have hundreds of thousands of acres of brushland producing far below its potential. We still have farmers who'll watch topsoil blow into the fence rows and remark: "It'll blow back when the wind shifts." Water continues to cut ugly gullies in what should be productive land.

This is no indictment of the soil conservation district. Only God knows what this country would be like today if it hadn't been for the district's work over the past 20 years.

But the plain fact remains that men best qualified to comment say that we haven't scratched the surface so far as soil and water conservation is concerned in this area.

If the surface isn't scratched within the next 20 years, it may never be scratched. No less an authority than Dolph Briscoe, Jr., has said that the next 20 to 25 years will determine whether south Texas will become the world's greatest grassland or a brush-choked desert.

An American Citizen's Rights and Responsibilities Under the Constitution

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, August 15, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent speech entitled "An American Citizen's Rights and Responsibilities Under the Constitution," delivered by a 16-year-old high school junior, Richard J. Stillman II, of Carlisle, Pa.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AN AMERICAN CITIZEN'S RIGHTS AND RESPONSIBILITIES UNDER THE CONSTITUTION

(Address by Richard J. Stillman II)

Let us envision our Constitution as a huge balance. On one side we find the American citizen's rights under the Constitution, and on the other side the citizen's responsibilities under the Constitution. In order to understand why this relationship between the rights and the responsibilities must be kept in balance, let us first look at the basic concepts of this document.

The distinguished British Prime Minister William Gladstone once wrote: "I have always regarded that Constitution (of the United States) as the most remarkable work known to me in modern times to have been produced by the human intellect, at a single stroke, in its application to political affairs."

Why should our Constitution have impressed such a noted foreigner? Perhaps in large measure it was due to the high intellect and broad vision of such Founding Fathers as Washington, Franklin, Madison, and Hamilton. They evolved our Constitution from many sources: the democracy of ancient Greece; the laws of Rome; the English Magna Carter and Bill of Rights; the Mayflower Compact; and the writings of Rousseau, Locke, and Paine.

Inherent in the Constitution is a philosophy of the diffusion of power, and a balancing of the rights and responsibilities. What is the purpose of this diffusion of power? Undoubtedly, the writers of our Constitution learned from history that "Power corrupts, and absolute power corrupts obsolutely" (Lord Acton). Hitler, Mussolini, and Stalin all are symbolic of this centralization of power. Accordingly, the U.S. Constitution enumerated only specific powers to the Federal Government with the remainder residing with the States or the people.

Moreover, within the Federal Government power is divided among coequal branches—legislative, executive, and judicial. The legislative branch, consisting of direct representatives of the people, makes the laws; the executive branch, headed by the President, enforces the laws; and the judicial branch, made up of the courts, interprets the laws. Currently, one of our presidential candidates is advocating a more powerful executive branch. Is this what the architects of our Constitution envisioned? Or was it a branch coequal to the other two?

Now let us turn from the constitutional diffusion of power to its end product—the rights and responsibilities of the American citizen. As I mentioned before, let us envision our Constitution as a huge balance. On one side we find the American citizen's rights under the Constitution; and on the other side, the citizen's responsibilities under the Constitution. In order to understand why this relationship must be kept in balance I shall present each side of this balance. First, the rights of the citizens.

1. Basic freedoms: The first 10 amendments to the Constitution provide these basic freedoms: free speech, press, religion, the right of assembly and petition, and the right of a fair trial by jury. This Bill of Rights points up the fact that the state is but to serve its citizens. I repeat, the state is but to serve the citizen. It is government's continuing role, though, to preserve these basic freedoms. After the recent TV scandal there were many advocates of greater Federal control over this important media. Would this not constitute a surrendering of part of our individual freedom?

2. Necessary public services: At the local, State, and national level necessary public services are essential. Law enforcement, fire protection, postal system, schooling, health measures, and roads are some of these necessary duties of Government. On the other hand, Government must repeatedly guard against assuming too many services which may lead to socialism—the enslaver of individual initiative and freedom.

3. Free enterprise and the capitalistic system: It was the pioneering spirit built into the words "Go west, young man, go west" which symbolized America as the land of

opportunity. The Constitution with its amendments permits each citizen to achieve those goals feasible within his own capabilities. Such opportunities have produced the world's highest standard of living.

To this point I have shown the three rights guaranteed by the Constitution: basic freedoms, appropriate public services, and free enterprise and the capitalistic system. In counterbalance to the three basic rights. I see three major citizen responsibilities to his Government, responsibilities that must be accomplished by the citizen in order to preserve his rights. Rights are easy to take for granted, but the citizenship responsibilities in our democracy require hard work. Let us look at these three duties.

1. Comprehension of current events and the function of Government: Redbook magazine recently conducted a nationwide survey of 500 young men and women to determine what these voters knew about would-be presidential candidates. The lack of rudimentary knowledge was readily apparent when only 48 percent could identify Senator HUBERT HUMPHREY'S political party, and only 23 percent could remember Senator SYMINGTON'S home State. The writer commented, "The results reveal ignorance and confusion among many of our younger voters about the best-publicized figures in America today—ignorance of who they are, confusion about what they believe."

This ignorance is cause for concern and should receive further attention by our leaders. It is from apathy and lack of facts that the seeds of communism and totalitarianism may be sown. As Thomas Jefferson once wrote, "If a nation expects to be ignorant and free, it expects what never was and never will be."

2. Appreciation of our American heritage: America truly has a great heritage that was born of Washington's era and enriched by each succeeding generation. A fundamental understanding of America's past is the best rebuttal to foreign "isms." In order to fully appreciate our American heritage it is necessary for the citizen to understand our Constitution. Abraham Lincoln once said: "Let it [the Constitution] be taught in schools, in seminaries, and in colleges, let it be written in primers, in spelling books and in almanacs, let it be preached from the pulpit, proclaimed in legislative halls, and enforced in courts of justice. And, in short, let it become the political religion of the Nation." Only through a knowledge of our American heritage to include an understanding of our Constitution, will a citizen be able to appreciate Daniel Webster's classic remark: "Thank God I am an American."

3, Recognition of citizenship responsibilities to country: We must perform certain services for our country—in peace and war. This may be accomplished by participation in civic and governmental affairs, voting, abiding by the laws, and defending the Nation in event of war.

The necessity for accepting this responsibility of service to country was recently stated by Secretary of the Army Wilber M. Brucker, "Rome fell because the individual Roman citizen forgot his own unshirkable moral and physical responsibility for the defense of the state, not only on the battlefield but in every aspect of life."

In summary, the two-way relationship between the three rights and the three responsibilities of a citizen must be kept in balance. Although the Constitution provides the climate for this relationship, it is necessary for each generation of Americans to preserve it. If this continues, Abraham Lincoln's statement will always remain true, "That government, of the people, by the people, for the people, shall not perish from the earth."

Extension of the Sugar Act

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 15, 1960

Mr. YOUNG of North Dakota. Mr. President, our farmers have always sought the right to produce more of the sugar that is needed in this country. It seems almost unbelievable that in a country which is burdened with surpluses our farmers are denied the right to produce a commodity which is in short supply—a commodity of which we import over one-half of our requirements.

I ask unanimous consent to have printed in the Appendix of the RECORD a resolution bearing on this problem adopted at a recent joint meeting of the directors of the Western Sugar Beet Growers Association and the Red River Valley Beet Growers Association.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF DIRECTORS OF WESTERN SUGAR BEET GROWERS ASSOCIATION AND RED RIVER VALLEY BEET GROWERS ASSOCIATION

At a joint meeting of the directors of the Western Sugar Beet Growers Association, and Red River Valley Beet Growers Association, held at Fargo, N. Dak., July 29, 1960, consideration was given the fact that for the first time in more than 25 years we have a crop of beets growing in the United States, with prospects for marketing only a small percentage of the sugar from this crop prior to the expiration of our Sugar Act. Further, that our sugar beet acreage for 1960 was set by the U.S. Department of Agriculture at a time when our marketing quota was much less than our present quota of 2,514,945 tons. We are therefore unable to produce sufficient sugar to completely fill our new quota, notwithstanding the urgent demand for additional sugar beet acreage, and the need for production within the United States of a much higher percentage of the sugar required for distribution and consumption in the United States: Now, therefore, be it

Resolved by the directors of the Western Sugar Beet Growers Association, and Red River Valley Beet Growers Association, that Congress upon reconvening in August 1960, is hereby requested to give consideration of the urgent need for extending the Sugar Act, expiring March 31, 1961, for purposes as follows:

1. To assure an adequate supply of sugar at prices fair to the consumer and to maintain a domestic sugar industry which will produce a larger share of the sugar needed for distribution within the United States.

2. That the beet sugar quota be set at 2,400,000 tons plus a pro rata share with other domestic areas of 100 percent of the increase above 9,600,000 tons in consumptive estimate of sugar required for distribution in the United States.

3. That the Congress set quotas, with pro rata shares in increase in annual consumptive estimate, for mainland cane, Hawaii, Puerto Rico and Virgin Islands on such basis as these areas may be expected to supply annually.

4. That "deficits" of any domestic areas be first pro rated to other domestic areas; and be it further

Resolved, That the Sugar Act be extended for a term of 4¾ years in order to give assurance to growers that invest in farm equipment and to processors, that expenditures for facilities will be usefully employed during such extension period.

Congress Should Reject Ike's Plea for Careless and Uninformed Spending

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 15, 1960

Mr. PROXMIRE. Mr. President, the President of the United States has denounced Democrats as wasteful spenders constantly for 8 years. This has been the steady and unremitting theme of his administration.

And yet he greeted this Congress when we convened last week with a demand that the Senate restore $600 million cuts made by the House in his foreign aid bill. He also told us to "kick in" an additional $100 million. On top of this he asked for some 22 programs, most of which would cost money and which in the aggregate would unbalance the budget by billions, if we should vote for them. And the President topped off this message with the stern admonition that he would flatten any reckless spending proposals with his veto.

And then he asked for an additional $600 million of new authorization for aid to Latin America. This morning the Foreign Relations Committee of this body has been considering this request.

Mr. President, I have voted for additional funds for economic aid, and I shall do so again; but unless the Foreign Relations Committee is able to develop a far more explicit and precise formulation of why and how and where and when this money is needed than the President or his Secretary of State have come up with in their several public statements to date, I shall not consider voting to commit hundreds of millions of dollars for such a vague and amorphous purpose.

No State or city or corporation or bank would consider authorizing expenditures on such a dim and foggy basis.

Mr. President, the Milwaukee Journal last Friday spoke out in criticism of this request, and wisely suggested that "There will be a new President and a new Congress in January. Together they can take a careful and informed look at the need for more Latin American aid."

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A PRETTY VAGUE PROGRAM

President Eisenhower asked Congress this week to hurry through a $600 million appropriation for an enlarged Latin American aid program.

At the President's Wednesday press conference, James Reston of the New York Times asked: "Mr. President, would you spell out for us the ideas you have in mind for your new Latin American program?"

Here is the Presidential answer in part:

"Well, by and large it's this: To find better ways of getting a cooperative effort in this country—in these nations to bring about the thing they are always talking about, a rise of living standards throughout their nations. What we need is something, and programs which we can work ourselves and have enough authorization or intent behind them that we can begin to give more hope directly to people throughout this hemisphere.

"I am not asking for a specific program, Mr. Reston. I'm saying that I would like to have an expression of the sentiment in the Congress, and its intent that we would, together, find ways to bring about this raising of living standards and bring better life to these people generally. I don't want to make the program from here for South America, as you can well see. They are the ones that have to make the programs or cooperate with them."

Secretary of State Herter appeared before the Senate Foreign Relations Committee Thursday to push the $600 million appropriation. He was a bit more explicit—$100 million would go for special rehabilitation work in the earthquake stricken area of Chile and another $100 million into the President's emergency fund for mutual security.

Over all, however, there remains a most disturbing vagueness about this sudden program. In view of this, plus the fact that the United States is already distributing more than $160 million in foreign aid each year to Latin America, a busy and short-lived Congress might be well advised to let this issue cool.

There will be a new President and a new Congress in January. Together they can take a careful and informed look at the need for more Latin American aid.

Rockets Away

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 15, 1960

Mr. WILEY. Mr. President, the National Space and Aeronautics Administration recently announced a 10-year timetable of 260 space shots—averaging about 2 major launchings a month.

The space scorecard now shows the United States leading Russia about 25 to 7 in the successful space shots.

We recognize, of course, that it is difficult—even for experts— to compare the relative values and significance of the space launchings by the United States and the U.S.S.R. Nevertheless there is a considerable body of informed opinion—with which I agree—that now believes that the composit value of U.S. launchings exceeds that of the Soviet Union.

To the gloom-and-doom prophets, this might be somewhat dismaying; yet I personally feel that even these self-styled prophets—deep in their hearts—are patriotically exultant over our progress in space even though it may take a little fuel away from their campaign rockets.

Reflecting the heartening way in which we are moving ahead, I ask unanimous consent to have two items printed in the Appendix of the RECORD. One is an editorial entitled "Outer Space Scorecard" from the Saturday, August 13 edition of the Washington Daily News; and and editorial entitled "Rockets Away" from the August 13 edition of the Washington Post.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Daily News, Aug. 13, 1960]

OUTER SPACE SCORECARD

United States now leads Russia in successful space shots, 25 to 7.

It's ahead in exploring space close to the earth.

Soviets hold the weight-lifting championship. (Their rocket launchers have lifted 5 tons of instruments; ours only 1½ tons.)

And Russia leads in exploring space around the moon.

Here's the box score:

Russia was first to orbit the earth, orbit the sun, loop the moon, hit the moon, orbit an animal, photograph hidden side of the moon, detect magnetic ring around the earth, maneuver a space craft in flight, monitor life activities in orbit (checking on dog's pulse, blood pressure, and breathing rate), detect an ionosphere around the moon, gage the moon's magnetic field, establish absence of radiation belt around the moon, control temperature inside a satellite, and put a satellite into north-south orbit.

United States was first to discover two radiation belts around the earth, to gage effect of solar explosions on earth's magnetic field, beam a recorded voice from space, photograph earth from space, use solar energy to power satellite radios, establish shape of earth, tape-record satellite information for delayed delivery on ground command, shut off and restart a satellite launcher in space, recover an object from orbit (just accomplished this week).

Also, United States has launched first weather, navigation, and communication satellites. It launched first reconnaissance satellite, though this failed to function properly, and first double-header satellite—which did work.

United States holds the reoord for long-distance communication—22½ million miles.

It all adds up to this: Scientists feel United States has produced more significant information than Soviets.

Navy is enthusiastic over success of its Polaris missile, but doesn't like the noise its missile-carrying atomic submarines make.

It's launched an extensive research program for ways to mute the subs, make it harder for them to be detected by underground listening devices.

[From the Washington (D.C.) Post and Times Herald, Aug. 13, 1960]

ROCKETS AWAY

Space buffs must have had figurative stiff necks this morning if they tried to keep up with all the doings up yonder. A Polaris missile and an Atlas missile whizzed down the test ranges. The X–15 rocket plane climbed to new heights where the pilot reported things were very blue and "really fantastic." Out in the Pacific the Navy joyfully retrieved for the first time, after many misses, a capsule fired back to earth from the latest Discoverer satellite, heralding the successful recovery of animal and man-bearing satellites which will follow.

Perhaps most sensational of all the acts in the American space carnival was the Echo communications satellite. A thousand miles out, this cellophane-thin, 100-foot, self-inflating balloon was orbiting the earth every hour and a half. At night, it was destined to be as bright as any star in the heavens, by far the most easily seen of any satellite yet launched. Scientists at a dozen private and Government institutions were bouncing radio signals off Echo, including a message from President Eisenhower inviting all the world to join in similar experiments.

The last venture offers the most immediate prospect of extensive peaceful application. It should soon be possible to build a world-wide television system employing a series of such reflecting satellites and enabling people all over the world to watch the same live program simultaneously. The opportunities for improved ordinary communication and for news dissemination or government propaganda are enormous, and both the Soviet Union and the United States undoubtedly will press Echo and similar programs vigorously.

The rocket plane flight and the Discoverer success represent advances with great ultimate significance for manned space travel, for military reconnaissance, for arms control systems and for mapping and weather analysis. The successful missile tests are a reminder that the great powers are moving quickly and steadily toward the day of prime reliance on pushbutton, intercontinental weapons.

It was a busy day, indeed, in space. And a wondering earth can only guess how these new strides in rocket technology will shape its future.

George Knierim, Agriculture Instructor From Floyd County, Tex., Teaches Farmers of India

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 15, 1960

Mr. YARBOROUGH. Mr. President, it sometimes seems to me that press reports and other news media lay an unfair and disproportionate emphasis on the bad instead of the good parts of our various programs of foreign assistance.

Perhaps this is because sensational stories of waste or mismanagement or worse stirs more popular interest than straightforward, uncolored reports of the inspiring, day-to-day work of the dedicated men who carry out our foreign assistance programs almost around the world.

One such dedicated, hard-working man is George Knierim, of Floyd County, Tex., who for the past 5 years has served as an agriculture adviser on water use with the U.S. International Cooperation Administration in southern India.

I ask unanimous consent to have printed in the Appendix of the RECORD an excellently written feature story concerning Mr. Knierim's work which was published in the July 28, 1960, issue of the Matador (Tex.) Tribune entitled "Texan in India Sees Hope for Hungry."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXAN IN INDIA SEES HOPE FOR THE HUNGRY

A workingman receives 34 cents per day in the Tungabhadra Valley, Mysore, State of

southern India, where George Knierim is instructing farmers to increase production through newly acquired irrigation. Knierim, a native of Floyd County, Tex., accompanied by his wife and younger son, Larry, 9, visited in Matador last week with his sister and family, Mr. and Mrs. Frank Pohl and daughter, Carolyn.

George Knierim is listed as agricultural adviser, water use, with the U.S. International Cooperation Administration for four States, Mysore, Kerela, Andhra Pradesh, and Madras, in southern India. He has been overseas 5 years and will return as soon as his leave is up.

Knierim has had 18 years experience in irrigation, much of the time with the Pima Indians in Arizona. His home is in Chandler. His experience exactly fits his present assignment in India.

His challenge is 823,000 acres of land in the Tungabhadra Valley which can now be irrigated with water from one of India's 7 new dams. The soil is good (although depleted in some instances) and the climate is ideal, never dropping below freezing and averaging 70°.

The problem is teaching farmers to use irrigation who have no money and who have lived through generations with the specter of famine always at their doors. For the past 3 years the farmers have been wasting 60 percent of the water.

Knierim believes India may eventually feed its hungry people, many of whom have never owned a pair of shoes and have a life expectancy of 35 years. Millions live and die without ever having had all the food they want.

India has many problems. It has twice the population of the United States and half the territory. Experts believe the 400 million population will double within the next 10 years.

George Knierim is a patient and practical man. He realized that the farmer in India on his small farm (average 2½ acres) could not acquire modern farm equipment. He could not buy it, nor could he earn enough to operate it (gasoline is 70 cents per gallon in Bangalore, India, where he is stationed).

Oxen and hand labor alone must be the answer. Knierim started out with the most primitive implements (like those used by the Mormons in Utah about 1875) and built wooden plows with steel-pointed shares, and made wooden drags with which to level the soil.

He also built wooden ditchers which the oxen could pull. The India farmers were amazed at the progressive equipment. He made an inexpensive level with two bamboo poles and some rubber tubing which the Indian farmer could use to check the elevation and know how to level his land. He gave field demonstrations and worked in the fields with the farmers. They were amazed and delighted.

One blacksmith received an immediate order for 40 plows like Knierim had built. In the rural areas of India the population is 95 percent illiterate, but the farmers could understand the equipment he was introducing. He went to great pains to make it simple.

In his first demonstration he hired some poor oxen because otherwise most of the farmers would say, "That is good, but those oxen are fat; mine are poor and they cannot pull the plow," so it was best to have poor oxen like most of the farmers owned.

He is showing the farmers how to save every precious drop of irrigation water, introducing better planting methods and better seed.

He also instructs agricultural students from India's agricultural colleges. Primarily, however his work is irrigation. His services were requested by the Indian Government and his salary is paid by the U.S. Government under its mutual security program.

BORN NEAR FLOYDADA

George Knierim, who is 46, was born near Floydada. He graduated from Lockney High School in 1930, and from West Texas State College, Canyon, in 1938 after working his way, most of the time by milking cows. He received a degree in agriculture from New Mexico A. & M. College, Las Cruces, in 1940.

He married Miss Beulah Robinson in Canyon, and they have two sons.

After their marriage Mr. Knierim taught school at Folley in the north part of Motley County. He was a vocational agriculture teacher for 8 years in New Mexico and Arizona, and was with the U.S. Department of Agriculture for 7 years.

Following their visit in Matador, they proceeded to Boulder, Colo., for a visit with their oldest son, Willis, 20, who is taking summer courses at the University of Colorado, following his freshman work in Linfield College, at McMinneville, Oreg. He is majoring in political sciences.

WILL RETURN TO INDIA

Mr. and Mrs. Knierim and Larry are going back to India. Back to their Far East home in Bangalore where it is 1,500 miles to a grocery store (where they can buy American food).

Back to a land of poor people—and a very few, very rich—where the ancient soil of India, on which millions have died of starvation, may through the miracle of knowledge and irrigation be made to produce food for teeming millions, and millions yet unborn.

World's Largest Electric Power Generating Unit Placed in Commercial Operation

---

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, August 15, 1960

Mr. HARTKE. Mr. President, the world's largest electric power generating unit was placed in commercial operation recently in Indiana.

Mr. R. E. Doyle, of Fort Wayne, vice president and general manager of the Indiana & Michigan Electric Co., announced the operation of the new generating unit at the newly constructed Breed plant in Sullivan County, Ind. The generating capacity of the new unit has been rated at 475,000 kilowatts.

I ask unanimous consent to have printed in the Appendix of the RECORD a report on the opening of the new plant which appeared in the August 5, 1960, edition of the Farm News of Grant County.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORLD'S LARGEST ELECTRIC POWER GENERATING UNIT IS PLACED IN COMMERCIAL OPERATION

The world's largest electric power generating unit—capable of fulfilling the electric requirements of more than a million average American homes—is now in commercial operation.

The giant 475,000-kilowatt turbine-generator at Indiana & Michigan Electric Co.'s single-unit Breed plant in Sullivan County has been declared in commercial service by R. E. Doyle, Jr., vice president and general manager.

Mr. Doyle also announced that the generating capacity of the new unit had been revised upward to the new rating of 475,000 kilowatts from the original level of 450,000 kilowatts. He explained that the unit had undergone extensive tests and had been successfully operated at close to 500,000 kilowatts. Based on this performance, the revised rating was established.

The commercial operation of the unit—which is 40 percent larger than the next biggest turbine-generator now in service—comes as the climax to a period of construction and testing that extended over a period of 3½ years. Ground was broken for the power station in late 1956, and in the ensuing months construction workers moved well over a million cubic yards of earth at the site, raised 6,300 tons of structural steel, and poured 63,000 cubic yards of concrete.

The plant is located on the east bank of the Wabash River, about 20 miles southwest of Terre Haute. It is tied into the I. & M. system and that of its parent firm, American Electric Power Co., by a 186-mile double-circuit 345,000-volt transmission line extending to a new substation west of South Bend. This new line increased to 1,226 the number of circuit-miles of 345,000-volt transmission line extending throughout the 7-State AEP system.

Total cost of the plant, where only finishing touches remain to be performed, is estimated at $71.5 million. This is exclusive of the cost of the various transmission switchyard, substation, and line facilities required to interconnect and integrate the Breed plant with the balance of the I. & M. system, and, in turn, with the rest of the AEP system.

Mr. Doyle emphasized that the plant's single unit not only is the largest in the world from the standpoint of capacity but also is expected to be the most efficient power producer ever built.

Design calculations and expectations are that the unit will have a thermal efficiency represented by the consumption of 8,535 B.t.u. per kilowatt-hour generated. Its thermal efficiency would thus be 40 percent.

However, final determination of this efficiency must await actual operation over a period of at least several months. (As a comparison, the Nation's most efficient plant, according to the latest Federal Power Commission reports, required 9,093 B.t.u. per kilowatt-hour.)

Major contributing factors to the anticipated efficiency, aside from the unit's size, are its steam pressure of 3,500 pounds per square inch, an initial steam temperature of 1,050° F., and double steam reheat temperatures also of 1,050°. (At 3,500 per square inch pressure, the breed unit is well above the critical-pressure level of steam—3,206 pounds per square inch—at which point water passes into steam without an intermediate boiling stage.)

Breed is the first of two 475,000 kilowatt units on the AEP system. A similar unit is being built by I. & M.'s sister company, Ohio Power Co., at the Philip Sporn plant on the Ohio River at Graham Station, W. Va. It is slated for operation later this year.

The new unit will raise I. & M.'s total generating capability to more than 1,450,000 kilowatts, an increase of about one-third. It will also boost the entire AEP system's capacity above the 6 million kilowatt level, making it the first private utility system in the world to achieve that milestone in generating capability.

As a yardstick of its size, the Breed unit has a power-producing capacity greater than the combined capabilities of all powerplants in any one of the States of Vermont, Rhode Island, Delaware, Wyoming, Alaska, or Hawaii. Or, taken in another way, the plant—by operating at capacity around the clock for 365 days—is theoretically capable of producing more than 4.1 billion kilowatt-hours a year. This is more electric power than is

consumed annually in any one of 15 States: Maine, New Hampshire, Vermont, Rhode Island, Delaware, North Dakota, South Dakota, Nebraska, Montana, Wyoming, New Mexico, Utah, Nevada, Alaska, or Hawaii.

The plant is expected to burn 1.4 million tons of coal a year, all of which is supplied by Ayrshire Collieries Corp., Indianapolis, under a 15-year contract. Ayrshire developed its new Thunderbird mine nearby for this purpose and built a private 6-mile railroad to connect the mine and powerplant. The rail line is tied in with the Chicago & Eastern Illinois Railroad by a spur track.

Provision was made in the plant's design for the eventual construction of a second 475,000-kilowatt unit. Likewise, provision was made in the coal contract for a doubling of the fuel supply at that time.

While the 475,000-kilowatt unit is capable of producing 110 percent more electric power than the AEP system's previously largest units (225,000 kilowatts), it occupies a cubic space only 75 percent larger, helping to bring about a reduction in the capital cost per kilowatt of generating capacity.

The turbine generator consists of a high-pressure section and a low-pressure section, both of approximately equal dimensions and equal capacity. Each machine is 112 feet long, almost 21 feet wide, and 15½ feet above floor level, and weighs approximately 875 tons.

The plant's single boiler is as tall as a 23-story building and produces 3 million pounds of steam per hour. Its spent gases exhaust to a concrete stack rising 577 feet above ground level, or 22 feet higher than the Washington Monument.

General Electric Co. built the turbine generator and Babcock & Wilcox Co. the boiler. Booth & Flinn Co., of Pittsburgh, performed the general construction work; Green Construction Co., Oaktown, Ind., carried out the excavation and earth moving.

The plant is named in honor of the Breed family, long prominent in the affairs of American Electric Power Co. The late Richard E. Breed of Marion was one of the founders of the company and served as an early president, chairman, and director.

Indiana & Michigan provides electric service to more than 285,000 customers in 166 communities in northern and east central Indiana and southwestern Michigan. This area has an estimated population of 1,350,000.

The company's headquarters are in Fort Wayne, with division offices in Fort Wayne, South Bend, and Marion.

In addition to the new Breed plant, I. & M. also operates two other major power stations: the 525,000-kilowatt Tanners Creek plant at Lawrenceburg and the 390,000-kilowatt Twin Branch plant at Mishawaka.

The B–70

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES

Monday, August 15, 1960

Mr. GOLDWATER. Mr. President, appearing in yesterday's Parade is an interesting article entitled "The Greatest Plane of Them All."

It describes the B–70, which the Senate was active in supporting this year, and which will become, in my estimation, one of the greatest, if not the greatest, weapons that the world has ever known.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GREATEST PLANE OF THEM ALL

(By Opal Ginn)

The year is 1966. An American businessman leaving London boards his airliner at dawn. Swept 80,000 feet above the Atlantic, he outraces the sun westward at such speed that it appears to set in the east. Five hours after takeoff he walks down the ramp at San Francisco. He must wait 3 hours for the sun to rise again.

This vision of the future could come true if Uncle Sam goes ahead with plans already well advanced. For the aircraft capable of this amazing performance is the celebrated B–70, half plane, half spaceship.

This versatile aircraft is designed as a nuclear bomber with a 7,000-mile range. It will be equipped with new devices for foiling enemy interceptor planes and missiles. Recently a congressional report hinted the B–70 might take over the high-altitude reconnaissance role, using only U.S. bases.

Dressed in "civvies," the B–70 could be changed into a jet transport. Its bomb bays could be converted into baggage holds and its 156-foot, pencil-slim body fitted with seats for as many as 150 passengers.

LONG LIVE THE QUEEN

Leading experts like J. L. Atwood, president of North American Aviation, which is building the B–70 prototype, see the plane as winning the great race for the world's airways. Both the Russians and British are working at top pressure to develop supersonic airliners that will grab off the rich market for high-speed travel. The B–70—which will fly three times the speed of sound, or better than 2,000 miles an hour—could become America's queen of the skies.

By 1975 more than 400 supersonic airliners will be whistling across the world's horizons. Whether the majority will be American made will depend on how speedily the B–70 can be adapted to civilian needs. Chief snag: the initial cost of converting the blueprints into a production-line model, estimated to range between $500 million and $1 billion. This is more than the commercial aviation industry can raise. Probable solution: Government aid, utilizing money already spent to develop the B–70.

MORE FLIGHTS FASTER

Apart from speed, what are the advantages of a triplesonic airliner?

In the long run, the B–70 means cheaper fares: it will have a much faster turnaround and can pack in more passengers per mile than present jets. For trips up to 1,000 miles, today's subsonic jets produce 160 million seat-miles a year.

Triplesonic jets, it is estimated, would produce over 300 million seat-miles. The difference would be even greater for trips over 4,000 miles. Results in dollars: a triplesonic airliner would yield up to 25 seat-miles for each dollar invested, compared with 17 seat-miles per dollar for today's fastest airliners.

It will mean safer, more comfortable air travel. At 15 miles altitude, there is no weather. Winds move at a tranquil 5 to 10 miles an hour, so there will be no bumpiness, no air-sickness.

The B–70 can fly the 7,000 miles between London and San Francisco without refueling. Its new boron fuels are not only extraordinarily economical but give 40 percent more zip and power.

Maintenance of the triplesonic airliner also promises to be cheaper than that of present jets. Most of its equipment will be plug-in units. Equipment needing repairs simply would be whipped out and replaced in a minimum of time.

Nor would major alteration be necessary for the world's principal airports. The B–70 can take off and land on almost any of them.

Of course, there are still technical problems to be solved. Even in thin air, the triplesonic airliner will set up friction which can heat its outer shell hotter than 900 degrees. This can be overcome by a honeycomb shell of special aluminum and steel alloys.

The noise of the plane's six giant jets is not so easily controlled. There is also the question of broken windows on the ground caused by the boom of the plane as it breaks the sound barrier. This can be avoided by holding down the speed until the plane reaches 40,000 feet.

There is also a navigational problem linked with the plane's terrific speed. At 2,000 miles per hour, a tiny error would be progressively magnified every second.

To solve the problem of keeping on course navigation will be controlled by electronic devices which will set a course automatically by the stars. The pilot will handle only takeoffs and landings.

RIDE OF THE VALKYRIE

Will the triplesonic airliner be followed by even faster planes? The latter can be built, say the experts. But beyond triplesonic speed the law of diminishing returns begins to operate. Takeoff and landing requires the same time; the journey itself would be cut not by hours but only by minutes—and at soaring expense.

The Air Force has named the B–70 the Valkyrie, after the beautiful but terrible maidens of Norse legend. They rode their winged horses over the battlefield to choose dying warriors to be carried back to Valhalla. The modern Valkyries may have an equally exciting chore: racing against the sun as they speed around the world carrying peaceful travelers.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D.D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Schoeppel, and Cooper.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long of Louisiana, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Curtis, and Morton.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long of Louisiana, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Aiken, Capehart, Carlson, and Williams of Delaware.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Javits.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Carroll, Church, Gruening, Moss, Long of Hawaii, Lusk, Dworshak, Kuchel, Goldwater, Allott, Martin, and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Dirksen, Hruska, Keating, and Cotton.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Dirksen, Case of New Jersey, Javits, Prouty, ———.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Yarborough, Clark, Jordan, Randolph, Carlson, Fong, ———.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Long of Hawaii, Lusk, Case of South Dakota, Martin, Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Keating, ———.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.

Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, 3013 Q St.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED

TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit. Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Democratic National Convention Keynote Address by Senator Church

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, August 16, 1960

Mr. GORE. Mr. President, during the recent Democratic National Convention, the junior Senator from Idaho [Mr. CHURCH] delivered a brilliant and eloquent keynote address. His address set the tone of the convention. His address was well composed, masterfully delivered, and splendidly received. Seldom in the history of our country has the honor of delivering a keynote address to a national convention come to one so young as the junior Senator from Idaho; never has it come to one who has spoken more sincerely, more pungently, or more eloquently.

I ask unanimous consent that his very able address, together with some editorial comment which I have collected, be printed in the Appendix of the RECORD.

There being no objection, the address and the editorial comment were ordered to be printed in the RECORD, as follows:

KEYNOTE ADDRESS BY SENATOR FRANK CHURCH, OF IDAHO, AT THE DEMOCRATIC NATIONAL CONVENTION, LOS ANGELES, JULY 11, 1960

A keynote speaker is often expected to perform like a cheerleader at a pep rally. But these are solemn times that summon us to reason together. We are Democrats, not because our party has always done everything right, but because it has been the principal party of progress. We face the future with assurance, because of the way our party has served the country in the past.

No other party, for example, has furnished so many great Presidents—the author of our liberties, Thomas Jefferson; the framer of frontier freedom, Andrew Jackson; the sentinel of integrity in public office, Grover Cleveland; the scholarly architect of world order, Woodrow Wilson; the giant of humanitarian reform, Franklin Roosevelt; and that indomitable man of the people, Harry Truman.

Nearly everybody now acclaims the liberal reforms that Democrats had to hammer out, against determined Republican opposition, a few short years ago—the Social Security Act, to give a minimal retirement income to our senior citizens; the minimum wage and hour laws, to upgrade menial wages to decent standards; the REA, bringing electric light to the countryside of America; and the Federal housing program, which has enabled the bulk of our people to become the owners of their own homes.

I wish that time would permit a review of all the achievements of former Democratic administrations. But the laurels of the past alone do not entitle us to the keys to the future. We will deserve to win the coming election, not on account of yesterday's service, but on the basis of the programs we present for today, and the plans we project for tomorrow. Therefore, I must speak to you tonight of the grave crisis confronting us all.

Ours is an awesome age. We live anxiously in the shadow of the mushroom cloud, and wonder whether the human race itself is to be consumed in the witchfire of thermonuclear war. We see the world in upheaval, polarized about two gigantic adversaries, the United States and the Soviet Union. At stake is the shape of the future.

If the Soviet Union is communism on exhibit, even more is the United States the showcase of democracy. How urgent it is for us to demonstrate to all the watching world that democracy has the will to serve vital public needs. How ironic that our national administration should have fallen into the hands of the "holdback" party, during the times that beseeched us to push ahead.

For the heralded "crusade" of 1952 brought only complacency back to Washington. It was the same old "keep cool with Coolidge" attitude of the twenties; it was the familiar "prosperity is just around the corner" spirit which prevented Herbert Hoover from ever coming to grips with the great depression. Once the new Eisenhower "team" had been installed, Madison Avenue eagerly took charge, and a barrage of bland ballyhoo soon filled the land. Like a drug, if you please, it has tranquilized our leadership for ever 7 years.

Now we must be done with this addition. We must seek candid answers to the hard questions: Where do we really stand? Where are we headed? What must we do about it?

We are told by the Republicans to be content, that they have done as much about our problems as we can afford, and that the present prosperity attests to their prudent management of our affairs.

But do we have a wholesome prosperity? I submit it is a pitch-man prosperity, the kind that results when government is run by hucksters not unaccustomed to selling inferior products by wrapping them in bright packages.

It is no accident that big business profits are higher than ever, nor that small business is failing at a record rate. The Republicans tell us that this is due to the immutable law of the survival of the fittest. The fittest, of course, are the biggest, as anyone knows who has ever been in an alley fight. If small business doesn't want to get licked, it will have to get out of the alley. In any case, it is "paternalism," according to the Republican rulebook, for the Government to intervene as referee.

Who suffers from this pitch-man prosperity? Not just small business, but the farmers as well.

This administration, in dealing with the farm problem, has treated the American people like the fabled blind men of India who went to see the elephant. One felt his side and thought him like a wall; one his tail and thought him like a rope; one his ear and thought him like a fan:

"And so these men of Indostan
Disputed loud and long,
Though each was partly in the right,
And all were in the wrong."

To the farmers, the Republicans have said: "Price supports have induced you to overproduce. We will lower them. Less food will mean higher prices, and this will make you prosperous."

To the consumers, they have said: "We are lifting acreage restrictions and reducing the farmers' price supports. This will mean more food at cheaper prices in the marketplace."

To all of us who are taxpayers, they have said: "We are paring down the farm program to save you taxes."

With such conflicting arguments, the administration won approval from a Republican Congress, in 1954, of its flexible price support program, and the use of the veto has kept it alive ever since. With the same arguments, the program is still defended, despite all the accumulated evidence of its failure.

Has it helped the consumer? The housewife will tell you that groceries are higher than ever.

Has it helped the taxpayer? Why this administration has spent more money on its farm program than all previous administrations combined, from the time the Department of Agriculture was first established in 1862. Instead of declining, our surpluses have grown mammoth. Just to maintain them, now costs us more than a billion dollars a year. For some of those who own storage bins, this may be the road to riches, but for the farmer, it is the road to ruin.

Farm income has dropped 23 percent since 1952, while costs have continued to rise, in a squeeze that has driven nearly 5 million people off the farms. We Democrats reject the proposition that the family farm is finished. The farmer is entitled to a fair return on the food and fiber he raises, and no prosperity is genuine that excludes him.

Yet those who pay for this pitchman prosperity are not confined to either farmers or small businessmen. Workingmen pay for it. Elderly people on pensions pay for it. Everyone who has to borrow pays for it. The cost is exacted in higher interest rates.

I swear Rip Van Winkle could have gone to sleep during anytime in this century past, and upon awakening, could readily have determined which party was in control, merely by asking, "How high are the interest rates?" And, if they were hovering up there close to the ceiling, he could bet his life that the Republicans had taken over in Washington.

One of the first acts of this administration, in 1953, was to raise the interest rates, a policy that has already cost the taxpayers $12 billion, just to pay the increased interest on the national debt. Imagine what the boosted tax cost has been on money borrowed by the States, the cities, and the school districts of the land.

But even this is not all. Pile on top of it the added money paid out by every person who has had to buy his TV set, refrigerator, or automobile, on the installment plan, and you can begin to understand how spiraling interest rates have intensified the inflation, and lifted the cost of living to an alltime high.

The fact is that the tight-money policies of this administration have sapped our vitality and shackled our economic growth. Compare the past 7 years under this Republican administration with the previous 7 years under the Democrats. During the Truman administration, our gross national product increased an average of 4.7 percent each year. Under the Eisenhower administration, the increase has averaged only 2.3 percent, less than half as much. And if our growing population is taken into account, the per capita rate of growth for the 7 years under the Democrats was four times as great as under the Republicans.

Indeed, our economic vigor has been undermined to the point that our urgent needs at home have been left untreated like festering sores.

Private slums are spreading through the rotting cores of our big cities, while our urban renewal and public housing programs are "too little and too late." Our private automobiles are stalled in traffic jams, while rapid public transportation, for lack of funds, lags 20 years behind our needs. Private dissipation flourishes, while public education flounders. The classroom shortage has not been met, and we continue to spend more for liquor and tobacco than for public schools. To sweeten private life, our stores display a billion bottles of deodorant, yet a modest bill to reduce the stench from our polluted public rivers was vetoed, and the urban air—thickening with contamination—begins to threaten public health.

We have cared so much about "conspicuous consumption" that our lives are cluttered with gadgets. Yet, we have cared so little about our public responsibilities, that both young and old have been neglected; gangs of switchblade delinquents haunt the public streets, while the lack of adequate medical care for the aged is fast becoming a national disgrace.

What does all of this portend for America? Are we to become a modern Babylon of public want amidst private glut? Is this to be the last port of call for the great American Republic? Such has been the direction of our course—under this Republican administration.

I say to you: The issue in the coming election is not Dwight Eisenhower, whether the strong or the weak; it is not RICHARD NIXON, whether the new or the old; the issue is our country's course—whether we can risk another 4-year ride on the Republican train.

For it is the same old train. He who sits in the cab up front cannot change the direction of the ride. The train runs on Republican tracks, and they are fixed in place. To change direction, we must change trains, and that is just what the American people plan to do in November.

What will be our new direction? Well, let's see what the Democrats in Congress have done—even in the face of veto, and the threat of veto—these past few years.

We have advanced the cause of good health through larger appropriations for vital medical research against cancer, heart disease, tuberculosis, and a host of other chronic ailments.

We have kept faith wtih our forefathers by overcoming 40 years of resistance, to embrace Alaska and Hawaii within the Federal Union, as our 49th and 50th States.

We have broken a stalemate in the fight for full equality under law, by enacting the first civil rights legislation in 80 years, to better protect the right to vote for all our citizens, regardless of race or color. Much remains to be done, but it is already clear that the Democratic Party is dealing most effectively with the lingering problem of racial intolerance, even as we have rejected religious bigotry. We are proud to count among our leading contenders for the Presidency itself, both Protestant and Catholic alike.

But in other fields, the work of the Democratic Congress has been blocked by the Republican veto. In the field of continued development of our water resources—so important to my own State of Idaho, and the future of the country—the Republican Cabinet is split. One half wants "no new starts," the other half demands "more new stops." Four times in 4 years, rivers and harbors bills have been vetoed.

Twice the Congress has tried to give aid to depressed areas of chronic unemployment, and twice have the bills been vetoed. Twice, because of vetoes, we have seen an adequate public housing program cut below our minimal needs, and many have been the times that Congrses has been frustrated in its efforts to deal with the worsening farm problem. Half a dozen major farm bills have been vetoed since 1956.

If only there had been a Democrat in the White House, these past 7 Republican years, and we had continued to enjoy the same rate of economic growth we experienced during the previous 7 Democratic years, there would have been plenty of revenue to enact all of these programs into law, plus urban renewal and school construction besides, without deficit spending, and without need for any increase in Federal taxes.

This is why the American people are determined to put an end to divided government. Not only are they going to reelect a Democratic Congress, but they are going to make sure that the man we nominate in this convention becomes the next President of the United States.

We must make the change. Our problems at home call for it. Our predicament abroad compels it.

The President and his representatives, under the Constitution, conduct our foreign policy. For over 7 years, they have staged it as though the world were a grandstand, where showmanship might be the easy substitute for statesmanship.

Before it's too late, we must begin to see the world realistically. We live on a shrunken planet, where the prevailing order of the past three centuries has been destroyed. New nations rise from the wreckage of old empires, so that our world, like ancient Gaul, lies divided in three parts: One part consists of the Western nations, led by the United States; one part of the Communist nations, dominated by the Soviet Union; while the third part is made up of the newly emerging nations in the old, colonial regions of Africa, Asia, and the southern seas.

These undeveloped and uncommitted nations are the "no man's lands" on which the destiny of the human race will be decided. For if the continents of Africa and Asia are drawn behind the Iron and Bamboo Curtains, the economy of Western Europe is at once undermined. And if we yield Europe, Asia, and Africa to the Communists, the balance of power will fatally shift against us, thus assuring eventual Communist domination of all the world.

Two ways of life—freedom and communism—are locked in mortal competition. Until the debris has been cleared away from the wrecked summit conference in Paris, until the tumult that turned the President back from Tokyo is better understood, we cannot know, for sure, what form this competition may take. But this we do know: we shall either win it or lose it. There is no way out of it. History's verdict will be rendered. The days of our years will determine whether freedom shall endure.

Accordingly, we must inquire, How have the Communists been doing in this dire contest?

A few months ago, my wife and I stood in a long line which moved slowly across the Red Square in Moscow, into the marble mausoleum beneath the Kremlin wall. We went there to see the mortal remains of Lenin and Stalin, laid out upon beds of bronze. The mausoleum is the pagan cathedral of world communism, and each day the "comrades" comes there, three and four abreast, in a never-ending procession.

It is the same procession that emerged from the ruin of Russia at the end of the Second World War to thrust up a Red empire—the only new empire of the 20th century. It now engulfs all of Eastern Europe and vast China, and encloses a third of the world's people within its spreading reach. Its method of expansion has always been conquest, either from within or from without; in no Communist land have the people ever freely voted the system in, and in no such land have they ever been given a chance to vote it out.

Now the tyranny invades the Middle East, and plants its seeds in restless Africa.

I have listened to Nikita Khrushchev, behind the closed doors of the Senate Foreign Relations Committee. I have heard his certain prediction that communism would win history's verdict. He boasted that, although we may be freemen, our grandchildren will be Communists.

Is this an idle boast? The Communists have seized a third of the world in 15 years. History does not record another conquest so large in so short a time. I submit to you that the fateful decisions taken in Washington today and tomorrow will determine whether or not our grandchildren shall be free.

These are the grave stakes deeply involved in the coming national election, and the mission of the Democratic Party is to reawaken America to the mighty task before her. The hinge of the future swings on the United States. The maintenance of peace, the preservation of freedom, the fate of the world, all ultimately depend upon American principle, American prestige, and American power.

What has been happening to American principle? Under Truman we had a Marshall plan to restore economic strength to the free governments of Western Europe, but of late we have courted tyrants, as though they were the friends of freedom.

We have pinned medals upon the chests of hated dictators like Peron of Argentina and Perez Jimenez of Venezuela, and when they were driven into exile, we were aghast at the stoning of our own Vice President on the streets of Caracas.

We have carelessly furnished weapons to other petty tyrants, like Batista in Cuba, who turned them upon his own people, and now we are dismayed at the vehemence of the "Hate America" rallies in Havana.

We have helped to arm a Fascist Franco in Spain, and a Communist Tito in Yugoslavia, until the world has been left to wonder if we still stand for freedom. And as traditional American principles have been obscured, a tide of suspicion and hostility rises against us.

We must also ask: What has happened to American prestige?

Long have we been known as a generous people. Since the end of the Second World War, we have given freely of our treasure to help raise standards in far-flung parts of the world. To the needy, our hand has been extended in friendship. Yet, an overemphasis on military aid has caused the hand, in many places, to be mistaken for a fist. Worse still, by allowing our surplus foods to pile up in massive quantities, by failing for too long to implement an imaginative food-for-peace program, this administration has wrongfully permitted the ugly image to spread of a fat America hoarding food in a hungry world.

But our prestige has suffered in yet another way. We live in an age of science, when men equate national excellence with technological achievement. In such a competition, how could this country—the most highly industrialized and technically advanced in history—possibly stumble and fall behind? Well, during these Republican years, we've done it.

Somehow we lost, and have yet to recapture, the initiative in space. The Russians were the first to launch a satellite, the first to strike, and then to photograph the far side of the moon, the first to orbit the sun. So effectively have they capitalized on these feats, that our own public opinion experts tell us that the average citizen of the world believes today that the Soviet Union has become the leading scientific nation. Don't ever discount the effect of this upon people in primitive lands, where the promise of

modern science alone seems to hold out hope for a better life in the years ahead.

So we are left with the final question: What has happened to American power?

As long as the Russian and Chinese Governments live by the sword, our military strength must be second to none. We understand that arms alone can never perpetuate the peace, but can only buy us time with which to supplant the rule of force among nations with the rule of law.

Yet it must be clear by now that if this objective is ever to be won, if nuclear weapons tests are ever to be suspended, if open skies for the prevention of surprise attack is ever to be established, if enforcible arms control is ever to commence, these complicated problems will be worked out—not at ceremonial summit conferences—but through long, painstaking, and skillful negotiation. At the conference table, our chances for success will depend upon our ability to negotiate, not from weakness, but from strength.

What has happened to our strength? Our Army has shrunk from 20 to 14 divisions. Our Navy has lost scores of fighting ships. We concede to the Russians superior numbers of intercontinental ballistic missiles, which we ourselves describe as the "ultimate weapon." Still, we are told by this administration that we need not match the Soviet Union in missile strength, for this would impose too heavy a strain upon us. Is it possible that the richest Nation in history can no longer afford to be the strongest?

In these many ways, we have watched our country shrink in stature, only to be told that Mr. NIXON, the single aspirant in either party who upholds the very policies that have led us into fiasco, is the man best qualified to lead us out.

Well, the American people won't be fooled. Remembering the famous admonition of Theodore Roosevelt, "Speak softly and carry a big stick," they are not about to substitute, "Talk tough and carry a toothpick."

They know that scowls will never scuttle the Communist thrust, that this can be accomplished only by a mighty striving to revive American principle, to restore American prestige, and to rebuild American power.

I shall never forget the words of a Polish lady, spoken to me last year on the square of the inner city of old Warsaw. She spoke with a wisdom and perspective forged in nearly a century of life. "Senator," she said to me, "America is truly the hope of the world."

It is the American Revolution—not the Russian—that has served as the inspiration of all people who would be free.

It is the American industrial revolution—not the touted "class struggle"—that has created, here in the United States, the world's most classless society.

It is the American technological revolution—not the proletrian state—that has produced, here in the United States, a standard of living that is the marvel of the world.

Nominate a man who will summon this priceless heritage to work. Give us a leader whose program will match this atomic age, and the Democratic Party—true to its tradition—will once again lift our country upon the highroad of destiny.

For only an awakened and rededicated America can raise a standard around which the great fraternity of the free can rally, to summon from a new-found unity, the resolution and the strength to make history's verdict ours.

This is the case for all America that the Democratic Party must carry to the people.

God help us plead it well.

EDITORIAL COMMENT

Los Angeles Evening Express:

"The keynote speech at the Democratic National Convention in Los Angeles was a brilliant political address delivered in dynamic fashion by young FRANK CHURCH, U.S. Senator from Idaho.

"It was a red hot attack on the 7 years of Republican administration in which the speaker detailed what he asserted to be the failures of the top GOP leadership in dealing not only with domestic issues, but also with the tense international crisis.

"And highly laudable in his forceful fighting keynote address was his assertion that peace, freedom, and the fate of the world 'all ultimately depend upon American principle, American prestige, and American power.'"

Los Angeles Examiner:

"As to Senator CHURCH's keynote speech, it was a vigorous and masterful statement in the grand old tradition of partisan politics."

Washington (D.C.) Post:

"The Democratic keynote speech of Senator FRANK CHURCH * * * was a competent partisan address to a partisan convention assembled for the serious business of choosing a man qualified to be the next President of the United States."

The Portland (Oreg.) Oregonian:

"Senator CHURCH has well performed the task assigned him."

The New York Times:

"Senator CHURCH's speech was superior to many such in the past. * * * There is a great deal with which we agree in (his) analysis; but we do not find it so easy as he did to apportion the praise and blame along strictly party lines."

Idaho Statesman (Boise):

"Idahoans generally, and her Democrats particularly, will applaud the honor and accomplishment involved in Senator FRANK CHURCH's keynote address at the Democratic National Convention in Los Angeles. A finished orator, Mr. CHURCH undoubtedly set the theme of the convention, and he did it well.

"What we are watching is American history in the making, and Senator CHURCH, assigned an important place in that activity, did an excellent job in a modernized, fairly brief type keynote address. Unlike tradition, which says that keynoters talk their way into the political graveyard, we think the young Senator attracted favorable attention to himself and the State he represents. Often we disagree with his liberal philosophies but Monday night we felt that he filled an important pair of political shoes with deep determination and enthusiasm. As Idahoans we are proud of the recognition that came to one our citizens."

Lewiston (Idaho) Morning Tribune:

"We commend the speech to the readers of the Tribune, not simply because the speaker is an Idahoan whom many in this area know personally, but, more importantly, because the speech itself is a particularly good one.

"Unlike the usual keynote address, this one wrestles seriously with serious issues: perilous difficulties abroad, wasteful consumption and irresponsibility at home, the erosion of American power and prestige, an absence of executive leadership.

"More than anything else, this was a statement of faith in what the Nation could do if she set herself to doing it, and a declaration of what she must do if disaster is to be avoided.

"It has not traditionally been the purpose of a keynote speech to scold or enlighten but to enthuse, and this one contains its fair share of the trappings of convention oratory. But it contains, in addition, a larger proportion of substance than conventions have grown accustomed to."

The Salt Lake (Utah) Tribune:

"The keynote speech of young, handsome Senator FRANK CHURCH of Idaho at the Democratic National Convention was in keeping with the new political accent on youth and the electronic age.

"While dynamic and to the point, the 45-minute address was terse and restrained, compared with some keynote addresses of past political conventions.

"The sincerity of the youngest Member of the U.S. Senate was impressive.

"Senator CHURCH spoke without notes and without using a teleprompter.

"The able Idahoan drew favorable attention to his State and to the Intermountain West. Many oldtimers undoubtedly recalled the days when another Idaho Senator, the late William E. Borah, was prominent in the conventions and operations of the opposing party."

The Intermountain (Pocatello, Idaho):

"It was a superb appeal to his party. He implored them to restore freedom as the Nation's key export commodity, and to proceed without apology to take new Federal action against festering domestic problems.

"The Senator warned against our becoming a modern Babylon, privately glutted in a state starving for lack of purpose."

The Garden City (Idaho) Gazette:

"FRANK CHURCH did Idaho proud Monday evening.

"His keynote address at the Democratic National Convention in Los Angeles was another example of the masterful oratory that Idahoans have long recognized in the young Senator.

"Once before Idaho produced a U.S. Senator who was known throughout the Nation for his oratory and who brought fame to the Gem State. FRANK CHURCH's performance Monday night has put him well on the way to being a second Borah in the eyes of the country."

POLITICAL COLUMNISTS

C. F. Byrns in the Fort Smith (Ark.) Southwest American:

"The high spot in the first session of the Democratic National Convention Monday was a brilliant keynote speech by the Senate's youngest Member, Senator FRANK CHURCH, of Boise, Idaho. * * * If there has ever been a keynoter so young, I do not recall it. There have been few who approached his oratorical skill and his attractive personality.

"Senator CHURCH impressed me, not alone for what he said, but how he said it. In a gathering such as this, the speakers normally and obviously refer to written scripts. Senator CHURCH may have had a manuscript tucked away somewhere out of sight; but if he had, he neither used nor needed it. He spoke easily, vigorously, dynamically, and persuasively, covering multiple ideas and situations with sharp criticism of the present administration—which was the object of the meeting."

Roy Ringer in the Los Angeles Mirror News:

"CHURCH of Idaho, at 35 the youngest U.S. Senator, was proof incarnate that the slam-bang art of political oratory is far from dead.

"Matching gesture to voice, inflection to emotion, his 45-minute keynote address was in the grand tradition."

Richard L. Strout in the Christian Science Monitor:

"Boyish looking FRANK CHURCH's national televised keynote address fulfilled all the standard qualifications of this kind of performance, and added something more.

"Because the United States is engaged in a desperate struggle with communism the Democratic keynote had deeper significance. It not only indicated the prospective Democratic line of attack, but in its own way it seemed to make the attempt, however successfully, to voice the call to greatness which the times require.

"Thus his address, which was interrupted 42 times by applause, touched great issues. The apple-cheeked young Idaho Senator used a style and delivery which were, for this kind of thing, relatively models of restraint. In fact, at various points he seemed to get near the issues that really separate the two great parties."

Frank Hewlett in the Spokesman Review (Spokane, Wash.):

"Idaho's Senator FRANK CHURCH was showered with more than 150 congratulatory telegrams Tuesday on his keynote speech before the Democratic National Convention.

"They came from all sections of the country—and included two from self-styled Republicans who said he had converted them.

"The press also treated the Gem Stater well.

"The Los Angeles Times said he 'did not disappoint the throngs who came to hear him' and the New York Herald Tribune praised the delivery and sincerity of the man from the potato State.

"Only three or four of the stack of messages were critical. A couple merely attacked the Democratic Party's past position on international affairs.

"An Illinois fan said 'Your speech was like giving light to the blind.'

"A New Yorker commented 'inspiring speech, fit for president' and a Missourian said 'Your speech was the best since Franklin D. Roosevelt.'

"An Ohio man said 'run for president' and one from Tennessee said 'Can't think of a stronger ticket than KENNEDY and CHURCH.'

" 'Would be to God that there were more men like you in our great country,' said a message from Rhode Island and from Washington, D.C., came one saying 'Applying now for front row seat on your bandwagon.'

" 'Help me organize Republicans for KENNEDY,' messaged a California woman and a New York telegram said 'A Republican small businessman thought your speech excellent.'

"From his home State there was a message from Pocatello which read, 'Fine job, FRANK,' and from Nampa was a message saying the speech was excellent and added the 'TV reception here was fine.' "

Eleanor Roberts in the Boston Traveler:

"The man who won the vote—without so much as a battle—as the glamour boy and Demosthenes of the Democrats last night was handsome, 35-year-old Senator FRANK CHURCH of Boise, Idaho.

"He provided the chief excitement in an otherwise dull evening.

"When he finished his impassioned moving keynote speech—delivered with such force and in such colorful language—he not only brought the convention to its feet for the first time, but left viewers at home silently cheering.

"Obviously, CHURCH knew his speech perfectly. And since he had no need of a teleprompter, he could concentrate on putting it across. Almost every sentence was accompanied by gestures, like raising hands high to indicate how interest rates on installment plans had 'piled up' during the Republican administration.

"It was a dramatic, serious speech in spite of the many catch phrases, and no elder statesman could have put over more effectively the terrifying warning that Russia had conquered one-third of the world in 15 years, a historymaking record."

The Scope of School Lunch and Special Milk Programs in Wisconsin

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 16, 1960

Mr. WILEY. Mr. President, over the years, the school lunch and special milk programs—as enacted by Congress—have provided, first, a most worthwhile outlet for our surplus milk and other farm products; and, second, a constructive way for improving the health of the youth of the Nation.

I have considered it a privilege to support legislation for carrying forward and supporting these fine programs.

In Wisconsin, the programs have been utilized by our citizens in a variety of ways, including school lunches, distribution of milk to institutions, child care centers, summer camps, and for disaster relief.

Under the supervision of Gordon W. Gunderson, the program has been going forward splendidly.

Recently, I was privileged to receive a résumé of the report from Mr. Gunderson. Reflecting the way in which this national program is serving the citizens of Wisconsin, I ask unanimous consent to have this résumé printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE STATE OF WISCONSIN,
DEPARTMENT OF PUBLIC INSTRUCTION,
Madison, August 10, 1960.

Hon. ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: In keeping with my promise to you some time ago to send you some detailed information concerning the school-lunch and special milk programs as soon as final data was available, I should like to report the following information to you at this time:

SCHOOL LUNCH PROGRAM

There were 1,778 schools participating in the program with an average daily participation of 182,992 children (peak).

During the course of the year, these schools served a total of 29,958,137 type A lunches with milk. An additional number of lunches were served without milk, but, since they are not reimbursable, we did not keep a tabulation of them.

Payments from Federal funds for the school-lunch program totaled	$1,515,088.35
Payments by children totaled	7,312,903.64
Adult payments	521,301.42
Other income	260,603.11
Federal reimbursement for special milk served to schools participating in the lunch program totaled	1,304,128.80
Operation deficits met by school districts amounted to	1,524,853.40
Total income	12,438,878.72

Wholesale value of commodities donated by the U.S. Department of Agriculture to schools in Wisconsin (8,410,339 pounds) (includes distribution to 343 nonpublic schols), $2,608,509.96.

Expenditures reported were as follows:

For food (including special milk served in schools participating in the lunch program)	$7,735,077.84
Labor	3,562,762.65
Equipment	388,758.75
Other expenditures	321,070.84
Refunded to district general funds from earnings	252,234.31
Total expenditures	12,259,904.39

SPECIAL MILK PROGRAM

There was a substantial increase in the number of half pints of milk utilized in the special milk program. Total consumption of milk, both in the school lunch and special milk programs, amounted to 91,968,438 half pints. Of this number, 29,958,137 half pints were served as a part of the type A lunch and the remaining 62,010,301 half pints were utilized in the special milk program. Total Federal funds utilized for the special milk program this year amounted to $2,136,780.24. Of this amount, $832,631.44 was paid to school districts not in the lunch program.

COMMODITY DISTRIBUTION PROGRAM

We distributed 4,987,695 pounds of commodities to institutions, welfare, child care centers, summer camps and for disaster relief, having a wholesale value of $794,191.68. At the present time there are 216 institutions receiving commodities regularly, nad there are 12 counties, 2 cities, 1 village, and 6 towns participating in the distribution of commodities to 23,121 welfare recipients. We have 7 child care centers and 231 summer camps operating this summer, serving 131,350 children.

Attached are detailed statements of the breakdown of commodity distribution, both as to kinds and total weight of commodities distributed and the dollar value.

The commodities distributed for disaster relief involved the flood which occurred at Odanah, in Ashland County, this spring. On this occasion the Ashland Public Schools cooperated with the Red Cross Disaster Relief Units and used the high school kitchen for the preparation of foods which was transported to the families isolated by the flood waters. USDA donated flour and powdered milk were utilized in baking bread at the high school kitchen and transported to the families in need. Other commodities available were also prepared at the high school kitchen and transported ready to eat. During the early part of these operations, the food was transported by helicopter and, after the water had receded somewhat, it was transported by tractor and truck. A mass feeding center was set up at Odanah to take care of families which had been evacuated from their homes and this center was maintained until the families were again able to move back into their homes.

Sincerely,

GORDON W. GUNDERSON,
Director, School Lunch Programs.

John Harris, of Dallas Times-Herald, Sets Record Straight on False "Oath" Being Circulated

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 16, 1960

Mr. YARBOROUGH. Mr. President, in recent weeks I have received several letters from Texas asking for information on the thoroughly disproved false "oath" concerning the Knights of Columbus pledge.

It is reported that this unfair and untrue propaganda was circulated in the West Virginia primary in a vain effort to cast a reflection on Senator JOHN F. KENNEDY. The people of that proud State are to be congratulated for having the good judgment and sense of fairness to see that such material has no place, or should have no place, in free, honest elections.

Recently Mr. John Harris, a news correspondent with the Washington bureau of the Dallas Times-Herald, wrote an excellent, straightforward feature article in an effort to set the record straight and exposing the false "oath." I ask unanimous consent that his important article, entitled "False Knights of Columbus 'Oath' Has Been Circulating 50 Years," published in the Dallas Times of August 10, 1960, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FALSE KNIGHTS OF COLUMBUS OATH HAS BEEN CIRCULATING 50 YEARS

(By John Harris)

Even though this is the year 1960, there's no use fooling ourselves—the religious issue will loom large in the presidential campaign.

Senator JOHN F. KENNEDY said the issue died in the hills of West Virginia, where he won a primary in overwhelmingly Protestant country, and maybe it did.

But the regrettable fact is that its ghost goes marching on.

Now ghosts—even delicate and touchy ones with religious connotations—can't be swept under rugs. That is why this was written.

For a ghost of shadowy dimension and mysterious origin is again haunting the land as it has done for nearly half a century—especially around election time.

GHOST IDENTIFIED

This weird specimen is the form of an alleged oath taken by members of the Knights of Columbus, a fraternal organization of Catholic men.

Couched in terms worthy of a fifth-grade society, the oath says the organization is pledged to kill all non-Catholics.

KENNEDY being a Catholic, the idea seems to be that this could hurt his chances in the campaign. The oath was circulated during the West Virginia primary in April, and apparently didn't have much success.

Now it is showing up again in various parts of the country.

FALSE "OATH"

Let's take a look at this "oath." Its propagators claim that fourth-degree Knights of Columbus must pledge themselves to:

"Wage relentless war, secretly and openly, against all heretics, Protestants and Masons and to extirpate them from the face of the earth without regard to age, sex or condition by hanging, burning, boiling, strangling, burying alive and to rip up the stomachs and wombs of their women and to crush their infants' heads against the walls in order to annihilate their execrable race."

Actual obligation taken by fourth-degree Knights of Columbus is the following, and a publication issued by the organization offers a $25,000 reward for proof that it is not:

GENUINE OATH

"I swear to support the Constitution of the United States. I pledge myself, as a Catholic citizen and a Knight of Columbus, fully to enlighten myself upon my duties as a citizen and conscientiously perform them entirely in the interests of my country, regardless of all personal consequences. I pledge myself to do all in my power to preserve the integrity and purity of the ballot and to promote respect for law and order. I promise to practice my religion consistently and faithfully and to so conduct myself in public affairs and in the exercise of public virtue as to reflect nothing but credit upon our holy church, to the end that she may flourish and our country prosper to the greater honor and glory of God."

The Library of Congress, has over many years patiently answered requests for information on this matter. Its files reveal at least how our ghost first got into politics.

WHERE IT STARTED

It appears that 47 years ago a gentleman named Eugene C. Bonniwell decided to run for Congress from the Seventh District of Pennsylvania. Bonniwell was a member of the Knights of Columbus.

He was opposed by Thomas S. Butler, who won. During the campaign, some anti-Bonniwell forces circulated the "oath" to help Butler get in.

Butler later repudiated this help and said it lost, rather than gained him votes.

The Control of Crime Through Cooperation

EXTENSION OF REMARKS

OF

HON. CARL HAYDEN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 16, 1960

Mr. HAYDEN. Mr. President, because of the excellent way in which the distinguished junior Senator from Virginia, Hon. A. WILLIS ROBERTSON, has set forth the importance of effective cooperation between the State and the Federal authorities having jurisdiction over the enforcement of laws to control and punish criminal activities, I am directing the attention of Senators to an address that he is delivering this evening at Richmond, before the convention of the Virginia State Sheriffs' and City Sergeants' Association.

All of us who have been privileged to serve with him in the Senate have repeatedly observed the way in which Senator ROBERTSON has forcefully demonstrated his ability to utilize his wide and accurate knowledge of historical facts to stress the importance of maintaining a clearcut distinction between the functions to be performed by the State and Federal Governments. At Richmond there will be no departure by the Senator from his usual clarity of expression in that respect.

We have in common experience gained as law enforcement officers when we were young men. Senator ROBERTSON was the Commonwealth attorney for Rockbridge County for 6 years and I was the sheriff of Maricopa County in the Territory of Arizona for 5 years. I learned, as he did, that there are those who will commit crimes and that there are always available many others who can be depended upon to support law and order when convinced that honest enforcement efforts are being made.

As the Senator from Virginia clearly indicates, the availability of speedy transportation has made crime a national menace. I join with him in praise for the way in which the Federal Bureau of Investigation is rendering invaluable assistance to the States in resisting the impact of organized crime. No such help was available when we were county officers.

In 1923, I first became acquainted with J. Edgar Hoover, then a young man serving as an Assistant Director of the Bureau of Investigation of the Department of Justice. I was impressed with his earnest plea for the establishment of an Identification Division in that Bureau where fingerprints from all parts of the Nation could be assembled and classified. I promptly agreed to assist him in that effort because during my service as sheriff fingerprints and a photograph which I had the good fortune to obtain from the Ohio State Penitentiary resulted in the capture of Louis V. Etynge, who, after I brought him back from San Francisco, was convicted of murder in the first degree.

When the Department of Justice appropriation bill for the fiscal year 1924 was under consideration, I joined in urging that the Bureau of Investigation be provided with funds to acquire, maintain, and exchange criminal identification records with the State and city authorities, and my recollection is that about $50,000 were made available for that purpose.

It was not until 1931 that Mr. Hoover's proposal was finally consummated by the permanent establishment of the Division of Identification in the Bureau of Investigation. As Senator ROBERTSON points out, during the intervening 36 years the FBI Identification Division has acquired more than 150 million fingerpoint cards in its files.

I ask unanimous consent that the address to be made by Senator ROBERTSON, to which I have referred, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CONTROL OF CRIME THROUGH COOPERATION

(Remarks of Senator A. WILLIS ROBERTSON at the convention of the Virginia State Sheriffs' and City Sergeants' Association, John Marshall Hotel, Richmond, Va., August 16, 1960)

For 6 years, I served as the Commonwealth's attorney for Rockbridge County, and will always be grateful for the experience, because, through it, I learned about county government and the problems of law-enforcement officers. I soon learned that a Commonwealth's attorney could not hope to make a record as a good prosecuting attorney without a good sheriff. You can't send a felon to the penitentiary before he is caught, and after he is caught you can't convict him without proving criminal intent and the corpus delicti.

A joke is told on some criminal lawyers that their fee is determined by whether they must furnish the evidence or have it furnished by the client. Commonwealth's attorneys must rely principally upon their sheriffs in establishing the fact that a crime has been committed and connecting the prisoner with it.

Nothing more clearly indicates the march of time and changes in social customs than the history of the office of sheriff. It was an office we inherited from our English ancestors, where it existed among the Anglo-Saxons even before the Norman Conquest. In fact, the word "sheriff" is a Saxon word indicating the executive officer of a shire, or English county. The Saxons probably elected their sheriffs, but after the Norman Conquest the sheriff became the personal representative of the King, appointed by him from a list of three submitted by the Chancellor of the Exchequer and the Judges of the King's Bench. As the personal representative of the King, the sheriff was the most important and most powerful man in his

shire, which was known as his bailiwick; and, incidentally, the office was very remunerative. I don't know what the early office of sheriff paid in England, but I find a record of the fact that in Scotland the deputies, there known as sheriff's deputes received salaries from $2,500 to $10,000 a year, so the sheriff probably received as much as $25,000 per year.

However, in Scotland, in addition to being an administrative official, the sheriff and his deputies were also trial justices for misdemeanors and warrants on small claims.

When the Colonial Government was set up in Virginia, we naturally followed the English system, with sheriffs appointed for a term of 1 year by the Governor (the King's representative) from a list of three peace commissioners recommended by the county court. The sheriffs of that day and time were also tax collectors, and that duty is still exercised by the sheriffs of West Virginia. From colonial days until a fish and game department was created in 1916, Virginia sheriffs were the sole game wardens; and until the creation of the motor vehicle division, they were highway traffic patrolmen, combining all of these duties and functions in some counties for the munificent salary of $600 a year, plus some small fees which usually went to the deputies, as they received no salary. About the only thing the Virginia sheriff doesn't have to do that the English sheriff did is to furnish liquor and other refreshments to the judges. But even in that pleasant function of the English sheriff he has assistance from a distinguished group known as "riders with the sheriff."

The appointment of sheriffs by the Governor continued until the spring of 1775, when the then Governor, Lord Dunsmore, suspended normal governmental functions, declared martial law, and took refuge on a British man-of-war. On March 20, 1775, a convention was held in the city of Richmond to consider what steps the Colonies should take to preserve their freedom, and as stated in the call of the convention: "To bring about a return of the halcyon days of peace and prosperity." That was a remarkable convention, attended by two representatives who afterward became President—Washington, who represented Fairfax; Jefferson, who represented Albemarle; and Benjamin Harrison of Charles City County, father of a third President. Rockbridge, which was then a part of Botetcourt, was represented by John Bowyer; Augusta, east of the Alleghenies, was represented by Thomas Lewis (a descendant of John Lewis, the first white settler in the valley), and Samuel McDowell. The area west of the Alleghenies that extended to the Mississippi River was represented by John Harvie. Shenandoah County, then called Dunmore, was represented by a young Lutheran preacher named Peter Muhlenberg. It was in that convention that he made the acquaintance of George Washington, who in 1776 named him a colonel in the Continental Army, where he served with much bravery and distinction and rose to the rank of major general.

The convention met again in Richmond on July 17, 1775, and again on December 1, 1775, and at this last session, among other things, made provision for the appointment of sheriffs. Under the terms of that resolution, whenever the term of a sheriff expired his successor was appointed for a term of 1 year by the county court. In colonial times the office of sheriff in Virginia, as in the mother country, was a very high and respected post, but in Virginia the work of the sheriff has always been difficult, at times dangerous, and in many counties underpaid.

In many respects, I think Virginia has the best government of any State in the Union. I am satisfied that in no State is justice administered on a cleaner and higher basis, but I have frequently felt that we in Virginia have not attached sufficient importance to the offices of sheriff and city sergeant, nor adequately remunerated the clean, able, and brave men who have been willing to assume those important posts.

One must smile as he reads the record that there could be no court held in Augusta County for 4 years after it was formed from Orange in 1738 because no one could be found willing to assume the duties of sheriff. And for many years after the county was formed, there was a continuing order of the court exempting from jury duty in Staunton citizens of the county who lived on the Mississippi River. We have expected too much of our sheriffs and city sergeants and at times have required them to make brick without straw. The real significance of that Biblical reference was that the children of Israel had to furnish their own straw, gathering it in the fields at night after making brick in the concentration camps all day. And out of the meager salaries and fees allowed our sheriffs and city sergeants we have expected them to respond to every call for help (traveling at their own expense), and, when some major crime has been committed, to spend days and weeks in working up the evidence.

It was not surprising that our State and local law enforcement officers found themselves unable to compete with ruthless bands of organized criminals, operating across the State lines. Good roads and fast, easy means of transportation became the allies of organized crime as far back as 1920, when bootleggers and hijackers began to operate in this country on a major scale. It was in response to this situation that the Federal Government in 1934 passed the Fugitive Felon Act. As you know, this act, as it exists today, makes it a Federal offense to flee across State lines to avoid prosecution, custody or confinement for serious criminal acts. The FBI has had the responsibility of investigating violations under this statute, but before it can enter such a case, there must be indication that the fugitive has left the State, and local authorities must agree to extradite the criminal when he is located. The law provides for Federal prosecution, but, very properly, this rarely occurs since the primary purpose of the act is to locate and return to local custody those individuals who have committed serious crimes.

The value of this cooperative function, between Federal and local governments, is evident when statistics for the fiscal year 1959 are noted. In that year, 1,149 Fugitive Felon Act subjects were located by the FBI, an increase of more than 12 percent over the previous alltime high established in 1958.

I mention this act, because it seems to me that it furnishes the framework of a proper relationship between the Federal Government and local governments for cooperation in law enforcement. It is a framework in which the responsibilities are shared, but the primary responsibility for crimes of a local nature remains with the local law enforcement officers. There are, of course, other proper areas where the Federal Government can and does assist you in your most important work. When I spoke to your group in 1936, I urged you to make full use of the facilities which had only recently been made available to you through the FBI. The FBI National Academy had been initiated only in 1935, the year before I spoke to your group, and I urged your members to attend the courses of training provided by the Academy, which is commonly referred to as the "West Point of law enforcement." I'm glad to learn that you have done so. Since the inception of this Academy, there have been a total of 133 graduates from the State of Virginia, and of this number, I am informed, 94 are still active in law enforcement in Virginia.

One of the most notable Virginia graduates of the National Academy is Col. Charles W. Woodson, Jr., superintendent, Virginia State Police, Richmond, Va., who is currently president of the International Association of Chiefs of Police. Colonel Woodson was also the president of his National Academy class in 1940.

Two very excellent officers in the State of Virginia have been selected to attend the National Academy starting on August 15, 1960. They are Sheriff Harold Clark Taylor, Isle of Wight County, and Lt. Julius Marvin Boyers, police department, Staunton, Va.

It is heartening to note that the citizens and law-enforcement officials of the State of Virginia have recognized the professional nature of police work and are actively participating by sending police officers to the FBI National Academy.

Other services of the FBI which I called your attention to in 1936 were the FBI Laboratory and the FBI Identification Division.

During fiscal year 1959, a total of 1,886 examinations were made by the FBI Laboatory on specimens submitted by Virginia law-enforcement agencies. The FBI Laboratory is an excellent source of scientific aid which is available to law-enforcement agencies simply for the asking. The examination of a piece of evidence is performed without cost to the agency, and, if requested, the FBI will send the laboratory technician to testify as an expert witness at a local trial, also at no cost to the agency.

The FBI Identification Division now includes in its files 156,402,518 fingerprint cards, representing over 75 million persons. Ninety-five law-enforcement agencies in the State of Virginia are presently contributing to this division.

The FBI has established a disaster squad of highly trained fingerprint experts who, upon the request of law-enforcement authorities, are immediately dispatched to disaster areas in an effort to identify casualties. This humanitarian service has been utilized in the last several years largely in connection with plane crashes. In January of this year, the disaster squad was called upon to assist local authorities in identification of the victims of the plane crash which occurred in Charles City County, Va. This again, it seems to me, is a proper function of the Federal Government.

Another service provided by the Federal Government is the FBI police schools.

During fiscal year 1960, a total of 54 police schools were conducted by the FBI in the State of Virginia. In addition, the FBI conducted five specialized law-enforcement conferences on the subject of auto theft during the first part of 1960. These schools not only acquaint officers with new investigative techniques and methods, but also advise them of the many ways the FBI can assist them in the solution of a crime through the use of their Laboratory or Identification Division.

Schools of this nature are an example of the excellent instruction that is available to law-enforcement officers today. Officers, because of the highly professional nature of their work, should constantly strive to keep abreast of new scientific methods and techniques which they may apply in the course of their investigations.

In spite of the cooperation between local law-enforcement officials and the Federal Government, and in spite of the modern methods of scientific detection and identification, crime in the United States continues to rise.

An estimated 1,553,992 serious crimes were committed in the United States in 1958, a rise of 9 percent in comparison with the previous year. This rise in crime has far exceeded the rate of population increase in the country. The overall rise of 9 percent for 1958 was supported by increases in each of the 7 serious crime categories, namely, forcible rape, robbery, burglary, larceny over $50,

aggravated assault, murder, and automobile thefts.

Preliminary crime data for 1959 reveals that crimes against the person rose 7 percent. Crimes against property increased 1 percent, according to reports received from police in cities over 25,000. Some individual offenses, showed marked changes as follows: Aggravated assault, up 7 percent; murder, up 5 percent; rape, up 4 percent; and robbery, down 2 percent. Burglary showed no noticeable change, while auto thefts and major larcenies rose 2 percent and 1 percent respectively.

The continuing increase in crime is reflected in statistics for the first 6 months of 1960, when crime increased an additional 9 percent. During this period there was a sharp upward trend in serious crimes reported by cities over 25,000. Robberies were up 13 percent, reflecting the highest increase, followed closely by burglaries with a 12 percent rise, while larcenies over $50 rose 8 percent. These figures for the first 6 months of 1960 show a total of 462,396 offenses against property reported by contributing cities. That is an increase of over 40,000 more burglaries, robberies, and thefts than occurred during the same period in 1959. The minimum loss which this figure represents is a staggering $134 million.

In view of this increase in crime, all of us, and not only those of you who are immediately responsible, should concern ourselves with the problem of law enforcement. In my opinion cooperation, as exists between the State and Federal Governments, is the most effective weapon against the criminal world. This cooperation, however, must extend to every citizen of the United States.

In speaking of the continued increase in crime in the United States, J. Edgar Hoover, Director of the Federal Bureau of Investigation, has observed that many citizens have a detached attitiude toward crime; that they are seldom concerned with the plight of their neighbors who have been victimized by vicious criminals. He pointed out that all too often brutal crimes arouse only morbid curiosity or mild sympathy for the victims, instead of indignation and concerted action against lawbreakers who all too often have shown utter contempt for human lives and rights.

Mr. Hoover cited the fact that the rising tide of crime is not attributable alone to our population growth, but is traceable primarily to the two following conditions:

(1) There has been an unfortunate spread of moral deterioration among growing communities of our population. This is not evinced alone in the rise of bank robberies and crimes of violence but includes the willingness of many law-abiding Americans to compromise their ideals if an easy dollar can be made. This concept is commonly known in our society as "payola."

(2) Public apathy toward crime and other dangerous conditions has been on the rise in too many American communities. Such apathy attacks man's sensitivity to the difference between right and wrong. Its symptoms are lethargy, self-indulgence, and the desire of personal pleasure before duty.

The problem of young people involved in crime activities is tragic. The increasing frequency of youth crimes is compounded by an increasing savagery in their commission.

Many authorities in noting the continued increase in crime and the resultant danger to our country have loudly advocated the establishment of various types of national crime commissions and national police forces. Crime commissions and national police forces are not the answer to this serious problem. Local crimes should be handled by local authorities with the assistance of the many cooperative facilities available to all law enforcement today.

There have also been in recent years many proposals for invasion of the police powers of States by the Federal Government, in the guise of so-called civil rights bills, while the U.S. Supreme Court on a number of occasions has used the due process clause of the 14th amendment as an excuse for invading the police powers of the States, especially with respect to religious and loyalty issues. Those of us who have opposed these invasions have not done so because of any lack of sensitivity to the rights of every American to enjoy the benefits of the Constitution, but because we know that ultimately the enjoyment by all citizens of all their civil rights depends upon the preservation of a Federal Union composed of sovereign States which had reserved to themselves or the people thereof all powers not delegated to the Central Government. The retention within the States of the police power is one of the most important elements of sovereignty which were wisely retained by the State governments at the time of the formation of the Union. Alexander Hamilton recognized this. In spite of his reputation as an advocate of a strong Central Government, he wrote in The Federalist, No. 17, as follows:

"There is one transcendent advantage belonging to the province of the State governments, which alone suffices to place the matter in a clear and satisfactory light—I mean the ordinary administration of criminal and civil justice. This, of all others, is the most powerful, most universal, and most attractive source of popular obedience and attachment. It is that which, being the immediate and visible guardian of life and property, having its benefits and its terrors in constant activity before the public eye, regulating all those personal interests and familiar concerns to which the sensibility of individuals is more immediately awake, contributes, more than any other circumstance, to impressing upon the minds of the people, affection, esteem, and reverence toward the Government. This great cement of society, which will diffuse itself almost wholly through the channels of the particular governments, independent of all other causes of influence, would insure them so decided an empire over their respective citizens as to render them at all times a complete counterpoise, and not unfrequently, dangerous rivals to the power of the Union."

Even though Hamilton may not have been accurate in his prediction that the retention of police power in the States would make them "dangerous rivals to the power of the Union," he was entirely accurate in his appraisal of the importance to the concept of federalism of the retention of the police powers within the States. It is no accident that the dictatorships of the recent past, and the Communist nations of the present, are called police states. Every government, of course, exercises police powers; but in the police states those powers are exercised with oppressive ruthlessness by the Central Government rather than by local jurisdictions.

Those of us who represent you in the Federal Government must maintain the concept of States rights if our Government is to remain one of individual freedom and opportunity. But the success of our efforts, and the retention of our liberties and opportunities, depend to a great extent upon those of you who have the duty and responsibility for exercising the great police powers which you continue to hold. I know that Virginia peace officers will, as they have in the past, be worthy custodians of these powers.

Address by Hon. Alan S. Boyd, Member, Civil Aeronautics Board, Before Association of Local Transport Airlines

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Tuesday, August 16, 1960

Mr. MAGNUSON. Mr. President, during the recent brief adjournment, it was my pleasure to attend the quarterly regional meeting of the Association of Local Transport Airlines, held in the Beverly Wilshire Hotel, July 18–19, in Los Angles, Calif., at which Pacific Airlines was the host.

The Honorable Alan S. Boyd, a distinguished member of the Civil Aeronautics Board, addressed the meeting on the subject of the future of local service and short-haul transport airlines.

Quite aside from the usual exchange of pleasantries between guest speaker and audience, this address was hard hitting, advised the immediate development of a system of class mail pay rates and admonished the member carriers of ALTA to prepare themselves psychologically for an efficient class rate system. Airline managements were also cautioned to develop a favorable climate for the local service carriers to insure an eventual reduction of subsidy by a judicious use of the CAB "use it or lose it" policy.

When the regulator and the regulatees, as represented by this energetic industry association known as ALTA can talk straight from the shoulder to each other as was done in this address, great strides in public-interest concepts and their application to short-haul air-transport industry can be envisioned.

Knowing of the sincere interest of Senators in the subject of short-haul air transport to some 533 smaller communities of the 50 States, I ask unanimous consent that the speech which the Honorable Alan S. Boyd delivered on this occasion be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

A LOOK TO THE FUTURE

In looking to the future of the local service carriers, it is obvious that for some time the main concern of those carriers with Government regulation will continue to be the level of direct subsidy payments. Subsidy is provided to the locals by Congress to assure the maintenance and development of services which meet the public interest in and need for air transportation of mail, passengers, and cargo over routes and through communities which cannot immediately or soon support airline operations profitably.

Granted that such services are essential and that subsidy is still necessary to their support. Nevertheless, we who are believers in a self-sustaining free enterprise system must recognize that subsidy is a financial crutch. It is evidence of internal weakness. The sooner the industry is rid of it, the better. Manifestly, this cannot be done

tomorrow. But I believe that over a reasonable period of years the local service carriers can be so strengthened within as to become self-supporting, thereby eliminating the need for subsidization.

I am sure that you all join me in wanting to see strong, independent local airline companies, free of the necessity to depend on outside priming. Reliance on continued subsidy payments over the long run is risky in itself. The temper of the times goes into the making of such payments. It may be assumed that many persons will insist that the locals at some time throw away the crutch, as did the trunkline operators. Conceivably it could be jerked away by a Congress pressed by the need to appropriate great sums of money for other purposes. As you know, the executive has already touched on the subject from a budget standpoint.

I personally do not believe that drastic cuts are imminent or desirable now, but I know that the carriers and the Civil Aeronautics Board are expected to come forward with plans which will lead to the end of subsidy. Probably it will go up before it goes down, especially in consideration of anticipated service expansion and the acquisition of costly new flight equipment. An increase in subsidy need can easily be explained. It can be justified, however, only by demonstrating that the increase is the temporary means of accomplishing the final objective, which is subsidy-free, profitmaking local service operations, characterized by safety, speed, adequacy and economy.

The reconciliation of these many requirements will not be easy of attainment. Nor can it be effected in a haphazard way. A program is needed. Neither Congress, nor the Executive, nor the public, nor the CAB will be long content with the idea of paying out public funds in unknown quantities for an indeterminate number of services. The position will have to be regularized. It is much too loose today. The Board at present is unable with certainty to fix payments that are required by individual carriers until after a lengthy, tedious, ex post facto review of carrier operations and claims. Disallowances and compromises have us all unhappy. It is for these reasons that the Board and its staff are working so diligently with the local carriers to formulate a system of class mail pay rates.

The Civil Aeronautics Board is vested by statute with the authority and responsibility to ascertain the amount and methods by which subsidy is to be paid. It is necessary for the Board to justify to Congress its request each fiscal year for specific sums of money to be used for subsidy purposes. Up to now we have exercised this authority on a somewhat ad hoc basis. In my opinion, this system has not given us the degree of control over the matter that we should have, and intend to have in the future.

By control I mean simply that the Board should be in a position to know in advance what substantially will be the subsidy cost to the Government for the operation of each segment of a carrier's route, depending upon the type of equipment and number of schedules operated. The carriers will have the benefit of the same information. The class rate system as presently conceived should provide carrier management with a sounder basis for operational planning, and should provide the Board with a better understanding of what service will be provided for how much subsidy money during the ensuing year.

Additionally, it is hoped that the advent of class rates will markedly diminish debate on disallowances of claimed expenses and costs.

The Board feels that it has given full evidence of good faith and a sincere desire to bolster the progress of the local service carriers. The recent announcement of our decision on rate of return is an example. Others include the elimination of various certificate restrictions, and what we trust are beneficial route awards. We must have similar evidence of good faith from the industry.

I ask you to prepare yourselves psychologically for the class rate system. I ask you to help in its development and to use your best efforts to make it work when it is instituted. I am not entirely happy with progress in this connection so far. I will accuse no one of dragging his heels, but I will say this: Subsidy is the local service carrier's Achilles' heel and if I were you I would not risk the consequences of moving so slowly as to make a better target of my most vulnerable spot.

The introduction of the class rate system may not be an altogether happy change for all carriers. However, not all carriers are happy with the present arrangement. We are going to devise a system which we feel is equitable. We are going to put it into effect on January 1, 1961. We believe a class rate will be an improvement in the public interest and in the interest of the local service carriers as a whole. We can and will make it work.

The time is fast approaching for the first large-scale review of the "use it or lose it" policy. No doubt, this will involve service at communities you would like to drop and others which you would prefer to continue. In many cases the communities where you want to drop service will themselves want it continued. One of the fundamental questions here will be whether the service actually provided constituted a fair trial to develop the passenger (or cargo) potential.

In these cases do not waste the Board's time in asserting that the burden is on the community to show that it did not have a fair trial. One burden you carry under subsidized regulation is that of showing you provided the best possible schedule of service consonant with the other requirements of your system. For your own best interests do not attempt to shift this burden; rather, prepare yourself to carry it candidly.

It is my belief that the Board must act with dispatch in pruning dead limbs from the local service tree. This becomes a necessity in view of the growing volume of the annual subsidy bill. But we do not propose to eliminate a community if it can be shown that the carrier failed to provide reasonably adequate service during the period under review. Nor will we eliminate services only because they are not profitmaking. Elimination will be based on a showing to the effect that the services are no longer required by the public convenience and necessity.

The application of the "use it or lose it" policy will surely result in the abandonment of some stations, but it does not follow that local service will diminish in the sense that fewer points will be served by local carriers. As below-minimum traffic points are eliminated, promising new points will be added to your systems on a trial basis. Many points of proven potential to be abandoned by the trunkline operators will be picked up profitably by the locals. As you know, the Board has taken the initiative in putting the issue of suspension of the trunks into the local service area cases. Recently the Board has approved suspension of 57 trunkline authorizations. In cases now pending, there are at issue 79 other trunkline points for suspension or deletion.

Step by step it is the intention of the Board to build up your systems. This will take time. Under the Federal Aviation Act, a point cannot be permanently deleted from a carrier's certificate without a formal hearing. But the Board does have a procedure available to dispose of cases on the pleadings through the means of temporary service suspension of the trunks and exemption to the local carriers. The Board has not and will not hesitate to use this procedure when it makes good sense to follow a policy of suspension and replacement. At the same time, however, it is essential to develop a favorable climate for the local service carriers to insure an eventual reduction of subsidy. Judicious selection of points and routes to be served by the local carriers, and relaxation of restrictions on their services should go to the accomplishment of the desired end. Longer stage length operations have been made possible by permitting extensive nonstop operations between terminals where there is no competition, and one-stop operations between terminals where there is competition after one or two round trips a day have been provided to the immediate points. Effective use of your skip-stop authority is a means of improving the economics of your operations.

The foregoing views on local services and subsidy therefor lead me into the vital subject of public relations. My impression is that your relations with Congress are excellent. This is due in large part to the very efficient efforts of your genial Executive Director, General Adams. Mutual acquaintances in Congress speak of him with affection and respect. You are to be congratulated on having made so fortunate a choice to conduct the affairs of ALTA.

The cost-benefit study you had prepared for Congress earlier this year was a fine piece of work. It was directed at Congress to give a greater understanding of your operation—in effect a report of stewardship on moneys appropriated to the industry. But Congress is composed of a very small segment of the population. In the final analysis it is the general public who provides you with the crutch to which I referred in the beginning. In my judgment you need a broad public relations program directed at the general public, a program so designed as to advise the public of your problems—to gain public understanding—to obtain public support by showing the public benefits derived from local service operations.

Why do you operate DC–3's when others operate jets or turboprop equipment? Why do you make so many stops? Why is it that you only serve my town at 5 o'clock in the morning? Why don't you use helicopters? Why don't you fly on Sunday?

These are examples of many questions to which the public would like to have answers.

The kind of public relations I am talking about does not require paying for space in the newspapers or for time on radio or television. The industry you represent is big business in this country and is a legitimate subject for news or magazine articles or station sponsored coverage.

It will require a lot of work to bring this idea to fruition, but if you are willing to persevere, there is every reason to believe that you can obtain space in magazines such as Life or Look. The Saturday Evening Post has editors constantly looking for worthwhile material. The American Weekly comes into millions of homes with the newspaper each Sunday morning. An article in Reader's Digest could be of immense value to the industry.

Space like this is not for sale. It is available to people and enterprises which are newsworthy or which have a story of general interest to tell. The local service industry should easily qualify.

Your industry got its toehold in the forties. It spent most of the fifties suffering from malnutrition. The decade beginning with 1960 should be one of sustained growth. The burden, of course, is on you. You must win the support and sympathy of the general public through national media and through contacts in the communities throughout the Nation which you collectively serve. Your intimate knowledge of local needs should make it possible for you to put your story over and to enlist support. You must convince the people on your routes that your

locally concentrated activities will result in better air service for them. Explain to them the technical why's and wherefore's of trunk suspension and local substitution. Educate them in airport and flight equipment problems and airline economics to the extent that they will willingly back your efforts to replace the trunks.

It can be shown that you can meet the greater part of the air transportation needs of smaller cities more effectively than low-frequency, or off-hour trunk services, that you will operate the equipment suitable to their needs and their airport facilities, that you must be free of trunk competition between many points in order to build up your financial position. True, some communities in losing trunks will have to forgo single-plane service or nonstop service to distant points, but this transportation does not constitute the bulk of air travel from smaller cities and towns. Given the opportunity to enjoy their full support, you can do a better job for them.

This is your first public relations job. You must follow up by solidifying your position before Congress and the Board. I believe you can do this by cooperating with the implementation of a sound program for the control and gradual elimination of subsidy.

In these endeavors I am sure that you will have the wholehearted assistance of the Board. I urge you to exert every effort toward their accomplishment and your own reward.

Nation's Jobs Total Shows Rise in July

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 16, 1960

Mr. WILEY. Mr. President, the Nation fortunately is moving forward economically—despite the outcries of some who would falsely give the impression that we are "on the rocks." In July, for example, the number of employed reached an alltime record of 68,600,000.

We recognize, of course, that there is still a small percentage of unemployed as well as some other economic problems throughout the country. Those, of course, must be dealt with as quickly and effectively as possible.

Reflecting the forward movement in our employment—a fundamental factor in our overall economy, however—I ask unanimous consent to have an article from the Milwaukee Journal printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, Aug. 11, 1960]

NATION'S JOBS TOTAL SHOWS RISE IN JULY

WASHINGTON, D.C.—Unemployment has dropped to 406,000 in July, while the number of people holding jobs increased by 110,000, the Labor Department reported Wednesday.

The number of unemployed dropped from 4,423,000 to 4,017,000, while the number holding jobs increased from 68,579,000 to 68,689,000.

EXCEPTIONS CITED

Secretary of Labor James P. Mitchell described the changes as mainly seasonal.

He noted as exceptions a better than seasonable pickup in construction employment and continued job cutbacks in the steel industry.

The overall reduction in unemployment was about usual for this time of year, and the seasonally adjusted rate of unemployment of 5.4 percent compared with 5.5 percent in June.

DECLINE EXPLAINED

Unemployment among teenagers dropped sharply—by about 550,000—but employment among adults rose by nearly 150,000 as a result of cuts in jobs in durable goods industries, mainly in autos and steel.

Seymour L. Wolfbein, the Labor Department's top manpower expert, attributed the decline in employment in the auto industry to model changeovers.

He said the steel production decline was the major weak spot in the economy.

"But it is not fair to say that this is a harbinger of recession," he said. "We're still operating at record alltime highs in total employment."

The number of unemployed workers covered by insurance rose more than seasonally to 1,700,000, an increase of nearly 150,000.

Statement To Be Delivered by Senator Douglas at the Silver Anniversary Convention of Catholic War Veterans of the United States of America

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 16, 1960

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement to be given by me at the silver anniversary convention of the Catholic War Veterans of the United States of America meeting this week in Chicago.

There being no objection, the statemented was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR PAUL H. DOUGLAS ON THE SILVER ANNIVERSARY CONVENTION OF THE CATHOLIC WAR VETERANS OF THE UNITED STATES OF AMERICA
